Mr. Aiken, however, had to temper his approach to practical diplomacy—or so one must assume. Last autumn the United States had begun its preparations for distributing nuclear weapons—though always under American lock and key—to certain of its NATO allies. Consequently, in one of his expositions, Mr. Aiken said that his proposals would leave the great powers free "to hold nuclear weapons anywhere in any allied territory that wished to hold it." This may have accounted for some mellowing in the line taken by Mr. Lodge, the American representative, who after the assembly reported the Irish initiative in not unfriendly terms to the Senate Foreign Relations Committee.

Sympathetic critics may feel that Mr. Aiken has here an unresolved dilemma. Although Congress requires that these weapons be kept under American control it may not continue to insist on this. And, even while formally it does insist, in practice the American key may not be too firmly turned in the lock of every store. Where weapons are being located near a possible battle area they have to be ready for swift use in an emergency. As a result it might not be difficult for the German, Italian, or other allied teams to take control of them. The same must apply as and when the Russians distribute weapons in support of the Warsaw Treaty forces.

If, then, the Irish proposal is to be effective it must provide some safeguard—perhaps not at the first stage but at a later one. At the beginning an undertaking by the Americans (and Russians) not to let these weapons out of their own hands would be useful. Later, perhaps in conformity with inspection now being discussed, nuclear weapons might be withdrawn from the central area in Europe.

WITH OR WITHOUT CONTROL

At present the British Government apparently does not like the Irish proposals. Its objection is that control of the agreement is not practicable. Why not? It may be impossible to detect violations by the nuclear powers of their undertakings (when given) not to supply weapons to others, but it is possible to see whether nonnuclear nations are training units for their use. Ships are fairly simple to inspect for nuclear-bearing missiles, and land-based missile units (other than for short-range antiaircraft weapons) will not be formed by any country that does not expect the use of nuclear warheads.

But Mr. Aiken himself has argued that even if control is not attainable the agreement is still worth having. The absence of control, he says, does not vitiate the scheme. In his view it is in the plain self-interest of the nuclear powers to keep the weapons to themselves, because in parting with them they part with a measure of their own power and influence. It seems likely, therefore, that this year Mr. Aiken will press for adoption of his proposals, whether or not there is to be any system of control.

Remembering the Canadian comment that the wider dissemination of nuclear weapons can lead only to "uncontrollable anarchy," one may hope that the Irish Government is able to rally many more than 37 votes in its favor this year. There might be value in a declaration by those nations who support the Irish proposal that, if the great powers will give the pledge asked of them and if two-thirds of the Assembly will join in, they will individually regard themselves as bound not to obtain or manufacture nuclear weapons. It would exert some moral pressure on the hesitant.

"The Big Red Lie"

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. WOLF. Mr. Speaker, considerable publicity has surrounded the article in True magazine, called "The Big Red Lie," by Lloyd Mallan. The charges by Mr. Mallan that the Soviet lunik or mechta did not in fact exist, and that the Soviet Union is incapable of building an ICBM now or in the near future involve serious enough issues as to deserve close scrutiny. If in fact Mr. Mallan is right, then a great hoax has been staged with acute political damage to the United States, and our national treasure might be wasted with the present level of defense activities. On the other hand, if Mr. Mallan is mistaken, his article could cause serious damage to the United States by adding to public confusion, bringing a lack of confidence in serious conclusions of Federal authorities, and creating a false sense of self-confidence at a very critical time in the race for scientific and military superiority on the part of the United States.

The expression "snow job" has come up in connection with the Mallan article, and some commentators question whether the Soviets did a snow job on Mr. Mallan, or whether Mr. Mallan is doing this to the American public. There is no reason for not being charitable to Mr. Mallan, and crediting him with sincerity. But there is real reason to doubt that he is in a position to give a very good judgment despite his having written popular books about space personalities and having made a tourist visit to the Soviet Union.

The House Science and Astronautics Committee, of which I am a member, has now spent 4 days in hearings, some public and some executive, on the points raised by Mr. Mallan and on related matters. We have not yet concluded these studies, and there will be no committee judgment until all the evidence is in and carefully evauated. At the same time, we have now heard enough to be able to see generally what the probable conclusion is likely to be. I will touch on a few of these points.

It is the definite conclusion of top Government scientists, military leaders, and administrators based on all the evidence, both open and classified, that the Soviet probe did approximately what the Soviets claimed; namely, it traveled to the vicinity of the moon, sending back signals on the way, and at some point beyond the moon entered into an independent orbit around the sun. That it orbited the sun is only a tribute to the very powerful rocket motors used. That it came near the moon and broadcast back signals along the way is a tribute to the overall high level of technical competence, including abilities in guidance, computing, and related areas.

Mr. Mallan's visit to the Soviet Union on which he based his view of Soviet technical backwardness brought errors in his judgment for a number of reasons. Although he met some notable Soviet scientists, there is no evidence that he met the teams actually working on the space program. From photographs and oral testimony to the committee, it is clear that he did not get to see the best Soviet equipment in telescopes, miniaturization, or computers. One must remember that the Soviet Union classes all foreign journalists as spies, and it is hardly likely that they would make it easy for him to see the people and the facilities which would lead to any real insight into their highly classified space activities. Mr. Mallan assumes that for propaganda reasons the Soviets would show him their best. Actually their goal would be to convince the lay public that they are the most advanced country in all respects, as their propaganda mills illustrate. At the same time, it would be a superb victory for their counterintelligence people if through visitors like Mallan, they could convince United States decision makers in high places that the Soviet Union lagged behind, and that the United States could slacken its pace.

This statement cannot be long enough to discuss point by point every comment by Mr. Mallen. In summary, our committee learned that a consistent pattern of U.S. observations, many beyond all known techniques of faking, established that the Soviet device did travel to the moon and beyond. Having gone that far, there was no particular feat in entering into orbit around the sun. The committee also heard that Soviet technical skills are respectable, and that the pace of development there is so great as to pose a rising threat to this country.

Our report, when it is issued, will support these generalizations in a more specific way.

New Frontiers for America

EXTENSION OF REMARKS
OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. ROOSEVELT. Mr. Speaker, on the evening of April 24 of this year in Los Angeles, Calif., I had the distinct pleasure to be among the many hundreds who heard a most lucid, inspiring and seasoned address by Senator HUBERT H. HUMPHREY, of Minnesota.

On the occasion of the annual Franklin D. Roosevelt Dinner, sponsored by the Democratic Central Committee of Los Angeles County, Senator HUMPHREY, in addressing himself to the thesis on "New Frontiers for America," spoke with clarity of thought and conviction about the need and challenge to spark our national thinking toward improved goals and objectives.

It is with pleasure, Mr. Speaker, that I insert in the RECORD the text of his address because I am confident that those having the opportunity to read it will find in it that valuable ingredient of good common sense grounded in liberal and sound philosophical concepts and principles.

Senator HUMPHREY'S speech follows:

NEW FRONTIERS FOR AMERICA

(Remarks of Senator HUBERT H. HUMPHREY, Democratic Committee Roosevelt Dinner, Los Angeles, April 24, 1959)

We gather here tonight to draw inspiration from the life and works of Franklin Delano Roosevelt.

An ancient philosopher of freedom said that a man whose work is nearly done is sometimes gifted with prophetic vision. So it was with Franklin D. Roosevelt. The last words he ever penned, to the San Francisco Conference of the United Nations which he did not live to attend, said, "We must move forward with strong and active faith."

How well these words sum up his own life and works. How well they state our tasks for today and tomorrow.

No man ever had more justification than Franklin Roosevelt, in April 1945, to look backward with satisfaction.

The greatest of depressions had been routed.

The most far-reaching economic and social reforms had been built into the permanent structure of our Nation.

The most powerful oppressors in the history of mankind had been challenged, and their defeat and surrender were clearly in view.

A new concert of nations—the United Nations—was in the making.

Yet the last written words of Roosevelt were not words of contentment. They were a call to action. They summoned us—they summoned the world to which he spoke—to move forward.

To Franklin Roosevelt, moving forward did not mean reliance on the momentum of forces already in being. He said that we must be strong and active. He knew that there was no strength in waiting for events to take their course. He demonstrated that events must be shaped. He knew that neither domestic nor international problems could be solved by sporadic and desperate reactions to crisis. He demonstrated that leadership depends upon holding the initiative, that leadership means positive action.

And he knew that this action must be guided by faith. Not the unreasoning faith that all will turn out right, if we but close our eyes to all that is wrong. But a reasoned faith in the capacity of free peoples and free institutions to solve their problems by seeing the truth, by trusting themselves, and by limitless devotion to human progress through human endeavor.

Today, those looking backward rather than forward, those who are passive rather than active, and those who substitute unfounded fears for reasoned faith, may find much discouragement in the world around us. But for those of us who reject the doctrine of despair, who are propelled by the Roosevelt tradition, the challenge of our times is bright with hope.

In the years ahead, three great goals confront America: the winning of an honorable and lasting peace; the fulfillment of our economic potential; and the attainment of full dignity and liberty for every American.

The winning of the peace means this: it means unfailing pursuit of the goal of universal disarmament, so that men can devote their energies and resources to constructive purposes, to bettering the lot of their fellow men.

But until we attain that goal, the pursuit of peace means superiority in arms—a shield of defense—not only to deter those who would make war, but to negotiate disarmament from strength, and not from weakness.

And finally, the pursuit of truly lasting peace means a long, hard struggle to improve the lot of the oppressed, the poor, the hungry, the sick, and the illiterate.

For the Communists will never cease their appeals to these people; and unless we wish to yield the world to their domination, we cannot relax our efforts to help those who are less fortunate than we.

These totalitarian states, first Russia and now in increasing measure China, recognize no ideal but power. Yet they know where they are headed, and they have the blueprints for attaining their goals. Year by year, the masters of the enslaved people are driving them ruthlessly and relentlessly forward, in the most gigantic program of military and economic development the world has ever seen.

Within their master plan, though, they are flexible, agile. They blow hot and cold. They push forward and pull back. They belong to the United Nations, but they do not respect it. They seek to use it as a tool for their own designs, not as a means toward international harmony.

In ultimate purposes, we in the United States represent the opposite pole.

We regard the United Nations as a mechanism through which we and other peace-loving nations can build an international order of law, morality, and peace.

We seek to build no mpires, but only to build freedom and plenty.

We seek to impose no will upon anyone, except the will to live and let live.

We have no satellites, no unwilling allies.

None need fear us, except those who fear resistance to wrongdoing.

Our shortcomings, unlike those of the totalitarians, are not in ultimate purposes. But we have not yet equalled them in the steadfastness of our purposes; nor in our willingness to dedicate our full resources to the attainment of our goals.

We properly believe in a military shield of unequaled strength; but this administration tells us that we cannot afford to maintain it.

Through the Marshall plan, the point 4 program, and in other ways, we have recognized that economic participation in the strength of the free world is the ultimate weapon of freedom; but we are not now matching the size of our purposes with the size of our deeds.

Too many of our actions are improvised and disconnected, instead of being purposeful and long-ranged. Too often we blunt the effect of fine words with meager deeds. And too often we blur the effect of fine deeds with foolish words.

In this quest for peace, we are too much on the defensive.

Where we should be actively branding the Soviets before the United Nations with contaminating the atmosphere with their nuclear explosions, we are silent, for our own hands are not clean.

Where we should have taken the initiative in calling for nuclear test suspensions, for too long, we allowed the Soviets to hold the offensive.

Where we should be boasting of our efforts and desire to help other nations with economic and technical assistance, our Government seems to apologize for these efforts. We seem to be ashamed of being Christian in our behavior—of helping our fellow man because he is our brother and he needs our help.

The challenge of the Soviets is total. Their dedication is total. They have stolen from us our very own idea of helping other nations to help themselves, and they are pursuing it with a zeal and an energy which today we are not equaling.

We cannot answer this challenge of the totalitarians merely by unmasking its malevolent intent. We cannot answer it by false statements that they do not have the power to accomplish their asserted goals. We cannot answer it by soothing statements. We can answer it only by superior deeds.

We are the true originators of help to others, not because we need their help, but rather because they need our help. We are the true originators, not of the idea of helping others for political or even economic reasons, but rather of helping others for human and moral reasons.

The Indian peasant, the longshoreman in an Indonesian port, the miner in Ghana, do not care a whit about political contests between great powers. They do not care whether the American economy or the Russian economy grows faster. They do care about their own daily struggles to keep alive and to move forward. They do care which of the powerful economic and political systems will do the most in a practical way to help them along. And they are eternally right in their preoccupation with these matters.

Dollars are important, but they alone will not do the job. We need to tell the world better what we are trying to do. We need to distinguish more carefully between impressing our ideas upon others, and making others aware of our ideals. An expanded Voice of America cannot take the place of expanded actions by America. To have good things to say, we must have good deeds.

The second great goal before America is the fulfillment of our economic potential here at home.

In pursuing this goal, we must look upon our economic system as something bigger than the dollar sign, and something warmer than the stone walls of factories.

We seek not only to build machines, but also to improve men; not only to provide work opportunity, but also to provide leisure for self-development; not only to achieve security, but also to stimulate initiative and daring; not only to be efficient, but also to do justice.

With the resources, technology, and inventiveness that are ours, we can within a short space of years bring to pass in America the prophets' dream of abolishing any remnant of poverty in a land of limitless plenty. And by reducing to secondary importance the satisfaction of material wants, men and women can turn more effectively to those higher values which are the mark of men and women created in the image of God.

But in order to move forward with strong and active faith toward this goal, we must recognize and dispose of one primary obstacle. The obstacle is a Republican administration which is satisfied with stagnation.

Let me illustrate the difference between the Eisenhower Republican administration and the inheritors of the Roosevelt tradition:

Picture, if you will, a Republican and a Democrat examining the latest statistical report card on the progress of the American economy.

The Republican looks at the report card and exclaims: "Let's grade this A-plus in everything. This will make the parents happy and confident; in fact, it will make everybody happy and confident; and if everybody is happy and confident, there is nothing in the world to worry about."

The Democrat is more likely to say, "Let's face the facts. Let's tell the truth. The economy is not doing as well as it should."

The Republican is likely to make strange use of the law of averages. When he finds that the youngster's blood pressure is 25 percent too high and his respiration 25 percent too low, he may well say that the average is perfect.

But we Democrats do not derive an average of economic stability from the record-breaking profits of a few giant corporations and the record-breaking failures of small business.

We do not derive an average of economic justice from more families with incomes above $400,000 a year and more families with incomes below $4,000 a year.

We do not derive an average of national well-being from more investment in cars and iceboxes and less in roads and schools.

The Republicans take great pride in telling us that the economy is bigger than ever—as if this solved everything.

But when the Republican press agents tells us that we are now higher than ever before, we want to know who is higher, and how much higher. The 4½ million unemployed are not better off than ever before. The farmer is hardly enjoying unique prosperity. The homeowner is hardly being helped by higher and higher interest rates. The small businessman has not reached his millenium.

The truth is, the economy has been dragging along in the last half decade.

From 1953 through the end of 1958, we have lost more than 10 million man-years of job opportunity. Unemployment has more than doubled.

The income of the average American family has been penalized to the tune of almost $3,000 in real buying power.

Net farm income has been about $31 billion less than it should have been, and wages and salary income almost $100 billion too low.

Private business investment opportunity has been almost $40 billion too low.

The excessive idleness of plant and manpower from 1953 through 1958 caused us to lose more than $150 billion in total national production.

As a result, even high tax rates have yielded to all levels of government about $25 to $30 billion less revenues than full prosperity would have yielded. These deficits in public revenues have meant deficits in national security and international economic cooperation. They have meant immense deficits in education and health services, housing and resource development, social security improvement and income protection to the unemployed.

None of these things has happened by accident. Every basic economic policy of the Republican administration—the tight money policy, the regressive tax policy, the penny wise and pound foolish economy programs, the giveaway of our resources—all of these have resulted in substituting economic stagnation for full economic growth.

These Republican policies have not meant boom and bust in the old-fashioned sense. The protective Democratic legislation of the New Deal and the Fair Deal has saved us from this. But they have meant recession half the time and stunted growth all the time.

Where do we go from here; and first of all, where can we go?

If we fully marshal our economic potential, we can in the next 5 years lift our $460 billion economy to much better than a $600 billion economy.

We can increase the average annual income of American families, measured in real buying power, by about $2,000.

We can liquidate most of the private poverty, which still bears down upon millions of our people.

We can have prosperous farmers as well as prosperous industry; small business can thrive alongside the corporate giants. In short, we can lift those at the bottom without penalizing those at the top.

We can combine the American system of different rewards for different abilities and efforts with the American system of equal opportunity for all and social justice.

And on the productive foundation of this private economic progress, we can check the impoverishment of our vital public services, and put an end to the neglect of our greatest national and worldwide priorities of need.

We can, in a word, fulfill our economic potential and realize our dream of abundance.

The third great goal before America is the attainment of full dignity and liberty for every man, woman, and child within our borders.

We have made a start toward equality of opportunity for employment; you in California crossed one more barrier when your legislature acted so forthrightly.

We have made a start toward integrating our public schools.

We have made a start toward integrating our public facilities of all kinds.

We have made a start toward preventing discrimination in housing.

We have made a start toward assuring the right of every citizen to vote.

Yes, we have made a start in each of these areas. But there is still much more to be done.

And we are determined that from these small beginnings we shall one day build a land of tolerance that knows no bigotry.

The road toward understanding and tolerance, toward equality and justice may be a rough one. But we must travel that road and travel it surely if we are to survive in a world two-thirds colored. And we must travel that road and travel it courageously—not only because it is necessary for our survival—but because it is right.

As we would protect every American against discrimination because of race, religion or ancestry, so we must also protect him against all other arbitrary governmental action.

Away with test oaths that serve only to stigmatize.

Away with secret informants who too often speak from malice and ill will.

Away with public character assassination.

How proud every citizen of California must be of Chief Justice Earl Warren, who has done so much to make every American more secure in his heritage of freedom.

My friends, if we move forward to cross and conquer these three new frontiers, many of us may live to see the greatest era of accomplishment in the history of man.

During a large part of the 19th century, the Old World enjoyed a wide measure of peace and prosperity, scientific development, and practical reform. The outstanding characteristic of this period was faith in the future of man, expressed by a poet laureate of England who spoke of the gleam of the untraveled world ahead.

At this midpoint in the 20th century, mankind is again moving into an untraveled world. New problems, new danger, new uncertainties, confront us. But the new world into which we are moving is also gleaming with high promise. The free peoples of the world are infinitely stronger than they were in the 19th century. We have gained in knowledge of the physical world, in science and technology and communication. Above, all, we have come to appreciate the links which bind all free peoples together. We have found the instruments of cooperation which may forge these loose links into an unbreakable chain of strength.

So let us lead from strength. Instead of thinking that every great task is beyond our means, let us measure the greatness of our capacity.

Instead of filling the air with fear, let us fill men's hearts with hope.

Instead of being overwhelmed by the dangers of the world, let us be inspired by the challenge to surmount these dangers.

Instead of worrying about the future, let us labor to create it.

Again in the words of the poet, as the great world spins forever through the ringing grooves of change, we can bring an increasing

purpose into the lives of freemen, if only we do not close our minds to new problems, if only the thoughts of men are widened with the processes of suns.

Cubans Less Enthusiastic About Castro as They Watch Changes

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. BOW. Mr. Speaker, Raymond E. Dix, publisher of the Wooster, Ohio, Daily Record, maintains a lively interest in international affairs and has traveled widely to study the problems of other countries and our efforts to deal with them. Recently returned from a trip to Haiti, the Dominican Republic and Cuba, Mr. Dix has published an interesting account of Cuban attitudes toward the revolutionary government which I include with my remarks:

[From the Wooster (Ohio) Daily Record, Apr. 28, 1959]

WHAT'S HIS AIM?—CUBANS LESS ENTHUSIASTIC ABOUT CASTRO AS THEY WATCH CHANGES

(By Raymond E. Dix)

HAVANA, CUBA.—What does Fidel really want? People here need the answer to that question before they can evaluate the situation.

Public opinion is not almost unanimous as it was in January and even in February. Polls then showed 98 percent of the people were back of Castro. A poll taken in March showed that Castro had slipped to a 61 percent approval. Castro quit taking polls after that one.

Cubans are afraid to talk. They are afraid of reprisals. They fear the confidence boxes where anyone can drop in a complaint against anyone. Such complaints lead to almost immediate arrest, and once in prison you may stay there a long time. There is no such thing as habeas corpus under a government by decree such as the present government in Cuba.

Cubans are beginning to fear that Castro is improvising, making up his mind as he goes along. They believe he was sincere at one time. But they see that he loves adulation, that he can brook no opposition whatsoever. The elections that were to be held within a year of the downfall of the Batista regime are now being promised within 4 years. Fidel says he will name a date soon, but he hasn't yet set the date when he'll set the date.

"I don't like what is happening," said a taxi driver who must have been about 60 years of age. "He's too young a man with no experience whatsoever."

One prominent Havanan said: "They (Castro's people) don't want opinions from anyone over 22 years of age."

Cubans have an expression, "When a frog grows whiskers," which they use when they want to say something may never happen. They are using that expression today about the elections that have been promised at various times.

"We are afraid that all Fidel has wanted all along is power," said one student of the country's affairs.

If power has been and still is Fidel's goal, Cubans are in for a bad time.

The Communists intend to use the Fidel regime for all it is worth. Many important Communists occupy posts close to Castro. A man who calls himself David Salvador is running one of the major radio networks. He is a Communist.

The Communists are calling this our revolution. Their people are making many of the major decisions.

Our representatives here are trying to figure out just how the Communists intend to operate. Will they work just below the surface as they did under the Arbenz regime in Guatemala? Or will they stay out of positions of authority and try to cause the American Government and the Cuban Government all the embarrassment possible?

Just how is the Fidel Castro regime linked with the threatened invasions of the Dominican Republic and of Haiti, and possibly Panama? Fidel may have changed his position during his present trip in the United States. Before he went to the United States his enemies said he considered himself the Napoleon of the Caribbean with intentions of upsetting the Governments in the Dominican Republic, Haiti, Nicaragua, and possibly Panama.

Despite protestations to the contrary he knew about the abortive embarkation of Cuban revolutionaries for Haiti. He has succeeded in creating a state of jitters throughout the area, if nothing else.

Fidel has been articulate about three goals, agrarian reform, full employment, clean government. He is now saying that it wouldn't be a good thing to hold free elections until he has achieved these goals.

Agrarian reform means land for the landless. Whether or not he will partition his mother's hundred thousand acres is a moot question. His mother has reportedly told him to stay away.

Fidel was a fair student at the university, but by no means an exceptional one. His grades frequently ran from 70 to 79, not much higher. He spent much of his time playing at politics. He had the knack of going over a fellow student's notes before an examination and retaining enough facts to pass.

Raul, Fidel's brother, didn't graduate from high school. He is head of the army.

Historians of the country don't like the way Raul rewrites history to fit into his political thinking.

Sensitive people recoil at the continuous executions. Each new killing costs the regime hundreds of friends and further undermines the confidence of the people.

Rents have been reduced by one-half by decree of the government. Building has dropped 75 percent. Property has descended in value. All this has happened because people don't know what to expect next.

Castro just can't stand any opposition. Anyone who disagrees with him is labeled a counter-revolutionary.

Raul, who is feared and distrusted because of his ignorance, made a speech the other night during which he called one of the country's eminent patriots a traitor in the employ of the United States. He named him: Herminino Portell Vila who is the director of the American-Cuban cultural center in Cuba.

Portell Vila has been a frequent critic of the United States. He was strongly opposed to the Batista regime. He was one of Castro's early supporters.

Batista fell because his regime was corrupt from top to bottom. The people of Cuba had had all they could stand. They saw in Castro the person who could rid them of this corruption. The influential people joined forces, contributed their money, and paved the way for Castro. They were promised an immediate provisional government to administer the laws of the country and an election within a year. If Castro wants to regain the support of these people he will have to make his promises good.

Batista's fall came suddenly and as a surprise to most of the American people because they had not heeded the news and the warnings that constantly kept coming from the island.

UPI manager McCarthy went to Florida in December to telephone his office in New York to give the warning. He knew that the dispatches were not being interpreted correctly.

American embassy officials knew the end of Batista was at hand. They kept the Government constantly apprised. They had it timed within days.

How can conditions degenerate to such a state in this wealthy little country? The answer is partly because the country is so wealthy. Life is easy. Income is the highest of any Latin American country. Taxes are low. The Government takes in enough on import and export duties to run the Government profitably in spite of all the graft.

A corrupting influence has been the large subsidies given newspapers. Every month the Government has doled out a quarter of a million dollars to the city of Havana's 17 daily newspapers. This money goes to the newspapers and to some of the top reporters. The system of division is a rather informal one. Since the fall of the Batista regime the Government has substituted paid advertising for the direct dole. Every night in all the 17 daily newspapers some government agency has a large ad for which it pays a very high rate.

The thinking back of this system is that the newspapers disseminate the Government's information and are thus being paid for it. But the practice is completely corrupting. Of course this explains the 17 daily newspapers. A U.S. city of this size wouldn't support more than three and possibly not more than two daily newspapers.

But Cuba is stuck with Castro and Castro with Cuba for the moment. There is no machinery apparent which could change situations.

Cubans didn't want a political revolution. They wanted only a fair government, free from graft. Maybe Castro's sensitive ear by which he seems to be feeling his way will tell him that when he returns to Cuba. But maybe his new power has dulled his hearing. In that event we are due for a lot of trouble 90 miles off the American coast.

How Much Federal Aid Did the Pilgrims Get?

EXTENSION OF REMARKS
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. MOELLER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I call attention to an advertisement inserted by a leading machine tool company in recent issues of several national magazines. The advertisement sounds a warning to America on the dangers we face through overdependence on Government and less dependence on self. It sounds a call for a return to the traits of character, work, and self-respect which made us the greatest Nation in the world because our people possessed those traits.

The advertisement may oversimplify the picture. The fact that I ask that it be inserted in the CONGRESSIONAL RECORD does not mean that I decry all of the present-day programs and policies at

which it is apparently aimed. I do feel, however, that despite the differences between our present-day civilization and way of life and those in which our forefathers lived and worked, we can learn a great lesson from the basic though behind this advertisement. That thought is this: The great Nation which is America became what it is because the men and women who worked its soil and manned its factories were strong, self-reliant individuals. They did it themselves. That is the breed of men and women we need today if we are not to fall victim to our own weaknesses and become easy prey to the philosophies of socialism and communism which stalk the world. Strong men are not made strong by constant pampering and self-indulgence. They become strong through hard work, self-responsibility, and above all a determination to rise above circumstances and not to cringe before it. Let that be our aim as individuals and then as a united people we will continue to deserve the name of Americans.

The advertisement follows:

HOW MUCH FEDERAL AID DID THE PILGRIMS GET?

They were in a depressed area. No one guaranteed them high prices for anything. Their only roads and schools were built by themselves. For security they did their own saving, or starved.

All they had was character. All they did was work. All they wanted was self-respect.

The sum of those three traits became America.

But what's going to be the sum of the traits you see today—the traits of character, or, rather, lack of it, that demand more money for less work, put security above self-respect, pamper self-pitying criminals instead of punishing them, give away resources we desperately need to protect ourselves, listen to weaklings that want Government to take care of them when they should take care of themselves.

Long years of early-American self-respect and hard work built America, but the traits you see today can destroy it, in half the time.

Free Trade Wrecking Pottery Industry

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. HENDERSON. Mr. Speaker, we have debated the merits and disadvantages of our Nation's trade policy in this Chamber on repeated occasions in the past. Each time the debate has been resolved in favor of sacrificing various domestic industries to obtain some international advantage. This is a calculated policy which I have opposed vigorously each time it has been debated here.

In my opinion, we have failed to comprehend the consequences of our tariff policy. Too little attention has been given to the actual issue involved—not alone of competing products in the marketplace, but of competing ways of life and standards of living. The standard of living we enjoy cannot compete with the subsistence standards of Japanese labor, for instance. The abstract arguments of free trade economics are ridiculously superficial and meaninglessly theoretical in evaluating the tariff issue today.

Southeastern Ohio, the area I have the honor to represent here, has felt the eroding effect of a trade policy which has opened our ports to an increasing flow of products produced abroad. The pottery industry is an excellent example of what has happened and will contine to occur throughout our economy as we persist in pursuing this policy.

Today I wish to call to the attention of the Congress an excellent editorial by Wilbur D. Matson, the publisher of the Morgan County Herald of McConnelsville, Ohio, as it was reprinted in the April 11 issue of the Times Recorder of Zanesville:

FREE TRADE WRECKING POTTERY INDUSTRY

Bill Gold, feature writer in the Columbus Citizen, carried a highly interesting article a few days ago, showing how the pottery business in southeastern Ohio is being wrecked by free trade. He quotes Mr. McClelland of Universal Potteries at Cambridge in the following illuminating statistics: In 1947, 26 million man-hours were worked in this industry. This was reduced last year to 8½ million hours. Eleven years ago, 27 million dozen pieces of dinnerware were shipped. This figure last year was cut in half. At Coshocton, Pope Gosser China Co.; the Crooksville China Co.; and, a few weeks since, the Dimond Pottery (since resold to an Akron firm); Roseville, Zanesville, East Liverpool, and other pottery centers in southeast Ohio, have been heavily hit by potteries which have closed their doors.

What is the cause? The ceramic industry, so important to this section of Ohio, was built up on a protective tariff. The men who ran this country 50 years ago had sufficient practical business sense to know that no potter could compete with his product on the market and pay the American standard of wages, currently from 5 to 7 times paid in eastern Europe and 10 times what the Japanese worker is presently drawing. The result of reciprocal and free trade policies is just a logical case of cause and effect. It is destroying American potteries and turning over the richest consumers market in the world to the foreigner.

To be sure, the wreck of the pottery industry is not entirely attributable to lack of protection—but that is the principal reason. Plastics, driving clay products from the field, are but a small contributing cause.

Not only have we thrown open our markets to the Japanese and other overseas competitors, but we have actually subsidized the potter abroad through foreign aid. The American potter has been taxed to help pay for foreign aid to build up his competitor. Were the American industrialists allowed to compete on an equal footing with the foreign potter, it would be different. But American industry has no monopoly on brains and business organizations. It is hopeless to compete with the Jap potter, his chief competitor, whose men draw but one-tenth that of the American pottery worker. So he gives up the unequal struggle and closes his doors.

We have heretofore in this column quoted Bismarck, on the tariff—Bismarck, the Iron Chancellor, who unified Germany and was one of the world's greatest statesmen. Noting that those nations which had adopted a protective tariff policy grew strong in industry and finance, while those who pursued free trade retrograded, he said:

"For the abstract teaching of science in this connection (referring to a protective tariff) I care not a straw. I base my opinion on experience, the experience of our own time. I see that protectionist countries are prospering, that free-trade countries are retrograding, and that great and powerful England, the mighty athlete, who, having hardened her sinews stepped out into the open market and said: 'Who will fight me? I am ready for any and all,' even she is gradually turning toward protection, and will in a few years adopt it in order to keep for herself, at least, the English market."

Exactly what Bismarck said would happen to Germany, is closing down American potteries and other industries which cannot compete with low wage scales and low costs of production abroad. Over here, closing down factories which produce wealth and taking men from productive jobs and placing them on relief or unemployment rolls, passes for statesmanship. Surely, we owe it to our potters to give them sufficient protection to equalize production costs and place them in a competitive position in the markets of the world. Any other trade policy is rank folly.

397th Anniversary Is Appropriately Memorialized at Jacksonville, Fla.

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. BENNETT of Florida. Mr. Speaker, the beginnings of permanent settlement by Europeans in what is now the United States go back to May 1, 1562, when French Huguenots under Jean Ribaut and René Laudonnière first set foot on the banks of the St. Johns River near what is now Jacksonville, Fla. They then and there erected a beautiful monument on the south bank of the river and explored the coast for some distance. Finally, they returned in 1564 and 1565 to found the settlement Fort Caroline, near where the monument had been erected. There were then no other European settlements in what is now the United States. The success of this venture inspired Queen Elizabeth to undertake the Roanoke settlement some years later and required the Spanish to settle St. Augustine in 1565. At the present time, there are some exceptionally fine exhibits of the history of this period being displayed on the site at the Fort Caroline National Memorial, Jacksonville, Fla. These exhibits contain not only the things which are permanently there under the supervision of the National Park Service but a number of interesting temporary exhibits on loan from other museums.

Since the 397th anniversary of the erection of the column has just recently passed it seemed appropriate to me to have included in the CONGRESSIONAL RECORD at this point an article from the magazine published by the Daughters of the American Revolution which gives some additional historical information. The article is particularly outstanding because of its inclusion of the excellent

talk by historian Albert Manucy when he dedicated a replica of the Ribault column at the Fort Caroline National Memorial late last year. The article and speech are included at this point:

FLORIDA DEDICATES THE RIBAULT MONUMENT

(By Mrs. G. Fildes Tresher, State historian of Florida)

The Florida Daughters dedicated the new site of Ribault Monument at Fort Caroline National Memorial on Wednesday, October 29, 1958, at 3:15 p.m. The inscription reads as follows: "Donated to Fort Caroline National Memorial by the Florida Daughters of the American Revolution, and moved from a site near Mayport, Fla." The earlier monument was erected in 1924 to commemorate the landing of the French in Florida with the Huguenot Capt. Jean Ribault at the St. Johns River on May 1, 1562. This shaft, bearing the arms of France, is a replica of the one erected by Capt. Jean Ribault in 1562 on the River May, now St. Johns River.

Because of the expansion of the U.S. naval installations at Mayport, it was necessary to move the 1924 marker, and it was moved to where it now stands, on historic St. Johns Bluff within the bounds of Fort Caroline National Memorial. This national memorial commemorates the French colony established at Fort Caroline.

Mrs. Jackson E. Stewart, State regent, presided at the dedication ceremony. Mrs. G. Fildes Tresher, State historian, was chairman of the event. The invocation was given by Rev. Clyde B. Lipscomb and the pledge to the flag was led by Mrs. Edward G. Longman. The main speaker of the afternoon was Albert C. Manucy, historian, National Park Service, and president, Florida Historical Society. Others taking part in the program were Mrs. James A. Craig, honorary State regent, who was State regent at the first dedication of the monument in 1924, and the Honorable CHARLES E. BENNETT, Congressman from Florida.

The monument, presented by Mrs. Stewart, was accepted by John R. DeWeese on behalf of Fort Caroline National Memorial.

TALK BY HISTORIAN ALBERT MANUCY FOR THE DEDICATION OF THE RIBAULT MARKER AT FORT CAROLINE NATIONAL MEMORIAL ON OCTOBER 29, 1958

France, in the middle of the 1500's, was full of discordant and struggling vitality. The leaven of the Reform was working. John Calvin was a foremost ecclesiastical leader of the new movement. Gaspard de Coligny, Admiral of France, was foremost among the military nobles who embraced the reformed religion.

Coligny was not only a valiant and resolute soldier; he was a calm and sagacious statesman. In the conflict among Frenchmen, and in France's rivalry with powerful Spain, he knew that he saw a gathering storm, full of danger for France and its people.

There was another man, like unto Coligny in his concern for the welfare of his country and the souls of its people. Perhaps he lacked Coligny's calm balance, but this man, Nicolas Durand de Villegagnon, was also a proved soldier—a brave Knight of Malta scarred in battle with the infidels.

It was he who led a colony of Huguenots to the coast of Brazil in 1555, there to build Fort Coligny and the settlement that was called Antarctic France. This was a French challenge to the pope's division of the New World between Spain and Portugal. It was also a Protestant colony—a band of Huguenots who sought those opportunities which the Americas promised to any man who was brave enough to seize them. But Villegagnon was not the leader for this colony. The settlement grew feeble, and in 1558 the Portuguese destroyed it.

Yet, it was a start. The next year, 1559, the Ministers of the French King officially set forth the first of the French plans for a systematic attack upon the American sources of Spanish treasure. By this date, Spain already had about 200 settlements in the tropical Americas. Cortez had found the silver in Mexico, and Pizarro had discovered the treasures of the Incas in Peru.

The French knew that Peruvian treasure was brought to Panama each year in May, so a strong squadron sent there could ruin the Spanish navigation at a single blow. On the way, they could sack Santo Domingo and Puerto Rico, which were poorly defended; and 1,200 troops could march across the isthmus and surprise the South Sea Fleet in Panama harbor. Sailing north, the squadron could attack the flotilla bearing the Mexican silver when it left Veracruz in June. Then, returning through the Florida channel, the expedition could destroy new fortifications that were under construction at Havana.

Out of Coligny's planning for a France that would lift herself above the increasingly bitter an unreasoning civil conflict between Catholic and Huguenot, out of this planning grew the idea of another colony—this one to be in North America, the continent which Jacques Cartier had penetrated 20 years earlier. This might be a city of refuge for persecuted Huguenots, but it would also be a foothold to challenge Spain's supremacy in the Americas, and a project that would redound to the glory of France. No one has told the story of Coligny's colonies better than Francis Parkman. Let me read you a few of the lines he has written:

"An excellent seaman and stanch Protestant, Jean Ribault of Dieppe, commanded the expedition. Under him, besides sailors, were a band of veteran soldiers, and a few young nobles. Embarked in two of those antiquated craft whose high poops and tublike proportions are preserved in the old engravings of De Bry, they sailed from Havre on February 18, 1562. They crossed the Atlantic, and on April 30, in the latitude of 29½°, saw the long, low line where the wilderness of waves met the wilderness of woods. It was the coast of Florida."

On the morning of first of May (1562) they found themselves off the mouth of a great river. Riding at anchor on a sunny sea, they lowered their boats, crossed the bar that obstructed the entrance, and floated on a basin of deep and sheltered water, "boiling and roaring," says their leader Ribault, "through the multitude of all kind of fish."

Never had they known a fairer Mayday. The quaint old narrative is exuberant with delight. The tranquil air, the warm sun, woods fresh with young verdure, meadows bright with flowers; the palm, the cypress, the pine, the magnolia * * * cedars bearded from crown to root with long, gray moss; huge oaks smothering in the folds of enormous grapevines—such were the objects that greeted them in their roamings, till their new-discovered land seemed the fairest, fruitfullest, and pleasantest of all the world.

They found a tree covered with caterpillars, and the narrative says: "Also there be silkworms in marvelous number, a great deal fairer and better than be our silkworms."

They named the river the River of May—this river now called St. Johns. "And on the next morning," says Ribault, "we returned to land again, accompanied with the captains, gentlemen, and soldiers, and others of our small troop, carrying with us a pillar or column of hard stone, to plant and set the same in the entry of the port; and being come thither we espied on the south side of the river a place very fit for that purpose upon a little hill compassed with cypress, bays, palms, and other trees, with sweet smelling and pleasant shrubs." Here they set the column, and then, embarking, held their course northward, happy in the benign decree which locks from mortal eyes the secrets of the future.

Preliminary exploration was the object of Ribault's voyage. But his men liked this new land, and when he reached the South Carolina harbor they named Port Royal, they decided to build a fort. They named it Charlesfort, and 30 of them were chosen to man it, while Ribault and the others went back to France for reinforcements.

The exact location of the 1562 fort is not known today. Some months ago, in connection with work on the Fort Caroline Museum, I visited the site of a fortification excavated a number of years ago on Parris Island, S.C. This site was believed by some to be the location of Charlesfort. However, today we are sure from the character of the site, as well as from the nature of artifacts recovered from it, that the Parris Island site is not French, but Spanish. The complex of artifacts is identical to what is found in known Spanish sites of the 1500's in the Caribbean.

The tragic fate of Charlesfort is a well-known story. Ribault could not return. The men he left at Port Royal were not colonists; they were soldiers and adventurers. In a land of plenty they came to the verge of starvation. Their leader, Albert, grew harsh and domineering. With his own hands he hanged a drummer who displeased him. He banished a soldier named La Chere and left him to starve on a solitary island. But Albert was overpowered and murdered, La Chere was rescued, and the men decided to leave this land. They built a crude boat and set sail. Far out in the Atlantic they were becalmed. Food and water ran out. They cast lots, and the loser was La Chere, the same wretched man whom Albert had doomed to starvation but they had rescued. Now they killed him, and his flesh kept them alive until an English vessel saw them and took them captive to Queen Elizabeth.

The news of Charlesfort came to Spain, but not the news of its failure. A trusted soldier of Havana, Capt. Hernando Manrique de Rojas, went under the Spanish King's orders to do certain specific things:

First, he would sail to Florida, and at the 29th degree of latitude he would find a stone column bearing the arms of France. He would either destroy it or fetch it to Havana.

Second, he would find another at latitude 30, and treat it the same.

Third, at latitude 32, at the St. Helena River, he would find another column to treat likewise. There he would also find the wooden fort of the French and learn what must be done to expel them.

Fourth, he was ordered to "expel them if you can, bringing prisoners if you can, and destroy the fort so completely that no trace of it shall remain."

I would like to read you some paragraphs from Captain Manrique's report on his voyage to Florida in 1564. The translation is by the late Dr. Lucy Wenhold, my good friend. So far as I know, this document has never before been rendered into English.

This is the declaration of Capitan Hernando Manrique de Rojas (I paraphrase it somewhat for the sake of brevity):

After Capitan Manrique left Havana, he sailed by day along the Florida coast up to a harbor at 29°. On May 23 he explored its shores and went to an Indian village on its banks. Nowhere did he find the column nor any evidence of Christians.

They sailed to a river at latitude 30. (The St. Johns is above 30° latitude.) On May 26 the capitan went ashore. There he found about 80 Indians and learned that Christians had passed through going northward. In one of the village huts he found a wooden box made by Christian hands, but no column.

On May 31 they entered a river at latitude 32, found signs of the French, and decided to search even farther north.

On June 11 they were in another harbor, and saw a pair of Indians in a canoe. Willingly the Indians came aboard and helped

them sail to the village, where they found iron axes, a mirror, some cloth, bells, knives, and other things of Christian manufacture. By signs the Indians told them that 34 men with a ship had been at the village, but 33 had gone. One man remained at a nearby village called Usta. Capitan Manrique sent two Indian messengers for this man, giving them a piece of wood marked with a cross as a sign that Christians were here. The next day at noon the man arrived. He was dressed like an Indian, but he said he was a Frenchman.

Under oath, the Frenchman said he was a Christian named Guillaume Rouffi. He told about his voyage to this land and said they had set up a stone marker bearing the arms of France in the place they had first explored and another 3 or 4 leagues south of where they now are. On this same bay they had built a house of wood and earth, roofed with straw. There was a moat around it, and it had 4 bastions and some cannon; 26 men stayed there while the others returned to France.

Of the 26 men, 2 were drowned while crossing a river in a canoe, and 1 was killed in a fight. The others built a 20-ton boat to go to France. The declarant, realizing there would be nobody in the boat who understood navigation, decided to stay with the Indians, where he has been now for the past 14 months.

The Frenchman declares himself to be about 17 years of age. He did not sign the deposition because he says he does not know how to write.

Capitan Manrique ordered him held aboard the frigate under close guard.

On June 13 the Frenchman led the capitan to the fort. In it was found nothing at all. Then the capitan ordered the building to be set on fire and burned, and he ordered me, the scrivener, to certify so in writing. I, the said scrivener, do hereby certify and declare that it was burned and destroyed in my presence.

Then the capitan went in the boat to another harbor, to the place where Guillaume Rouffi said the stone marker was. It was found on an elevation above an arm of the river of the harbor, somewhat back in the forest. It is of white stone, about the size of a man, and on the upper part of it is inscribed a shield with a crown above it, and on the shield three fleur de lys, and below these the character R. Below this are four arabic numerals which read 1561. By order of the capitan, this marker was taken down and thrown to the ground. Thereupon the capitan, in the presence of me, the scrivener, had the stone marker put into the boat to be taken to the frigate and carried to the Governor at Havana. This was done and witnessed.

Times does not allow reexploration of the coast in order to take away the other marker, because Guillaume Rouffi says he does not know what latitude it is in.

So the column at the River May was spared by Manrique's expedition. Because he did not find it, it has been preserved for all time in the drawing made by the artist Jacques Le Moyne de Morgues.

For when Laudonniere's colony came to the River May on May 25, 1564, the Spanish frigate was already some distance north of them. Fortunately for the French, the Spanish skipper decided to return to Havana via the Bahamas, in order to miss the adverse current of the Gulf Stream along the Florida coast.

Laudonniere's colonists landed on the south shore of the River May, at the very spot where Ribault had come ashore 2 years earlier. And there, after a warm and demonstrative greeting by his Indian friends, Rene de Laudonniere was taken to see the stone pillar that the Spaniards had failed to find. The Indians had crowned it with evergreens and placed offerings of food before it, and this is the way that Le Moyne shows it.

Meanwhile, a Spanish naval commander of first-rate ability had applied himself to the Florida problem, which after all was only part of a larger problem involving the safety of Spanish commerce on the great seaways. This man was Pedro Menendez de Aviles, the founder of St. Augustine. Menendez impressed upon his king the importance of strengthening all the American defenses, and especially did he point out the need for occupying the coast of Florida to police it against the French.

The resulting Florida massacre, in which Menendez destroyed the French in Florida, was a terrible lesson. It gravely embittered the struggle between France and Spain, which was now entering a new phase, wherein all the rancor of religious strife was added to the rivalry for trade and territory.

Nevertheless, Menendez achieved his aim. St. Augustine became a defensive bastion for Spain, and France was removed from Spain's path as a serious competitor in the New World for many years. Yet it was not the destruction of the French colonists that brought about the eclipse of the French rival, who alone had contested Spain's monopoly in the New World for two generations. For that eclipse, a momentous change in the political alinement in Europe was responsible; and here we have an important illustration of the truth that the fate of the outer lands is molded less by what happens within them than by what happens at the center of world affairs. France, heretofore unified and strong, was dissolved into warring factions, and its monarchy was forced to rely for help upon the old enemy, Spain. Leadership in the rivalry against Spain then passed from France to England.

But let us return to the stone marker which Ribault had erected on the south shore of the River May. Probably soon after Fort Caroline was captured by the Spanish, the Ribault column was found and destroyed. We may be sure that the other column, found at Port Royal and taken to Havana, was likewise destroyed, after the facts of its existence and removal were duly recorded.

On May 1, 1924, the Florida Daughters of the American Revolution erected another shaft bearing the arms of France to commemorate the landing of the French at this river on May 1, 1962. This shaft is a replica of the one shown in the Le Moyne drawing.

But, as with the original marker, military reasons made it necessary to move the 1924 marker away from the mouth of the river. Fortunately, there is no superior location for this monument than the ground where it now stands, on historic St. Johns Bluff within the bounds of Fort Caroline National Memorial.

For this national memorial commemorates for all time the French colony that was conceived by Coligny, planted by Laudonniere, and nourished by Ribault.

It is therefore with pleasure and gratitude that we of the National Park Service accept the custody of this monument from the Florida Daughters of the American Revolution.

This talk is based largely upon the following sources:

Francis Parkman, "Pioneers of France of the New World" (Boston 1891), pages 20–26, 34–38, 40–41, 44–47.

A. P. Newton, "The European Nations in the West Indies" (London 1933), pages 58–59, 74–75.

L. L. Wenhold (tr.), "Manrique's Report on French Settlement in Florida, 1564" (typescript in library of Castillo de San Marcos National Monument, n.p., n.d.).

Nonaggression 20 Years Ago

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an article appearing in the Washington Star, of May 11, 1959, objectively interpreting present world conditions, particularly with reference to the Foreign Ministers meeting about to start in Geneva, and the probable summit meeting later on. In his timely article Mr. Lawrence refreshes our minds of happenings of 20 years ago, which resulted in appeasement and then war. His article is a warning to representatives of free nations not to make the mistakes that were made only 20 years ago. Fear is the road to war. Firmness before the fact is the only road that might result in peace:

NONAGGRESSION 20 YEARS AGO—SOVIET BLANDISHMENTS TODAY VIEWED IN LIGHT OF WHAT FOLLOWED HITLER PACT

(By David Lawrence)

GENEVA, May 11.—Throughout Europe the people have just celebrated the 14th anniversary of the ending of World War II on this continent. But, strangely enough, the villain who really made that war possible goes unmentioned and unscathed.

For it was the Communist dictatorship in Moscow which just 20 years ago this year formed a nonaggression alliance with the Nazi dictatorship in Berlin. This protected Hitler's eastern front from any danger and permitted him a few weeks later to deploy his entire military force against the West.

Eventually, because the Nazi dictatorship was given a free hand, millions of Russians were slaughtered as the Nazis turned against the Soviet Union. Likewise, millions of persons across Europe were killed because that 1939 alliance made by the Communist dictator gave World War II its initial impetus.

Today a Communist government in Moscow is again propagandizing the world with proposals of nonaggression pacts and pious claims of peaceful intent. Its record, however, is one of opportunistic alliances with dictatorships in Red China and the Middle East. As the four-power Foreign Ministers' conference begins here, the Communists are aiming at concessions that will enable them to strengthen their military position in Europe.

For why do the Soviet chiefs wax indignant about the idea of free elections in both parts of Germany, and why do they balk at the reunification of that country? They have managed by their propaganda to scare many people in the West into believing that a reunited Germany would be a menace to peace. Actually a free Germany was never a menace. When the Weimar republic was overthrown by Hitler, the true will of the German people was ignored.

The Communists now, as in 1939, prefer dictatorships everywhere—they are easier for them to handle.

Today elections in both East and West Germany would mean a free and independent Germany, but this is not what Moscow wants. It seeks a divided Germany so that, through Communist stooges, it not only may continue a puppet dictatorship in East Germany but continue to infiltrate West

Germany. It plans to keep West Germany in a state of limited armament and wants to push the NATO military forces out of West Germany altogether.

In the face of this brazen effort to carry on its program of world conquest, the Communists are accepted in this conference on a so-called negotiating basis. Through out the free world many people have been deluded into believing that, by sitting at the table with the Russians, either here or at a summit conference, something can be done to assure world peace. But the record of the Communist Party, which believes in organized deception, belies any confidence that such a result can be achieved.

The Soviet game is succeeding in some important respects. Thus the worldwide scare about radioactive fallout has produced a public opinion that is demanding a suspension of nuclear tests. Once this is done, the same demand will arise that the use of nuclear weapons also be banned. This would leave the Soviets with a huge supply of troops more powerful than that of the Western allies. The process of dictating to the West would then be intensified.

What is going on here, therefore, must be appraised primarily in terms of military strategy. For when the Communists carry on a negotiation, it is what they seek in a military sense that is really important. Now they want ostensibly to change the status of West Berlin, but actually they seek acquiescence by the Western Powers in what is often referred to as the "status quo." This means confirmation of their conquest of East Germany, Poland, Czechoslovakia, Rumania, Bulgaria, Hungary, Estonia, Latvia, and Lithuania.

Oddly enough, one hears virtually nothing here at Geneva about freeing these captive States, and very little about the tragic plight of these enslaved peoples. One hears only of some plan or device that will placate the hungry dictatorship in Moscow which, true to form, has established an alliance with the dictatorship in Peiping and has helped to set up dictatorships in the Middle East. Billions of dollars are spent annually in Latin America through a Communist apparatus designed to make trouble for the United States and its allies.

One wonders when the western allies will begin to perceive that another Communist dictatorship such as encouraged Hitler to start World War II is today playing the same kind of game that can bring on World War III. To appease the men in the Kremlin by concessions that are supposed to be relatively unimportant is to tell the people of Soviet Russia that in reality the dictatorship in Moscow and its conquests are accepted as an accomplished fact and that the rest of the people in the world are willing again, as in the 1930's, to buy that kind of ephemeral peace.

The Rural Redevelopment Program

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. HENDERSON. Mr. Speaker, Secretary Benson recently made a statement which shows exactly why the rural development program is needed by many farm people. I believe the remarks of the Secretary of Agriculture are of vital interest to my colleagues.

Mr. Benson said:

Underemployment—not surpluses and markets—is their big problem. More of our resources—personnel skills and available funds—must be directed toward meeting the special needs of small farmers, part-time farmers, aged and disabled farm people, and those with limited land and capital.

Mr. Speaker, I know and all of us know that this is the group of farmers which has been neglected and overlooked by the present farm program. We are allowing valuable human resources to go to waste. This program opens to these people an opportunity to share in our national prosperity and still remain in a rural environment, which the great majority prefers. This is not a resettlement program, not a Government-inspired drive to move families, bag and baggage, off the land and into the city.

That movement has been in existence for a great many years, forced upon farm people by modern machinery and improved production methods. Small operators, finding it increasingly difficult to compete, have had to find a new livelihood.

The rural development program gives this group of people a new chance to stay in communities where they were born and reared. It is giving rural trading centers where the program is in operation a new lease on life.

Secretary Benson said the program is functioning in about 200 rural communities. Two of the pilot counties are located in the 15th District of Ohio which I represent here. I have had an opportunity to observe the program's operation over the past 2 years. I am sure that as its potential becomes more widely realized it will spread to a great many more throughout the Nation where rural people are in need of this type of help.

Helicopter Survey of Kansas Area Confirms Prairie Chicken Farm

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. BREEDING. Mr. Speaker, a very interesting survey conducted by Federal and State wildlife agencies, with the assistance of the U.S. Air Force, disclosed the presence of several hundred prairie chickens along the Cimarron River in Morton County, Kans. The area covered 100,000 acres of Government land—ideal for wildlife refuge. The report is as follows:

HELICOPTER SURVEY OF KANSAS CONFIRMS PRAIRIE CHICKEN PLAN

Favorable prospects for a prairie chicken research and management area of national significance in southwestern Kansas were confirmed by an aerial survey of some 100,000 acres of Government-owned land April 14, 15, and 16.

The land, lying along the Cimarron River in Morton County in an almost solid block, was formerly submarginal farming and ranch land. It was acquired by the Federal Government after drought and erosion had driven out most of the farmers in the Dust Bowl years of the 1930's. It is known as land utilization project KA–LU–21, and is in the category sometimes designed as "Bankhead-Jones Act, title III lands."

The survey, conducted by Federal and State wildlife agencies with the assistance of the U.S. Air Force, disclosed the presence of several hundred lesser prairie chickens. An actual count of 274 birds in 24 separate flocks or groups was reported by Dr. Adolph M. Stebler of the U.S. Fish and Wildlife Service, leader of the cooperative wildlife research unit at Oklahoma State University, Stillwater. This was a considerably larger population of the interesting prairie grouse than had previously been estimated.

Since most of the birds were largely discovered on "booming grounds" where the males perform courting displays on spring mornings, it is believed a large percentage of those actually seen and counted were males.

The survey was made in a twin-roter helicopter (H–21 type) provided by the Air Force. The counts were made by biologists seated in the nose and tail of the craft as it cruised slowly over the rolling prairie at altitudes of 60 to 100 feet. The experiment also demonstrated the usefulness of the helicopter in making wild game counts and observations of habitat conditions, according to Dr. Stebler's report. In addition to its slow cruising speed at low altitudes, the 'copter was able to make frequent landings for closer inspections of display grounds and the vegetative cover. An estimated 189 square miles were systematically cruised.

Besides the prairie chickens, the observers saw and tallied from 71 to 90 ringnecked pheasants, 4 coveys of scaled quail, 1 bobwhite quail, 5 deer, and 31 coyotes.

The lesser prairie chicken is perhaps the most endangered of the prairie grouse species, with the exception of the Atwater's chicken of the Texas coastal country. The Atwater's, however, is considered not a distinct species but a subspecies, or race, of the greater prairie chicken. An eastern race, called the Heath Hen, became extinct several decades ago. The natural range of the lesser became the "dust bowl" of the Southwest. Continued overgrazing and farming have steadily depressed its numbers except in small islands of relatively protected grasslands. Remnant flocks are found now only in southwestern Kansas, southeastern Colorado, eastern New Mexico, western Texas, and western Oklahoma.

Since the "dust bowl" disaster of the 1930's, the sandy, erodible soil of the Morton County LU area has been anchored down by the restoration of grasses under the management of Department of Agriculture agencies. First supervised by the Resettlement Administration, a depression-era agency, and later by the Soil Conservation Service, the tract is now administered by the U.S. Forest Service. Limited grazing by neighboring ranchers is permitted.

The Kansas Forestry, Fish and Game Commission has signed an agreement with the Forest Service for a cooperative wildlife management project on the area. Director Dave Leahy of the Kansas commission has announced plans to assign a biologist to the project who will give special attention to prairie chicken problems.

Careful management of the Morton County area could assure the survival of the lesser chicken and perhaps restore the birds to the point where limited hunting might be permitted. At the same time research and management experiments on this large block of land might point the way to restoration of the species over much of its former range.

The helicopter survey was arranged by the National Wildlife Federation through the conservation office of the Air Force. Dr. Stebler was in charge of the field operation. Other individuals taking part or assisting included Maj. R. E. DeGroat, Maj. H. W. Densford, and Conservationist E. A. ("Woody") Seaman of the Air Force; D. C. Coleman, Dick Eggan, and Robert Niece of the Kansas Forestry, Fish and Game Commission; George Atwood of the Forest Service, resident manager of the LU area; Tom Evans and John Dustrude, also of the Forest Service; M. B. Fhrome of Washington, D.C., a freelance writer; and William L. Reavley, western field representative of National Wildlife Federation.

The helicopter crew, detailed from Vance Air Force Base, Okla., was composed of 1st Lt. R. L. Foster and James R. Lamoreaux, pilots, and A1c J. W. Blackwell and J. M. Casey.

Very Rev. Firmin Schmidt, O.F.M., Superior of Capuchin College, Washington, D.C., Named Mission Prefect in Papua, New Guinea

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Catholic Standard of Friday, May 1, 1959, and a news article from the Washington Post and Times Herald of Tuesday, May 5, 1959:

[From the Catholic Standard, May 1, 1959]

CAPUCHIN COLLEGE HEAD NAMED MISSION PREFECT

The Very Reverend Firmin Schmidt, O.F.M. Cap., superior of Capuchin College, Washington, has been appointed Prefect Apostolic of Mendi, Papua, New Guinea, by the Sacred Congregation of the Propagation of the Faith in Rome.

The 40-year-old Kansas priest was ordained in 1946. Continuing his studies at Catholic University of America, Washington, Father Firmin received the doctorate of Sacred Theology in 1951. For the past 11 years he has taught Dogmatic Theology at Capuchin College and since 1953 has been superior of the Capuchin Monastery. In 1956 he was elected provincial counselor of the St. Augustine Province of Capuchins.

The Pennsylvania Province of Capuchin, of which Father Firmin is a member, was entrusted with the Mendi Mission in February 1955. Nine priests and a brother have subsequently gone to the territory, plus two newlyweds, Mr. and Mrs. Fidelis Miltenberger of Cumberland, Md. Mr. Miltenberger pilots the Cessna plane of the missionaries, dedicated to St. Joseph Cupertino, the flying Franciscan.

The mission territory, high among the treacherous mountains of the southern highlands in the interior of New Guinea, is practically speaking, inaccessible by land. A trip of 150 miles by air has been estimated as a 15-day journey by foot. When Father Claude Vogel, Provincial of the Pennsylvania Province of Capuchins, visited the mission last year and called the friars together, for several of them it was the first meeting on the island.

An official census of the territory expects to uncover 150,000 to 200,000 natives in the area. These natives, 12,000 miles from the United States, are also 10,000 years behind civilization. The Papuans, possessors of a stone age culture, have come under the influence of the white men so recently that Australia opens the new areas to missionaries only with the greatest precautions. In this way the Government insures to some extent the safety of the missionaries and other civil officials.

At present the missionaries in Papua are divided into three main stations, Mendi, Tari, and Ialibu. Each compound consists of a neat group of buildings comprising church, school, friary, boys' dormitory, living quarters for teachers and catechists, and workshops. Practically all these buildings have been erected by the Capuchin Fathers and Brothers with the help of friendly natives.

In connection with the three main stations, substations have also been established at various convenient centers. To reach most of them, the missionary must walk from 6 to 8 hours up and down hill, through jungles, and over streams. At the substation he has built his little house and also a school with accommodations for the native teachers who assist him in his work. Here he remains for 2 weeks at a time, supervising the teaching and contacting the natives so as to win them for the mission. After the 2-week period in the bush, he returns to the main station for rest and spiritual renewal.

A Prefecture Apostolic is a territorial division in mission countries, governed by a Prefect Apostolic in the name of the Holy See. The erection of a Prefecture Apostolic is the first step in a mission country in the development of a future diocese.

Although the Prefect Apostolic is usually not a bishop, he has the same ordinary powers of jurisdiction as a resident bishop, and is empowered by law to give episcopal blessings, to consecrate chalices, to confirm, and confer tonsure and minor orders.

[From the Washington Post and Times Herald, May 5, 1959]

ROUGH MISSION AREA IS PRIEST'S NEW CLASS

(By Milton Viorst)

Father Firmin Schmidt, a Franciscan Capuchin priest who has taught the fine points of theology at Catholic University for the past decade, will return to the Stone Age soon to teach the fundamentals of civilization to the natives of New Guinea.

Father Firmin, 40, has been appointed by Pope John XXIII to head the Catholic mission in the jungles of Papua, where many of the natives have never seen a white man. As the mission's Prefect Apostolic, Father Firmin will hold a rank similar to a bishop's.

An 11-man Capuchin team has been in New Guinea for the past 3½ years, surveying the prospects for missionary activity. Until now, their findings haven't been too promising, Father Firmin said. No one has been able to communicate with the natives.

"Our big problem is language," Father Firmin said. "Anthropologists and linguists from Australia have been working on it. So far they've been able to devise only the most fundamental grammar."

The mission priests travel about their 23,000-square-mile domain only by airplane, Father Firmin said. The priests have their own plane, which is flown by a lay pilot.

As soon as an area is opened by a team of explorers from Australia—which is the mandate power for the area—the missionaries fly in to establish contact with the natives and attempt to teach the gospel, the priest said.

Father Firmin estimates it will take 7 to 10 years to make the first real converts; that is, those who know what Christianity means. Meanwhile, he said, the mission will use every means it can to bring the natives into contact with the religion.

Superior at the Capuchin Monastery at 4121 Harewood Road, NE., since 1953, Father Firmin said that he will probably spend the rest of his life in his New Guinea parish and that he considers his selection an honor.

Suggested Reading for Steelmen: Aesop, Plus Economic Statistics

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. SCHENCK. Mr. Speaker, Mr. Ralph Holsinger, Washington correspondent for the Dayton Journal Herald, has made considerable effort to obtain data which in his opinion relates some of the problems of unemployment to the wage-price situation. Mr. Holsinger's story has created considerable comment among the readers of the Dayton Journal Herald, including many in the Third District of Ohio. Many have written me to comment on his story; and thinking it will be of interest to Members of Congress, under unanimous consent I include it at this point in the Appendix of the RECORD:

[From the Dayton Journal Herald, May 9, 1959]

SUGGESTED READING FOR STEELMEN: AESOP, PLUS ECONOMIC STATISTICS

(By Ralph Holsinger)

WASHINGTON.—Suggested reading for members of the steelworkers' bargaining committee, now seeking higher wages from the steel industry: An Aesop fable and some economic statistics.

Aesop tells the story of a man who had a goose that laid one golden egg a day. The man became greedy. He wanted more gold and he wanted it now.

He killed the goose, but he found no store of gold inside it. Nor did he continue to get his golden egg every day.

Not long ago, Michael F. Widman, Jr., an economist for the United Mine Workers (UMW), told the Joint Economic Committee of Congress:

"A high wage level is the basis of prosperity. In the UMW we have always struggled for high wages. Our miner today is the highest paid production worker in the country."

A few days later, John L. Lewis, UMW president, won a 25-cents-an-hour wage increase for his union's members, raising their average pay to $3.25 an hour.

At about the same time, a senate subcommittee went into the coal towns of West Virginia. It saw there "a grim and disheartening picture of suffering."

It found one man in eight out of work. It found 278,000 men, women and children drawing monthly rations of flour, rice, cheese and butter from Federal surplus food stocks.

Eight years ago, 120,888 coal miners were employed in West Virginia. Today, there are 44,237.

STEEL FASTEST GAINER

The figures are a measure of two factors—mine mechanization, so that one expensive man can dig and load more coal than ever before, and a switch by fuel users from higher priced coal to lower priced oil and

gas. Coal output fell from 680 million tons in 1947 to 515 million in 1957.

The steel union was first to break the World War II wage freeze. With the help of President Truman, it won an 18.5-cents-an-hour increase that ended a four-week strike and set a pattern for many other industries.

Since then, steel wages have risen at a rate nearly 50 percent higher than that for other factory workers. The average now is 3.03 an hour.

But mechanization has been at work in the smoky valleys of the Allegheny, the Mahoning and the Cuyahoga, too.

This week, steel mills were scheduled to turn out 2,668,000 tons of steel. If they did, it was a new record—and it was done with 200,000 fewer men than were at work in the industry only 18 months ago.

BENEFICIAL TO ECONOMY?

Walter Reuther has taken his auto workers to third place in the wage derby with an average of $2.65 an hour. But the auto industry has laid off more than 200,000 of them since 1955. In Detroit, as many persons are receiving surplus food as in the entire State of West Virginia.

Rail workers enjoy pensions running up to twice those paid by the social security system. But railroad employment has dropped from 1.4 million in 1945 to 840,000 last year.

The figures all point in the same direction. And they raise a couple of questions:

Is a high wage level a guarantee of prosperity?

Are annual, general wage increases, sought and won by a few powerful unions, beneficial to the economy?

If the answer to both of these questions is yes, then the union that first wins a $100-a-day wage from a complaisant employer will be the Nation's savior.

Wabash Valley Association Deserves Praise for Efforts to Combat and Control Wabash River Floodwaters

EXTENSION OF REMARKS
OF
HON. FRED WAMPLER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. WAMPLER. Mr. Speaker, on May 1, 1959, I and a group of dedicated Hoosiers appeared before the Public Works Subcommittee of the House Committee on Appropriations to ask for Federal funds and assistance with which to combat the constantly flooding Wabash River.

Representing Indiana's sixth district flood-control interests were Mrs. Chauncey B. Baldwin, chairman of the Parke County Chapter of the Wabash Valley Association; Mr. Don Montgomery, editor and publisher of the Attica Ledger-Tribune; Mr. Maurice Hegarty, president of the Vermillion County Chapter of the Wabash Valley Association; and, Mr. Walker Robertson, chairman of the Vigo County Chapter, Wabash Valley Association; and, Attica, Ind., farmer-businessmen Mr. Ray Fix and Mr. Elbert E. Smith.

Others appearing in support of flood control construction funds were the following officials of the Vigo County Chapter of the Wabash Valley Association: Mr. John R. Donnelly, Mr. Robert Dunlap, Mr. Joe S. Francis, Mr. Kermit Flesher, and Mr. Carl I. Hale. In addition, Vigo, Ind., County Agricultural Agent, Mr. A. D. Luers was heard.

Each of those testifying presented the flood control needs of his particular area of the sixth district of Indiana, while I covered the overall district necessities, asking for $67,000 in preconstruction planning money to be spent at the West Terre Haute local protection project, the Sugar Creek Levee, the Clinton Levee, the Conover Levee at Terre Haute and for the Wabash River Basin study to allow the Army Corps of Engineers to continue working on Sugar Creek, Wild Cat Creek, and the Big Pine Creek survey projects.

Mr. Speaker, I certainly believe the Wabash Valley Association, association President J. Roy Dee, executive Vice President William Prather, and all officers and members, richly deserve the gratitude of the people of the States of Indiana and Illinois for unflagging efforts to combat and control the ravaging flood waters of the Wabash River so that the Wabash Valley will become a more bountiful, tranquil, and productive region.

One Battle We're Losing—And Why

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. WILSON. Mr. Speaker, the problem of communicating a worldwide understanding of the American way of life is one that all of us are concerned about. As an advertising man, I have taken a special interest in the activities of the U.S. Information Agency, which is charged with the responsibility of properly interpreting our activities to our friends and enemies over the world.

One of the most commendable programs carried on by USIA is the one known as IMG, or the Informational Media Guaranty program. This program enables publishers of books in this country to reach millions of people in foreign lands with approved technical, scientific, and educational publications.

In recent visits I have made to Japan, the Philippines, and other areas, I have been concerned about the quantity of Soviet books, magazines, and other publications available at low cost to the masses in those areas. The Russians are using the quest for knowledge and information as a means of propagandizing the Communist's philosophy. They underwrite the cost of such publications. We must meet this challenge in our own way. The IMG program is a logical and sensible means of meeting Russian competition.

I am concerned about the current efforts to reduce or eliminate this vital program. This is one area in which we must not fail.

The McGraw-Hill Publishing Co. recently issued a forceful statement about the importance of this program. It explains the workings of the program and the need for its continuation. Under unanimous consent, I include this article as a portion of my remarks:

ONE BATTLE WE'RE LOSING—AND WHY

The United States is losing an important battle—a battle of knowledge and ideas, waged with books. It does not have the excitement of competition in scientific achievement, nor the urgency of a diplomatic crisis, nor the obvious economic significance of a struggle for export markets. But our success or failure in this battle of knowledge and ideas may well have a decisive bearing on these more spectacular aspects of international rivalry.

The Russians know this. About a decade ago, they started a program to build up their export of books, the most durable and penetrating way of communicating knowledge and ideas. By 1957 the Soviet Union was exporting 30 million books, one-and-a-half times as many as the United States. Many of these books are printed in English, and all are in languages of the non-Communist world.

In the languages of the Near East alone, the Russians printed and distributed 413,600 books in 1957, as compared with 166,415 in 1956. In India, Russian textbooks on engineering are to be published in English under a technical aid agreement signed in Moscow last December.

TRADE FOLLOWS THE BOOK

Books are in the advance guard of the Soviet political and economic challenge to the free world. With books go ways of thinking—about government, about education, about management, about science and technology. If these books do their job effectively in the training of those who will become a nation's leaders, they will provide the basis for political and cultural understanding and also, in the future, for trade.

The Russians are not the first to discover this relationship. Britain, which lives by trade, has traditionally exported more of its book production than any other nation. Today it exports one book in every two produced. The British have a favorite dictum: "Trade follows the book." They have proved its accuracy. Now the Russians are trying to make this same principle serve their purposes.

Where does the United States stand in this competition for men's minds? In number of books, it trails far behind the Soviet Union—exporting roughly 20 million books, against the Russians' 30 million. As a proportion of our total output of books, our exports amount to only 10 percent—against Britain's 50 percent.

THE RUSSIANS' ADVANTAGE

U.S. book exports have grown in the years since World War II, from approximately $11 million in 1946 to $35 million in 1958 (both figures excluding Canada). But in expanding book exports, the American publishing industry faces two major obstacles:

1. The comparatively high cost of producing a book in the United States, which puts its price well beyond the reach of many students, teachers and businessmen in other countries; and

2. The shortage of dollar exchange in many countries, which means that importers can pay for books only in currencies that are of little use to American publishers.

The Russians have neither of these problems. Soviet publishing is state-subsidized, and exported books are sold for nominal sums paid in the currencies of the importers. As these books serve the political and economic purposes of the Soviet Union, they are cheerfully sold on giveaway terms.

The American publishing industry, on its own, is making vigorous efforts to increase the distribution of American books in other countries. Leading U.S. publishers and their agents have offices and salesmen in the major countries of Asia, Africa and Latin America. Several publishers have begun to reprint textbooks in Asia at one-half to one-third of their U.S. costs, thus making them available to the students in Asian countries at prices they can more nearly afford. And the American paperback has become a symbol of low cost in popular books. But neither of these devices is practicable for serious cultural, technical, scientific, educational and professional books, which require durable, hardbound and necessarily expensive editions. Despite their great importance to those who need these books, the demand for them is simply not large enough to warrant low-cost publishing methods.

Government agencies also have increased the availability of American books. The U.S. Information Agency and the International Cooperation Administration have placed American books in libraries overseas, donated them to educational institutions and presented them to key individuals in the industries and Governments of the developing countries of the world. But these programs are small in relation to the need.

A MODEST PROGRAM

An unusual and little-publicized Government program has helped American publishers overcome the other major obstacle to the export of books—the shortage of dollar exchange. This is the Informational Media Guaranty (IMG) program, administered by the U.S. Information Agency. It enables publishers of books judged to be worthy of the American way of life to sell their books, for local currency, in countries such as the Philippines, Formosa, Vietnam, Burma, Indonesia, Pakistan, Turkey, Israel, Poland, Yugoslavia, Spain and Chile, which would otherwise be unable to buy these books because of their shortage of U.S. dollar exchange.

The IMG program is not a giveaway. Publishers have to sell their books, and customers overseas have to want them enough to buy them at full prices. IMG merely guarantees that the exporting publisher receives in dollars the payments he collects from his customers in their currency. The program costs very little in terms of our total foreign aid program, or in terms of what it accomplishes. In 10 years it has made possible the sale of $150 million worth of books, magazines and films to countries of key economic and strategic importance at a cost of only $10 million.

The IMG functions through a revolving fund. Foreign currencies are exchanged for dollars, and the foreign currencies in turn are resold to replenish the supply of dollars. The net cost is the small but unavoidable loss on resale of these foreign currencies. Over the 10 years of this program, the IMG revolving fund has shrunk from its original $28 million to $18 million, $10 million of which is in unconverted foreign currencies.

If this modest but vitally important program is to be continued, Congress must appropriate the money necessary to rebuild the revolving fund. This would insure that any country approved by the State Department and willing to sign an agreement to buy American books, at their full price, with its own currency, could do so. Last August, Congress reduced a requested appropriation for this purpose from $7 million to $2½ million. To continue even at its present reduced level, an appropriation of $3½ million is needed. To realize the full potential of IMG, the fund must be restored to its original level.

If the IMG program is not continued, with adequate financial support, some countries whose friendship and understanding we seek today and with whom we hope to build a trading partnership in the future will have to reduce their purchases of American books to a trickle. These are countries where schoolteachers, college professors, students, engineers, doctors, and businessmen need and want to buy American books. The loss will be not only theirs, but ours as well. For it will deprive the United States of one of its most effective, and least costly, means of communicating knowledge and ideas and understanding of the American way of life.

Statement by Hon. Isidore Dollinger, of New York, on H.R. 2526

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. DOLLINGER. Mr. Speaker, I am including in the CONGRESSIONAL RECORD my statement to the Committee on the Judiciary in connection with my bill, H.R. 2526:

Mr. Chairman and members of the Committee on the Judiciary, on January 15, 1959, I introduced H.R. 2526, a bill to prohibit certain acts involving the importation, transportation, possession, or use of explosives with intent to destroy or damage any communal building, residence, or place of business.

The outbreak of anti-Semitic violence last fall shocked every right-thinking American. The bombings and attempted dynamitings of Hebrew congregations, temples, and centers, which occurred in Atlanta, Peoria, Miami, Nashville, Jacksonville, Charlotte, Gastonia, and Birmingham, as well as threats to numerous synagogs throughout the country were indisputable evidence of a new wave of terror and hatred directed against Jews; we have proof of a substantial increase in anti-Semitic defamation by publications promoting religious hatred. Anti-Semitic defamation and violence against Jews and Jewish property constitute a serious problem; it must have our intelligent and effective attention, and a solution must be found.

The lawlessness rampant in communities where the acts of violence took place is a symptom of the general breakdown of respect for law in those areas; lawlessness is the inevitable consequence of disrespect for law. Therefore, any approach to the problem which does not reach the root of the evil—disrespect for law—will prove of no avail. Also, remedies must be sought within the framework of constitutional limitations.

I would also point out that the number of houses-of-worship bombings in the South is a relatively small one as compared to the scores of bombings of residences and business places owned by Negroes. Therefore, any legislation which seeks to impose Federal penalties upon vandals and unlawful users of dynamite must, if it is to have any significance, include in its compass those who use dynamite against private dwellings and places of business. My bill would represent an effective, if modest, step in meeting the problem and would give some protection to all those who are victims or intended victims of bombings.

When leaders of State governments express their defiance of the U.S. Constitution, they set an example for the entire community and then members of the community feel free to show their disrespect in any way they choose. Dynamiting is one result; lynching another. The Nation was shocked and outraged by the abduction of Mack Charles Parker who was tortured and lynched. This horrible act proves that respect for law is more important than ever; it also proves that the Federal Government must act without delay to prevent such unspeakable barbarism. Local leaders cannot be trusted to protect the rights of all those within State boundaries; the American people through Congress demand that all persons in our country be assured of their rights granted by the Constitution.

My bill being considered today covers only one factor and would help eliminate only one evil. I trust your committee will take favorable action on it or similar legislation, and that you will also proceed with dispatch to vote out other bills which concern civil liberties and protection of those now discriminated against, terrorized, and deprived of their rights.

Fete Spotlights State's Dramatic Past, Present

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. SIKES. Mr. Speaker, just a few days ago in Pensacola began the most significant and unusual celebration in the history of America. We are celebrating Florida's Quadricentennial—400 years of colorful history, romance, and progress. In no other part of the Nation can this be true. As you all know, Congress recognized the importance of this occasion by the passage of House Concurrent Resolution 117 which was approved by the President on August 7, 1957.

It is with much pleasure that I bring to the attention of my distinguished colleagues an editorial appearing in the May 11, 1959, issue of the Florida Times-Union on the opening of Florida's Quadricentennial celebration. I am sure that it will prove of interest to the membership of this great body. The editorial follows:

FETE SPOTLIGHTS STATE'S DRAMATIC PAST, PRESENT

The opening of Florida's quadricentennial celebration on Santa Rosa Island this week provides dramatic illustration that the State's eventful history extends across four centuries right up to the present moment.

For history has been and is being made in that Pensacola area in a grand manner, just as is the case over the State. Santa Rosa Island personifies it.

This island, which is the scene of the observance of the Spanish explorer Tristan de Luna's landing and establishing a settlement in the Pensacola Bay area in 1559, 6 years before the founding of St. Augustine and 47 years before the start of the Jamestown Colony, is also making current history in a big way. It is the location of a missile test center that is carrying on some important 20th century explorations. And the industrial activity in the Pensacola area is very much on the wave of the future.

De Luna's landing is just one chapter in the eventful history of the Pensacola area. Pensacola itself was founded in 1698 and the

transfer of Florida to the United States by Spain was arranged there. The city was the first territorial capital of Florida.

Fort Pickens, which is located on Santa Rosa, was Florida's "Fort Sumter"—where occurred the opening rounds in the Civil War fighting in the State.

Florida's history is so action-packed it is going to take 7 years to handle all the celebrations planned for the quadricentennial observances. And by no means are things of historical significance confined to Pensacola and St. Augustine. The Jacksonville area was the scene of some lively and important history.

Local celebrants will call attention to our area history that too long has been slighted. That includes the visit of the Frenchman, Jean Ribaut, to the mouth of the St. Johns in 1562 and the erection of Fort Caroline by the French in 1564, an act that led to the first conflict between the Spanish and French in a long struggle to establish a North American empire and which prompted the founding of St. Augustine.

On paper the plans for the local phase of the quadricentennial celebration in 1964 look dazzling. A historical-recreation park costing between $7 million and $10 million has been outlined. Much hard work will be required to bring such a dream to fruition. The significance of the history of our area warrants that it be treated in the grand style in which it was made.

Two Women

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. McINTIRE. Mr. Speaker, I take pleasure in inserting in the RECORD the following editorial which appeared in the Portland (Maine) Sunday Telegram for May 10, 1959:

TWO WOMEN

One of the pleasant events of the week just past was new recognition for two women already nationally recognized for their distinguished careers.

The National Council of Auxiliaries of the American Medical Center of Denver gave their annual achievement awards to reporter May Craig and research scientist Wilhelmina F. Dunning.

Mrs. Craig, whose columns appear regularly on this page and six days a week in the Press Herald, Waterville Sentinel and Kennebec Journal, has long been known as one of the hardest working and most spirited reporters in Washington.

On occasion she has made some of our readers angry, which is the inevitable lot of a hard-hitting, candid columnist. But she is known by friend and critic alike as a reporter of honesty, straightforwardness, high principle and capacity for penetrating analyses.

Dr. Dunning is director of the Cancer Research Laboratory at the University of Miami. She was graduated from Brunswick High School, the University of Maine, and her mother, Mrs. Evelyn W. Hennessey now lives in Topsham.

Her achievements in science and medicine, like those of Mrs. Craig in journalism, radio and television would take pages to record. Suffice to say that as a research professor of experimental pathology and director of an important laboratory she has risen to the top in a profession where brilliance and performance are at a premium.

We in Maine dwell a great deal on our faults, spend much time discussing our shortcomings. Perhaps this is proper, provided it leads to improvement. But it can be a stimulating change of pace to pause occasionally to reflect on contributions being made to society by people with Maine connections.

The list is long, but on it are the names of May Craig and Doctor Dunning. We are indebted to the National Council of Auxiliaries of the American Medical Center of Denver for calling this to our attention.

TVA Robs Peter To Pay Paul

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. BATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call attention to the following article by the noted writer and analyst, Richard D. Grant, of Boston, Mass., under the heading of "The New Bold Look of the Welfare State."

The author shows a keen insight into the importance of the TVA issue and the dangers of overtaxing business in order to pay for deficit operations in Government. I commend it to your reading. It follows:

THE BOLD NEW LOOK OF THE WELFARE STATE

For 25 years, people who appreciate the value of a dollar have been alerting the public to the dangers of overtaxing business in order to support deficit operations in government. It has been a losing battle, with setbacks only briefly counterbalanced by an occasional turn to the right. Taxes imposed to extend this basically unsound policy have reached the point of strangulation.

Clearest view of the progressive pattern is in the new objective of Tennessee Valley Authority, which seeks to be rid of public control while evading its huge public indebtedness.

From the standpoint of practical accomplishment TVA is the most colossal fraud ever perpetrated on the American taxpayer. It owes the people of the United States $1.2 billion in appropriations advanced by Congress since 1933, as well as nearly $500 million retained from sales of electric power. Part of the cheese-dream that created TVA was that public funds advanced for this project would be repaid over a period of 40 years. With all but 15 years of that term expired and nothing on the credit side but token payments in piddling amounts, TVA now wants out and stands a pretty fair chance of getting it.

The thing that disturbs practical-minded critics is not the loss of huge sums already buried but the effect on many other governmental agencies of TVA's bold bid for independence.

Under pending legislation that passed the U.S. Senate last year, TVA would be relieved of the obligation of asking Congress for money to carry out its commitments and would be empowered to go into debt up to $750 million through the sale of revenue bonds to the public. This switch is dressed up by the public power lobby as a desirable means of reducing the Government's financial load, with the further advantage of appearing to be a move in the direction of private operation.

The catch is that although the bonds would not be Government securities nor subject to Federal approval, they would be moral and practical obligations of the United States.

The disclaimer of Federal liability means nothing. Obviously, a government which creates an agency and retains uninterrupted status as sole proprietor is not in a good legal position to disavow responsibility for loans made to it in good faith by its own taxpaying citizens. Yet, under pending legislation, TVA can cell its bonds without any check by Congress and completely outside the control of fiscal agencies established to protect the people from abuse of public credit or misapplication of public funds.

FIRST 120 YEARS THE HARDEST

Any possibility of repayment by TVA of the $1.2 billion advanced to the Authority by American taxpayers during the last quarter century will be delayed by subordination of such repayments to payments due on the revenue bonds. Even assuming funds available from TVA's low power rates sufficient to pay back the funds received through congressional appropriations, such payments might be as little as $10 million a year, which could stretch the period of reimbursement of the TVA investment from the present 40-year term to one of at least 120 years.

When lawmakers refer to the TVA investment they completely ignore the fact that TVA has sold almost $500 million worth of electricity and used the revenues for its own purposes.

No provision is made in the new legislation for repayment of this half-billion, nor for paying any return on it to the taxpayers. Most of it has been expended without congressional authorization on plant and service facilities, just as the Authority plans to spend the $750 million it expects to borrow from purchasers of TVA revenue bonds.

WOULD RETAIN TAX EXEMPTION

Notwithstanding that in its revised status under the pending bill, TVA would be operated for the benefit of private investors—its dollar-conscious bondholders—it would not lose its vital exemption from Federal income taxes. There is no provision even for making any payments in lieu of taxes, as are presently made by TVA to State and local authorities. This priceless advantage would, of course, enable TVA to keep its power rates low, undercutting by a wide margin the taxpaying electric utilities, which must raise their new money at high interest costs by selling their securities in the free market.

From the public utility view, it was bad enough to have the Government as a tax-subsidized, price-cutting competitor, without having to meet private capital on these same terms.

Last July the Budget Bureau told the House Committee on Public Works that a wholly owned government corporation with a net of $1,200 million of Federal moneys invested in it ought to have the same rules of the game applied to it as does any other government operation. President Eisenhower long has taken the position that nothing should replace congressional control of the expansion of facilities. The Comptroller General, earlier this year in a TVA audit report, said, "We believe that Congress can most effectively control capital expenditures through appropriations. If, however, Congress wishes TVA to use power revenues, or funds obtained from non-Federal sources, to construct or acquire new steam-electric generating units, we recommend that TVA be required to obtain specific and prior authorization from Congress for such facilities.

Like everything else prompted by the foot-inside-the-door method, this drastic divorcement of TVA from visible channels of responsibility has serious and far-reaching implications. TVA admits the need of about $180 million a year in new money for expansion of facilities to meet a demand for power that is increasing in its service area at an annual rate of 10 to 12 percent. At least 65 percent of this amount—$120 million a year—will have to be obtained from outside sources; namely, from the sale of revenue bonds. This means that less than a decade from now, the original $750 million obtained from bondholders would be used up, creating a demand for raising the ceiling on the total of revenue bonds in public hands, or going back to Congress for another handout, asking the lawmakers to put the slug on the public for money enough to rescue the investment of the private bondholders. What a scandal that would be.

This TVA pitch has a lot in common with efforts of other bureaucratic agencies to escape supervision and the worst of it is they seem to be succeeding on many fronts.

Frankly, if TVA is permitted to get away with it, why should the privilege be denied other Federal departments? In this proposed change the debt incurred or service charges due from TVA would not appear in the Federal budget at all. Money owed by TVA would be completely detached from the total of the national debt. And if this legislation creates a precedent, as it very likely will, it is conceivable it will be adapted to many other agencies, the operations of which will then be of a clandestine nature, so far as any accessible public accounting is concerned. That, of course, would mean that the statutory limit on the national debt, could be evaded by adapting the TVA system to scores of activities now within the purview of Congress and the White House. Indeed, the possibilities are so grave as to warrant public consideration far beyond the attention the slick TVA scheme appears to be receiving at the present time.

Resolution on the Disclaimer Provision of the National Defense Education Act

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. SCHWENGEL. Mr. Speaker, on March 16, I introduced a bill to repeal title X, section 1001(f) of the National Defense Education Act of 1958, because I feel that this requirement is a hindrance to the full realization of the purposes of the act.

On March 21, the Iowa conference of the American Association of University Professors, at their annual meeting at Grinnell, Iowa, adopted two resolutions with respect to the National Defense Education Act. One of these supports my bill and calls for the repeal of title X, section 1001(f)(1), and the other asks for the extension of certain aspects of the act to cover private schools as well as public schools.

Under leave to extend my remarks, I ask that these resolutions be printed in the Appendix of the RECORD:

The Iowa conference of the American Association of University Professors calls upon the 86th Congress to repeal title X, section 1001(f)(1) of the National Defense Education Act of 1958. This section reads:

"No funds shall be used to make payments or loans to any individual unless such individual (1) has executed and filed with the Commissioner an affidavit that he does not believe in, and is not a member of and does not support any organization that believes in or teaches the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods."

Our reasons for opposing the requirement of such a disclaimer statement are as follows:

"1. On grounds of principle, it is a violation of the American tradition of freedom of thought since it makes an individual's opportunity for educational assistance contingent upon his beliefs. It is also self-defeating in that a person momentarily seduced by antidemocratic ideologies is more likely to discover their fallacies through more rather than less education. We uphold the basic soundness of Thomas Jefferson's famous statement: "If there be any among us who would wish to dissolve this Union or to change its republican form, let them stand undisturbed as monuments of the safety with which error of opinion may be tolerated where reason is left free to combat it."

"2. On the grounds of utility, such an oath is totally ineffective, simply one more ribbon of redtape powerless to sustain our national security. Dedicated subversives who have already exposed themselves to the major charges of treason or sedition will not hesitate to take such an oath, with its relatively minor risk of perjury. Past experience has repeatedly demonstrated that the persons who refuse such a disclaimer statement are mainly idealists who sacrifice themselves to protest what they consider a violation of the Bill of Rights.

"3. On purely legal grounds, this vaguely worded oath, which is required under the criminal penalties of perjury, violates the legal principle that criminal statutes shall punish actions rather than beliefs, and shall define the proscribed actions in unmistakable terms. The law does not specify the organizations in which membership is proscribed, nor any procedure for specifying them. Neither does the law define what constitutes 'support' of such an organization, which could include a mere defense of its right to be heard. Again, the law does not provide any test by which a member can know when the organization is using 'illegal or unconstitutional methods' for bringing about a change in the government of the day. This broad wording could be made to extend to a member of a corporation or labor union which contributed financially to the Democratic or Republican Party or a candidate, in violation of the Taft-Hartley Act. Finally, this law could be used to expose to malicious and harassing investigation and perjury prosecution persons whose later utterances might be construed as retrospective evidence of previous false swearing. Such a threat can only intimidate the free inquiry and expression on which a vigorous democracy depends for its vitality.

"4. On grounds of public policy, this disclaimer oath directly contradicts our attempts to bring our best minds into teaching to offset Soviet educational and scientific gains. At the very time we are trying to raise the status, prestige, and income of the teaching profession, we single out its present and potential members as a target for popular suspicion. We require of them an oath which is seldom required of other groups receiving Federal assistance, or of other members of the general population. Such oaths reinforce the growing tendency of college students to avoid all independent thinking and discussion about values and goals for fear of some day being suspected of harboring beliefs disloyal to their country. This policy is worse than discriminatory and unfair. It is foolish and self-defeating."

RESOLUTION ON THE EXTENSION OF CERTAIN ASPECTS OF THE NATIONAL DEFENSE EDUCATION ACT TO COVER PRIVATE SCHOOLS AS WELL AS PUBLIC SCHOOLS

(Adopted by a vote of 16 to 11 by the Iowa conference of the American Association of University Professors, at the annual meeting at Grinnell, Iowa, March 21, 1959, with instructions that it be sent to the National Office of the AAUP and to Iowa Federal Senators and Representatives)

The Iowa conference of the American Association of University Professors calls upon the 86th Congress of the United States to amend the National Defense Education Act in such a way that teachers and counselors in private schools and colleges be made eligible for the same benefits as those in public schools.

Title II, section 205(b)(3) provides that up to 50 percent of loans made to undergraduate and graduate students in institutions of higher education shall be cancelled for service as a full time teacher in a public elementary or secondary school, at the rate of 10 percent for each year of such service. We strongly urge that this "forgiveness feature" be extended to teachers in private elementary and secondary schools, and to teachers in both private and public institutions of higher learning.

It seems quite obvious that teachers in colleges and universities and in private elementary and secondary schools are rendering as much service to society as teachers in public elementary and secondary schools. In terms of economic need it is often the case that the teachers in private institutions need this relief even more than those in public institutions. The national interest requires that we recruit teachers for education at every level and in both public and private institutions.

The same kind of amendment is recommended in Title V, part B, section 511, which provides stipends for individuals "engaged, or preparing to engage, in counseling and guidance in a public secondary school * * *" We urge that such stipends be made available on the same basis to persons engaged, or preparing to engage, in counseling and guidance in a private nonprofit secondary school.

Our Freedoms Versus Our Responsibilities in a Free Society

EXTENSION OF REMARKS
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. MOELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include the winning essay among all those submitted by high school seniors in the State of Ohio in the recent American Legion essay contest. The winner was Stephen W. Miller, of the Lancaster High School in my hometown of Lancaster, Ohio. The title of Stephen's essay is "Our Freedoms Versus Our Responsibilities in a Free Society." This young man's viewpoint is a tribute not only to himself but to his teachers and the Lancaster school system. Stephen points out that if we are to maintain our prized liberties each citizen has the strong obligation to assume personal responsibilities which will enable us as a free nation to perpetuate democratic

freedom. The message he brings is one which we could all well ponder.

SUBJECT: "OUR FREEDOMS VERSUS OUR RESPONSIBILITIES IN A FREE SOCIETY

(By Stephen W. Miller, Lancaster, Ohio, 12th Grade)

Liberty—What does it mean? Is it the freedom of choice? Or the right of self-government? Or just the privilege of doing as one pleases? Certainly these represent a portion of our liberties. But what is the one mainstay of all these privileges? It is the freedom to perpetuate them. The ends and means of maintaining liberty in a free society must of necessity follow a path of responsibility. To keep self-government, to retain personal freedoms, and to support an equitable code of justice—these are the goals for which one must strive. But to attain these goals completely every citizen must exercise those rights that he has. To maintain these liberties each citizen must use these liberties.

Just as with every mountain there must be a valley, for every liberty there is a responsibility. For instance, freedom from attack is a liberty balanced by the responsibility of serving in the Armed Forces. Likewise, to maintain representative government, one of the simplest tasks is to vote, for the principal power of a despot is his withholding of this right. That voting is a duty is not always realized, since only half of our citizens vote; but those who do vote recognize that every vote cast is a vote for a democratic form of government.

Free education is one of our priceless liberties. Yet it is one responsibility that is usually overlooked. How can one choose correctly the best man for an office, or speak intelligently in defense of democracy, or write a letter to a Congressman if he has not an adequate education? Even though people under 21 are not old enough to enjoy the full rights of citizenship, they still have the obligation to prepare themselves for citizenship with a good education. It should not be one that is too narrow, but an education that contains not only a study of our Nation's language and its Government, but also a study of the despotism of other countries, for how can one fight somthing he knows nothing about?

Most people accede that voting, obeying laws, and acquiring an education are prerequisites for the liberties of citizenship. But there is one other responsibility of a good citizen—to be intolerant of intolerance. The repression of prejudice is the keystone of our country. What a great Utopia this country would be if there were no bonds of hatred of one another's religion or race:

Just as a seal when pressed on a sheet of paper shows ridges on one side and depressions on the other, so liberty, viewed from a different angle, shows that it is actually a responsibility. This country, because it realizes the interchangeability of liberty and responsibility, has more freedom than any other country in the world.

Senator Hennings of Missouri

EXTENSION OF REMARKS

OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. MOULDER. Mr. Speaker, we Missourians are proud of the great ability and outstanding record of our Senator THOMAS C. HENNINGS, JR., of Missouri. His knowledge, statesmanship, and integrity is righly respected in the Congress of the United States. The history of our great Nation records the work of great Nation records the work of great Senators from Missouri and none excel the brilliant ability and record of Senator HENNINGS. An example of this appears in an editorial published May 1, 1959, in the Hunnewell Standard, as follows:

SENATOR HENNINGS AND INDIVIDUAL LIBERTY

Missourians who believe in individual liberty should take note and send a word of approval and encouragement to our senior Senator from Missouri, the Honorable THOMAS C. HENNINGS, JR., for the unrelenting battle he continues to wage for this principle of democratic government.

Last week a bill known as the freedom of information bill, and introduced by Senator HENNINGS, was taken up for consideration by the Senate Judiciary Subcommittee on Constitutional Rights. A special House subcommittee is also holding hearings on secrecy problems in Government, and both subcommittees are concerned with the repeated refusal of agencies within the Defense Department to provide the General Accounting Office with information it requests and is obviously entitled to receive.

In Washington, as well as in our State and local governments, there are numerous agencies and governing units who seem possessed with an idea they, who by chance or design happen to come into the administration of these agencies or units, are endowed with supernatural powers of judgment and discernment in directing affairs of state and the welfare of the people, not enjoyed by anyone outside their particular agency.

Senator HENNINGS, along with many of his fellow Americans, declines to agree with this assumption, and he has taken a firm stand against this practice, when far too many of his fellow Congressmen, cowering under bureaucratic domination in fear for their political hides, have faltered in their duty to the system of government under which they serve.

Senator HENNINGS wrote to all Federal agencies for their opinions on his proposed changes in the law that would insure a fuller accounting to the people on their handling of these agencies. The answers he received were in many instances weak and even amusing. For example, the Agriculture Department declared they would be unable to assure persons who gave them statistical data, that this data would not be made public, if such a law were passed. How funny. Most people have always held the notion that statistics were collected for the purpose of public dissemination. What is there about statistics in agriculture anyway, that would endanger our national security?

The Post Office Department had another reason for withholding information to other Government heads and to the people. It declared a law such as Senator HENNINGS proposes would require them to open its files of pornographic materials to everyone, even minors, who might decide to examine them. Now wouldn't that be too bad? Pornography is a bad word for adults, still considered by these agencies evidently, as too young to know; while for our minors who might decide to desert the comics and other vile books such as "Peyton Place," and "Mandingo," to go in search of Government files for a taste of this lurid entertainment, it would indeed be extremely inconvenient.

And funniest of all was the Justice Department's objections, who said such a bill would only encourage such popular slogans as "the people's right to know," which would turn prompt an expansion of this slogan into another that would demand "the right to know" every detail of the Congress' business.

Well, well, that makes us wonder if those details the Congress might not like to reveal could be the way the people's tax money is being spent; how many members of a Congressman's family might be on the public payroll while not ever near the scene of their remunerative employment more than the minimum time required to claim and collect these salary windfalls; or why certain individuals or groups might be accorded special favors, while others even more deserving may be getting the run-around.

Ironically many of these Government agencies created by the Congress itself, sometimes deny that representative body access to the information it requests, so powerful do they become once they are safely established, with their own set of regulations that gives them immunity to congressional interference.

Senator HENNINGS has denounced the practice of these agencies as a threat to freedom. Surely most people will agree with our Senator from Missouri.

This investigation and legislation proposed by Senator HENNINGS is only one of the important legislative chores he is presently engaged in to correct abuses that have reached formidable proportions.

He is chairman of another investigating group on the Juvenile Delinquency Code. It is to the credit of Senator HENNINGS' conscientiousness and courage that he is not wasting this investigation by reviving that shopworn performance of trying to find the cause for delinquency. That has been batted about since the problem began to attract national attention at least 10 years ago, and has never yet seemed to advance past the cause stage.

The Missouri Senator is not looking for cause. He is seeking a remedy. He admits the problem and wants a program or statutes that will cure it. His approach to this momentous problem is new and refreshing. May his tribe increase.

A Tribute to Ambassador Abba Eban of Israel

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am honored to include the following address by our distinguished majority leader, Hon. JOHN W. MCCORMACK, delivered at a dinner held on Wednesday evening, May 13, 1959, at the Grand Ballroom of the Sheraton-Park Hotel, Washington, D.C. The dinner was given by the National Testimonial Committee for Ambassador Abba Eban of Israel and the America-Israel Society on the occasion of the 11th anniversary of Israel's independence and to bid farewell to Ambassador and Mrs. Eban prior to their return to Israel and was attended by many Members of Congress, officials of the executive agencies, and prominent citizens of the country:

When we talk about the distinguished guest of this evening, Ambassador Abba Eban, we talk about Israel—and of the faith, the prayers, the hopes and the sacrifices of generations of yesterday of Jewish blood, culminating through clear thinking and courageous action in the establishment 11 years ago tomorrow, of the new dynamic liberty-loving nation in the Middle East between

whose leaders and people, and the leaders and people of the United States, there exists close and fundamental ties from a governmental angle, and equally close and undying ties from the angle of friendship.

For over 2,000 years, despite the trials and tribulations that history records, of multitudes of inequities, discriminations and persecutions in many lands, and even death in some, those of Jewish blood in dispersion, faced their almost endless vicissitudes with exemplary fortitude.

Their spiritual and cultural heritage sustained their undying spirit of freedom and independence, and kept them spiritually bound together. Through centuries that unique heritage was carefully nurtured, jealously guarded, and actively kept alive. Finally, after centuries of waiting in suspense, many of Jewish blood of today in different lands were afforded the opportunity of returning to their ancient homeland at the end of the First World War. And in May of 1948, with the proclamation of Israel's independence, they launched once more upon an independent political existence under a government of laws.

During the past 11 years, a short time in the history of man, there has been miraculous progress in the new nation of Israel. Today Israel stands as a dynamic and powerful state as the embodiment of the centuries-old faith. After the establishment of Israel in 1948 as a new nation, and one of the best friends that America has throughout the world, and the citadel of democracy in the Middle East, more than 1 million immigrant persons of Jewish blood, through the sound policies and able leadership of the Israeli Government, have been provided opportunities for these refugees to become happy, industrious, and patriotic citizens of Izrael. The leaders of the Government of Israel have brought social justice to their people. We have seen the enthusiasm and energy that has turned much of the desert of the Negev into fertile and cultivable land, and the hills of Galilee into blossoming orchards. By the skillfull use of science and the technical abilities of their people, by the erection of hydroelectric power stations, by building canals, by installing petrol refineries and by laying oil and water pipelines, Israeli leaders have successfully transformed arid and inhospitable hills and desert plains into industrial centers and productive farm lands. And what is more important in these perilous and anxious days, all of the citizens of Israel are prepared to guard their newly found freedom and recreated and reclaimed homeland with extraordinary vigilance and uncommon bravery against all eventualities.

Today on the eve of the celebration of the 11th anniversary of its independence day the State of Israel is a new and encouraging phenomenon in the Middle East. It is fast becoming the most industrialized urban community in the underdeveloped rural communities in that region. Today the State of Israel can proudly claim the right to be recognized as an outstanding member of the families of nations. Under most hazardous circumstances and trying conditions, despite the mutiplicity of difficulties and dilemmas, economic and fiscal hardships, and sometimes baffling political uncertainties, the people of Israel face the future with justifiable pride and confidence.

The leadership of Israel during the past 11 years has been superb. Under Prime Minister Ben-Gurion, and those associated with him, progress has been made of an amazing nature. And one of the outstanding leaders of brave Israel is the distinguished diplomat and scholar whom we honor tonight.

It is with a deep mixture of feelings that I speak tonight about our guest of honor, Ambassador Abba Eban. In our sadness and regret in the departure of this fine gentleman, an outstanding diplomat and scholar, as well as world citizen, whose very name is a stimulant to a world depressed by international ills, is mixed with a sense of happy confidence in the future of our distinguished friend who has already made, and will in the years ahead, continue to make marked contributions to his country and to the world at large. Our distinguished guest, who has so admirably served for more than 10 years as Ambassador to the United States, and as Ambassador to the United Nations from Israel, has won a place in our affections, as well as in our admiration. In his own country, in Washington diplomatic circles, and in the United Nations he has become a figure of outstanding proportions. He has reflected credit upon the people of his liberty-loving country. He is known to millions of Americans for his extraordinary ability, for his outstanding accomplishments in the field of diplomacy, negotiating—but always firm and never retreating, for his frequent discussion programs, and particularly becaues he has endeared himself to us as a friend. In the United Nations he has won the respect even of his opponents, as an eloquent speaker and persuasive debater, possessed of a profound, logical mind. His training and experience have equipped him to play the very important part that he has in the establishment of Israel, and in protecting her against her enemies.

One could talk for hours about this distinguished gentleman who has already had crowded into his life decades of wisdom and experience, and yet whose life is still ahead of him to serve his country and mankind. As one biographer has expressed it, "throughout the prolonged and complex series of crises that has harassed the Middle East since the birth of Israel as an independent republic in 1948, no representative in the United Nations has pleaded more eloquently for the rights of his government than has Israel's Abba Eban." And I might go further and say that no one has pleaded more eloquently for the advancement of world peace than he has.

As another writer, in referring to Ambassador Eban, very recently said, "With Abba Eban's initiative in the United Nations, the government has attempted to break through the wall of silence and hostility which the Arab neighbors have built around Israell * * * Israel's readiness to take an active part in the solution of the problem * * * must be interpreted as the offer of an advance payment that one cannot simply ignore. If it should fail to impress the Arab neighbors, it will at least impress the nations interested in Israel's welfare."

As he leaves, for the time being at least, the diplomatic field, to enter into another important field of public activity in the service of his country, I remember well what this Ambassador par excellence said in 1953: "The voice of world opinion, together with the pressure of a situation fast becoming intolerable, would bring Israel and the Arab States together to confront the common destiny which awaits them in the region, which they have both illuminated by their radiant achievements in generations past."

And it is proper and fitting that we honor this distinguished gentleman on this occasion as he is about to leave us to enter into other fields of public activity in his country. And we know that with his extraordinary ability, his vast experience, his logical mind, and his eloquent voice, that he will continue to make his marked contributions to an Israel constantly growing stronger and stronger, and through his future services, a marked contribution toward the ultimate goals that we all seek—a world of peace.

And in saying "goodday" not "goodby" to Ambassador Eban, and speaking for those present at this wonderful banquet, and countless of thousands of friends throughout the United States, I extend to Mrs. Eban, the guide and the inspiration of the Ambassador, the real soldier in his life, our very best wishes for every future happiness and success.

An Open Letter to Congressman Canfield

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. CANFIELD. Mr. Speaker, I would like to call to the attention of my colleagues an open letter to me which appeared in the May 7, 1959, issue of the Passaic (N.J.) Herald-News. The writer, Mr. Arthur F. Lenehan, puts in proper perspective the current debate in Congress about a national flower, and he suggests his own favorite flower—the dandelion.

In reading Mr. Lenehan's learned defense of the dandelion—a flower some unknowing people thing is a weed—I was reminded of Henry Ward Beecher's century-old tribute to the underdog of the flower world: "You cannot forget if you would, those golden kisses all over the cheeks of the meadow, queerly called dandelions."

The following letter is to assure that Mr. Lenehan's prose will not be "born to blush unseen":

[From the Passaic Herald-News, May 7, 1959]

AN OPEN (AND FLOWERY) LETTER TO CONGRESSMAN CANFIELD

(By Arthur F. Lenehan)

Dear Congressman CANFIELD: I see by the papers that the language in Congress is getting more flowery than ever.

I refer, of course, to the recent discussions about the selection of a national floral emblem.

They tell me that David Burpee, head of the seed concern and registered lobbyist for marigolds, has succeeded in having a bill introduced in the House of Representatives calling for his favorite to become the national flower.

That's all right, it's a free country.

But I also understand that there are proposals to make the daisy, black-eyed susan, columbine, poppy, carnation, corn tassle, the rose, goldenrod and even grass the country's botanical badge.

Now I don't want to take up your valuable time with a long discussion about the drawbacks of this collection of horticulture but as corresponding secretary of the Society for the Selection of Taraxacum Officinale as the National Flower of the United States, I cannot remain silent.

Taraxacum officinale, in case you are not horticulturally hep, is that Yankee Doodle Dandy of a flower, the dandelion.

What can compare with the dandelion? Certainly not that green scourag of suburbia—grass. After you break your back to sow it, you finally get to grow it and then you break your back again to mow it. Grass leads us all in a vicious circle.

Backers of the rose have a point. It is unquestionably a thing of beauty. But the rose has its points, too—all those thorns—and this is an issue that is thorny enough already.

The daisy and the black-eyed susan don't deserve consideration. Think of all the people they've disappointed in that "loves me, loves me not" game.

In regard to the columbine, let me point out that this is the name of President Eisenhower's personal plane. Let's keep this on a nonpartisan basis, please.

As for corn tassel, I have it on good authority that it is only the male part of the corn plant and is not a complete flower.

The older fellows also tell me that it is the prime ingredient in a beverage which is not universally accepted as the most beneficial brew around.

Carnations, I must tell you, are commonly known as "pinks." You put "pinks" up as the national flower and the American Legion will murder you.

And goldenrod. The hayfever people will have you all impeached.

This brings us down to the poppy and the unalterable fact that opium is derived from this inscrutable oriental blossom. Put that in your pipe and smoke it and see if you get elected again.

So we're back to the dandelion, the flower that has everything.

What other bloom has its staying power? It can survive floods. It can survive drought. It can survive small boys and large dogs. Name me another made of such stern stuff.

What other flower rallied to its country's cause in time of war? During World War II the American Government financed the planting of experimental fields of dandelions as a nontropical source of rubber. The dandelion has latex surging through its veins, you see. Fortunately, synthetics bounced us back in the ballgame, but the dandelion was there if needed.

And what other blossom makes such heavenly wine—wine that doesn't make your legs rubbery?

What other flower has leaves that make such wonderful salad greens?

What other little blooming idiot of a plant has covered so many bare spots in so many lawns and lined so many highways?

And what plant distrbutes its seed so beautifully? It has a parachute for every one. Now isn't that tailormade for getting behind the Iron Curtain?

We of the Sftsotoatnfotus are confident you will give some consideration to the little golden flower that is with us everywhere.

We won't go so far as to say we're trying to plant the seed in your head. But if you furrow your brow and keep an open mind, don't be surprised if you find the idea growing on you.

Postal Increase

EXTENSION OF REMARKS
OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. HÉBERT. Mr. Speaker, a few days ago, the Postmaster General addressed you, requesting consideration, by the Congress, of legislation to increase, by 1 cent, the postal rates on first-class regular and airmail.

Accompanying this communication, was a draft bill designed to put into effect, the higher rates which had previously also been recommended by the President in his budget message for 1960.

This proposal would mean an increase of 15 percent on airmail, and 25 percent on regular mail.

The Postmaster General estimates that such a proposed increase in rates would yield an additional $355 million per year in revenue, which, he says, will reduce substantially the current operating deficit of his Department.

Assuming efficiency of operation of the Post Office Department, any such deficiency can only result from losses sustained in performance, by the Department, of its "public services" as defined in the Postal Policy Act of 1958.

Less than a year ago, Mr. Speaker, we defined those public services in that statute, to include "the total loss resulting from the transmission of matter in the mails free of postage or at reduced rates," and from various other special and nonpostal services.

In the same legislation, it was "declared to be the policy of the Congress", that the cost "of such public service items" should be "paid directly out of the general fund of the Treasury"—72 Stat 134, sec. 103(c)(3)(A), 39 U.S.C. 270a(c)(3)(A).

Further, Mr. Speaker, in the same statute—the Postal Policy Act of 1958, enacted, I repeat, less than a year ago—we declared that "the Congress hereby finds that it would be an unfair burden upon any particular user or class of users of the mails to compel them to bear the expenses incurred by reason of special rate considerations granted, or facilities provided, to other users of the mails, or to underwrite those expenses incurred by the postal establishment for services of a nonpostal nature"—72 Stat. 134, sec. 102(5), 39 U.S.C. 270(5).

Indeed, Mr. Speaker, we called express attention to the policy of the Congress that "the postal establishment should be operated in an efficient manner," and that "it clearly is not a business enterprise conducted for profit or for raising general funds"—72 Stat. 134, sec. 102(5), 39 U.S.C. 270(5).

And now, I submit, Mr. Speaker, the Postmaster General, in his recent letter to you, suggests that we disregard that policy, so recently and so clearly expressed, to use our power of taxation, through an increase in first-class postal rates, to operate a part of the postal establishment at a profit to raise general funds to cover the cost of "public service items" which we declared, only last year, to be payable "out of the general fund of the Treasury".

As stated, Mr. Speaker, this suggestion on the part of the Postmaster General, follows the same request, in substance, made by the President in his budget message for 1960.

The President, in that message, does suggest amendment of the Postal Policy Act of 1958, by a revision of our declaration of policy, in order to "assure a more equitable sharing of postal operating costs between mail users and the general public."

But the President's budget message, I submit Mr. Speaker, simply recommends, as does the recent letter of the Postmaster General, an increased tax of 1 cent in first-class postal rates, to provide funds "to finance the postal deficit and the subsidized public service"—which we declared last year should be met "out of the general fund of the Treasury."

Lest there be any question in the mind of any Member of this House, as to the fact that the fixing of postal rates is an exercise of the power of taxation, let me remind them first, of the Supreme Court's pronouncement, over 100 years ago, that "the revenue of the Post Office Department, being raised by a tax on mailable matter conveyed in the mail, and which is disbursed in the public service, is as much a part of the income of the Government as moneys collected for duties or imports"—*United States* v. *Bromley*, 53 US 88, 97.

In 1859, H.R. 872 of the 35th Congress, to make an appropriation "for the service of the Post Office Department"—Congressional Globe, 35th Congress, 2d session, page 914, 1859—was referred to the Committee on Ways and Means, reported favorably, and was passed by this House.

The Senate amended the bill to provide increased postal rates, but this House adopted a formal resolution refusing to consider the Senate amendment, because legislation increasing postal rates "is in the nature of a revenue bill," which, under the Constitution, "shall originate in the House of Representatives" *Id.* at page 1666.

Mr. Speaker, I take the liberty of reminding the Members of this House that the postal increases of 1917—1917 act, 40 Stat. 300, October 3, 1917—and 1932—1932 act, 27 Stat. 285, June 6, 1932—were embodied in general revenue bills which originated in this House, and were referred to the Committee on Ways and Means.

Reference was made, in the debates on the floor of this House, to the increase in postal rates in the 1917 bill, as "a direct tax"—volume 55, CONGRESSIONAL RECORD, page 2773—and as the laying on of "the heavy hand of taxation"—volume 55, CONGRESSIONAL RECORD, page 2766.

In 1904, the Supreme Court again described the postal service as a "popular and efficient method of taxation"—*Public Clearing House* v. *Coyne*, 194 US 497, 506.

In recent years, we have sought to raise revenue by increasing postal rates on the advertising content of newspapers and other publications passing through the mails as second-class matter, on the assumption that the advertiser should bear a greater portion of the burden of governmental operations.

Thus, Mr. Speaker, in the Postal Policy Act of 1958 itself, in which we declared, as stated, that each class of mail should bear its own, and no other's cost of handling in the postal service, we levied a tax on the transportation through the mails, of the advertising content in second-class mail matter, up to several times that on the so-called news content thereof.

Now, Mr. Speaker, it must be perfectly obvious that it cannot possibly cost any more to carry through the mails, the advertising content than the news content of the same newspaper.

As early as 1793, in his annual message to the Congress, President Washington urged "repeal of the tax on the transportation of public prints"—Volume 12, Writings of George Washington Sparks Editorial 1837, page 42.

Mr. Speaker, I repeat that only last year, in the Postal Policy Act of 1958, we declared the policy of the Congress to be that "the total loss resulting from the transmission of matter in the mails free of postage or at reduced rates", was

a "public service", which should be "paid directly out of the general fund of the Treasury".

In the same enactment, we stated expressly that "the postal establishment should be operated in an efficient manner" and "clearly is not a business enterprise conducted for profit or for raising general funds."

I therefore submit to you, Mr. Speaker, and to the House, that when the Postmaster General now suggests, as did the President in his Budget Message for 1960, that the Congress, by exercise of its power of taxation, increase postal rates on first-class mail matter, he is suggesting that that part of the postal establishment be used—as are the postal rates on advertising content of newspapers in second-class matter—to raise general funds to cover the cost of "public services," instead of defraying them "out of the general fund of the Treasury" pursuant to the expressed policy of the Congress in the Postal Policy Act of 1958.

Radiation Hazards in Uranium Mining

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. ASPINALL. Mr .Speaker, under permission, I include in the Appendix of the RECORD an article entitled "Radiation Hazards in Uranium Mining," by Duncan A. Holaday, of the U.S. Public Health Service, Salt Lake City, Utah, as reprinted from pages 104–106 of the April 1959 edition of the Mining Congress Journal.

Mr. Holaday in this article describes in an authoritative manner the hazards presented to uranium miners. Eventually, he points out, around 5,000 men will probably be employed in mining uranium ore.

On March 11, 1959, Mr. Holaday testified before a subcommittee of the Joint Committee Investigating Employee Radiation Hazards and Workmen's Compensation Problems, under the chairmanship of my good friend and colleague, Congressman MELVIN PRICE of Illinois.

Mr. Holaday points out in this article that proper ventilation in uranium mines is of great importance. I might add that thorough inspections by regulatory authorities would also appear necessary in order to protect the health and safety of the workers.

At the present time, the inspection of these mines is under the responsibilities of State governments.

Next week the Joint Committee on Atomic Energy has scheduled public hearings on Federal-State relationships in the atomic energy field. We are scheduled to hear from many witnesses concerning the respective activities of Federal and State governments, including my good friend from Colorado, Dr. Roy Cleere, director of the department of public health in Colorado.

The safety of uranium miners is a subject of great interest to me, and I hope that improved safeguards and inspection procedures can be developed in the near future:

RADIATION HAZARDS IN URANIUM MINING

(By Duncan A. Holaday)

Uranium mining is at this time one of the more important segments of the American mining industry. In 1957, the processing rate was about 13,000 tons of ore per day, and present plans of the AEC call for a total refining capacity of about 24,000 tons per day. This ore is produced by a multiplicity of mines ranging in size from two-man operations to those employing several hundred men.

As part of a long-range health study which the U.S. Public Health Service is conducting, a census was taken of uranium miners in Colorado, Arizona, New Mexico, and Utah during the summer of 1957. This operation located 2,700 miners working in about 375 mines. The number of mines which shipped ore during 1957 was much larger, but we found only the ones operating during the survey period. A few hundred additional miners were employed in areas not covered by the census. Eventually, it is probable that around 5,000 men will be employed in mining uranium ore.

This is not a large group of workers, but it is an important one. The entire multibillion dollar atomic energy industry depends on the efforts of these relatively few miners, for there is no substitute for the uranium which they produce. It is vitally necessary that any hazards peculiar to this industry be evaluated and controlled to insure a flow of ore to the processing plants.

DIFFERENT TYPES OF RADIATION PRESENT

In many respects uranium mining is similar to other metal mining. All of the usual hazards such as exposure to silica dust, powder gases, and diesel exhaust fumes and gases, are present, and are just as significant here as in any underground operation. The hazards produced by these materials are known and need no detailed discussion here. In addition to these familiar hazards, uranium mines have problems produced by the radioactive constituents of the ore, a recognition of which is new to the mining industry.

Workers in uranium mines are exposed to alpha, beta, and gamma radiation, present both as external sources and as radioactive gas and particulates which can be inhaled and retained in the body. Such mixed exposures are difficult to evaluate completely and, therefore, what appear to be the most important items must be selected for study.

External gamma radiation is produced by several members of the uranium family which are present in the ore body. The threshold level for industrial exposure to this type of radiation is 300 mr (milliroentgens) per week. This level has been established by the National Committee on Radition Protection, and rules for using it are described in NBS Handbook 59. Gamma radiation dose rates can be measured by calibrated scintillometers, Geiger counters, or ion chambers, if the atmospheric radon and radioactive dust concentrations are not high enough to contaminate the instruments. The radiation rate will depend on the size and grade of the exposed ore body, and our measurements have shown levels ranging from a few tenths of an milliroentgen per hour to 10 milliroentgens per hour.

If a radiation survey indicates that the miners may receive a significant fraction of the threshold amount of gamma radiation, their exposure should be checked with film badges. In the instances where we have done such measurements, we have found that the film badge results agreed reasonably well with survey meter readings. In uranium mines producing average grade ore (0.2 to 0.3 percent), the workers received 35 to 50 milliroengtens per week, which is well below the threshold level. A few mines consistently produce high grade (above 1 percent) ore. In such cases, it is important to have the gamma radiation exposures measured as the men may receive more than the threshold limit.

External beta radiation is probably not a significant exposure, but it should be considered. Such operations as handsorting of high-grade ore could deliver large doses of beta radiation to the hands, and should be avoided. Good change-house facilities are also needed, so that the workers can clean up thoroughly at the end of their shift and remove any contamination that they might have acquired.

RADON GAS EMANATES FROM EXPOSED ORE

Uranium miners are also exposed to radon gas which is continuously emanated from the ore body and to air-borne dust containing all the radioactive constituents of the ore. The greatest radiation hazard and the most difficult one to control is due to radon. The situation is comparable to any gassy mine as there is a steady escape of gas into the working areas of the mine. The amount of radon produced will depend on the area of ore exposed, the grade of the ore, and the porosity of the host rock. We have measured emanation rates varying from 0.004 curie to 0.27 curie per minute per 1,000 cubic feet of mine volume, or roughly by a ratio of 70 to 1. Dust, however, will only be produced by active mining operations at a relatively few locations in the mine.

A detailed discussion of the radon problem is given in PHS publication No. 494, "Control of Radon and Daughters in Uranium Mines," which reports the results of this phase of our study of the uranium mining and processing industry. This bulletin points out (1) that there is a history of human exposure to radon in European mines which probably caused a high incidence of lung cancer in these men; (2) that the immediate daughters of radon are more important than radon in delivering radiation to the lungs; (3) that, without controls, the atmospheric concentrations of radon daughters in the majority of American mines would be in the same ranges as were those in the European mines; and, (4) that mechanical ventilation is the only feasible method of control. A working level for atmospheric concentrations of radon daughters is suggested for use until further information is available, and methods for measuring these concentrations are described. All of these data are useful to those who are responsible for the health and safety of uranium miners, and a study of this report is recommended.

Since 1956 we have maintained a record of radon daughter samples which were taken by State agencies, mine operators, and our own staff. A summary of the 1957 results are given in table 1. Table 2 lists the same samples by concentration ranges and type of ventilation in the location sampled. These results show the effectiveness of ventilation in reducing radon daughter concentrations. They also show that these concentrations vary considerably among the mines, and that many operations will require study by an expert in mine ventilation to develop adequate control measures.

PROPER VENTILATION IS OF PRIME IMPORTANCE

Because of the wide variation in radon emanation rates, and since dilution ventilation is the only feasible method of control, the quantities of fresh air needed will also vary widely. Fortunately, in mine ventilation the laws of radioactive growth and decay operate in our favor. Each of the

members of the radon decay series is produced by the transmutation of the preceding element. Therefore, the removal of radon, RaA and other members of the series by ventilation has a cumulative effect on the atmospheric concentrations of the later elements in the chain. The net result is that lowering the concentration of radon by a factor of two will reduce the alpha energy content of the mine air by a factor of approximately four.

In other words, if the radon daughter concentration in a stope is four times the working level, doubling the ventilation air will reduce the concentration to the working level. Such calculations are not exact because they assume that uncontaminated air can be introduced directly to the working areas, but they do assist in planning a ventilation program.

Similar calculations will also demonstrate the desirability of closing off unused areas of a mine, which may be large sources of radon, and the necessity of keeping the ventilation fans running continuously. With no air changes, the radon daughter levels can rise to fantastic heights overnight. In almost all mines, one air change every 4 minutes will maintain the radon daughter concentrations at or below the working level. In many mines, one air change every 10 minutes is sufficient for control. Most mines working well-defined ore bodies should have no unusual ventilation problems. However, those operators who are mining small, scattered deposits may indeed have difficulty in establishing adequate controls.

RADIUM MAY BE PROBLEM IN DUSTY MINE

There are many other radioactive elements in uranium ore which must be considered in evaluating the total radiation exposure of the workers. Of these, the one on which we have most information is radium. For this element, a maximum permissible body burden of 0.1 microgram fixed in the body has been set as a result of studies of human exposures. Atmospheric concentrations of radium should be maintained at levels which will prevent the retention and fixation of this amount of radium in a working lifetime. The National Committee for Radiation Protection has adopted a threshold level of 24 micromicrograms of radium per cubic meter of air, which seems to have an ample safety factor in it.

We have analyzed several hundred mine air samples for air-borne radium and found that about 10 percent of them were above the threshold level, which would indicate that radium was not a significant health hazard in those mines. However, it should be pointed out that these samples were all taken in small mines with little mechanization. In larger operations, with trucks and ore loaders operating, it would be advisable to measure the atmospheric radium concentrations. It is probable that exposure to silica dust will be the controlling factor, but the situation should be checked.

If the levels of air-borne radium are high, it is possible to estimate the amount of radium that a miner is retaining and absorbing by determining the urinary radium excretion, and as a final check the body burden can be measured in a whole body counter. This procedure will detect as little as five percent of the maximum permissible body burden, so there is ample time to correct any conditions that are overexposing the workers.

EXCESS URANIUM IN MINE AIR UNLIKELY

On a weight basis, uranium is much less toxic than radium. Uranium can produce both chemical and radiation injury, and the threshold levels will vary according to the characteristic that is being considered. The American Conference of Governmental Industrial Hygienists has adopted a level of 250 micrograms of insoluable uranium per cubic meter of air based on chemical toxicity, while the AEC regulations specify 150 micrograms of U–238 per cubic meter of air based on radiological hazard. It has been estimated that the radiation threshold level has a factor of safety below the injury level of from 10 to 25. The difference between the two threshold levels is probably due to the differences in the safety factors used in establishing them.

It appears to be very unlikely that air-borne uranium concentrations would be above the threshold level unless the radium concentrations were also excessive. We have run a limited number of mine air samples for uranium and have found none which exceeded either the chemical or radiation threshold levels.

Limitations of time and staff have made it impossible for us to study other elements, such as polonium, radiolead, and ionium which also occur in the ores. It would be desirable to have information on these elements, but we believe that we have obtained data on the most significant constituents.

The studies that have been made of radiation exposures in uranium mines show that the greatest hazard is probably produced by radon daughters, and that practically all mines will require mechanical ventilation to reduce the atmospheric concentrations of these elements to the working level. Simple field methods are available for measuring radon daughters and for estimating ventilation requirements. In a large majority of mines, if the radon daughters are controlled, other air-borne radioactive dusts will also be controlled. Gamma radiation will usually not be a significant hazard, but may be a problem in mines working high grade ores.

J. Edgar Hoover Credited With Saving Once Weak Law Enforcement Group

EXTENSION OF REMARKS
OF
HON. GEORGE H. MAHON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. MAHON. Mr. Speaker, the American people for years have maintained an unwavering confidence in J. Edgar Hoover, the Director of the Federal Bureau of Investigation. It is good for our country that we can have in a position of such great responsibility a man in whom the rank and file of the people have such great confidence. We need always to hold high in this country respect for law and order. The great job which Mr. Hoover has done has been of incalculable value to our people.

Thirty-five years ago Mr. Hoover became head of the FBI. As one who has watched his work through the years and taken pride in his accomplishments, I wish to pay tribute to this great American.

Having received unanimous consent to do so, I now insert a portion of a United Press International story by Robert J. Serling which appeared in the press earlier this week.

J. EDGAR HOOVER CREDITED WITH SAVING ONCE WEAK LAW ENFORCEMENT GROUP

(By Robert J. Serling)

WASHINGTON.—Thirty-five years ago Sunday, a young, one-time night school law student became head of the Federal Bureau of Investigation.

His name was John Edgar Hoover. Today, he still heads the agency that has come to stand for the finest in law enforcement.

When Hoover took over, the FBI had the lowest morale, poorest personnel and worst reputation of any agency in the Federal Government. It was loaded with political appointees who couldn't have solved the theft of a 5-cent candy bar in broad daylight.

LONG POLICE RECORDS

There were FBI agents with long police records. Ex-convicts carried FBI credentials.

Special agent badges were given to politicians; to a theatrical producer who brought a girlie show to Washington; and to a drunk who used to stand outside the Department of Justice at lunchtime and sing bawdy songs.

Hoover was only 29 when Attorney General Harlan Fisk Stone told him to "clean up the mess." He used more than a broom. He fumigated.

The ex-convicts were fired. The political hacks were treated even rougher. Hoover transferred them from city to city so often they finally quit. And gradually, he built the FBI into a symbol of efficient, honest law enforcement.

Hoover used to know every one of his agents by name, but the FBI has long since outgrown this personal touch. Yet the growing process never affected his greatest achievement—the esprit de corps that has made the FBI one of the most respected, and feared, investigative bodies in the world.

This respect reflects the character of Hoover himself. Like his coldly efficient agents, he is more of a symbol than an individual. Now 64, he never married—explaining to friends, logically, that any woman who married him also would have to marry the FBI.

He loves horses, dogs, gardening, art, popular music, sports, sculpture and above all, his job, which he treats with rigid concentration.

Under Hoover, the FBI has obtained convictions or pleas of guilty in more than 90 percent of the cases it has investigated. In 4 years of global war, not a single case of foreign-directed sabotage was reported, kidnaping has become one of the least likely to succeed major crimes.

AFTER FACTS ONLY

No man could have acquired the influence enjoyed by Hoover without also acquiring some enemies—racketeers, Communists and fellow travelers. But there also are some liberals who fear the FBI occasionally treads on civil rights, tags innocent people with Red labels and is by its very nature a potential Gestapo.

Such charges disturb Hoover, who has leaned over backward to keep the agency exactly what it was intended to be—a nonpolitical investigative agency which digs up the facts and lets someone else judge them.

St. Elizabeths Hospital

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 29, 1959

Mr. WAINWRIGHT. Mr. Speaker, I have introduced today a bill drafted by the Department of Health, Education, and Welfare "to amend the laws relating to St. Elizabeths Hospital so as to fix the salaries of the superintendent, assistant superintendent, and first assistant physi-

cian of the hospital, and for other purposes."

This bill is similar to H.R. 9416, which was submitted to the 85th Congress in August 1957 in order to meet a long-standing problem concerning the furnishing of quarters, subsistence, and other items of maintenance to the three top officials of St. Elizabeths, and to provide them with salaries which more realistically reflect their professional status and their responsibilities.

In his letter of transmittal accompanying the bill, the Secretary of Health, Education, and Welfare Arthur S. Flemming, describes the need for this legislation as urgent. As he points out:

In the interval between submittal of this legislation to the 85th Congress and the present date, the incumbent of the position of Assistant Superintendent has retired and accepted a more lucrative position outside the Government. In addition, the incumbent of the first assistant physician's position has died and only recently been replaced by a promotion from within St. Elizabeths Hospital of a physician who is nearing retirement. This bill is an essential step in placing the Department in a position where it can hope to recruit qualified persons for these very important posts.

Address by Hon. James A. Farley at the Annual Communion Breakfast, Rosary Society, St. Teresa's Parish, Woodside N.Y., at the Waldorf-Astoria, New York City, May 3, 1959

EXTENSION OF REMARKS
OF

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. DELANEY. Mr. Speaker, on May 3, 1959, the Honorable James A. Farley addressed the Rosary Society of St. Teresa's Parish of Woodside, N.Y., which is located in my district. Fittingly enough, in view of the approaching Mother's Day, he paid a tribute to the mothers of our country. I am sure we all share the sentiments expressed by Mr. Farley:

To the mothers of America this is the month of May, which traditionally in the Christian world is dedicated to the honor of Mary, the Mother of Christ. A week from today, the second Sunday in the month is that day in May when America, by Presidential proclamation, pays its respects to the mothers of our Nation. And so, while today is not in fact Mother's Day I feel certain it will not be out of order for me, on this first Sunday in May, to talk about mothers. I greatly appreciated Father Haggerty's invitation to participate in the annual communion breakfast of the Rosary Society of St. Teresa's Parish of Woodside. I am delighted to be with you this morning.

In these days of national anxiety—and who is not apprehensive about the Berlin situation—we can well pause to make a silent prayer that divine providence will guide our Government and will continue to strengthen our Commander in Chief, to the end that our unity of effort will speedily achieve the inevitable satisfactory settlement of our common enemies' plans and culminate in a just and lasting peace.

I feel it is appropriate for me, at this point, to quote to you the advice the mother of Andrew Jackson, the seventh President of this country, gave to her son shortly before she died: "Andrew, if I should not see you again, I wish you to remember and treasure up some things I have already said to you: In this world you will have to make your own way. To do that you must have friends. You can make friends by being honest, and you can keep them by being steadfast. You must keep in mind that friends worth having will in the long run expect as much from you as they give to you. To forget an obligation or be ungrateful for a kindness is a base crime—not merely a fault or a sin but an actual crime. Men guilty of it sooner or later must suffer the penalty. In personal conduct be always polite but never obsequious. None will respect you more than you respect yourself. Avoid quarrels as long as you can without yielding to imposition. But sustain your manhood always. Never bring suit in law for assault and battery or for defamation. The law affords no remedy for such outrages that can satisfy the feeling of a true man. Never wound the feelings of others. Never brook wanton outrage upon your own feelings. If you ever have to vindicate your feelings or defend your honor do it calmly. If angry at first, wait until your wrath cools before you proceed."

These words were repeated by General Jackson on his birthday, March 15, 1815, at New Orleans, to three members of his military family, Maj. John H. Eaton, Maj. William V. Lewis and Capt. W. W. Butler. "Gentlemen," said General Jackson, "I wish she could have lived to see this day. There never was a woman like her. She was gentle as a dove and as brave as a lioness. Her last words have been the law of my life."

Mothers are instinctively—and we instinctively expect them to be—a fount of virtue and inspiration to their children. As a daughter, as a sister, or as a wife, a woman represents only herself; but as a mother she is an institution, a living source of man's beginning, a living symbol of mankind's destiny. A man may be steeped in cynicism and despair but still his mother's words will be for him a source of strength and a fortress of hope.

Many a man's wife who took the oath with solemn voice has withdrawn her support, but a mother always is constant in her support, "for better, for worse, for richer, for poorer, in sickness and in health, until death do us part."

That oath imposed in the marriage ceremony implies the expectation that those made one before the law will be one in spirit, too. Though often only a hope between spouses it is a fact between mother and son. No solemn soundings are needed to bind a mother to her son "for better, for worse, unto death." Nature herself forges the undying bond, for it takes her into the shadow of the valley of death to give him life at the risk of her own. Affection thus born is surely not a mere sentiment or an accident. It is a profound manifestation of nature and shows that though we may turn to our scholars for the answers to technical problems we would do better to turn to our American mothers when we seek fundamentals.

Long before the dawn of the Christian era, the reliability of a mother's instinct was recognized in all ages and places. The best known story goes back thousands of years to the time of Solomon. You recall, I am sure, the story of the two women who claimed the same child. As it is told in the Scriptures, one said to Solomon, "Oh, my Lord, give her the living child and in no wise slay it." But the other said, "Let it be neither mine nor thine but divide it." Then the king, turning to the first woman said, "Give her the living child and in no wise slay it; she is the mother thereof." How easy it was for him to be sure which of the two was the true mother.

In the Christian tradition, of course, the mother has always been the voice of virtue and the living star of truth. Dignity and honor have been hers, and her material welfare has been the proper concern of every self-respecting son.

Most mothers live obscure lives and die obscure deaths, their grace and inspiration enhancing the lives only of their offspring. It is significant, therefore, of the genius of motherhood as an institution that mothers as a class are so widely heralded throughout all literature.

Our own Washington Irving states simply but well: "The love of a mother is never exhausted, it never changes, it never tires."

A father may turn his back on his child, brothers and sisters become inveterate enemies, husbands may desert their wives, or wives their husbands. But a mother's love endures through all; in good repute, in bad repute, in the face of the world's condemnation, a mother still loves on and still hopes that her child may turn from his evil ways and repent; still she remembers the infant smiles that once filled her bosom with rapture, the merry laugh, the joyful shout of his childhood, the opening promise of his youth; and she can never be brought to think him all unworthy.

The life of Augustine shows how sound such a mother's faith can be. Augustine, contemptible before the world, was to his mother the soul of beauty and honor. She tirelessly pursued him, determined to convert him to the Christian life of which she knew he was worthy. When at last she had lifted him out of the mire and set him among princes she knew and said her life was done, and she was happy to pass on to her place in eternity—the great St. Monica.

Some writers have gone very far in their portrayals of the function of motherhood. The English novelist Dickens wrote, "I think it must somewhere be written that the virtues of the mothers shall be visited on their children as well as the sins of their fathers."

The philosopher Michelet: "It is the general rule that all superior men inherit the elements of their superiority from their mothers."

And our own Ralph Waldo Emerson contributes the concise remark: "Men are what their mothers make them."

It is almost trite to repeat that our wars have been fought for liberty, but in substance doesn't that mean that they are fighting for the sanctity, the security, and the importance of the home? And what is home without a mother? As James Lowell said, "Many make a household but only one the home."

These are thoughts it should not be necessary to dwell upon and you may well ask why it is desirable to cite testimony to such a well-accepted truth. Precisely because it is not so well accepted as we may blindly believe. While the overwhelming majority of the mothers of this Nation—and of the fathers, too—are busy doing their best to maintain and preserve our American way of life there are abroad within our midst groups and individuals who conspire for the success of their peculiar brands of philosophy which would make a mockery of the values upon which we have bred. The honest average citizens of this land work hard at home and in shop to make a living and to serve their country. When their day's work is done they quietly, and in good faith, turn their minds to the peaceful enjoyment of family life. They have little or no time for political activity. They can only have faith that their efforts and the efforts of their neighbors are expended in behalf of the fundamental principles which they

understand to be the essence of our constitutional government.

There seems to be a spirit growing among some in this country that is alien to our institutions. I have an uneasy feeling that the belief is spreading that the people are not capable of governing themselves, that the problems of today are so complex that the citizen at large must of necessity be detached from his own difficulties. The concept of the political elite is growing.

Some weeks ago I noticed the publication of a new volume in the reviews. It was widely discussed in book circles and given serious consideration. The author believed that mankind can be divided into a small class of the ruler type and a large class of the ruled type. "Political action," the author contends, "is confined for the most part to a small minority of men; the majority is and remains, whatever else happens, the ruled." This writer even dares to suggest that Machiavelli is an excellent sample of the elite.

We see clearly what the "intellectual" believes. He believes that the hardworking masses of this great Nation were meant to be just hardworking and were not intended to bother about the solution of their own problems, but were meant to leave them to be determined by a small group of "know-it-alls."

We have always had the social snobs who have no respect in any sense for persons of crude though honest habits, and we have always had the intellectual snobs who think an individual becomes an individual only after he has acquired certain facts or theories; who refuse to recognize that the individual has merit unto himself and in himself.

Mothers have always been an antidote to the influence of social and intellectual snobbery in our society because mothers by nature appreciate that a child has a basic dignity equal to or greater than an adult's. The substance of human nature is there; later social or intellectual attainments are mere accidents.

We have got to realize that over 175 years of liberty do not assure us an eternity in its enjoyment. We have got to rid ourselves of the fixed idea that liberty is imperishable in America. The American schoolboy's knowledge of history, limited as it has been, is concerned primarily with America. The numberless centuries of human bondage and exploitation, and the vast areas of despotism in the past are virtually concealed from the American schoolboy in his most impressionable years. References to eternal vigilance as the price of liberty are but amusingly hollow words in his ears because they have been unnecessary in a land where liberty without vigilance has been a free commodity. Perhaps our time has come. We can learn the price of liberty by alertness. If the choice is given to us of liberty or security we must scorn the latter with the proper contempt of free men and the sound judgment of wise men who know that liberty and security are not incompatible in the lives of honest men.

It is upon the mothers of America that this Nation depends to protect its institutions while their sons are guarding its sovereignty. The enemy is "fore and aft" and we must mount our guns in bow and stern. The mothers are the repository of the fundamental principles of our national structure. Should these principles be subverted the sacrifices of our patriots, present and past, will seem minor compared with the sacrifices of future generations to bring about the resurrection of those freedoms which have made America great.

The good people of America must learn well that 175 years are swift and brief. America is but a thin stream of light in the long black history of human bondage and the illusion of permanence abiding in the hearts of so many proud Americans is a disarming perspective. The warm enlightening flame of liberty must be kept alive with the twin fuels of intelligence and courage.

I cannot believe we have talked the meaning out of words that now trite with use bear no message to inspire our populace. Liberty and freedom as words become trite only at a price. I will not believe that Americans must suffer their loss to learn their value. The tragedy is that the process of rediscovery of their value seldom involves a recovery of their enjoyment.

We are always being measured and we will perform. I have faith that just as we and our allies slowly but surely ground Hitler and his coconspirators into the dust, never again to impose their ugly power and perverted theories upon innocent and honest people, alien philosophies at home will be crushed under the heels of free Americans and a prosperous democracy of the United States of America will go forward to greater accomplishments.

The titanic efforts and the copious bloodshed that went into the making of America, the sacrifices of Valley Forge, Bull Run, the Marne, Anzio, and the Normandy beachhead are matters of meaning, full and deep in this day of new trial. In years of peace and complacency we have heard their recital with pleased but semiconscious ears. We must now grasp their full import to be equal to the threat before us.

American mothers will always do their part. You who offered your own lives that your sons and daughters might live—and in times of peril have offered those son's lives that your country might live—are purged souls of this world, and it is into your hands and the ideals that guide them that we willingly and with faith entrust the future of our beloved Nation.

Remarks of Former Senator Herbert H. Lehman at Women's National Democratic Club Dinner, Washington, D.C., March 19, 1959

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. STRATTON. Mr. Speaker, all of us in Congress are interested, I am sure, regardless of our particular party affiliation, in the job of improving the procedures of our American democracy, in stimulating political activity in both political parties at the grassroots level, in encouraging younger people to become more active in the field of practical politics in the party of their choice, and especially in insuring the development of those political forms and procedures in both our parties that make our party operations genuinely reflect the views and opinions of the rank and file members of those parties.

In this connection, I believe that a recent address by a distinguished American and a former Member of the U.S. Senate, Senator Herbert H. Lehman, of New York, made recently at a dinner in Washington, deserves the attention of every Member of this body. Senator Lehman has a long and distinguished career of Government service both in New York State and in the Nation. At a time when many men with his distinguished record behind them have retired to comparative inactivity, Senator Lehman has been connected with a new and active political movement in New York State. Although, as a Member of Congress, I have personally not taken part in this movement, I know that the views of this great American on the working principles of our democracy will be of great interest to the people of our State and to the Nation, and therefore, under leave to extend my remarks, I include the text of Senator Lehman's address:

NEW YORK'S DEMOCRATIC PARTY MUST BE DEMOCRATTIZED

(By Former U.S. Senator Herbert H. Lehman)

This is a familiar forum. In these friendly and familiar surroundings it is hard to resist the temptation merely to reminisce on issues and events of the past. But tonight I am going to resist that temptation, in part at least, because I want to tell you about something very current—about the reform movement now going on within the Democratic Party of New York State.

Many people have asked why I, who seek no fresh honors or prestige, undertake at this point in my life to engage in this hard, thankless, and exhausting job, so alien to my general run of interests. My answer is very simple. I am doing so because I believe that this is one of the most important contributions that I can make to the Democratic Party and to the political life of our State and Nation. To carry on this fight, I have committed a major share of my energies.

If there are present here tonight some New Yorkers who are affiliated in one way or another with the New York State or city organizations and who, for whatever reason, may be opposed to the nature or direction of the efforts which my associates and I are making to rehabilitate the party, I ask their indulgence, for I am going to speak frankly, as is my custom. If I should, by mischance, offend any sensibilities, let me apologize in advance. I know I am a guest here and perhaps I should refrain from speaking on so controversial a subject. But I hope that even those who disagree with me will be interested in what I have to say.

This dinner is being given tonight under the auspices and direction of the New York members of the Women's National Democratic Club. I am proud of these auspices. While I am not quite a States-rights man, in the Dixie sense, I have always been very proud of my State, as most New Yorkers are. It is our home.

But, in addition to this feeling common to all Ameriacns, from whatever State or section, New York has in many ways a very special significance for the Nation. Tonight I will refer only to its political meaning. And since I am speaking to the Women's National Democratic Club, I want to refer to the meaning of New York for the Democratic Party of this country.

I do not really think it is necessary to tell this audience what an important role New York has played in the history—and the achievements—of the Democratic Party. Its leadership in the field of ideas, especially those called liberal, is well known. The great Democrats whom New York has given to the Nation include not only Al Smith and Franklin Roosevelt, but also, out of the latter part of the last century, Samuel Tilden and Grover Cleveland.

Indeed, it is interesting to recall that in 12 out of the 23 presidential elections since the Civil War, the Democratic candidate for the Presidency has been a New Yorker. In the last 10 presidential elections, from 1920 to the present, a New Yorker has been the Democratic candidate for the Presidency in

6. In 9 of the last 10 Democratic presidential conventions, a Democrat from New York was either nominated or was a major contender for the nomination. The sole exception was in 1948, when Harry S. Truman, of Missouri, was nominated by acclamation.

Hence I start from the pardonable assumption that what happens to and within the Democratic Party of New York is important to all Democrats, and to all Americans.

All this is preliminary to my explanation of why Mrs. Roosevelt, Tom Finletter, and I have associated ourselves with a major undertaking to change, among other things, the face and image of New York's Democratic Party as it is today. The present image—based largely on the public impression of the party organization of New York City—is one of bossism and of machine control of party affairs.

This image, as dramatized by the State convention of our party at Buffalo last August, makes it unlikely, in my opinion, that any Democratic candidate for statewide office who is named by the bosses under the present system can be elected in the foreseeable future.

Unless this image is erased, I even question how much influence the New York delegation to the 1960 convention can have in the major decisions of that convention.

These are by no means the only sad results of present-day boss rule of the Democratic Party of New York. The real evils run far deeper. Many New Yorkers have grown so used to some of these evils that they are unconscious of them. But they enter into the vague sense of distaste which many New Yorkers have for party politics, and contribute to the widespread public distrust of the machine.

It is my purpose—and that of my associates in this effort—to focus public attention on the evils of the boss system and thus hopefully to bring about their elimination. I am going to discuss some of them with you tonight.

In the first place, the Democratic Party organization of New York State is an anachronism. It is something out of the past which has survived—and indeed in recent years has grown much worse—while the Democratic Party organizations in most of the other States have followed the tide of the times.

In the New York organization, the power of major political decision has come to rest in fewer and fewer hands—and these hands are those of the party professionals who have no direct responsibility whatever to the registered Democratic voters of the State, not to speak of the general electorate.

In most other States, the Democratic Party organizations have become more and more democratic. In one State after another, the power of the old-line party bosses—the Hagues of New Jersey, the Pendergasts of Missouri, and the Crumps of Tennessee—has been broken upon the rock of public disapproval. From California to Maine, and from Nebraska to Michigan, a new generation of young and vigorous men and women, responsible and responsive to the electorate, has taken over the party organizations. To an increasing extent, party leadership in these States has passed from the old-style party professionals into the hands of elective and elected public officials. In many States today, key party officials are selected at the polls.

Not so in New York. In our State, a party professional, Mr. Carmine DeSapio, has emerged as the chief wielder of political power, the top boss of the entire State organization. In a State with almost 3 million registered Democratic voters, Mr. DeSapio's only elective post in the party is that of district leader of one-third of an assembly district in Manhattan in the Greenwich Village area, a post to which he was reelected in 1957 by the vote of 3,700 Democrats in a contested primary.

Now let me say a few words about Mr. DeSapio and the system over which he presides. In addition to being the district leader of the southern third of the first assembly district, he is also the county leader for New York County, which is the borough of Manhattan. Today Manhattan is actually the fourth in size of the five boroughs of New York City, the larger three being Brooklyn, Queens, and the Bronx. Yet Mr. DeSapio, as the leader of the Manhattan organization, which is Tammany, has achieved de facto supremacy in the party organization of the entire city.

Control over the city organization means, in effect, control of the State organization. The votes of New York City's five county organizations have constituted a clear majority of the votes in past State conventions.

The delegates to State conventions, who generally are nominated by the professional leaders, are not elected on the basis of a pledge, except in a few cases, is to follow pledge to support any particular candidate for public office. Their only pledge, except in a few cases is to follow the leadership of the professionals.

But at most past State conventions, except for the recent Buffalo convention, most decisions have been made in close consultation with the public leaders of the party—above all with the Governor, if there is an incumbent Governor—and also with the mayor of New York City and the U.S. Senators.

The tradition is, and always has been, as far back as I remember, that the publicly elected officials have represented the voice of the people in party decisions, and in the end that voice has usually been respected by the party bosses. From time to time a group of bosses—sometimes representing the majority of the convention votes and sometimes not—has tried to put over one candidate or another in defiance of the views of the public leaders of the party. On a few occasions, the bosses have won. Usually they have lost. I might add that on every occasion I can remember when the bosses have won, the results at the succeeding general election have been disastrous.

But at the Buffalo convention, Mr. DeSapio who in the past had always given careful heed to the public leaders of the party, for the first time used his growing power—not to follow but to oppose and defy the public leaders of the party—in such a flagrant way as to shock the voters of New York State and indeed of the Nation.

Mr. DeSapio was by no means alone in his fault. The other New York City bosses—and a few of the upstate bosses—went along with him in this public demonstration of complete boss control of the convention and of the party organization. The subsequent public reaction against bossism astonished the professionals—and quite a few other people—in New York and in the Nation. To this day, some New York politicians will not face up to the fact that the time is gone when the people will accept the domination of the elective process by party bosses who never were and are not now directly subject to public control.

Some professionals continue to cherish the outdated notion that the people can indefinitely be treated as objects of manipulation and control, rather than as the sovereigns of the political process.

At this point I want to emphasize that I have no personal animosity against Mr. DeSapio. He is a capable party professional, and rather more flexible and enlightened than some others. His defeat or replacement is by no means our major objective. If Mr. DeSapio's removal were to be our sole achievement, it would be a hollow victory. Mr. DeSapio might well be succeeded by somebody who was no better. But Mr. DeSapio is the symbol of bossism in New York today. He has made himself that symbol. Our attack is against the system including the man, not merely the man.

We advocate all the reforms in law and party regulations required to overhaul the system, and the replacement of the organizational leaders who are determined to preserve the system.

One of the bad effects of the system, which is not generally appreciated as being due to the system, is its discouragement of young, talented, and idealistic young men and women from entering public life. The fact that in 1960, for the first time but one since 1916, New York will not have a contender for the presidential nomination is a major reflection of this result of the boss system. In that system promising and capable young men and women simply do not get the chance to show their capacity for statewide and nationwide leadership.

How about Franklin Roosevelt and myself, you might ask. Weren't we "made" by the machine? The answer is "No." Franklin Roosevelt originally came to general public notice in New York and in the Nation as a result of his battle against Tammany in 1911 as leader of a group of Democratic insurgents in the State legislature who successfully opposed Tammany's choice for the United States Senate. In 1928 Al Smith persuaded Franklin Rosevelt to run for Governor. At the same time Al Smith and F.D.R. persuaded me to run for Lieutenant Governor; and in 1932 Franklin Roosevelt and Al Smith strongly supported me for Governor.

I wish I had the time tonight to tell you in detail how violently and desperately the bosses fought my nomination as Governor in 1932. In short, with the support of Franklin Roosevelt, Al Smith and Jim Farley I finally secured the nomination after a desperately hard fight against the leaders of Tammany and their cohorts.

Today the Democratic Party's arsenal of public personalities who could become candidates for top statewide offices is almost as bare as Mother Hubbard's cupboard. Mayor Bob Wagner is one of the very few of the younger Democrats with a statewide reputation. And in the beginning, he too had to be forced by the Liberal Party on an unwilling Tammany as a candidate for borough president. In general, the organization shows a very chilly attitude indeed toward any candidate who has not come up through the maze of clubhouse politics.

Unfortunately most of the clubhouses are closed corporations, which regard with cruel suspicion any young man who is more interested in the burning public issues of the day than in the soothing question of patronage. The pot of gold at the end of the average clubhouse rainbow is not an opportunity for public service but a good patronage job—best of all, a judgeship. Another clubhouse reward is easy access to patronage favors from elected or appointed officeholders. The most lucrative of these favors come from judges, many of whom consider it a routine obligation to receive the recommendations of the organization as to the distribution of receiverships, trusteeships, guardianships and attorneyships in the settlement of estates. In this I am referring to what is perhaps the most evil aspect of all in the machine system—the exposure of the judiciary to political influence.

The very idea of this is scandalously shocking. One of the foremost principles of the American system of government, and the chief bulwark of the rights of our people, is the independence of the judiciary from any control or influence by the executive and legislative branches of the Government. But in New York we have a system for the selection of judges which places the judiciary within the reach and frequently

the control, not of the executive or legislative branches of the Government, but of the professional party politicians—a reach and control far more vicious in its potentialities, and frequently in its practice, than any measure of control by the executive or legislative branches could possibly be.

The drastic reform of this system—of the system whereby judges are in fact selected by the professional politicians and are consequently beholden to them—is one of the prime objectives of our efforts.

I should state at this point that I do not mean to cast anly reflection upon individual members of the New York State judiciary. There are a great many fine, outstanding judges in the State and city of New York. But the system is evil. It must be remedied. We are going to press for the total removal of the judiciary from clubhouse politics. We are going to press for the opening up of the Democratic Party to the young, the ambitious, the courageous and the promising—to people interested in ideas and ideals as well as in personal advancement.

We are going to press for the repeal and amendment of the maze of laws which now makes it almost impossible for an independent or an irregular to run in a primary election unless he is flanked by a force of experienced political technicians versed in the intricacies of election law, to help him find his way past the legal pitfalls that have been dug to discourage political independence or irregularity.

We are going to press for the direct primary for statewide offices so that nomination of candidates for governor and Senator will be by the people rather than by the bosses in convention assembled. The primary system has its defects and shortcomings, but I am convinced that in the long run it is superior to the convention system. Finally, we are going to press for the direct election of key party officials such as county leaders and—in the cities—or the district leaders. Only in Manhattan are district leaders now directly and clearly elected by the party voters—and this is a recent reform. Yet—next to the county leaders—the district leaders are the most powerful figures in the party organization. The district leaders and the county leaders together are the major repositories of the power of the organization.

On that level—in Manhattan, at least, the attack on the machine has already begun. This year there will be primary contests in many of the districts of Manhattan. Groups of young insurgents have organized themselves to give battle to the antireform leaders of Tammany. Our problem is to convince the registered Democrats of New York that participation in the primary election contests for district leader is essential to advance the reform and the democratization of the Democratic Party as a whole.

It was in order to give this movement a citywide and statewide character, with a leadership whose views would command citywide and statewide attention, that Mrs. Roosevelt, Tom Finletter, and I formed the Committee for Democratic Voters.

We have no desire to set up a political organization to rival the present Democratic organization; our aim is to secure the democratization of the existing one. The aim of our committee is to hold up the banner for all to see, and to sound the clarion call for all to hear.

The rest of the undertaking is up to the people—to the young men and women; to the New Yorkers of all ages—from the sidewalks, the tenements, the shops, factories and yes, the farms. It is the people's job to arise and organize; to raise a people's army, that will take over the party and make it the people's organization. We are working and hoping for a young leadership to take over the party organization of New York State.

It is somewhat paradoxical for Mrs. Roosevelt, Tom Finletter and me to be among the leaders of the youth movement in New York politics. But in fact, our aim is to bring out and to develop those who are young in years and young in vigor, with a future ahead of them, to build the foundations of a new Democratic Party organization in our State.

There has already developed a ground swell of interest in this undertaking. Reform is in the air in New York. Many of the organizational leaders have now begun to talk about reform, about a little reform, that is. But we are not going to settle for a little reform. We are going to continue to fight for all the reforms I have enumerated, and to try to make the party organization the instrument of the public will.

This we must do; this we will do, no matter how long it takes us, for the sake of the Democratic Party, for the sake of New York State and of the Nation.

And when I say "we," I mean the people—not Mrs. Roosevelt or Tom Finletter or myself. We are just the voice of the trumpet. This is the people's job—the job of the rank and file of Democratic voters in New York State. And we are going to succeed.

Space Age Projects for the Military Engineer

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. NORBLAD. Mr. Speaker, the inevitable victory of science is our best guarantee of continuing national security. This fact has been driven home to me with increasing clarity. I was present at Patrick Air Force Base and Cape Canaveral at the time of the Titan testing in February 1959, and I availed myself of the opportunity to be present for some of the conferences and discussions on aerospace and flight at the World Congress of Flight held earlier this month in Las Vegas. What I saw on those visits is of national and international significance, as we are adding to the miltary power of the free people in a telling manner—in a world where Communist reliance upon force to achieve its ends yields only to clearly superior force which denies these ends.

Maj. Gen. B. A. Schriever, whose nomination for promotion to lieutenant general was reported favorably by the Senate Armed Services Committee only last week, recently met with the Society of American Military Engineers in Portland, Oreg. He discussed "The Military Engineer in the Space Age." General Schriever has served with distinction as Commander of the Air Force's Ballistic Missile Division and soon will head the Air Force's Air Research and Development Command. His authoritative presentation in Portland was extremely interesting, as he provided a summary of the Air Force ballistic missile program. Additionally, he discussed many of the engineeing problems which the Air Force has faced in readying sites for ballistic missiles. General Schriever clarified a number of questions which occur to one who has an interest in this vital program. From General Schriever's forthright approach, it is obvious that he is completely sensitive to the magnitude and complexity of the problems relating to ballistic missiles, and it is heartening to get a glimpse of the way in which the Air Force has tackled these problems. I recommend that those defense-minded citizens of America who did not have an opportunity to hear General Schriever at Portland, Oreg., be given an opportunity to read his manuscript. For this reason, Mr. Speaker, and under unanimous consent, I include his paper in the Appendix of the CONGRESSIONAL RECORD.

THE MILITARY ENGINEER IN THE SPACE AGE

(Address by Maj. Gen. B. A. Schriever, Commander, Air Force Ballistic Missile Division (ARDC), to the Society of American Military Engineers, Portland, Oreg., April 10, 1959)

Members and guests of the Society of American Military Engineers, it is a pleasure to have this opportunity to talk to you this afternoon about the role of the military engineer in the space age. Before I get into some of the many interesting highlights of what the military engineer role is today—and what I think it will be in the future—I would like to tell you a little about the Air Force ballistic missile program.

The development of the Air Force's ballistic missiles—Atlas, Titan, Thor, and Minuteman—is the largest technical development program in the Nation's history, including the Manhattan project in World War II. Expenditures for fiscal year 1960 alone will approach $2 billion.

Thirty prime contractors are involved in the program—along with over 200 major subcontractors—and about 200,000 suppliers and vendors. The Nation's leading scientists have served as advisors on many intricate problems. These groups along with the people in our military management agencies comprise the unique government-science-industry team that was organized to develop the long-range ballistic missile from scientific theories to operational weapon systems.

The formation of this unprecedented government-science-industry team is characteristic of the Air Force's development philosophy in which a broad spectrum of the Nation's total human and industrial resources are focused on particularly challenging problems.

Our mission was more than the development of a new weapon—the intercontinental ballistic missile. It was also the development of the hardware, the skills, the facilities, the organization and the industrial base for a whole new concept of strategic warfare.

In the past few months, the years of planning and testing and building have begun to pay off. Here is a brief report on the present status of our major projects:

The ICBM Atlas successfully flew the full 6,000-mile distance several months ahead of its original schedule, and will be fully qualified for operational deployment at Vandenberg Air Force Base in California this summer. The Atlas is an intercontinental range ballistic missile—in what can be called the heavy class, since it is capable of delivering very large warheads at very long ranges.

A second and more advanced heavy class ICBM, the Titan, has begun its flight-test phase at Cape Canaveral with three completely successful flights in a row. These three successful first flights establish a new record in missile testing, and are testimony to the ever-growing confidence we have in your designs and our procedures. The Titan was designed at the outset to be stationed in underground silos where it will be able to survive a savage nuclear attack.

I want to emphasize at this point that both of these heavy-class ICBM's, Atlas and Titan, have tremendous growth potential. Their range can be greatly extended beyond the nominal 6,300 statute miles that is usually quoted.

What all of these future improvements add up to—and again I stress that they are already scheduled into our program—is the fact that our heavy-class ICBM's, Atlas and Titan, can have a long and extremely valuable life in the arsenal of the Strategic Air Command. And I am referring to a period of time extending through the entire 1960's.

Our third ICBM project is the Minuteman. The Minuteman will enjoy certain unique advantages: It will use solid propellants. It will be simpler than its forerunners. It will be operated and maintained by fewer personnel. Minuteman missiles will be placed in underground shelters and left unattended for long periods of time, ready to be fired from remote control centers on a few seconds' notice. The Minuteman, moreover, gives promise of being a major economic breakthrough. This missile, we believe, will mark the first case where a more effective weapon will be produced at a lower cost than its immediate predecessors.

It must be remembered, however, that the Minuteman is still in the research and development stage, although it is progressing at a highly gratifying rate.

The Thor, which is capable of delivering a heavy warhead to intermediate ranges of 350 to over 1,700 statute miles has already been deployed in the United Kingdom.

Now, I need not remind this audience that a weapon system is far more than just the missile that flies. In fact, only about 20 percent of a ballistic missile weapon system ever gets off the ground. The remaining 80 percent consists of the ground-support equipment, the personnel, and the technical and supporting facilities needed to operate and maintain the missile. Our approach to the design and development of the GSE and facilities is to regard them as subsystems of the overall weapon system, along with the missile subsystems, the personnel subsystem, the logistical support subsystem, and so forth.

Overlaid on the many unique technical aspects of ballistic missile weapon system development, was a completely unprecedented leadtime requirement. You all know how long it takes to build something. As I will indicate, we have had to build many things and still have much more to do. We haven't the time to perfect the missile and then build. We have had to do it simultaneously. From the outset we have proceeded with all aspects of our program simultaneously—that is, we have been moving forward concurrently with research, development, testing, production, the building of missile bases, crew training and everything else that goes into the making of a combat ready weapon system.

Under this concurrency concept, the construction of bases was actually begun before the first ICBM was launched on an R&D test flight. The construction engineers in our program have to prepare the training and operational bases long before the first missile arrives.

For example, prior to the first successful launch of the Titan test missile from Cape Canaveral on February 6 of this year, an operational suitability test facility had been designed, and its construction was well underway, at Vandenberg Air Force Base. In addition, the design of underground training launchers at Vandenberg and facilities for the first Titan operational squadron near Denver had been completed before the first test missile flew.

At the same time, we have been proceeding with the design and construction of other bases that will be used only as operational sites. This fall, an Atlas squadron base near Cheyenne, Wyo., will have been completed. Facilities for a second squadron of nine launchers at the same site were placed under contract in March, as were those for an Atlas squadron near Omaha, Nebr.

Construction of the first Atlas launchers in the Spokane, Wash., area will begin this month, and for other Spokane sites in June.

Construction will start this month on launchers for a Titan squadron at Lowry Air Force Base near Denver, with work on a second squadron in that area scheduled to begin in June.

Site surveys, soil investigations, and design of additional Atlas and Titan operational squadron facilities at Mountain Home, Idaho; Rapid City, S. Dak.; and Salina, Kans., are currently in progress. Construction work at those sites will commence early this fall.

To give you an idea of the financial scope of this effort, let me quote a few figures, which apply to BMD programs only:

By the close of this fiscal year, we will have placed under contract for construction nearly $900 million to support the production test, training and operational phases of the ballistic missile program. Of this amount, approximately $115 million has been contributed by the missile contractors for expansion of production facilities as an expression of their confidence in the program; $230 million represents the Air Force investment in production equipment and test facilities; and $550 million of military construction funds have gone into test, training and operational bases.

At the outset, it was recognized that the installations aspects of the program could not be accomplished under the normal administrative organization and procedures. In order to tie the designer of the facilities as closely as possible to the developer of the missile, it was decided that the Air Force would directly manage the design work. However, for supervision of the actual construction, we have used those experienced and highly competent construction agencies, the Army Corps of Engineers and the Navy Bureau of Yards and Docks. This arrangement eliminated the need for building up a new Air Force organization of sufficient size to handle the job. The major part of the construction is being very successfully accomplished by the Corp of Engineers, with the Los Angeles district engineer serving as the primary point of contact with BMD.

Colonel Leonhard, as my deputy commander for installations, is responsible for the design and construction of technical and supporting facilities at the test and operational sites. This encompasses the brick and mortar, concrete and steel, pipes and conduits—in short, anything that becomes permanently fixed to the ground. The normal base supporting facilities, such as housing, are provided by the using command.

The primary responsibility of Colonel Leonhard's installation shop is to establish the technical criteria for, and to monitor the work of, the architect-engineer firms retained by the Air Force to design the facilities. Finally, at BMD, we cooperate with the actual construction agency, furnishing guidance and assistance as required. Field offices are maintained at the various operational sites, to perform, among other things, surveillance of the construction.

Our contracting procedures are likewise tailored to weapon systems requirements and to the exceptional scheduling demands imposed on the program. As requirements are generated for a design, architect-engineer firms are selected to definitize the specifications. Selection of A. and E. contractors is made on the basis of ability to perform the type of work required, and to commit adequate talent to a project in order to complete it in the specified time.

After an A. and E. contractor has been selected, he is given a thorough briefing in all areas that are involved in the execution of his design. Briefing material includes Air Force construction standards and basic documents developed for the weapon system. In about 2 weeks he returns to submit his basic concepts of the facility. After these have been reviewed and approved, the next submittal is the preliminary plan, which is reviewed by the weapon system associate contractors for compatibility with the missile. The preliminary plan is also reviewed by SAC for conformity to operational requirements, and by our engineers for technical adequacy and construction feasibility.

The A. & E. contractor prepares final plans and specifications based on the comments of the various reviewing agencies. The final plans go through a review procedure similar to that for the preliminary plans, but not as detailed. This sounds like a long process, but it isn't.

To give you an idea of a typical schedule of a major project, let me take Squadron 2 at Warren Air Force Base near Cheyenne, Wyo., as an example. The A. & E. contractor was given notice to proceed on September 1, 1958; preliminary plans were received on October 10; and final plans and specifications were received on December 31. The programed amount for this facility is $20 million. It was placed under contract in March and will be completed in December of this year.

I hope that this brief review of the organizational and procedural aspects of the installations program gives you some idea of the kind of fast reacting management team we have organized to bring into being an ICBM operational capability at the earliest possible date. The same type of streamlined procedures are being applied in every aspect of the ballistic missile program.

Now I would like to take the few remaining minutes to mention some of the implications of these and similar space-age projects for the military engineer.

Like other professional fields, construction engineering has evolved from relatively straightforward tasks to the precise and complicated projects of today. Not so many years ago the military engineer was a man who built forts. Then, much of his work was simply moving dirt and erecting barricades. With the advent of the air age, the tasks of leveling off landing fields were added, and as the aircraft and their supporting bases became more complex, ever more elaborate facilities and ground equipment came under the cognizance of the military engineer. As you probably know, we Air Force types during World War II in the Pacific thought this was misplaced. Of course, we are aware that a magnificent job was done just as the corps is doing now in the ballistic missile field.

Today, in the missile and pace age, these requirements have multiplied in scope, complexity and—most important of all—in the close interrelationship of every element of the military unit operating on the base.

Today, each ballistic missile launching site must be precisely tailored to fit the particular weapon it is designed for.

As added complications, these installations must be built underground, and designed to withstand the overpressures, ground shock, and radiation associated with nuclear explosions. Launch chambers, control blockhouses, propellant storage and loading systems, radar emplacements, electrical, hydraulic and pneumatic supply lines—all of these facilities, and many more—are a part of the modern military engineer's responsibilities.

Consider the complexity of this in comparison with the design, construction and modification of an airbase—where dimensional requirements are relatively appropriate and flexible, and where the facilities provided will support several types of weapons.

As the military engineer's horizons broaden, his opportunities will increase correspondingly. These opportunities already exist, not only out in the field where his many skills are physically employed, but also in the management of large and complex projects such as the design of a weapon system base.

Those of us who are a part of this demanding present have a right to be proud of our achievements. Those who will have a share in building the future have good reason to be excited by the prospects.

Now finally, I think that these three main principles stand out as the guiding concepts of the Air Force ballistic missile program:

First, the weapon system approach, in which one agency coordinates the development of all the various subsystems—ground support equipment, facilities production, personnel and logistics, as well as the missile itself. This assures us that all of these necessary elements will fit together into an integrated unit.

Second, the concept of concurrency, in which all phases of the design-to-deployment cycle are undertaken simultaneously, rather than consecutively. This has enabled us to cut leadtimes into half of what they would normally have been.

Finally, the streamlining of management organization and procedures. We have established a unique government-science-industry team that has been able to focus a broad spectrum of American genious on the unprecedented problems we face. It is a credit to every government employee, every military officer, every scientist, and to everyone working in the private business firms participating in this team effort, that we have been able to meet or improve on every schedule to date.

The importance and urgency of this vital work is no less than the survival of this Nation and of the entire free world. The deterrent power we are building is a power for peace. We could dedicate our energies and our resources to no finer cause.

Colorado Launches Program Which Can Cut Millions From State's Welfare Expense

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, on April 30, during the House discussion of H.R. 6769, the appropriation bill for the Departments of Labor, and Health, Education, and Welfare, and related agencies, I pointed out to the Members that my own State of Colorado had intiated a welfare program which included a $104,000 experiment to give welfare recipients incentive to find and keep work. I indicated that if a State legislature could be persuaded that this kind of program will pay off, certainly the Congress of the United States should likewise be persuaded.

To further support my statement I should like to bring to your attention a news item from the Rocky Mountain News, of Denver, Colo., dated May 1, which offers additional details:

DENVER TO TRY WELFARE EXPERIMENT

(By David Stolberg)

Governor McNichols Thursday approved legislation which ultimately could slice millions of dollars from Colorado's welfare program.

Happily, it is also aimed at restoring the dignity of self-support to many mothers and needy disabled now on relief rolls.

The law sets up a $104,000 experiment to give welfare recipients incentive to find and keep work.

New York City officials claim they're saving $1,713,000 annually through rehabilitation of 2,677 mothers of dependent children.

TO KEEP PART

In essence, welfare recipients will be allowed to keep a portion of money they earn from jobs.

Once their earning capacity reaches the point where they and their families are considered self-sufficient they will be removed from the welfare rolls.

Some 6,181 ADC families were involved in the 5-year New York City experiment. More than a third no longer depend on relief.

Colorado will be the first to conduct a similar test at the State level. Federal officials have endorsed the program and hinted its success here could lead to a nationwide program.

Under present U.S. law, any wages earned by recipients must be deducted from their relief checks.

The pilot program will be centered on between 50 and 80 Denver cases. The State will assume the share of their relief checks that otherwise would have been paid by Federal grant.

Miss Charline Birkins, director of the city department, said case workers are already selecting ADC mothers and needy disabled who'll be asked to participate.

Miss Birkins said State officials are reviewing a tentative plan to allow jobholders to keep the first $25 of their monthly earnings, plus a fourth of all earnings in excess of $25.

Under the plan, an ADC mother who earns $50 a month would be able to keep $31.25.

CUTOFF POINT

Miss Birkins said the incentive program could give an ADC mother an outside income of up to $225 before she is dropped from the rolls.

The average ADC family now receives $118.13 a month.

The State supports 7,175 ADC families, with about 21,500 children. The caseload has increased almost 10 percent in a year.

There are 5,571 Coloradans averaging $62.73 a month from the aid to the needy disabled program. They've increased 3 percent in a year.

Harry Allen, director of the legislature's joint budget committee, which originated the pilot program, said it represents the first time anybody here has tried to do something at all about welfare, which now costs $75 million a year in Colorado.

"Incentives may not be the answer, but it's certainly worth trying.

"The legislature felt that once you show people they don't have to rely on handouts they no longer will want to be on the rolls. They'd prefer work and independence.

"In so many ADC families," Allen declared, "the mother has no skills and is stranded. Her husband has deserted her. Yet living on $118 a month, which is no cinch, becomes a habit.

"She's afraid to take the first plunge because there's no incentive. Now we may be able to create one."

McNichols is expected to sign a companion bill soon. It will allow a new State rehabilitation department to subsidize job training for welfare recipients, as well as for persons who are physically or mentally handicapped.

Both programs start July 1.

Mr. Speaker, it is my earnest hope that the Senate Appropriations Committee will restore the $1,785,000 requested by the administration for a national program of social security training and studies, for if through cooperative research and study the program can be improved, or recommendations brought back to the Congress for the improvement of the laws with respect to the programs, the taxpayers as well as the recipients will gain immeasurably thereby.

Harry S. Truman: A Man Dedicated to a Better America and a Free World

EXTENSION OF REMARKS
OF
HON. WILLIAM J. RANDALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. RANDALL. Mr. Speaker, I am very mindful that nothing I may say could ever add to the already great stature of our former President of the United States, Harry S. Truman.

Instead, as the Representative in Congress of his home district, and speaking for all of the people of that district, it is a privilege, to simply say, "Happy birthday, happy diamond jubilee, and may there be many happy returns of the day."

The Fourth Missouri District includes not only Independence, Mo., made famous by its leading son, and home of the Truman Library, but at the southern end of this same district, four counties away is Lamar, Mo., the birthplace of Mr. Truman. There on Sunday, April 19, 1959, this restored home was made a State park. Thousands gathered that day to pay tribute, but in the years to follow this will, in my opinion, become a national shrine, visited annually by increasing thousands of admirers of our great citizen.

It has been my pleasure and distinction to have known him as long as I can remember. I had always known that he was held in high esteem near his home, as a county judge and throughout his native Missouri. When I arrived in Washington, I quickly learned from my colleagues and all those on Capitol Hill that he was loved and much respected by those who had served with him in Congress and those who were here while he lived at 1600 Pennsylvania Avenue. Without exception, they speak praisingly of him.

But what always brings a quick reception is at the times when I may make

a casual remark that I am from Independence, Mo. to some men on the street—men without titles, such as the barber, the bellhop, the cab driver. Their faces light up with warm admiration and in their own unsolicited and voluntary way they say, "We like that fellow, Truman."

His appearance, denying the fact that today he is 75 pears of age, his morning walks, his youthful energy leave the impression he is a man 25 years younger than the birth records witness. Let us pray Harry S. Truman will continue, with his perennial enthusiasm as a teacher and counselor, to walk among us, now a statesman of international reputation, giving us freely of his wisdom and experience. A man of great stature and courage, history will increasingly emphasize President Truman safely piloted us through our most crucial times when communism was stretching its ugly tentacles in all directions. With President Truman at the helm, the United States successfully fought communism without involving the United States in war by several of his monumental decisions: Greece and Turkey were spared from the Communist peril by the Truman doctrine; the Marshall plan was the greatest single force in stabilizing the economy of Western Europe and thwarting Communist political victories; the Atlantic Pact added unity to the force against communism; the Berlin airlift saved Berlin from a Russian blockade which could have snuffed out forever her hope of ever attaining a free status.

In the face of bitter criticism and unfavorable popular opinion, President Truman steadfastly and courageously ordered the dropping of the atomic bomb to shorten the war against Japan, a measure militarily sound though not calculated to add to his immediate and unanimous acclaim. This is the test of the man—to proceed to do the right thing even though it may not be the popular thing.

Harry S. Truman is a man of decision—without which we might now be isolated in a Communist-dominated world. For these decisions we are thankful, and again we all hope that we have the benefit of his advice on the many decisions facing us in the future.

I am very honored and extremely fortunate to represent President Truman's district, the Fourth Congressional District of Missouri. To this man of Independence and to this great Missourian I am indebted for wise advice and sincere and valuable counsel. To this great American I take pleasure and pride in extending these birthday felicitations from his fellow Missourians.

U.S.S. "Leyte" Day

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. DORN of New York. Mr. Speaker, on May 15, 1959, the gallant carrier U.S.S. *Leyte*—CVS–32—will be decommissioned and thus will close an illustrious and noteworthy career. In honor of the ship and the occasion of her decommissioning, the president of the Borough of Brooklyn has proclaimed May 15 as "U.S.S. *Leyte* Day."

PROCLAMATION HONORING THE DECOMMISSIONING THE U.S.S. "LEYTE" (CVS–32)

Whereas the gallant U.S.S. *Leyte* (CVA–32) was commissioned on April 11, 1946, and named in commemoration of the largest naval engagement in history; the battle of Leyte Gulf; and

Whereas the *Leyte* in the spring of 1951 at the outbreak of Korean hostilities was urgently dispatched from Beirut, Lebanon to the Far East, 18,500 miles distant and did report to the Commander, Seventh Fleet in record time ready for battle; and

Whereas the *Leyte* did operate for 108 days in the Korean area—of these 92 at sea and 52 consecutively, the record for any carrier in the conflict. Her brave crew supporting her pilots who flew 3,933 sorties from her decks for a total of 11,000 hours in the air inflicting awesome and telling damage upon the enemy; and

Whereas the *Leyte* returned home late in January 1951 proudly carrying the Navy Unit Citation and Korean Presidential Citation; and

Whereas in the spring of 1953 the designation of *Leyte* was changed from CVA (attack carrier) to CVS (support carrier) she being the first to be so designated and the first to engage in operations against a nuclear submarine resulting in tangible recognition of her ability and diligence by being awarded in August 1958 with the prized Navy battle efficiency pennant as the outstanding ship of her class; and

Whereas the *Leyte*, the oldest Navy carrier in active service with half a million miles behind her in which she launched and recovered 70,000 planes; and

Whereas Comd. Jefferson Kennedy, Jr., U.S. Navy, outstanding commanding officer of the *Leyte* will this date at the New York Naval Shipyard in Brooklyn, the traditional Navy city, decommission the leading *Leyte* to assume his new duty station with the Chief of Naval Operations;

Now therefore, I, John Cashmore, do proclaim May 15, 1959 as U.S.S. *Leyte* (CVS–32) day in the Borough of Brooklyn and do urge all the people of the community to display the National Emblem in honor and recognition of the gallant officers and crew—living and dead—who served United States and her grateful people so courageously on the great Fighting Lady—U.S.S. *Leyte* (CVS–32).

HISTORY OF THE U.S.S. "LEYTE" (CVS–32)

In the fall of 1944 off a small island in the South Pacific was fought the largest naval engagement of history, the Battle of Leyte Gulf. The turning point of the war in the Pacific occurred at Midway, but it was at Leyte Gulf that the backbone of the Japanese Imperial Fleet was irreparably crushed.

Shortly thereafter work began at Newport News, Va., on the construction of a giant new Essex-class carrier, which was to be named in commemoration of this battle.

The ship was launched in 1945 with Mrs. Alice Dillon Mead breaking the traditional bottle of champagne against her bow. On April 11, 1946, completed and ready for sea she was commissioned and officialy named the U.S.S. *Leyte*. Her side number 32.

The maiden voyage of the *Leyte* took her through the Panama Canal and hence to the west coast of South America for a good will tour on behalf of the U.S. Government. The proud new carrier flew the flag of Adm. Marc Mitscher, the task group commander. The years 1946 to 1949 were swiftly consumed with three Mediterranean cruises and numerous fleet exercises. During this time she served as flagship for COMCARDIV 4 flying the two stars of the division commander.

In the spring of 1950, the *Leyte* again put on her 7-league boots, stood out of her home port, Quonset Point, R.I., for another Mediterranean cruise which was to prove itself far different from others she had experienced.

The outbreak of Korean hostilities found the ship in Beirut, Lebanon. Upon urgent dispatch she immediately set sail for the Far East. 18,500 miles later covered at a record average speed of 23 knots, she reported for duty to Commander, Seventh Fleet.

The night was spent in refueling. The following day she was launching her jets at the advancing North Korean Army. For 108 days she operated in the Korean area. Of these 92 were spent at sea—52 consecutively—the record for any carrier in the conflict. Pilots from her decks flew 3,933 sorties for a total of 11,000 hours in the air, inflicting massive damage upon the enemy. Her planes were credited with one of the first kills of a MIG 15 aircraft and one of her pilots, Lt. (jg) Thomas J. Hudner, received the prized Congressional Medal of Honor. This was the job for which she was built, and impressively did she perform it.

The ship returned home in late January 1951 carrying with it the Navy Unit Citation and the Korean Presidential Citation. Next came a long overdue yard overhaul in Norfolk, Va. Following this she left again for her fifth Mediterranean cruise.

In the spring of 1953 the *Leyte* entered the Boston Naval Shipyard for extensive overhaul and repair in preparing her for a new role. The designation of the *Leyte* was changed from CVA (attack carrier) to CVS (support carrier). She was the first to be so designated.

During this yard period, disaster struck. On October 15 at 1515 there was an explosion in the port catapult machinery room killing 32 and injuring scores more. The *Leyte* crew began at once the process of repairing their torn and crippled ship. Three months later a still sad but proud *Leyte* stood out of Boston Harbor on its way to a new career as an antisubmarine carrier. The warrior had turned sentinel.

Following a shakedown cruise to Guantanamo Bay the *Leyte* loaded aboard the then brand new S2F type aircraft for their first operational employment. The rest of the year was spent learning her new field of antisubmarine warfare.

1955 saw the *Leyte* engaging in three fleet exercises and making her sixth voyage to the Mediterranean. During this time she was chosen to be the flagship of Commander Carrier Division 18, an honor she retained for the remainder of her active service.

Leyte used her final 3 years for continuous work in the ASW field. As a CVS her role was that of the nucleus of a hunter-killer force consisting of a squadron of destroyers, herself and embarked air group with the combined mission of detecting, hunting, killing enemy submarines. This she did with the proficiency and skill of a master of her trade. She was the first carrier to engage in operations against nuclear submarines and was the forerunner and major contributor in the evolution of the tactics of hunter-killer forces opposing nuclear submarines. Her diligence and ability were tangibly recognized when in August 1958 she was awarded the Navy's prized Battle Efficiency Pennant as the outstanding ship of her class.

In January 1959 *Leyte* entered the Brooklyn Naval Shipyard for decommissioning. On May 15 the proud leading *Leyte* having steamed approximately half a million miles in which she launched and recovered 70,000 planes, was finally retired.

But the preceding are just facts and statistics behind which lies a legend greater than her accomplishments. There are certain ships which for no apparent reason are selected by fate to hold a special place among those which go down to sea. And this was the lot of the *Leyte*. From the infancy of

her commissioning to her last days on the line, the reputation of the ship and her crew was that of one which regardless of the duty assigned would serve with distinction. Her crew always took pride in a very special manner, for they sensed, as only a sailor can, flexibility, the preparedness, and the consistent ability to perform the impossible that constituted the character of the leading *Leyte*. Their spirit is legend. Now her days are over, and as the oldest Navy carrier in continuous active service the rest to which she retires is well deserved. Her place is taken on the line by the great new supercarriers the fledgling *Independence* and still embryonic *Constellation* and yet her loss will be sorely felt. She was a fighter and a steamer. What more can be said of any ship?

The Great Menace to American Children: What You Can Do About It

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable Arthur E. Summerfield, Postmaster General of the United States, before the conference of women leaders of civic, educational, parent, and religious organizations and women Members of the Congress and Government agencies, Washington, D.C., May 12, 1959:

THE GREAT MENACE TO AMERICAN CHILDREN: WHAT YOU CAN DO ABOUT IT

I want to thank you for taking the time to join us today.

I know that your schedules are full and that you are very busy. But we have asked you to be with us because we want to discuss a very serious matter with you.

We know how intelligently, how tenaciously and yes, how successfully American women can organize to fight evil.

We know that, in your positions of leadership in important organizations, as parents, and as citizens, you can be of great help to us in meeting a problem of growing concern to all of us.

I want to discuss this problem with you frankly, tell you what we are doing about it, and ask for your personal support, and the assistance and cooperation of the organizations you represent.

There is flourishing in this country today a vile racket of huge proportions about which the public is not too well informed.

This racket involves the use of the U.S. mails for the wholesale promotion and conduct of mail-order business in obscene and pornographic materials.

I say it is huge advisedly. We can estimate at present that the sale of these materials through the mails is running at more than $500 million a year.

The especially vicious aspect of this racket is the fact that these purveyors of filth are aiming their attention more and more at the Nation's children—teenage boys and girls, and even younger.

With complete arrogance, they are violating the homes of the Nation in defiance of the Federal Government.

They are dumping pornographic sewage into the hands of hundreds of thousands of our children, through the family mail box—most of it material that has not been ordered—material intended to solicit the sale of utterly obscene pictures, slides, films, and related trash.

How do these merchants of filth obtain the names and addresses of children?

They have any number of ways. One of the most common is to offer, in a legitimate ad in a normal publication, the sale of a product of interest to a boy or girl. This would be stamps, or model airplanes, or doll clothes, and the like. These items are frequently offered at bargain prices.

The child, usually with the parent's assistance, sends for and receives the item. Now the smut dealer has the name on his list, and soon the child is receiving lewd solicitations through the mail.

These racketeers also buy prepared mailing lists of children's names, of which there are many. They even go to the extent of gathering up high school year books, from which they take names and match them up with addresses in city telephone books.

Recently, we conducted a raid in New York City in which we confiscated 17 tons of highly obscene printed and filmed materials. The producer of these materials had in his possession a mailing list of names and addresses of 100,000 persons, including many high school students.

If you were to read some of the solicitation material that these debauched persons send to the children, I believe you would be sickened.

You would also be deeply disturbed to read the letters our postmasters receive from parents. Such letters for example as one from a mother who write: "The enclosed material was received by my son, age 8 years, a few days ago. Is there anything that can be done to stop this?"

The material sent to the 8-year-old boy began with the statement: "I am writing to you as a person interested in collecting all types of art photography of nudes."

Or like the letter which read: "Is there anything that can be done about literature like the enclosed? This is a mother's plea to you to do all in your power to stop the flow of this filth from seeping into our homes. Thank you for anything you can do to protect my 10-year-old girl."

Or the letter which stated: "I am enclosing a folder sent to boys at our camp. Is there any way that this terrible literature and its source can be destroyed?"

It is apaprent that many children, without parental attention, do fall into the trap of ordering such material, for the filth merchants regard their traffic with children as a major and growing part of their highly lucrative business.

Most parents who intercept these solicitations in the mail are, of course, shocked and greatly concerned. Last year, our Postal Inspection Service investigated 14,000 complaints about obscenity in the mails. Nearly two-thirds of these complaints were from parents objecting to the receipt of lewd material by their adolescent children.

In the case of a single mailing by one purveyor of filth, over 5,000 complaints were received, and all but 3 were from parents protesting mailings to their children.

On the basis of all the facts we have, our inspection service estimates that probably 700,000 to 1 million children this year will receive such invitations to depravity through the mails.

This is big business. It thrives on the curiosity of adolescents. It has no boundaries based upon social position, religion, race or location. Your child, or the child next door, may be on a list. If not, he—or she—may get on one. For the lists are expanding. Nobody is immune. Obscene mail is addressed to both sides of the track. It finds its way into orphanages. It is addressed to children as young as 8 years.

Yes, their parents will be worried—and well they should be. For it is well known to law enforcement groups that juvenile delinquency stems in measurable part from the demoralizing influence of exposure to obscenity and pornography.

Consider this, if you will, in the light of a recent report on delinquency by a Senate subcommittee. The report states that one out of every five boys in this country, of ages 10 to 17, has a court record, charged with breaking the law.

Again and again, in the investigations of armed robbery, extortion, embezzlement, and forgery, authorities find that those guilty of these crimes were early collectors of obscene pictures and films.

And it is well known that almost all sex criminals and sex murderers prove to have a long record of addiction to pornographic and sadistic material. Your children may never be exposed to this material. But they could be victims of sex criminals who have been exposed to it.

Let us quote from the report of the Senate subcommittee that studied this problem:

"There is a peculiar resemblance to narcotics addiction in exposure of juveniles to pornography. There is the same pattern of progression. Once initiated into a knowledge of the unnatural, the impressionable young mind with the insatiable curiosity characteristic of those reaching for maturity inevitably hunts for something stronger, something with more 'jolt,' something imparting a greater thrill.

"The dealer in pornography is acutely aware of this progessive facet; his array of material to feed this growing hunger is carefully geared to the successive stages. Like the peddler of narcotics, his only interest is to insure that his customers are 'hooked', he knows that once they are 'hooked' they will continue to pay and pay."

It is clear the Congress is concerned with this problem. Much good should come from the hearings now being held by the House Post Office and Civil Service Subcommittee On Obscene Literature, headed by Congresswoman KATHRYN E. GRANAHAN.

I am sure you also will agree that this, indeed, is a problem that must be met. I personally am both revolted and incensed by this depraved, arrogant and poisonous attack on the minds of our children. These feelings are shared, I can assure you, by our postmasters around the country and by my associates in the Post Office Department.

We recognize that there is urgent need for positive action now. We are, therefore, in effect, declaring war on these purveyors of filth, big and little, high and low.

We are launching an intense and unrelenting effort to stop this monstrous assault on the Nation's children in every way possible.

And let me say we are confident that, with adequate public support, this job can be done.

I do not mean to imply at all, of course, that the Post Office Department is only now awakening to this problem.

The records show quite clearly that the Post Office, over the years, has diligently tried to keep the mails clear of indecent material. It has done so even while subjected to attack and ridicule by those who hope to benefit personally from obscene mailings, and by those who, confusing liberty with license, unwittingly give them assistance.

Investigations conducted by our postal inspectors, in fiscal 1958, caused the arrest of 293 persons. Our General Counsel issued 92 orders barring use of the mails.

The arrests last year were 45 percent above the previous year, and this year they will increase substantially again.

Congress, as far back as 1865, made it a Federal offense to mail obscene matter.

The Post Office has lent its fullest support to such legislation. But nevertheless, com-

mercialized pornography has continued to grow.

It has expanded tremendously since World War II.

It has doubled in just the past 5 years alone.

Especially, as I have pointed out, the effort has been to expand the market through sales to children.

There appear to be two basic reasons for this rapidly growing volume:

First, the huge profits realized from a relatively small capital investment; and second, the very broad definition of obscenity handed down by certain courts, notably in Los Angeles and New York, where the great bulk of the mail order business in obscenity and pornography originates.

These liberal rulings have established, over a period of time, virtual sanctuaries in which dealers of obscenity have operated with impunity and in defiance of justice.

We in the Post Office for several years have strongly urged legislation which would permit prosecution not only at the points of mailing of obscene material, but in the communities where it is received—where the real damage is done—and where citizens have an opportunity to express their standards of morality and decency.

Such legislation was passed by the 85th Congress and signed into law by President Eisenhower last year. It is, we believe, among the most important legislation adopted in recent years.

We have pressed, and are determined to press, its use to the fullest possible extent. The first case following this legislation was at Boise, Idaho, and it had to do with mailings made from California and Oregon. The offenders, a man and his wife, each received a 10-year prison sentence and a fine.

Similar cases are now pending. And I would like to say that a goodly series of stiff sentences of that kind can go a long way toward discouraging other such people from further mailings of their degenerate trash to children.

To make full use of this new legal weapon, however, the Post Office must have the cooperation of parents and decent-minded citizens everywhere. Without such cooperation on a broad and resolute scale, we are under great handicap.

As you know, the absolute privacy of the mail is one of our basic American rights. The Post Office Department cannot, and will not, violate this right, even when it has strong evidence that the mail is being used for unlawful purpose. I, for one, believe fully in this right.

The Post Office, therefore, can legally identify and take action against violators of the mails only on the complaints of citizens who receive such material.

Let me repeat that point: We can act only after the recipient of obscene mail has opened that mail, and the material has been forwarded to the local postmaster as evidence.

To achieve this cooperation on the largest possible scale, our intensified program for action is fourfold:

1. To draw maximum public attention to the menace of this racket.

2. To urge parents to help us apprehend the mailers of filth to their children.

3. To help mobilize community support behind adequate law enforcement of local ordinances or State laws when these purveyors are apprehended and brought to court.

4. To rally public opinion behind new and stiffer legislation on obscenity.

Obviously there is going to be less likelihood of putting dealers in obscenity out of business if they are not given the book when they are caught.

Unfortunately, giving them the book is not easy. Most of these smut merchants make such profits that they are able to retain high-priced lawyers who know all the tricks.

And these gentlemen all too often have used the tricks of hamstringing, delaying, and confusing action until their clients have gone free or received only small prison terms or fines. Unperturbed, the peddlers have been back in their racket under a new name within days.

They are also experts at raising a hue and cry about "censorshsip," "freedom of the press," and "civil liberties." And all too often they are able to find willing pawns to take up their cry and carry on their slimy battle for them.

This, of course, is utter nonsense. I would only ask any such misguided person these questions:

Is it a violation of civil liberties to deny the sale of liquor to a 10-year-old boy?

Is it censorship to prosecute those who sell narcotics to junior high-school girls?

Are we abridging civil liberties when we do not permit children to drive a car?

I am sure the answers, and the point to be made, are quite clear.

Peddling pornographic poison to children is a heinous crime. And that community which does not punish the criminal to the full extent of the law is failing its duty—failing just as surely as if it were to allow sales to children of liquor or dope.

Now, what is likely to happen if we do not rid ourselves of this social cancer?

First, we may as well concede that the obscenity business, with its vast revenue, will be taken over by organized crime, to a far greater extent.

It will become a gigantic organized racket far beyond even its present scope, with millions more of our children its principal victims.

The undermining of the moral fiber of the Nation's children will spread; with the poisoning of increasing millions of minds.

Sex crimes will be a spreading blight on our society, and will become far more prevalent than they are today.

And overall, we could expect an ultimate breakdown of order and decency in this country.

My friends, I am not asking you simply to "view with alarm." I am asking you to view with deep conscience, deep concern, and determination.

Thorough action must be taken now. I am asking you to take part. You have both the opportunity and—I would dare to say—the responsibility for joining with the Post Office in this drive.

Help us to alert parents across the country. Help us through your organizations, and your publications, and by your individual efforts. Let the parents of America know what to do on any day that obscene mail arrives in their home.

The process is very simple.

First, parents should save all materials received including the envelopes and all enclosures.

Second, parents should report the material immediately to their local postmaster and turn the materials over to him, either in person or by mail.

Finally, all citizens, whether or not their children have been touched with this filth, can help by backing up Members of Congress and local officials in their growing efforts to stamp out this evil.

I urge you to carry this message to the other officers of your organizations, and to your local chapters. Urge your local members to enlist the support of religious and educational leaders, newspaper editors, and citizen groups in their communities. The task calls for everyone who can, and will, contribute effort and dedication to it.

I pledge to you that the Post Office Department will lead the way. And if the American people are made properly aware of this challenge, I am confident—as I know you are—that the challenge will be firmly and successfully met.

Secretary Benson's Report on Rural Development Program Workshop Conference

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. MOORE. Mr. Speaker, by now it is quite evident to all that the present outmoded farm program, in existence since the great depression with few modifications, does not help the small farmer. Its major benefits go to the big operators.

What has been needed all these years is a program that will help the small family agricultural units which produce so little that they cannot obtain commodity loans or other assistance. Such a program is now in operation. It is the rural development program.

Through it rural communities are enlisting the cooperation of Federal and State agencies, business and educational groups, churches and civic organizations in a concentrated drive to help those on the lower rung of the economic ladder.

What it is accomplishing, where it should go, were pointed out in a speech delivered on May 11 by Secretary of Agriculture Ezra Taft Benson at Jackson's Mill 4–H Camp, Weston, W. Va. Without objection I offer that speech to the RECORD, for I believe there is information here which will hearten every American who is interested in the welfare of rural communities:

ADDRESS BY SECRETARY OF AGRICULTURE EZRA TAFT BENSON, RURAL DEVELOPMENT PROGRAM WORKSHOP CONFERENCE

It is a genuine privilege and pleasure to meet with you this evening.

Let me say at the outset that I am attending this opening session of your extremely important and timely Rural Development Conference principally to meet as many of you as possible, and to learn your ideas regarding the rural development program.

You are a select group of people—you are in the true sense a pioneering group.

Several weeks ago the Nation paid deserved attention to seven young men of our Armed Forces selected as astronauts. One of these young men is expected to be the first American to rocket into orbit around the earth.

He and his colleagues are pioneers of the space age.

I say that, in a very significant sense, many of you in this room are pioneers also. You are pioneering new methods of solving farm problems. You are working to bring about long-needed adjustments in many of our rural areas. You are exploring better ways of helping rural people make the changes—the adjustments—they desire in their own best interests.

Problems of space travel are awesome. They stagger the imagination. They command the attention of the Nation and the world.

However, there's still a lot of pioneering to do right here on the ground. It isn't glamorous. It commands little attention. But it's tremendously important to the welfare of the United States. Some would question whether the problem of putting a manned satellite into orbit is so much

more challenging than the social and economic problems facing the Nation.

Day-to-day leadership in rural area development programs is one of the hard, unpublicized jobs so vital to the Nation.

Those of you working with these programs are performing one of the most difficult assignments in the entire agricultural area.

We commend the initiative and imagination all of you have shown in carrying forward this work. We commend you on your many accomplishments.

And I am sure you would agree that the wisdom, experience, and dedication of Under Secretary Morse and Dean Harry J. Reed have provided the spark and spirit to keep the program growing and national in scope.

In recent weeks, we have heard some criticism that the rural development program has not moved fast enough.

As usual, the best reply to such criticism is to examine the record.

In April 1955, President Eisenhower submitted to the Congress a report on underemployed farm families—a large problem segment in agriculture. The President also recommended a coordinated attack on the problem. As you know, this report, entitled "Development of Agriculture's Human Resources," was more than a year in preparation. It was prepared by the best Government technicians in the field, with the advice and aid of private individuals and organizations working in the field of agriculture.

Late in 1956 the administration finally received a small appropriation to begin the program on a pilot or test basis. The amount received was roughly half of what we requested. As late as the first part of 1957, less than 25 rural counties were going forward with organized programs. In quite a few States Rural Development was just in the planning stage at that time.

Today, some 2 years later, 30 States are participating. Twelve of these have broad area programs under way or planned. Some 200 rural counties are presently involved in the operation or planning of this work.

In addition, I am gratified to report, interest in rural, resource, and area development programs has spread to many States other than the 30 officially listed as in the program.

National awareness of the rural development program has grown apace.

There has been greater interest in this session of the Congress than at any time since the program started. It now has extensive bipartisan support. In my judgment this support will increase with the passing of time.

The farm press and the great newspapers of the Midwest, the South, and Midsouth, especially, have reported extensively on the program.

Growing numbers of national research groups are studying our experiences—your experiences—with the program.

Do not underestimate the value and importance of this national attention and discussion. Nothing gets accomplished in a democracy unless the people and their representatives know about it, and are persuaded to support it.

Only a few weeks ago, Representative WILLIAM H. NATCHER, a Member of the Kentucky congressional delegation and of the House Subcommittee on Agricultural Appropriations, called the rural development program in his district the true American dream of self-help, progress, and independence.

Congressman NATCHER has well stated the real meaning of the rural development program. It is indeed democracy in action, out where it counts, at the grassroots.

Your efforts to make this idea work can influence profoundly the future course of our Nation. By bringing local leaders to the fore, this program can help reverse the trend toward centralization in government, in economic development, in dealing with the vast problems that confront local communities, both rural and urban.

In recommending the rural development program, we were determined that rural leaders would have an opportunity to take the lead in program development at the local level. This was not to be just another government program, with Washington calling the tune. The aim is to encourage local initiative and enterprise, not to put a bridle on them.

Without a doubt, the record of the program in just two short years is remarkable.

I use the term advisedly. The record is remarkable in relation to the many difficult problems involved in getting this work under way.

I know of no other program on the national scene which involves so many different groups and interests. No other program is attempting to cope with such a chronic domestic problem as rural resource adjustment.

Results in just a short time are gratifying. I am especially impressed by the many sound projects already carried to completion in program areas throughout the Nation. The list is a long one:

A new health clinic in one of the Kentucky program counties.

Milk processing plant in northern Mississippi.

Hardwood industries in eastern Maine, Wisconsin, and other States.

Conservation and land drainage in a South Carolina county.

Construction of new manufacturing plants in several States.

A vegetable packing plant and shed in North Carolina.

Added educational and training opportunities in Washington and Missouri.

Swine improvement and marketing in northern Minnesota.

Tourist industry promotion in Michigan.

Expansion of livestock production in Louisiana.

And hundreds of other projects I haven't time to mention, all the result of action by local people, utilizing rural development program personnel and services.

However, we are attending a workshop session, not a pep rally. I am going to speak frankly for a few minutes about the great responsibility all of you bear to farm people and the Nation as a whole, as you help carry forward these rural development programs.

A campaign to promote balanced farm, industry, and community development cannot be a halfhearted operation. All leadership in rural areas must become involved. This most certainly includes the able, skilled workers who staff the county agent's office, FHA, SCS, ASC, local health, welfare, and education offices, county governments, and industry boards.

These latter agencies, working outside the strictly agricultural field, bear an important responsibility in the program.

It is understandable that rural people would turn to farming improvement as the principal method of adding income. But I am concerned that this aspect of the Rural Development Program, important as it is, may receive too much emphasis to the neglect of other opportunities.

In many areas, true enough, the field is wide open to improve incomes through betterment of agricultural production and practices.

But I would be remiss in my responsibility to you this evening if I did not caution that local leaders who force agricultural improvement to bear the whole weight of the Rural Development Program may be doomed to disappointment.

Promotion of rural inustries, off-farm jobs, and revised educational programs must also receive equal emphasis. Indeed, in some areas, these are the core of sucessful rural development programs.

Let's not put all our eggs in one basket.

In many rural areas, we still are not helping our young people prepare themselves for the wide range of opportunities they most certainly will encounter in a growing, fast-changing America.

Let me give you an example. One of the State universities cooperating with the Department of Agriculture recently completed an educational study in three rural development counties. Less than 20 percent of the boys interviewed in these areas intended to stay in farming. Yet, in the words of the study, "none of the boys and girls interviewed indicated they had ever taken a course in trade and industrial education in high school."

I cite this example because it illustrates very well a situation that is widespread. According to recent estimates, approximately 65 percent of boys and girls growing up in rural areas will not find opportunities on the farm—on any kind of farm.

We are not downgrading agriculture when we face up to this fact. A lot of young people in rural communities will be able to find jobs in industries related to agriculture. Handling, marketing, selling, processing, financing, and the like.

For example, about 15,000 new jobs for college graduates are created in agriculture each year. Our land-grant colleges graduate only 8,500 students to fill these openings.

Are the fine rural youngsters in your areas getting the counseling, advice, and education they need to meet the challenge of the future? Each of us here needs to face this question squarely.

As leaders in farming communities and rural towns, you have a duty and a mission.

Whether in the field of agriculture, or education, or industrial development, you have been trained to analyze facts, to develop sound plans based on conditions as they exist, not as you would like them to be. Facing facts is the mark of the leader, of the educated person, of the scientist.

I am concerned that in too many rural communities, local farm, business, civic, church, and other leaders are not getting the benefit of your analysis and insight.

It seems to me that what we need in rural development program areas, as well as throughout rural America, is more attention to broad national trends in agriculture affecting the local community, plus resource adjustment in the light of these trends.

We could not stop technological change in agriculture, even if we were foolish enough to try. But through neglect and through unrealistic programs we can hinder many of our rural communities and farm families in adjusting rapidly to these trends. Lack of information, misdirected assistance, a failure of imagination, all these can disarm our rural communities and leave them unprepared to meet future conditions.

There are many needs to be met: Encouragement of economic family farm units. Vigorous promotion of rural industries. Career counseling for young people. Sound programs of industrial training in schools. Zoning. Closer town-country cooperation.

Some of these activities may not be popular in rural communities. But those who see the need, and yet keep silent are simply not doing their duty.

All of you working in the Nation's rural areas know that the farm picture is far more complex than some politicians would like to have it appear.

Many farm families are doing well today. These are the families on the more productive, well-managed commercial farms and ranches. They help produce the 91 percent of farm products going to market.

Last year farm operators' realized net income rose to $13.1 billion, the highest in 5 years, and a gain of 20 percent over the previous year.

In the commercial sector of agriculture, we do have a rapidly changing, dynamic, and generally prosperous agriculture, which is undergoing an irreversible, technological revolution.

Our farm laws must be revised to cope with these current conditions.

In January, therefore, the President recommended to the Congress forthright changes in our farm price supports. He urged that price supports no longer be related to a standard 45 years old, but to a percentage of the average market price during the immediately preceding years.

If the Congress still prefers to keep existing parity standards, the President urged that the Secretary be given discretion to establish the support level for all commodities in accordance with guide lines fixed by law. This is now permitted for all of the 250 commercially produced commodities except the 16 for which supports are mandatory.

We definitely favor the first of these—price supports related to a percentage of the average recent market price.

Either of these changes would be constructive, however. Under either course, the surplus could be reduced, the cost cut, production controls relaxed and markets developed. Our farm people could make more of their own decisions. The Government could resume its proper function of promoting farm research, expanding and developing markets, protecting soil and water resources, improving farm credit, and promoting area economic growth. We would help stabilize markets, not price ourselves out of them.

Under the present, outmoded program we are trying to price abundant farm products as if they were scarce. This cannot be done without piling up surpluses.

The evidence of 25 years says that we cannot balance supply and demand by means of present acreage controls.

We cannot solve this farm problem by programs which destroy markets and which channel farm products into storage. A warehouse is not a market. A storage bin is not a customer.

The economics of the farm problem on our commercial, high-production farms is simple—we need less government in farming. We must quit trying to fix prices unrealistically. This is the source of the twin evils of production for Government warehouses and Government control over farmers. We must emphasize markets, increased efficiency, and competitive selling. We must eliminate Government's stranglehold on commercial agriculture.

Based on the mail we have received and on contracts from all over the country, I say bluntly that the overwhelming majority of agricultural economists and other students of this problem endorse what we are trying to do as sound and best for agriculture.

A recent survey of agricultural economists at our 49 land-grant colleges has just been published. Of the 37 economists replying, 4 out of 5 say that "any laws further hamstringing the free market will hurt the farmer, the consumer, and the Nation."

And farmers endorse it too.

One of the largest national farm magazines recently invited farmers to tell Congress what to do about price support programs.

This nationwide poll showed that 8 out of 10 of the farmers want greater freedom and less Government in farming.

In the referendum of December 1956, 61 percent of the corn farmers voted for lower support and increased acreage.

Last November corn farmers voted by almost 3 to 1 to eliminate corn acreage allotments and lower the level of price supports.

Even more recently, about 70,000 cotton growers chose the "B" program with 15 parity points less price support in exchange for a 40 percent increase in acreage.

Farmers want more freedom.

The early enactment of realistic, beneficial farm legislation would be of great value to commercial agriculture and the entire national economy.

It would give farmers the freedom they desire to produce for markets, instead of Government bins and warehouses.

However, I have been discussing programs that have their major impact in the commercial sector of American agriculture. As all of you know, at first hand, this is only half the picture.

The other half is made up of part-time farmers, residential farmers, those on poor soil often in isolated areas, those handicapped by age or illness, families with limited resources.

As President Eisenhower observed in 1954:

"The chief beneficiaries of our farm programs have been the 2 million larger, more productive farm units. Production on nearly 3 million other farms is so limited that the families thereon benefit only in small degree from the types of programs that heretofore have dominated our activities."

This broad segment of our farm and rural population have largely been neglected. These families cannot be served effectively by programs designed primarily for commercial agriculture. Most of them gain little, if any, benefits from price supports and Government commodity stabilization programs.

Underemployment—not surpluses and markets—is their big problem.

They need opportunity to obtain off-farm work to supplement farm income. They need adjustments which will permit able farmers to obtain land and other resources to do an adequate job of production. They need better and broader opportunities for their young people. They need educational programs to prepare them for a wide variety of jobs in an expanding economy.

It appears indefensible that this Nation should devote such a large increment of public programs and services in the field of agriculture to the benefit of less than half our farmers.

More of our resources—personnel skills and available funds—must be directed toward meeting the special needs of small farmers, part-time farmers, aged, and disabled farm people, and those with limited land and capital.

Why should publicly supported programs provide most of their benefits for the minority of farmers who need help the least?

More and more the public and the press are asking this fundamental question.

Recently, for example, the highly respected editor of the Atlanta Constitution, Ralph McGill, asked in his column, "Who are the farmers?" He discussed the two broad groups of farmers in the Nation, and termed the 56 percent producing little for market as the hard core of the farm problem. "But they are the human core, and as such, deserve a program," he wrote.

Let's concentrate our skills and services on helping the neglected majority of the Nation's farm people.

I am calling on all agency heads concerned in the Department of Agriculture to reappraise the role of their agencies in the rural development program, with a view to speeding and perfecting this work.

I also propose to explore with deans of agriculture their ideas on how to bring about closer State and National cooperation to move the program forward more rapidly.

Rural and resource development programs offer the best chance of preserving the rural environment and strengthening small-scale farming in this Nation.

As President Eisenhower has stated, "Such programs deserve the awareness and support of all Americans."

I urge you to utilize the opportunity of this conference to strengthen and improve the work now going forward, and just as important, to seek ways of expanding such programs and broadening their impact in rural America.

God speed your efforts.

Soviet Trade Offensive

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. LIPSCOMB. Mr. Speaker, the Soviet trade offensive is a matter of grave concern to the entire free world for there is no doubt that the Soviets are going all out to further their nefarious plans.

As an indication of the scope of the Soviet economic campaign, they are reported to be readying an assault on the consumer market in the United States itself. Under leave to extend my remarks I am enclosing an article which appeared in the May 10, 1959, Washington Star discussing the Soviet plans to invade our markets. The article follows:

[From the Washington Star, May 10, 1959]

CONSUMER DRIVE HERE MAPPED BY SOVIETS

(By Neil R. Regelmbal)

A day may come when Russian consumer goods—watches, costume jewelry, pens, and lighters, even appliances and automobiles—will be displayed in U.S. store windows.

It won't come for several years. But the Russians are already casting a longing look at the American consumer dollar.

Top Soviet economic planners have filled their new 7-year plan with programs which add up to a massive economic war on the free world. For the first time, these include not only assaults on industrial markets throughout the world, but a calculated invasion of consumer goods into major countries.

Watches appear likely to be one of the first products which the Reds will send in large volume into world markets—and perhaps eventually to this country.

The Soviets are planning to boost their watch production by about 40 percent by 1965. Over the next 7 years, as production is stepped up, some 200 million Russian watch movements will be turned out. Most of these will be for export. The United States has no quota for such watch imports but there is, of course, a tariff.

The watch production boost was revealed in an article recently in "Moskovskaya Pravda," a large daily newspaper published in Moscow, by an N. Volkov, director of Russia's largest watch factory located in the capital city.

CHALLENGE TO THE SWISS

Volkov issued a direct challenge to the Swiss for leadership in watch manufacturing. The Reds are taking a typically direct approach to the problem.

First, Volkov said, the Russian watch industry will embark on an all-out drive to improve both mechanical and design features of its timepieces, particularly women's wrist watches. Training programs for workers to staff new watch production lines are being expanded.

The history of the Russian watch industry typifies the late but rapidly-moving industrial revolution in the Soviet Union.

Twenty-five years ago, there were no watches produced in Russia. In 1940, production amounted to 3 million movements. This year, Russia will turn out about 25 million movements. By 1965, this production will be boosted to 35 million. At Volkov's plant alone, production will be increased by 300 percent by 1965, he said.

This compares with present U.S. production of 7 million movements a year, and imports of about twice that.

Russia now trades with some 70 countries, including the United States. Soon, Volkov boasted, all 70 countries will be buying Russian-made watch movements. A French firm already buys large quantities of Red watch movements and puts them in French-made cases, the Soviet watchmaker said. A large Brussels department store, identified as the "Inovation," consistently promotes and sells Russian watches, he added. Several firms in Canada have just recently placed large orders too, he said.

In addition to these countries, Russian watches now are sold in large quantities in Egypt, India, Greece, Denmark, Pakistan, Afghanistan.

RUSSIAN WATCH PRICES

Russia's objectives in exporting consumer goods when most of her own people and the satellite countries are crying for just these goods are manifold.

For one thing, the Reds badly need the exchange currencies these sales would bring to help them plant heavy industrial machinery in the uncommitted areas of the world. Their ability to pick their own price at which these goods will be sold will permit them to disrupt foreign markets and in some cases probably cause industries in several countries to suffer serious economic damage.

And there is probably some propaganda value if they can put a watch with a Russian name in a U.S. department store, or a small car such as the Moskva on a U.S. foreign car showroom floor.

MARKETING SOVIET AUTOS

The editor of the English-language Russian magazine U.S.S.R., Enver Memedov, told a Detroit audience a few weeks ago that Soviet cars may be marketed in this country in a few years. Russia, he said, is challenging America's position as the world's No. 1 industrial power and we may reach your level or overtake you one of these days.

Immediate reaction in the U.S. auto capital was to scoff. Spokesmen for the industry and for the U.S. Commerce Department pointed out that while there is no embargo on Russian cars, there is a high tariff differential. Cars imported from Red countries pay a 10-percent tariff, compared with an 8½-percent duty for other foreign countries. Service parts would pay a 25-percent duty, compared to a 10½-percent levy on parts imports from friendly countries.

But some U.S. auto industry experts now are wondering whether this may be more than just an idle boast on Mr. Memedov's part. The tariff and transportation differentials could easily be absorbed by the Russian Government under its state ownership of production.

If the Reds could deliver a reasonably good car at a competitive price to this country, there's a good chance that many Americans would buy them—both as an oddity and for price reasons, these experts believe.

The same might well be true of other Russian products. If they reach any real volume, the U.S. Government could of course step in. But it would take time for our cumbersome bureaucracy to move, and in the meantime some U.S. business firms and workers could be hurt.

Tribute to Mr. Whitley C. Collins, Late President, Northrop Aircraft

EXTENSION OF REMARKS
OF
HON. JOE HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. HOLT. Mr. Speaker, our Nation has suffered a great loss in the passing of Whitley C. Collins, president of Northrop Aircraft. I have lost a personal friend for whom I had a high regard. Radioplane, which is a subsidiary of Northrop, is located in my congressional district. I know they will carry on as Whitley Collins would have wanted them to, doing an outstanding job for America and contributing to our community.

For the RECORD, I would like to submit the following letter I received this morning from the chairman of the board, Northrop Aviation:

NORTHROP CORPORATION,
Beverly Hills, Calif., May 12, 1959.

The Honorable JOE HOLT,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR MR. HOLT: It is with extreme regret that I must inform you that our president, Whitley C. Collins, died early today at Good Samaritan Hospital. His death followed surgery for a circulatory ailment.

I want to assure you that the policies and programs initiated during the past 5 years by Mr. Collins and the management team which he built up will be vigorously continued.

Northrop is deeply indebted to Mr. Collins for its present sound position. Thanks to his foresight the company today has an efficiently functioning organization and a strong management well able to carry forward the company's progress under plans already in existence. The board of directors assures you that this company is in a position to and will continue to carry out its obligation to our national defense.

I am sure that Mr. Collins would have wanted us to express our deep appreciation for your helpfulness and understanding.

Faithfully yours,
WILLIAM C. MCDUFFIE,
Chairman of the Board.

I am sure my colleagues will also be interested in the following editorials:

[From the Los Angeles Times, Wednesday, May 13, 1959]

WHITLEY CHARLES COLLINS

California's appreciative State legislature may not have so intended, but its official commendation a few months ago of the career of Whitley Charles Collins can stand as a fitting epitaph to the man whose death here yesterday ended a list of services far broader than the broadly diversified aircraft company he headed.

As president of Northrop Corp., he led in building a major company which would be an asset in any area at any time. His achievement becomes increasingly notable amid reports of efforts of other areas to take away from California what men like him have shrewdly and soundly built as pillars of southern California as we know it. Without his kind, a semiarid pueblo might still be choking its few visitors with dust stirred by their rare visits.

But Mr. Collins was not limited to one company or product; several in this area, from Lockheed to Menasco to Radioplane, have felt the benefit of his counsel and guidance.

Farther afield he was active in various industrial enterprises. Not the least was his service as chairman of the board of the Aircraft Industries Association, which more than ever is the keystone industry in our present efforts at peace and salvation.

His civic contributions could have ended with his achievements in helping to run several industrial organizations whose expanding payrolls are basic to any community. But he went further into civic affairs, serving on the boards of the California Institute of Technology, Claremont Men's College, Los Angeles YMCA, and the Boy Scouts.

Many will feel he reached his career's high point of activity and contribution as chairman of the Hollywood Bowl Association. There his loss will be deeply felt, for it has been exceedingly difficult to get able civic-minded executives to devote the kind of talent he demonstrated in his too-short tenure of responsibility in an organization that is a pacesetter among movements to promote culture.

From music to monorail, Mr. Collins was at the forefront of this community's activities. We can only hope others will arise to fill the voids he has left. If not, our present and future will be much the poorer.

[From the Los Angeles Examiner of May 13, 1959]

WHITLEY C. COLLINS

In many ways, Los Angeles has suffered a deep loss in the death of Whitley C. Collins, president of Northrop Aircraft.

He made his mark in this area, not only in the business, finance, and the development of southern California's vast aircraft industry, but in cultural growth and in the betterment of human relations.

Only last September he was elected chairman of the board of directors of the Hollywood Bowl Association in which both he and Mrs. Collins long had been active. He was active, also, in such organizations as the National Conference of Christians and Jews, and he gave generously of his business and financial acumen in many fields. As an aircraft manufacturer, he held the forward-looking view that "we must build tomorrow's planes today" to safeguard America.

Results of Questionnaire

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. DORN of New York. Mr. Speaker, the First Assembly District Young Republican Club of Brooklyn, N.Y., sent out a questionnaire on matters pertaining to New York State. The results are as follows:

1. Do you favor the New York State income tax being collected as a payroll withholding tax? Yes, 63 percent; no, 37 percent.

2. Do you favor: (a) off-track betting? Yes 65 percent, no 35 percent; (b) State lottery? Yes 70 percent, no 30 percent.

3. Do you think that the United States should extradite ex-Cuban officials now accused by Fidel Castro of war crimes? Yes, 15 percent; no, 85 percent.

4. Should domestic legal disputes be appealed to an International Court? Yes, o percent; no, 100 percent.

5. Should American correspondents be allowed to visit Communist China? Yes, 68; no, 32 percent.

6. In your opinion, should balancing the budget be the keystone in Federal and State spending? Yes, 74 percent; no, 26 percent.

7. Should the United States allow American firms to trade nonstrategic materials with Communist countries? Yes, 18 percent; no, 82 percent.

8. Should a man who serves on active duty be required to serve 2 years in the Active Reserve? Yes, 30 percent; no, 70 percent.

9. Are you in favor of a cultural exchange program between the United States and the U.S.S.R.? Yes, 75 percent; no, 25 percent.

10. (a) Do you believe that visits by Soviet leaders to the United States, such as Mikoyan's are beneficial to the United States? Yes, 22 percent; no, 78 percent. (b) Do you believe that visits by Soviet leaders to the United States should be offset by the President visiting Russia if he felt it would be in the interest of world peace? (Many people stated they had difficulty in answering this question due to the wording.) Yes, 40 percent; no, 60 percent.

11. Should the United States use force as a last resort to break another possible Communist Berlin blockade? Yes, 90 percent; no, 10 percent.

C. RAYMOND RADIGAN,
President.

A Role for Italy at Geneva

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. RODINO. Mr. Speaker, on June 2 Italy will celebrate another anniversary as a Republic. It will be great cause for rejoicing for a people who despite great obstacles and the threat of communism have come a long way on the road to economic recovery and have won a place in the family of free democratic nations.

It is, therefore, timely and significant to call to the attention of my colleagues, the following article which appeared in the Evening Star of May 13, 1959, by the noted political columnist and commentator, Constantine Brown, entitled, "A Role for Italy at Geneva":

A ROLE FOR ITALY AT GENEVA—ATTENDANCE OF NATO ALLY IS EXPECTED TO 'BALANCE' POLES AND CZECHS

(By Constantine Brown)

The foreign ministers conference at Geneva started out as a propaganda wrangle between the Soviet Union and the Western Powers. All the "shows" put on by the Kremlin's own Andrei Gromyko and his Western colleagues had been foreseen and their end agreed on before the meetings opened.

The question of the round against the square table, resulting in both the East and West German representative being seated at smaller tables as advisers, had been decided long in advance. It served the Soviet propaganda to show that the Soviet Union took to heart the case of Germany more than the West. And our side could boast that in the first encounter the East had to bow graciously to the unflinching will of the representatives of the Western Powers.

Similarly the matter of Poland and Czechoslovakia participating in the Geneva tea party was not only foreseen but also decided last February after the French objected strongly to the unilateral demand by Moscow. The solution agreed on is to permit Italy to attend some sessions of the conferences in which the Czechs and Poles will participate.

The Senate Democratic whip and senior member of the Foreign Affairs Committee, MIKE MANSFIELD, has insisted strongly in his talks with representatives of the State Department that Italy be given a more active role in the concert of free nations. The once decaying Italy has become in the last few years one of the pillars of the Western alliance. Her economic, moral and military renaissance is about as marvelous as that of war-devastated Germany although it took place a few years later.

At the end of the war Italy was riddled with communism, and there were serious doubts that she would be able to survive as a free, democratic country. Of course, it was realized that the Italian Communists were nowhere nearly as dedicated to the cause as those in France, and Communist infiltration in certain segments of Italy's intellectual life was even less than in the United States.

When the first Italian election was held after the war, with the late Christian Democratic leader, Alcide de Gasperi, as the standard bearer, the prospects for his victory looked slim. But it was realized that the cause of communism was strong at that time in the peninsula because the population was starving. We not only rushed food and supplies but also—the story can now be told—about $5 million in greenbacks of small denomination which were distributed to eager voters. De Gasperi won and in the decade which followed the Italians have not only been wedded to the cause of the West but have made enormous strides in their international trade and industry.

Today Italy is one of the pillars of Western resistance to the onslaughts of international communism. Much has been made recently of the fact that the Italian Government—despite the still large membership in the Communist Party—has accepted guided missile bases on its territory. Communist leaders Togliati and Longo tried to oppose it. But they gave up, since they realized that their followers were merely token Communists and would not obey orders for a general strike—the only Red weapon in democratic countries.

But the Italian Government's decision is actually less important than the surprising strides made by the Italian defense forces in the last 3 years. There was a time during and after the war when the Italian Army, Navy and Air Force were treated by the West as comic opera forces—more for show than for action. Then surprisingly, apparently because the Italians finally found themselves, the Italian national defense which we helped to bring into being became one of NATO's most reliable and imposing forces.

Italy's 9½ divisions are regarded by our professionals as a force as good as any of the other NATO members. The Italian Navy, recreated after we ordered most of its vessels surrendered to the Soviet Union at the end of the war, is regarded as a real force which is bound to give an excellent account of itself in the event of a showdown in the Mediterranean. It not only modernized all its units which deserved moderization, but is now building missile-carrying cruisers to be ready next year. The air force also has been brought up to date.

All in all, Italy is considered today as having in the Mediterranean and its assigned portion of the Western defense wall a military establishment superior to that of Britain or Germany. These, added to the moral renaissance after the fall of fascism, have decided Senator MANSFIELD, among others, to suggest that Rome be given a real voice in the forthcoming negotiations between East and West.

Norwegian Independence Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. MULTER. Mr. Speaker, Sunday, May 17, is Norwegian Independence Day. On this historic anniversary, the United States sends its congratulations to the stalwart and indefatigable people of the great nation of Norway.

From the time of Leif Ericson, who first discovered America around the year 1000, Norway has inscribed more names on world history than any other nation of its size. This country of only 3½ million souls has produced Trygve Lie, the first Secretary General of the United Nations, Fridtjof Nansen, the immortal explorer, scientist, and humanitarian; Roauld Amundsen, who discovered the South Pole; Edward Grieg, one of the world's greatest composers; Henrik Ibsen the prince of modern dramatists; Knut Hamsun and Sigrid Undset, novelists of international renown; and many others.

Ask a Norwegian to explain how such a small country can become so great and he is likely to reply: "Hardship is the strength of Norway."

Life certainly is hard in this mountainous, fjorded, but beautiful country. Although not blessed with natural wealth, Norway has the third largest merchant fleet in the world, and her fishing industries are prodigious.

Norway's valiant resistance to the German occupation during World War II was as dogged as that of any people in Europe. Jails and concentration camps were packed with courageous Norse patriots who refused to submit to the barbaric oppression of the Nazi tyrants.

But when liberation came, not one lawless act was committed against the few collaborationists. No traitor was condemned without trial and due process of law.

This fair treatment accorded to the quislings exemplifies the Norwegian trait of maturity in civil affairs. Norwegians seem to know how to live together in peace and harmony. They respect one another, and when disagreements arise they have a commonsense and well-behaved way of settling their differences. There is no race or caste division among them. As early as 1913 they extended the franchise to women by a unanimous vote of Parliament. Norwegians have grasped the basic truth that it is easier to enjoy life if all are given a chance to enjoy it.

Americans always feel a close kinship to the Norwegians. We inherit the self-reliant, hard-fibered, free-and-easy individualism of pioneers, and so do they, for to live at all on that rocky tongue of land has required the heart of a pioneer.

Norway is today making an important contribution to the defense of the North Atlantic Treaty area. A chain of radars, financed by NATO and manned by Norwegians, has been constructed to warn of Soviet bomber attacks against the West. Although Norway, which has 120 miles of common border with the Soviet Union, would gain only 3 minutes of warning time, this alert could be very important to her allies in NATO, especially the United States.

King Olaf, when he opened this year's session of Parliament, enunciated the principles of Norway's foreign policy. The King said that Norway will continue its efforts to strengthen political, economic, and social cooperation among the nations of the North Atlantic Treaty Organization. He also promised that Norway would work to safeguard peace and reduce international tension by striving for a general reduction of armaments and an end to nuclear testing.

Norway has strong ties to the United States. One of the most important is the presence of so many of her sons and daughters in this country. Their enterprising and pioneering spirit has greatly enriched the life and culture of the United States.

It is a privilege to congratulate the brave and sturdy Norsemen on their Independence Day. Norwegians throughout the world richly deserve the honor and admiration which is bestowed upon them by the United States and the entire free world.

The People's English

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. SANTANGELO. Mr. Speaker, words at best are imperfect vehicles of expression. Pronunciation of English words varies from place to place. Dictionanries in the past have given preferred pronunciations for varied words. The trend today in dictionaries is to set forth the various pronunciations without designating a preference. In the ultimate analysis the people decide pronunciation for American words. Gov. Alfred E. Smith's pronunciation of "raddio" did not gain many followers and today the pronunciation "radio" is popular.

One of my constituents, Dr. Grant H. Brown, has worked upon a dictionary which recognizes the accepted pronunciations in the various parts of the United States. We can be proud of Dr. Brown, who is the president of the American Book Co., the largest textbook publisher in the world. I, for one, am pleased to represent a district in which men like Dr. Brown reside. Many outstanding educators have hailed Dr. Brown's work as a significant contribution to our educational system and concepts since there is no tool more basic to our learning process than the dictionary.

In the May 4, 1959, edition of Newsweek, there appeared the following article under the caricature of a fruit with several grimaces. The article which I am pleased to present for the readers is as follows:

"E-ther" or "eye-ther"? Either is correct, according to Webster's "New Secondary School Dictionary"—the first dictionary that doesn't give a preferred pronunciation for English words. The new book ($4.75), published last week, also recognizes accepted pronunciations in various parts of the United States. Thus, the word "tomato" can be pronounced "toe-may-toe," or "toe-mah-toe." "We let the people themselves decide how to speak the language," says Grant H. Brown, president of the American Book Co., the dictionary's distributor. "We call it the people's English." Partisan purists of the King's English, however, were bound to choke on such proffered variants as "col-yum-ist" for "columnist"; and "i-dee" for "idea."

Prophets and Opinion Polls

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. COOLEY. Mr. Speaker, the Carolina Farmer, published at Raleigh, N.C., and ably edited by Mr. J. C. Brown, carries in its May edition a significant editorial directed at a poll of a few readers of another magazine which is being used by certain people in high places in an effort to discredit all national policies intended to enable farmers to adjust their production to their markets and to obtain a fair price for what they produce.

Under leave to extend my remarks I am including this editoroial in the Appendix of the RECORD, with the thought that other Members of the Congress may benefit from the knowledge of how farmers feel about this so-called poll:

PROPHETS AND OPINION POLLS

If Farm Journal has set out to make a prophet of Secretary of Agriculture Ezra Taft Benson, we think it's going to have to come up with something more believable than the opinion poll reported in its April issue.

The Journal claims it received 10,000 replies from among its 3,100,000 readers, proving that—

Sixty percent of the tobacco farmers, 41 percent of the cotton farmers, 42 percent of the peanut farmers, and 43 percent of the wheat farmers do not want price supports.

Already Secretary of Agriculture Benson is parading around the country citing Farm Journal's poll as proof that American farmers want Benson's program, not what they have.

The quarrel we have with the Journal is for implying that its survey reflects American farm thinking.

Of course, it does not. The record of voting in farm program referendums refutes such a ridiculous claim.

According to Farm Journal's survey, 61 percent of North Carolina farmers are against any kind of price supports. The truth is that less than 5 months ago 99.6 percent of North Carolina's Flue-cured tobacco voters approved price supports at 90 percent of parity, acreage controls, and penalties for overplanting. The total vote was 133,000, or 56.9 percent of those eligible to vote, a turnout that makes our political elections look like pledge night at the lodge.

Obviously, the Farm Journal is shooting blanks; but it's interesting to see what the target is; and an item written in the editor's column by Wheeler McMillen gives a hint:

"Our more than 3,100,000 subscribers certainly represent an accurate cross section of American agriculture. We have no reason to doubt that the 10,000 replies fairly represent our readers. They will give the same answers to Members of Congress. Farmers are saying that help has become a liability. The politicos who insist on high supports and strict controls will find that farm thinking is leaving them behind." (Signed) Wheeler McMillen.

We don't believe North Carolina's Congressmen, with recent farm referendum results fresh in their minds, will buy McMillen's survey, copies of which are for sale, incidentally.

But it might appeal to some big city legislators.

An Event of Lasting Significance

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. McINTIRE. Mr. Speaker, an anniversary is a time for celebration—a pause for reflecting on the progress of the past, for enjoying the excitement of the present, and for sowing the seeds of hope for the future.

Various communities in Maine are presently engaged in such celebration, and the following article from the editorial section of the May 8 issue of the Bangor Daily News serves to highlight these events.

[From the Bangor Daily News, May 8, 1959]

AN EVENT OF LASTING SIGNIFICANCE

As Bangor's 125th anniversary observance heads into a busy period of activity extending through the summer, several things about this and similar observances become clear:

First, they attract visitors to the State as well as to the celebrating community. This was emphasized by Commissioner Fred A. Clough, Jr., of the Maine Department of Economic Development, in a recent letter of congratulations to the Bangor anniversary committee. The State of Maine, Clough observed, has already received a considerable amount of nationwide publicity generated by the Bangor observance.

Bangor is the largest Maine community marking an anniversary this year but it is by no means alone. Caribou and Presque Isle are marking centennial years and Calais its 150th year, for example. The events increase tourist interest and are bound to bring thousands of additional visitors into the region.

A second notable point about community celebrations is the fact that some of the events and projects become fixtures. Lo-

cally, the Paul Bunyan statue, which has already proven its popularity, stands on its Main Street pedestal as a permanent sightseers' attraction. It may turn out that the free anniversary exhibition to open June 1 in the old auditorium will warrant permanent status. On the sports side, the Downeast Classic which ushered in the celebration is to be repeated.

A third product of community observances is the revival of civic pride. Young and old are discussing the anniversary, delving into books and old records to learn more about Bangor's famous past, and giving thought to the city's promising future. Commissioner Clough commented as follows on this point:

"In the long run, I believe that it is from an awakened and energized civic pride and community conscientiousness that you will gain the most. For this attitude, we in the department of economic development have learned by experience, can be the deciding factor in bringing new enterprise and economic betterment to a community."

Such programs, then, as Bangor's Quartqui Centennial, can be much more than a passing event. They can provide a surge of community interest leading to general improvement and development.

We would like to call attention to the largely thankless task being carried out by the Bangor 125th Anniversary Steering Committee. There has been some misunderstanding about this committee. Contrary to a misconception apparently held by a few people, the committee is a volunteer, unpaid group. Its members stand to gain nothing, other than the satisfaction of performing a worthwhile community service. The committee is made up of busy, civic-minded men. They are giving an incalculable amount of time and know-how to staging the ambitious year-round anniversary program.

Events and projects are financed or underwritten by private sources, including a $100,000 anniversary fund raised by the committee. The city's monetary contribution totals $46,700, spread over 3 budget years, 1957, 1958, and 1959. Thus the anniversary in the main is a private, public-spirited undertaking from which the city of Bangor and all its citizens stand to benefit.

And so—on with the show that is putting the Bangor area in the public spotlight from Maine to Hawaii and Alaska.

J. Edgar Hoover Marks 35 Years of Service

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. LOSER. Mr. Speaker, on May 10, 1924, Mr. J. Edgar Hoover became Director of one of the most respected agencies in the Federal Government. The Federal Bureau of Investigation has been doing an outstanding and necessary work for our country and its Director is admired by all.

The Nashville Banner, a great southern newspaper, has published an excellent editorial commending Mr. Hoover for his years of service to his country. I am placing it in the RECORD in order that you may have an opportunity to read it. The editorial follows:

[From the Nashville Banner, May 11, 1959]

J. EDGAR HOOVER MARKS 35 YEARS OF SERVICE

For 35 years the Federal Bureau of Investigation has been scandal-free and politics-proof. And the man behind this miracle is J. Edgar Hoover who became Director of the FBI, May 10, 1924, by appointment of President Calvin Coolidge.

Hoover, only 29 years old at the time, had been with the Justice Department for 7 years, earning his law degree at night school.

The FBI was created in 1908 and in 1924 it was tainted with scandal. Its personnel was largely composed of political hacks, riffraff, and ex-convicts.

When Hoover accepted the appointment he did so with the proviso that the Bureau would be freed from its political yoke and would be responsible only to the Attorney General. His first act was to clean house. The undesirables were thrown out and replaced with young men of character, intelligence, and ability.

These were the special agents who became the scourge of the gangsters of the late twenties and early thirties. They were the "G-men" who eliminated the Dillingers, Floyds, and Bonnie Parkers. They were lawyers, accountants, and outstanding law-enforcement officers who were welded into the finest professional police force in the world.

Their Chief has served under five Presidents and an even dozen Attorneys General without becoming a political figure. And during this span of 35 years, the Bureau has become the world capital of scientific criminal investigation.

Hoover is the Nation's No. 1 law-enforcement officer, but publicly has fought against a national police force which could operate without regard to State laws or local law-enforcement agencies.

Five years ago on the eve of his 30th anniversary, Hoover was asked if he thought there was any danger of the FBI becoming a Gestapo. His reply was typical: "No, there is no danger * * * not if we have men of character in the organization and an alert public opinion." This attitude remains unchanged.

A calm and deliberate man, Hoover certainly could not be classed as a witch-hunter or a person given to flights of fancy, but he has told the Nation time after time of the imminent threat of communism. His best-selling book, "Masters of Deceit," is considered by many as the most authoritative works ever written on communism in America.

It has been said there is no such a thing as an indispensable man, but there are invaluable men and one of these is J. Edgar Hoover whose unstinting service to this Nation deserves the fullest recognition as he passes another milestone in his rewarding career.

North Dakota State Medical Association

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. BURDICK. Mr. Speaker, I would like to call to the attention of my colleagues a resolution recently passed by the North Dakota State Medical Association in regard to our increasing traffic casualties. It suggests a special commorative stamp on the theme of traffic safety which, I believe, has a great deal of merit:

Whereas the State Medical Society of Wisconsin has passed and has asked our association to support the following resolution to wit:

"Whereas traffic accidents each year kill more than 37,000 persons and injure another 1,400,000 causing not only tragic suffering and loss of life but costs exceeding $5 billion in wage loss, property damage and medical services; and

"Whereas the attention of the Nation has been effectively directed to some of the great problems and philosophies of human living through the issuance of special commemorative stamps; Now, therefore, be it

"*Resolved*, That the Postmaster General of the United States be petitioned to issue annually, for 5 consecutive years, a special commemorative stamp on the theme of traffic safety, each year's stamp to receive its first day of issue from the capital city of each State of the United States."

Be it Resolved, That the North Dakota State Medical Association adopt said resolution and that copies of this resolution bearing the seal of the State Medical Association of North Dakota be sent to the Governor of North Dakota, the U.S. Senators and Representatives from North Dakota, the Postmaster General, and the President of the United States, the president and president-elect and executive vice president of the American Medical Association, as well as the president of the State Medical Society of Wisconsin.

Involuntary Partnership

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. WESTLAND. Mr. Speaker, on several occasions I have brought to the attention of this body my objections and the objections of the people of Snohomish County, whom I represent, to the Bureau of the Budget's decision to include this county in the Seattle standard metropolitan area.

I want to include in the RECORD an editorial from the Twin City News, published in Stanwood, Wash., which summarizes the attitude of the majority of Snohomish County residents. I agree that Seattle is a wonderful city, and that Snohomish County has been dragged into an involuntary partnership.

The editorial follows.

INVOLUNTARY PARTNERSHIP

Uncle Sam is forcing Snohomish County into a shotgun wedding with Seattle.

The Federal Government in Washington, D.C. has announced that for census purposes all of Snohomish County including the Twin Cities is being considered part of the Seattle standard metropolitan area.

It doesn't matter much right now, but eventually this deft bit of maneuvering may paralyze the ability of local communities to determine their own development. It is feared that the standard metropolitan area may later emerge as a huge sprawling metro armed with the power to take over planning activities, determine utilities development, influence industrial growth, etc. The center of such power would, of course, be at the heart of the metro—Seattle.

Reason for this county's inclusion in the Seattle district is that according to the bureau of the budget, 23 percent of the county's labor force is employed in Seattle. The Budget and Census Bureaus figure we are socially and economically integrated and might as well be considered one.

But our area has a future quite apart from Seattle and its uneasy dependence on the Boeing colossus. Trying to mesh Seattle's economy with such far-flung communities as our own will bring us little advantage and can take from us some fundamental decision making abilities.

Most of us like Seattle—for as cities go, she is still one of the most beautiful in the world. But we still don't want to marry her.

The 75th Birthday of the Honorable Harry S. Truman Recalls a High Moment in History, the Enunciation of the Truman Doctrine and the Reasons for Its Advancement

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, I do not want the occasion of the 75th birthday of the Honorable Harry S. Truman to pass into history without mention. In his message on aid to Greece and Turkey, given to the joint session of Congress on March 12, 1947, his closing paragraphs were these:

The United States contributed $341 billion toward winning World War II. This is an investment in world freedom and world peace. The assistance that I am recommending for Greece and Turkey amounts to little more than one-tenth of 1 percent of this investment. It is only commonsense that we should safeguard this investment and make sure that it was not in vain.

The seeds of totalitarian regimes are nurtured by misery and want. They spread and grow in the evil soil of poverty and strife.

They reach their full growth when the hope of a people for a better life has died. We must keep that hope alive.

The free peoples of the world look to us for support in maintaining their freedoms. If we falter in our leadership, we may endanger the peace of the world—and we shall surely endanger the welfare of our own Nation.

Great responsibilities have been placed upon us by the swift movement of events. I am confident that the Congress will face these responsibility squarely.

Mr. Speaker, it was my good fortune a few years later to have a bright young student from Turkey in one of my classes. In summarizing his report on the consequences of the Truman doctrine, he said:

I do not know what judgment the United States will render of President Harry S. Truman, but I can tell you this—he will go down in the history of my country as the greatest president the United States ever had.

Mr. Speaker, many Americans have been inclined to view harshly and to speak sharply about President Truman. Few men in history have had to face as many challenges as he faced in such swift succession after he became president. Few men have contributed more significantly to the institutions by which the human race may hope to build and achieve peace.

I should like to pay tribute to a great President, to a great American, to a great member of the human race—Harry S. Truman. Long may he live and enjoy the fruits of his handiwork. Generations yet to come will rise to bless his name.

Good News

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. WESTLAND. Mr. Speaker, many individuals are inclined to speak of the economy as if it were on the brink of disaster. This is not true and I think more should be said about the bright future that lies ahead. It is refreshing to read good news such as presented in an editorial, "News We Enjoy," published by the Bellingham (Wash.) Herald on May 4, 1959. I want to include this editorial in the RECORD, because its content indicates not only what is happening in Whatcom County, Wash., but also in thousands of other communities across the Nation.

The editorial follows:

NEWS WE ENJOY

Convincing evidence that Whatcom County has licked the business downturn and is definitely on a road of greater activity and prosperity businesswise is seen from almost every source.

One of the important barometers is the state employment and security department office. Latest reports show that approximately 100 names have been stricken from the list headed "Out of Work," each week for the past 6 weeks.

And during the same period the number of claimants for unemployment insurance has dropped by 629 persons.

But there are many physical examples of activity. The opening of the new Seattle-First National Bank branch last week was an outstanding addition to Bellingham. Now the old structure is to be razed and replaced by a modern building.

The construction of the new home of J. C. Penney and F. W. Woolworth Co. on the site of the American Theater is underway. Work has been started on the new Albertson's Supermarket near the coal mine site. The Robinson Plywood & Timber Co. of Everett has reopened the old Larson Mill plant. More construction—an addition to the Haskell Building—will dress up Cornwall Avenue. The Leopold Hotel is well along on the construction of the new motel and swimming pool.

At Western Washington College two buildings are being erected and more work on the Bellingham Freeway should open up within the next 30 days. There are also some extensive sewer installation projects in the residential areas.

The city of Bellingham Water Department has started work on what ultimately will be an expenditure of about $1½ million expansion and diversion project. Work on the tunnel is well along.

Retail stores report a definite uptrend in sales and the many resorts in the nearby areas are making last minute preparations for what has been forecast as a recordbreaking tourist season.

In the residential areas numerous new homes are under construction and building suppliers report that business is good. All of this substantiates the figure from the employment office that definite improvements in the area's economy are noted. That should be good news to everyone in Whatcom County.

Proposed Amendments to the Fair Labor Standards Act

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to include a portion of my statement before the Senate Labor and Public Welfare Committee today on proposed amendments to the Fair Labor Standards Act.

I appeared before the committee at the request of the South Dakota Press Association in opposition to the proposed removal of the existing exemption of smaller newspapers under the act. I sincerely believe that removing the exemption would sound the death knell not only for many small newspapers, but more serious, the opportunity for many young people to learn to do for themselves.

The excerpt from my statement is as follows:

As a former weekly newspaper publisher myself and a past president of the South Dakota Press Association, I speak from personal knowledge of the personal requirements of these small publications. To require them to meet minimum wage and hour provisions would, in many cases, force their discontinuance. Knowing the vital part these papers play in small communities, this would be a tragic loss.

Those of you who have never lived in a rural area where a 6-day week is a normal business week may not fully appreciate the problems involved. In addition, living costs are lower, as a rule, and the margin of profit of small business is smaller. To impose Federal regulation as suggested by the legislation under consideration would cut into that narrow profit margin to force a publisher out of business.

More important than all this, however, is the effect it would have on the public generally. I am thinking now of the high school kids that come into these small shops and work to supplement their income, earning a few dollars to buy the things their parents may not be able to provide for them, but more important, learning how to work.

I am thinking of several young men, besides my own son, who got their start and learned a profession in my own shop. One or two of them not only learned how to help make up forms and feed press, but in addition learned how to operate a linotype and later were able to work their way through college by operating a linotype in larger daily shops on Saturdays and evenings.

I am also thinking of the boys who got their start in the newspaper business by working part time and full time in the small shops in my State and then went on to college, taking advantage of the rural newspaper course taught at our State college, going out to become top-flight newspaper publishers, providing the people of their communities with local, State, and national coverage of the news.

I firmly believe that Government should place a protective floor under income, but I also believe with all my heart that we must be very cautious that this floor must never become a ceiling upon opportunity. This provision would place a ceiling upon opportunity for thousands of young people.

In my judgment it would be the most ill-considered and dangerous legislation this Congress could possibly pass.

I would also like to have included in the record of these hearings a telegram I received from the South Dakota Press Association, advising of the action taken at their annual convention on May 8, 1959:

MAY 8, 1959.

Congressman E. Y. BERRY,
House Office Building,
Washington, D.C.:

South Dakota Press Association in annual convention assembled here today unanimously approved a resolution urging that you appear before the Senate Labor Committee in our behalf. We earnestly request that an amendment be made to Senate bill No. 1046 to retain section 9 of present law which applies to circulation exemption for smaller newspapers of the country. We consider such an amendment vital and necessary to the welfare and stability of the smaller newspapers.

SOUTH DAKOTA PRESS ASSOCIATION,
E. H. LIGHTER, *President.*
HOMER GIVENS, *Manager.*

Significant and Substantial Drop in Unemployment

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. WALLHAUSER. Mr. Speaker, the news contained in the Labor Department news conference last Monday regarding the significant and substantial drop in unemployment, is certainly welcome and stimulating.

One of the major concerns of every thinking person in these United States should be the basic problem of providing employment for all Americans who are able to work.

More jobs in construction, summer resorts, farming, along with the pickup in the manufacturing industries, hardest hit by the recession, are generally believed to have contributed to the April improvement.

At 3,627,000, unemployment in the United States is now 1½ million below April a year ago. Just during the last 2 months unemployment has fallen by more than a million workers.

Realizing that there will always be a certain number of individuals unemployed due to various reasons, including infirmity, refusal to work, and others, it must be the constant aim of all to do whatever is necessary to provide employment for those who are willing and able to work.

My sincere hope is that the figures to be released in the months to come will continue to show the desirable trend that we are now in.

Testing of Nuclear Weapons

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. MONAGAN. Mr. Speaker, last week I introduced in this House a resolution which seeks to put this body on record as supporting efforts to obtain international agreement to cease the testing of nuclear weapons.

Yesterday's newspapers indicated that there is a better than 50–50 chance that an agreement may be reached at Geneva to ban nuclear testing.

The language of this resolution is carefully drawn. It is the same resolution which has already passed the Senate. In addition, Mr. James Wadsworth, the U.S. representative at the current Geneva talks on nuclear disarmament, has presented this resolution to the conference where it has been publicly welcomed by the Russian representative, Semyon K. Tsarapkin.

This resolution urges no appeasement. It seeks no surrender nor does it press for any relaxation of our present firm line of resistance to the Communists.

It would solely and simply emphasize once again and with the authority of this House the urgent need for agreement on this vital question. Current reports show a 100 percent increase in this country of the concentration of strontium 90 in the bones of our children. Excessive amounts of this noxious substance can cause leukemia.

Thus, what we are talking about is the health of our future generations. Surely, with this priceless asset at stake, we cannot fail to make every possible effort to eliminate the threatened danger.

I hope that the House will pass this resolution promptly so that it may be transmitted to Geneva to provide added weight to American efforts to obtain Soviet consent to a reasonable agreement.

I add herewith an article from the New York Times of May 4, 1959, describing the receipt at Geneva of the Senate resolution:

SOVIET WELCOMES U.S. PLEA ON TESTS—DELEGATE AT ATOM-BAN TALKS SAID TO APPROVE SENATE'S STATEMENT URGING PACT

GENEVA, May 4.—The Soviet Union was reported today to have welcomed the support expressed by the U.S. Senate for a controlled ban on nuclear weapons tests.

James J. Wadsworth, U.S. delegate to the three-power conference that is attempting here to negotiate an agreement banning tests, read into the record a resolution unanimously adopted by the Senate last Thursday.

The resolution said that the Senators "support the efforts of the United States to continue to negotiate for an international agreement" to suspend tests. A ban "under an effective control system would provide an opportunity to ease world tensions," the declaration stated.

The chief of the Soviet delegation, Semyon K. Tsarapkin, generally expressed satisfaction with the Senate's resolution, a Western source reported. He was said to have welcomed the desire shown for the success of the negotiations.

The Senators had asked President Eisenhower to communicate the resolution to the Soviet Government "so that the desire of the American people speaking through their representatives in the Senate will be known and made clear for the successful outcome of the negotiations in Geneva."

Mr. Wadsworth emphasized that the Soviet Union should regard the statement as indicative of the will of the people and Government of the United States for a nuclear test ban, a Western spokesman said.

The U.S. delegate was clearly alluding to the fact that Mr. Tsarapkin has often quoted unofficial statements and newspaper reports to cast doubt on the sincerity of the U.S. intentions in the negotiations. Mr. Wadsworth observed that the expression of support for an agreement came from the legislative body that must ratify any treaty negotiated here.

In the only other business at today's 26-minute meeting, the conference delegate approved a routine draft treaty article covering the procedures for the signature ratification and entry into force of the proposed test ban agreement. It was the 15th section of the draft treaty to be adopted since the conference began last October 31, but none of them has dealt with a key issue.

David Ormsby-Gore, the British delegation leader, returned to Geneva after a prolonged absence to attend today's meeting, the 87th. He wanted to consult with the British deputy delegate, Sir Michael Wright, and with Mr. Wadsworth, a British spokesman said. He will return to London tomorrow.

Trophy Award to AMVETS Alabama State Commander Charlie Casmus

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. GRANT. Mr. Speaker, after the adjournment of Congress last year, Dr. Winston E. Burdine, national commander of the American Veterans of World War II and Korea, presented a Silver Missile Trophy to AMVETS Alabama State Commander Charlie Casmus of Montgomery, Ala.

Commander Casmus is an outstanding citizen who has rendered unselfish service, not only to his comrades, but to the community and State in which he resides. This honor was well merited by Alabama's State commander; and upon presenting him the trophy on December 7, 1958, in Washington, D.C., National Commander Burdine stated:

It is with great pleasure that I call to the rostrum the State commander from Alabama, Charlie Casmus, for the purpose of

presenting the AMVETS Silver Missile Membership Trophy.

I can think of no man who has done more for AMVETS, or for the American veteran than our good friend and fellow AMVET Charlie Casmus.

Charlie has served AMVETS with distinction as State commander from Alabama, as national executive committeeman, and as national vice commander. As you know, the Silver Missile Award was established 3 years ago for presentation to the State which is first to reach its membership quota. Charlie was State commander of Alabama at that time and the first year's trophy went to Alabama.

After a year's service as national vice commander for the third national district, Charlie was reelected State commander for Alabama, and today—just 97 days after the start of the new membership year—it is with pleasure that I announce that Alabama is the first State to reach its membership quota, and has won possession of the Silver Missile for the second time in its 3-year history.

Before presenting the trophy, I do want to say a few words about Charlie's other activities, since his many accomplishments in AMVETS would make you believe that his time is thus occupied.

In his home town of Montgomery, Ala., Charlie is executive secretary of the Press and Radio Club; is secretary of Elks Lodge No. 596; formerly wrote a newspaper column; and is active in many fraternal, civic, and veterans organizations.

On behalf of the national executive committee, and fellow AMVETS throughout the Nation, I extend my congratulations to Alabama AMVETS and to their State commander, Charlie Casmus.

Perhaps Blasting's Needed To Get A Good Labor Law

EXTENSION OF REMARKS
OF
HON. A. PAUL KITCHIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. KITCHIN. Mr. Speaker, a very timely editorial appeared in the Hamlet, N.C., News-Messenger for May 12, 1959. I believe it might well be considered by the Members of the House of Representatives. Under leave to extend my remarks, I include the editorial in the RECORD:

PERHAPS BLASTING'S NEEDED TO GET A GOOD LABOR LAW

A very dejected and disappointed Senator MCCLELLAN has been quoted as saying with respect to the revelations of his Senate rackets committee: "If we don't get a good (labor) law on the basis of the record we have compiled now, Congress wouldn't legislate if we doubled the record."

Most Americans, we think, will agree with the Senator that his committee has developed a sufficiently lurid and shocking picture of union thievery, conspiracy, brutality, abuse of members and public alike and general skulduggery to spur the members of that body into effective action.

Instead, and in spite of the 150,000 letters received by the committee from rank-and-file union members on the evils of labor bossism, the dreary history of 1958 has been repeating itself with slight variations. Last year the Kennedy-Ives "sweetheart" bill was passed by the Senate. This year the Kennedy-Ervin bill, substantially the same flaccid measure—despite the heroic but futile efforts of Senator MCCLELLAN to toughen it with an effective bill-of-rights amendment—was passed by the Senate. Last year, a disgusted House defeated the original Senate-passed Kennedy bill, and the best thing that could now happen would be for the current Kennedy measure to meet the same fate so that the House could adopt the Barden bills, H.R. 4473 and H.R. 4474.

Between them, the Barden measures offer complete protection—including a puncture-proof bill-of-rights for the union member, and the end of secondary boycotts and blackmail picketing, against which management and employees alike are powerless, and to which small business must quickly yield or perish. Deprived of his present license to whipsaw members and business alike, the corrupt labor boss will be a Samson shorn.

But the labor dictator is still pulling down temples at will, cuffing around the dues-paying faceless people from whom his sinews derive, and thumbing his nose at the public at large. He is pretty sure of himself—and pretty sure of Congress. What else, when the protests of 150,000 of his minions are unheeded, and when the whole public is shocked at the fifth amendment hoodlums paraded before the McClellan committee—and still the solons are sharpening no shears?

Senator MCCLELLAN has a right to be dejected. He tried, through bills of his own and his subsequent efforts to amend the Kennedy palliative to get a good law. But millions of frustrated union members of citizens, whose businesses could be shut down tomorrow by secondary boycott or blackmail picketing, have not. At this 11th hour we have a right to be angry—and to be frightened. But, until we do something, we have no right to be dejected. If every Representative in the House were to find his desk stacked 2 feet high with demands for the Barden bills, the most vicious of our labor abuses would be ended.

It could happen. But that is what it will take.

Battery Additive VX–6

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. HALPERN. Mr. Speaker, I recently received a communication from Mr. Elliot A. Meyer, president of the National Dynamics Corp., of New York city, concerning the difficulties his firm has encountered in securing an impartial evaluation of a battery additive product manufactured by it, called VX–6. Mr. Meyer writes that unsupported charges have been made against this product through an organized effort to thwart its continuance despite its alleged beneficial value and the dollar savings which it provides to the public. And this, despite the fact that the product is used by the various branches of the armed services to effectively maintain the maximum of military effort as economically as possible.

The company possesses numerous statements commending the additive and sustaining its claim that VX–6 helps to prolong the life of batteries and fosters reductions in battery cost and upkeep.

Because the company is a corporation in the great city, a portion of which I have the honor to represent in Congress, and since many of its employees reside in my district, I ask that the letter from Mr. Meyer be printed in the RECORD at the conclusion of my remarks so that proper significance can be given to it and fair evaluation accorded to it. If its contentions are factual, a serious blow to our system of free enterprise is being perpetrated. The letter follows:

NATIONAL DYNAMICS CORP.,
New York, N.Y., May 8, 1959.

Congressman SEYMOUR HALPERN,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN HALPERN: Because of your great interest on behalf of the small businessman, I would like to bring to your attention a matter which smacks of conspiracy. I am doing this on behalf of our distributors throughout the United States who are in reality independent businessmen.

Lead acid battery replacement sales are approximately $500 million annually, based on an estimate of $20 per battery. Consistently these sales have run parallel to tire replacement sales in the automotive industry. However, during 1958, according to figures and facts from 53 different sources and some 4,000 pages of such reports as compiled by a leading trade paper, tire replacement sales have increased 5 percent and battery replacement sales have decreased 5 percent. This means a drop in battery replacement sales of 1,250,000 batteries.

The reason for this drop in sales has not been clearly explained by the battery manufacturers. One leading manufacturer has blamed the 1958 weather in a report to their stockholders. Others have advanced such reasons as an increase in the efficiency of the manufacture of batteries. Another reason is possibly that the 12 volt system is responsible for this. At this time they have admitted no logical reason as to why their sales have fallen off. They only agree that battery replacement sales did fall off.

National Dynamics Corp., whose principal office is in New York City, is currently manufacturing and marketing a battery additive for which we claim the prolonging of a normal life of a battery and that it is effective on new as well as old batteries. The trade name of this product is VX–6.

Before releasing this product to the public, it had 5 years of road and laboratory tests on 10,000 batteries of various applications.

During 1958, National Dynamics sold enough VX–6 to treat, 1,500,000 batteries—coincidently about the same number of battery replacement sales that were lost.

The American Association of Battery Manufacturers has vigorously opposed the marketing and sale of this product. They claim the product to be innocuous, having no beneficial or harmful effects yet they admit they instigated an FTC investigation into the claims of National Dynamics. They also have so changed their guarantees to hamper the sale of VX–6 by voiding these guarantees if this product is used in their batteries. They have disseminated information both ridiculing VX–6 and implying that certain claims were false. As one specific example, they have implied that a claim made by National Dynamics that VX–6 was used by the U.S. Navy is untrue. Below please find quoted a letter recently received by National Dynamics Corp. from the supply officer, written at the direction of the commanding officer, of the U.S.S. *Forrestal*.

"This is in reply to your letter of 11 February which was forwarded to the USS *Forrestal* by the Navy Supply Center, Norfolk, Va.

"VX–6 has been used by this vessel. The users of this product report the product is satisfactory but have no special comments favorable or unfavorable."

It seems strange that if this product is as innocuous as the American Association of Battery Manufacturers claims that they are putting such effort to stop the marketing of VX–6 and to discredit it. Or, is it possible that they may feel, as the National Dynamics people do, that VX–6 is the reason for the big drop in battery replacement sales.

A letter from Fort Leonard Wood states that $24 worth of VX–6 resulted in a saving of $162 in discarded batteries to the Army. The civilian manager of the transportation department for the Naval Air Station at Memphis, Tenn., as a result of using VX–6, states that a 300 percent saving can be realized on battery cost and upkeep. The New York Department of Sanitation has found that VX–6 has cut down internal heating by 53 percent which same internal heating is the chief cause of their battery trouble.

There are some thousands of similar reports on the application and results of the use of this product.

The American Association of Battery Manufacturers has not come up with any tests or proof refuting any of the claims made for this product. In spite of all the evidence and testimony of the users of VX–6, and the big decrease in battery replacement sales since its introduction into the market, the National Better Business Bureau has apparently allied themselves with the big battery interests to discourage the sale of this product. The National Better Business Bureau has not made a single test but has sought, by implication, to discourage the sale of VX–6. They have evidently set themselves up as a judge and jury and without any investigation have attacked a product that would seem to be in the interest of the general public while opposed to the interests of the big battery manufacturers.

It would seem that VX–6 should be tested for possible use by every branch of the Government, especially in view of the favorable reception from those spots where it has been used.

Yours very truly,

NATIONAL DYNAMICS CORP.,
ELLIOTT A. MEYER,
President.

Why I Am Opposed to the Murray-Metcalf Bill

EXTENSION OF REMARKS
OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. KEARNS. Mr. Speaker, in view of the great national interest in the Murray-Metcalf bill—the School Support Act of 1959—I ask leave to present to my colleagues the reasons why I cannot support this legislation. I hope each and every Member of the House will read this before casting his vote.

Enactment of the Murray-Metcalf bill would shift a major share of the cost of education, and thus of State and local responsibility for education, to the Federal Government. Such a shift of responsibility is clearly not in the national interest. Indeed the underlying philosophy of this bill is contrary to all Federal aid measures for education heretofore adopted by the Congress, including such programs as Federal aid for land grant colleges, assistance for vocational education, Federal aid in areas affected by Federal activities, and the recently enacted National Defense Education Act, all of which programs I have enthusiastically supported. These programs, and others in existence, have provided Federal funds for specific educational activities, the encouragement of which have had overriding national significance for the defense and welfare of our Nation. All the Murray-Metcalf bill would accomplish would be to shift a major and permanent responsibility to the Federal Government for the operation of our public elementary and secondary schools.

As originally introduced, the bill would authorize appropriations increasing from $1.1 billion in the first year of the program to $4.7 billion in the 4th year and for each year forever thereafter. This would entail a cost of $11.4 billion in the first 4 years alone. Even if these amounts were scaled down, I would feel compelled to resist the measure because of its basic philosophy and for the following reasons:

First. Under the United States Constitution education is, quite properly, I believe, a function of the States. In varying degrees the different States have delegated some of this responsibility to local school districts. No Federal program should ever be permitted to develop that would in any way lead to Federal domination of our educational system.

The fundamental principle of our Federal-State governmental organization is a division of authority and responsibility—not a sharing of every function by every type and level of government. In my judgment it would be completely naive to assume that Congress would appropriate the billions of dollars called for in the Murray-Metcalf bill without—sooner or later—attempting to assure through adequate controls that the sums are efficiently spent. Indeed, what justification can there be for vast Federal expenditures unless a definite product is purchased for the taxpayer's money? I think inevitably that H.R. 22, the Metcalf bill, drafted as loosely it is, would furnish the very impetus that would provoke throughout the Nation a demand for controls over the use of the Federal moneys. As the bill is drafted there is not even a requirement that the Federal funds be matched by State or local funds, nor is there any requirement that there be any increase in State and local spending over and above present levels. In my judgment this inevitably means merely a shifting of responsibility from the States to the Federal Treasury, with no assurance that the Federal expenditures will produce any better educational programs than we now have. As a practical matter such a shift in responsibility would tend only to perpetuate existing inequalities and inadequacies in education.

Second. The greater the amount of Federal aid going into our schools, not for specific purposes, but for overall financing, the less local school administrators would be dependent on their local boards of education, State legislatures, and communities. It seems perfectly clear that such circumstances would gradually but surely lead to whittling away State and local control over education.

Third. The bill would allot funds among the States without any regard to a State's need for Federal assistance. This is contrary to practically all proposals which heretofore have been considered by the Congress.

Fourth. In shifting major responsibility for education to the Federal Government, enactment of the bill would force the Federal Government either to boost its already burdensome taxes or to expand the national debt, thus further adding to inflation, which in the end would tend to defeat the presumed purposes of the bill.

Fifth. Some proponents of vast Federal aid for education appear to feel that school needs can be met and local taxpayers spared a boost in State and local taxes by shifting responsibility to the Federal Government.

This is a snare and a delusion. If H.R. 22, as introduced, were to be enacted, it would, in the first four years of the program, cost the citizens of Pennsylvania $158,537,000 more in Federal taxes than Pennsylvania would receive through Federal grants under the program. This just simply does not make sense as far as financing education in Pennsylvania is concerned. Pennsylvania cannot even support its own educational program at the present time.

Montana, on the other hand, would ride the gravy boat, getting $13,675,000 more in Federal grants than it would pay in taxes. It is quite understandable, therefore, why Senator MURRAY, of Montana, and Congressman METCALF, of Montana, are such strong advocates of the legislation; however, I cannot understand the reasoning of my teachers in Pennsylvania.

Is Montana going to be able to sell the eleven revenue—producing States in the Union—who pay 93 percent of the cost of running the Federal Government—this bill of merchandise?

Finally, in my judgment, the Federal Government should concern itself with specific educational problems, the solution of which is clearly in the national interest. To this end I intend to give full support to essential existing programs and to any necessary modifications of these programs that may become necessary as conditions change in the future. As a practical matter, the National Defense Education Act, which I supported in its enactment last year, is only now getting under way. I intend to support measures appropriating the necessary funds to make this National Defense Education Act effective. Until we get results from this important measure, I think it most untimely and unnecessary to give consideration to proposals such as the Murray-Metcalf bill.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Excerpts From Address by Hon. Alexander Wiley, of Wisconsin, To Be Broadcast Over Wisconsin Radio Stations

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, May 15, 1959

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an address I have prepared for broadcasting from Wisconsin radio stations.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EXCERPTS OF ADDRESS PREPARED FOR DELIVERY BY SENATOR ALEXANDER WILEY, REPUBLICAN, CHIPPEWA FALLS, OVER WISCONSIN RADIO STATIONS

I welcome the opportunity once again to be with you. I want to discuss a subject that is of deep interest to Americans in every walk of life. The subject is taxes.

Briefly, now, I would like to take a look at the (1) scope; (2) the interrelationship of Federal, State and local taxes; and (3) possible steps which offer the best hope for meeting our financial responsibilities and easing the burden on the American taxpayer at the earliest time.

Although taxes affect all of us Americans differently, basically they mean a "take" out of our incomes.

EFFECT OF TAXES ON THE ECONOMY

Today, the taxpayers of the Nation—you and I—pay a great many direct and hidden taxes. These include income, partnership, corporation, gift, inheritance, capital gains, and numerous others. The tax percentage ranges from 1 percent to 91 percent—think of it folks; 1 percent to 91 percent.

What effect does this have on the economy? A terrific impact.

We recognize, of course, that it is important to allow the American worker the opportunity to retain as much of the fruits of his labor as possible.

At the same time the economic life of business and industry depends upon their being able to have enough money to carry on their operations; to have venture capital to plow back into the business for improvements and expansion; to support research for new and better products for the consumer; and to remain economically healthy to provide jobs for the American worker, of whom more than 65 million—an all-time high—are now working toward building an ever-better life for themselves, their families, and a better country for the future.

We recognize, too, that in this complex, intertwined system of taxes, Federal taxes often overlap or duplicate taxes imposed by the State and local governments.

EFFECT OF TAXES ON ECONOMY

Now, the big question is: How can we create greater justice and equity out of this complex, intermingled, overlapping system of tax laws?

In addition, we must also ask:

1. What is the impact of this complex, many-faceted tax structure on individuals, on business and industry, and on the general economy?
2. How is this affecting our economic development, growth, and progress?
3. Are individuals, partnerships, corporations, and others being treated equitably under the tax system?
4. What proper steps should be taken to assure that the taxload is distributed fairly in the economy and that our tax policies are not unduly restrictive to growth and progress?

ESTABLISHMENT OF A TOP-LEVEL TAX COMMISSION

To help provide the answers to these and other questions, I have recommended the establishment of a top-level Tax Commission.

The objectives of the Commission would be to plug loopholes; iron out inequities; eliminate unintended hardships or benefits; capture revenue that may now be escaping taxation; make adjustments in the tax structure to reflect the changing needs of the economy, the technological revolution, shifts in the pattern of consumer needs, and other national requirements.

The overall purpose would be to provide a more efficient, equitable, and just tax system to better enable our free-enterprise economy to meet its present obligations, as well as to promote expansion and progress for the future.

The Commission—composed of 12 members from public and private life—would be required to make its studies, accompanied by recommendations for tax changes, and report to Congress.

The tax structure, over the years, has developed through a complex process of enactment of new laws, repeal of old ones, and extensions or revisions of statutes on the books. The long tentacles of the tax system reach into every organ of society.

During this period, there have been tremendous economic, technological, industrial, and other changes in the country. The tax structure, I believe, should reflect these changes.

PRINCIPLES OF TAX REFORM

The principles which, I believe, should govern tax reform include:

1. Taxes should be based on ability to pay.
2. Taxes should allow reasonable incentive to earn, to grow, to expand, to enjoy the fruits of labor.
3. Insofar as possible, taxes should be nondiscriminatory.

NEEDED: LONG-RANGE TAX POLICY

In view of the revolutionary changes in the economy in the past—and we can expect more in the future—the Tax Commission, too, should also attempt to lay the foundation for a long-range tax policy that would make proper adjustments for changes; provide for an orderly revision of tax statutes as needed, instead of amassing tax laws in a hodge-podge manner; and establishing a tax policy that would encourage—not hamper—orderly growth and progress.

The objective, of course, is to promote efficiency, equity, and justice in the tax system.

The establishment of a Hoover-type commission, I believe, would help achieve these objectives.

I am, therefore, urging early and favorable consideration of the proposed legislation for establishing the much-needed tax reform Commission.

COMMISSION WOULD NOT DELAY IMMEDIATELY NEEDED TAX REVISION

Now, friends, you may ask: If we establish a Tax Commission—scheduled to make its findings and report its recommendations to Congress by January 1961—would this obstruct, or hold off, any justified tax revisions in the meantime?

The answer is: Definitely not.

Realistically speaking, the outlook is dim for any broadscale tax cuts at this time. However, as Congress has the opportunity to correct glaring inequities in the tax structure—while the Commission, if established, completes its investigation, this should certainly be accomplished.

Almost daily, a vast volume of letters, telegrams, and cards pour into my office urging reductions of one kind of taxes or another.

Let me say, frankly, that I deeply sympathize with such messages—from many of you listening—as you outline the burdens posed by high taxes. If it were fiscally responsible, I would be happy to urge my colleagues in Congress to cut all taxes now.

BUDGET CRISIS DIMS OUTLOOK FOR TAX CUTS

But can we do this?

Currently, Uncle Sam is about $286 billion in the red.

In addition, the 1960 budget now before Congress may further contribute to that indebtedness unless we can get responsible action in Congress—supported by folks at home—to assure the adoption of a realistic fiscal policy.

Today the Nation, despite its recent economic setback, is establishing new economic records. The gross national product is at an all-time high of $465 billion. The national personal income has hit a record of $365 billion. Retail sales have reached $212 billion, topping al previous volumes of retailing.

Yet, the United States and State governments are having difficulty paying their bills.

We recognize, of course, that some communities are still suffering business lags and too much unemployment. This poses particularly difficult problems for the jobless and their families, as well as economically depresses the involved community.

Recognizing the seriousness of this situation, the Federal Government, as well as States and local communities, must step up their efforts to wipe out these economic dark spots in the economy.

The adoption of an improved tax program, as well as establishment of a long-range policy, I believe, would help to promote economic stability and better enable us to deal with these local, as well as national, problems in the future.

STRONG ECONOMY—A "MUST" FOR PRESERVING FREEDOM

We recognize, too, that the maintaining of a strong economy is definitely in the interests of national security.

Time after time, the Communists have predicted that our free enterprise system will fail to meet the economic challenges; that we will not succeed in coping with the ups and downs in the economic cycles; and that eventually our economic system will fold up, so that dictatorial communism—under the guise of socialism—can take over the country.

This must not happen. It will not happen if we have the courage, foresight, and willingness to meet the economic as well as military challenges to our security; in fact, to our survival.

"NEW LOOK" AT SPECIFIC TAXES

Now, what are the areas of taxation that merit a "new look" in terms of the long-range needs of the economy. A few of these include taxes on job-creating businesses and industry, particularly those included in the small business category; treatment of retirement benefits; possible tax adjustments to help meet the increasingly high costs of education, and thus help to fill a national need; depletion allowances for oil, gas, and other similar resources; treatment of working mothers under the tax laws; deductions for business expense accounts; excise taxes continued long beyond their wartime purposes; capital gains taxes.

In addition, there are a great many other areas of taxation which deserve careful reconsideration.

CONCLUSION

In proposing such a top-level Tax Commission, I am well aware that such a body cannot provide a cure-all for our economic ills, nor can it solve all problems.

However, I believe that tax reform action along these lines would provide our best hope for helping local, State, and Federal governments to better meet their financial obligations; early easing the burden on the American taxpayer; and assuring an equitable sharing of the tax load.

Overall, I believe that achieving these objectives would serve the interest of Wisconsin, as well as of the Nation.

Whether you are a businessman, farmer, teacher, doctor, lawyer, parent of students, or one who toils in some other vineyard—you well know the big bite which taxes take out of our income.

Now, friends, as you have the opportunity, I would be glad to have your ideas on this approach to establish a more efficient, just, and equitable tax policy.

Now, once again, this is your senior Senator, ALEX WILEY, saying: "Thanks for listening."

Americans Rally To Give Relief to Tibetan Refugees

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post and Times Herald of May 6, 1959:

TIBETANS IN NEED

A group of prominent citizens headed by Lowell Thomas, former Ambassador Grew, Justice Douglas, and Congressman Judd has offered a way in which Americans may demonstrate their compassion for the victims of Communist oppression in Tibet. The plight of the 18,000 refugees now in India, described in a letter to this newspaper, has a painfully familiar ring. These are the people who defended the autonomy of their country in much the same way as the Hungarian freedom fighters stood up to Soviet brutality. Although the two situations are not altogether comparable, it is important that the free world show the same concern for an Asian people that it voiced for the Hungarians. Drugs, food, and, most of all, fraternal support is needed for these refugees who have fled their homeland instead of bowing to the dictates of Peking. The response ought to be generous.

Economic Quackery

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 23, 1959

Mr. RAY. Mr. Speaker, the following editorial from the Wall Street Journal of May 13 needs no introduction. It is a thoughtful discussion of major problems confronting the country and this Congress. I hope it will be widely read:

ECONOMIC QUACKERY

The sharp drop in unemployment reported this week ought to teach some lessons about the way our economy works and what should and should not be done to make it work better.

All this year there has been a good deal of concern about the fact that employment was lagging behid the pace of the business recovery. While industrial production was regaining prerecession levels, the jobless totals were declining but still remained abnormally high.

The AFL–CIO answer to this problem was to stage a rally in Washington some weeks ago. The Senate's answer was to set up a study commission. Meantime, dark fears were expressed that instead of having between 2.5 million and 3 million technically unemployed in the best of times (because of seasonal work in some fields, among other factors), the country might have to accept a normal unemployment of 4 million.

Now, however, the jobless figure to mid-April is down to 3.6 million and total employment, at over 65 million, is a record for April.

So it's plain that neither the AFL–CIO nor the Senate wrought the improvement. Equally clear is that the fears of permanent high unemployment are not being borne out. And that means the people who have been demanding extensive and expensive Federal intervention as a cure for unemployment are mistaken.

Those demands will diminish in intensity now, but it is important to realize what is wrong with them. Such Government action—massive make-work projects or whatever—would at most be a temporary alleviation at some future time, for these things cannot be set up overnight. In fact, it is altogether probable that this type of action would lead not to help for the unemployed but to a worsening of the situation.

One reason is that any big new burst of Federal spending would inevitably be financed by inflation. And inflation, along with high taxes, is one of the big reasons many goods are so high-priced; if the prices were lower more people might buy and more people would have to be employed. In the long run inflation works against maximum employment.

Another kind of high price can have the same effect—the price of labor. When unions demand and get wage increases that are not economically justifiable, they force employers to do everything possible to cut costs. If employers can get along with fewer workers in order to keep going, they will do that, too. This kind of misguided union policy is one of the important reasons why unemployment is still as high as it is.

Thus the objection to the demands of unions and others for big Government action is not merely that it is a costly interference with the economy, but that it doesn't really do the job. Appealing to Government to cure unemployment is seeking a remedy that cannot deal with basic causes; it is a form of economic quackery.

The rapid new decline in the jobless rolls is a tribute to the resilience of the free economy despite various kinds of Government tinkering, and a tribute to the commonsense of the administration in resisting the pressures for even more grandiose tinkering.

But if we really want to reduce unemployment further, then we must demand that the Government avoid inflation, cut spending so that taxes can be cut, and remove the special legal privileges that give organized labor its monopoly power. And if we took those steps, we would cure more things wrong with our society than joblessness.

If the Government Cannot Be for Coal, at Least It Should Not Side Against It

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, May 15, 1959

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent editorial which appeared in the Charleston Daily Mail entitled "If the Government Cannot Be for Coal, at Least It Should Not Side Against It."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IF THE GOVERNMENT CANNOT BE FOR COAL, AT LEAST IT SHOULD NOT SIDE AGAINST IT

Toward hydroelectric power the Federal Government has long had a policy. It is to encourage and stimulate it even to the point of a direct subsidy.

The same is true, to some degree, of oil and gas whose fortunes are not left to the rigid application of economic law.

More recently, the Federal Government has gone into the production of atomic energy—again in accordance with a firm policy.

The one fuel (and almost the sole industry) for which the Government has no policy is coal. Indeed, it might be said that it has a policy against coal, so consistently does it favor coal's competition and wreck its markets.

Out of this has grown the National Coal Policy Conference, representative of the operators, the miners, the coal hauling railroads and the utilities which depend upon coal. Its object: To draw the attention of Congress and the administration to the mining industry and persuade them to show for coal the same degree of economic concern they exhibit toward agriculture, for example.

Not the same kind of concern, to be sure. No one in the coal industry is urging the Federal Government to compound in coal the follies it developed to deal with the farm problem. But if it is a matter of national concern what happens to the "family farm," and billions of dollars have been spent in this area, it may also be a matter of national concern what happens to the family which looks to coal for a living.

What is wanted is not the special favors of politics. Of that there is enough already. Rather is it the enlightenment which will compel the Federal Government in making

its economic decision elsewhere to consider their impact upon coal and the coal States.

As it is, coal is left to survive in a competitive struggle with the Federal Government serving, not as a neutral, but as an antagonist.

Commendation of Texas Senators and Representatives for Efforts To Eliminate Pollution of Rivers, Streams, and Water Courses in Texas

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, May 15, 1959

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution passed by the Board of Commissioners of the City of Temple, Tex., on November 11, 1958, which expresses their appreciation, praise, and thanks to the distinguished majority leader of the Senate, the able and honorable Senator LYNDON JOHNSON; to me; and to Representative W. R. POAGE, on behalf of the citizens of Temple and the surrounding counties in central Texas, for our efforts in the U.S. Congress to have enacted legislation to prevent pollution and to eliminate pollution of the water in the rivers, streams, and water courses of the State of Texas.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION COMMENDING SENATORS LYNDON JOHNSON AND RALPH YARBOROUGH AND CONGRESSMAN W. R. POAGE FOR THEIR EFFORTS IN CONGRESS TO ELIMINATE POLLUTION OF THE RIVERS, STREAMS, AND WATER COURSES IN TEXAS, AND URGING THEM TO CONTINUE THEIR EFFORTS IN THIS REGARD

"Be it resolved by the Board of Commissioners of the City of Temple, Tex., That we extend our praise and thanks to Senators LYNDON JOHNSON and RALPH YARBOROUGH and Congressman W. R. POAGE on behalf of the citizens of Temple and the surrounding area for their efforts in the U.S. Congress to enact legislation to prevent and eliminate pollution of the water in the rivers, streams, and water courses of the State of Texas; and be it further

"Resolved, That said members of the Congress be commended for their untiring efforts to preserve the purity and sanitation of our streams and rivers and that they be urged to continue such efforts for adequate legislation covering this problem in the future; and be it further

"Resolved, That a copy of this resolution be forwarded to Senator LYNDON JOHNSON, Senator RALPH YARBOROUGH, and Congressman W. R. POAGE."

Passed and adopted on this the 11th day of November 1958.

C. A. WHEELER, Jr.,
Mayor.

Attest:

CLAUDE H. THOMPSON,
City Controller.

I, Claude H. Thompson, city controller of the city of Temple, Tex., do hereby certify that the above and foregoing is a true and correct copy of a resolution duly adopted by the Board of Commissioners of the City of Temple at a regular meeting of said board held on the 11th day of November 1958, at which meeting a quorum was present.

To certify which, witness my hand and the official seal of the city of Temple, on this the 20th day of November 1958.

[SEAL] CLAUDE H. THOMPSON,
City Controller.

Conservation in Baker County, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, May 15, 1959

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a moving and thoughtful plea for conservation of natural resources which was voiced by the Honorable Lloyd Rea, county judge of Baker County, Oreg. Judge Rea's appeal was published originally in the Record-Courier of Baker of May 7, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EVERY CITIZEN SHOULD TAKE SOME INTEREST IN CONSERVATION, SAYS JUDGE REA

(By Lloyd Rea)

Our forefathers were farsighted in placing the land in the hands of its citizens.

It was the early belief in this country that the land was the owner's to do with as he believed. If he let it wash away, or if it were wasted in other ways it was his business. That concept has been changed in recent years.

We in America believe today that our natural resources belong to the present owner, but he must conserve it for future generations. We are taking stock, we are thinking deeply of the connection of the welfare of the people and the natural resources.

In spite of the fact that Washington, Jefferson, and Lincoln were concerned over the loss of soil in their day and that Patrick Henry was reputed to have said: "He is the greatest patriot who stops the most gulleys," it is only recently that we have adopted national policies to save our soil, water, timber, forage, and wildlife.

For many years we as a nation acted as if we had a virtually limitless and inexhaustible supply of natural resources, more than we could ever use. We treated our resources like the end would never come. We gave away lands to encourage settlements, we stripped the timber and when it was gone, we moved the mills closer to the next best stand of virgin timber, we killed off the game with no thought to the future, then suddenly in the early 1900's, we realized that this vast expanse of land, water, game, and other resources were not limitless and that we have in fact crossed the last frontier. We began to realize that our careless use of these resources had in fact encouraged the deterioration and destruction of the things that are basic to our survival.

Every citizen must take an active interest in some conservation program. He might be interested in soil conservation, or flood control. He might be interested in protecting our public lands; whatever his interest, he should join some group and let his voice be heard. This is the only effective way our resources will be saved for future generations.

Every citizen must ask himself, "Am I doing my part in resource conservation?"

Western Nations 4-Stage, 32-Point Peace Package

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, May 15, 1959

Mr. WILEY. Mr. President, yesterday, as we know, the Western Powers at Geneva unveiled a 4-stage, 32-step peace package. The plan, I believe, is a constructive, comprehensive, realistic effort to lay a foundation for peaceful settlement of problems relating to German and European security.

The West's peace package is a good one. However, I am under no illusions that the Soviets will buy this plan, in toto, if at all.

Rather, in the days ahead we can expect hard bargaining by the Soviets in support of their own proposals. From past experience we can expect that the Soviet efforts will be motivated, not toward serving the interests of peace and security but rather toward attaining their objectives of expansion of Communist influence and control over more land and people.

Despite this outlook, however, I believe that in creating the 4-stage, 32-point peace plan, the Western Powers have made a commendable contribution for, one, clarification of the issues involved in solution of the German problems; two, constructive recommendations for a solution of these problems; and three, broadscope planning aimed at eliminating threats to security in Europe.

The task now is to sell it—to get adoption of as much of the plan as possible.

I ask unanimous consent to have text of the West's 4-stage, 32-point plan printed in the Appendix of the RECORD.

There being no objection, the plan was ordered to be printed in the RECORD, as follows:

TEXT OF WEST'S 4-STAGE, 32-POINT PLAN

WESTERN PEACE PLAN PRESENTED AT THE FOURTH SESSION OF THE FOREIGN MINISTERS, BY THE FOREIGN MINISTERS OF FRANCE, THE UNITED KINGDOM, AND THE UNITED STATES, MAY 14, 1959

The Governments of France, the United Kingdom and the United States of America are convinced of the urgent need for a settlement of the German problem. They desire to seek, in such a settlement, progressive solutions which would bring about German reunification and security in Europe. Moreover they believe that progress on each of the problems of general disarmament. European security and a political settlement in Europe affects the degree of progress possible in the solution of each of the other problems.

They accordingly propose to the Government of the Union of Soviet Socialist Republics an agreement between the four governments which would include the measures outlined below relating to a general settlement of the problems at issue. The measures envisaged are closely interrelated and the present proposals are therefore to be regarded as an inseparable whole. They would come into effect progressively at the stages indicated.

Stage I

1. The four powers would establish suitable arrangements for consultation among

the parties to supervise the implementation of the agreement and to settle any disputes which might arise before the conclusion of a peace settlement with a reunified Germany.

2. With regard to Berlin, the four powers would agree that:

(A) Berlin is one city and belongs to all of Germany. East and West Berlin should, therefore be united through free elections held under quadripartite or United Nations supervision. A freely elected council would be formed for the whole of Berlin until German reunification was achieved and as a first step toward it. Thus Berlin would be retained as the future capital of a reunified Germany.

(B) Subject to the supreme authority of the four powers, (with voting procedure as adopted by the Allied authorities in Vienna), the freely elected Berlin Council would be free to administer the city.

(C) The freedom and integrity of the united city of Berlin and access thereto would be guaranteed by the four powers who would continue to be entitled as at present to station troops in Berlin.

(D) The four powers would take the necessary steps to carry out during stages I and II of the phased plan the measures described in (A) to (C) above.

3. In a common declaration, with which other interested states would be invited to associate themselves, they would undertake to:

(A) Settle, by peaceful means, any international dispute in which they may be involved with any other party;

(B) Refrain from the use of force in any manner inconsistent with the purposes of the charter of the United Nations;

(C) Withhold assistance, military or economic, to an aggressor.

4. In order to facilitate further the solution of political problems and the improvement of international relations, the four powers would, in an appropriate forum, initiate discussion of possible stated and controlled comprehensive disarmament measures.

5. The four powers would arrange discussions to develop procedures for exchanging information in stage II on military forces in agreed areas of Europe.

Stage II

Reunification

6. Bearing in mind the complex issues involved in reunification, a transitional period would be agreed. The four powers would set up a mixed German committee.

7. The mixed committee would consist of 25 members from the Federal Republic of Germany and 10 members from the so-called German Democratic Republic. These members would be appointed by the federal Government and the authorities of the so-called German Democratic Republic respectively.

8. The mixed committee would make its decisions by a three-quarter majority.

9. The mixed committee would be entrusted with the task of formulating proposals:

(a) To coordinate and expand technical contact between the two parts of Germany;

(b) To insure the free movement of persons, ideas, and publications between the two parts of Germany;

(c) To insure and guarantee human rights in both parts of Germany;

(d) For a draft law providing for general, free, and secret elections under independent supervision.

10. The mixed committee would transmit any proposals made by it under subparagraphs (a) to (c) inclusive of paragraph 9 above to the appropriate authorities in both parts of Germany. Such proposals, if no objections are raised with respect of them, should be implemented as appropriate in both parts of Germany.

11. (a) Any agreed proposal for an electoral law in accordance with subparagraph (d) of paragraph 9 above would be submitted to a plebiscite in both parts of Germany.

(b) If within I year no such draft law had been formulated by the committee, the group of members from the Federal Republic on the one hand and the group of members from the so-called German Democratic Republic on the other would each formulate a draft law approved by a majority of its members. These two draft laws would then be submitted to a plebiscite as alternatives. The electoral area for each draft law would consist of both parts of Germany.

(c) If any proposal for an electoral law obtained a majority of valid votes in each of the two parts of Germany, it would acquire the force of law and be directly applicable for the entire electoral area;

(d) The four powers would, at the time of signature of the agreement, expressly authorize the competent German authorities to promulgate any electoral law so approved.

(e) The four powers would adopt a statute providing for the supervision of the plebiscite.

12. If all-German elections had not been held on or before the termination of a 30-month period beginning on the date of the signing of the agreement, the four powers would determine the disposition to be made of the committee.

Security

13. An exchange of information on military forces in the areas referred to in paragraph 5 above would be undertaken.

14. The four powers would restrict or reduce their armed forces to agreed maximum limits, for example, the United States 2,500,000, Soviet Union 2,500,000. During this same period, these states would place in storage depots, within their own territories and under the supervision of an international control organization, specific quantities of designated types of armaments to be agreed upon and set forth in lists annexed to the agreement.

15. The four powers would be prepared to negotiate on a further limitation of their armed forces and armaments to become effective in stage III subject to:

(a) Verification of compliance with the provisions of paragraph 14 above;

(b) Agreement by other essential states to accept limits on their armed forces and armaments, fixed in relation to the limits of the armed four powers;

(c) Installation of an inspection and control system to verify compliance with all agreed security measures.

16. Measures of inspection and observation against surprise attack, helped by such technical devices as overlapping radar systems, could be undertaken in such geographical areas throughout the world as may be agreed by the four powers and other states concerned.

17. Since in 1954 the Federal Republic of Germany renounced the production of chemical, biological, and nuclear weapons, the four powers would make such arrangements as might be appropriate to secure similar measures of renunciation in the remainder of Germany and in other European countries to the east.

18. Inspection systems would be worked out for insuring compliance with the appropriate security measures envisaged in stage III.

Stage III

Reunification

19. Not later than 2½ years after the signature of the agreement elections for an all-German assembly would be held in both parts of Germany under the terms of the electoral law drafted by the mixed committee, approved by the four powers and adopted by the German people in a plebiscite (in accordance with the provision in stage II above.)

20. The elections would be supervised by a supervisory commission and supervisory teams throughout all of Germany. The commission and teams would be composed of either:

(A) United Nations personnel and representatives of both parts of Germany, or

(B) Representatives of the four powers and representatives of both parts of Germany.

21. The all-German assembly would have the task of drafting an all-German constitution. It would exercise such powers as are necessary to establish and secure a liberal, democratic and federative system.

22. As soon as an all-German government has been formed on the basis of the above mentioned constitution it would replace the governments of the Federal Republic and the so-called German Democratic Republic and would have:

(A) Full freedom of decision in regard to internal and external affairs, subject to the rights retained by the four powers as stipulated in paragraph 23 below;

(B) Responsibility for negotiating as soon as possible after its establishment, an all-German peace treaty.

23. Pending the signature of a peace treaty with an all-German government formed on the basis of the all-German constitution, the four powers would retain only those of their rights and responsibilities which relate to Berlin and Germany as a whole, including reunification and a peace settlement, and, as now exercised, to the stationing of armed forces in Germany and the protection of their security.

Security

24. Implementation of the following security provisions would be dependent upon the establishment of effective control and inspection systems to assure vertification and upon the agreement, where appropriate, of the all-German government to the security measures called for in stage III.

25. Upon the establishment of an all-German government the four powers and such other countries as are directly concerned would agree that in a zone comprising areas of comparable size and depth and importance on either side of a line to be mutually determined, agreed ceilings for the indigenous and nonindigenous forces would be put into effect.

26. After conclusion of the peace treaty, no party would station forces in any country in this area without the consent of the country involved. Upon the request of the country involved, any party to stationing forces would withdraw them within a stated period and would undertake the obligation not to send forces to that country again without the consent of the government of that country.

27. Should the all-German government decide to adhere to any security pact:

(A) there might be special measures relating to the disposition of military forces and installations in the area which lies closest to the frontiers between a reunited Germany and countries which are members of another security pact;

(B) The four powers would be prepared to join with other parties to European security arrangements in additional mutual obligations, covering especially the obligation to react against aggression;

(C) the four powers would be prepared to join with other parties to European security arrangements herein described in giving an assurance that they would not advance their forces beyond the former line of demarcation between the two parts of Germany.

28. Providing that the limitations and conditions set forth on armed forces and armaments in stage II are met, the four powers would further limit their armed forces together with corresponding reduction on armaments to agreed maximum levels, for example: United States 2,100,000;

and U.S.S.R. 2,100,000. Reductions in the armed forces and armaments of other essential states to agreed levels would take place at the same time in accordance with paragraph 15 of stage II.

29. After verified compliance with the above limitations, and subject to the same conditions, negotiations would be undertaken on further limitations (for example United States 1,700,000; and U.S.S.R. 1,700,000) together with corresponding reductions on armaments. The levels of armed forces and armaments of other essential states would be specified at the same time through negotiations with them.

30. The measures provided for above would be harmonized with general disarmament plans so as to be included in a general framework.

31. All of the security measures of the "phased plan" would continue in force as long as the control system is operative and effective and the security provisions are being fulfilled and observed.

Stage IV

32. Since a final peace settlement can only be concluded with a government representing all Germany, it should be concluded at this stage. The settlement should be open to signature by all states members of United Nations which were at war with Germany. The settlement should enter into force when ratified by the powers and by Germany.

Metcalf Protests Ban on New Water Development

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, May 15, 1959

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial, appearing in the May 9 issue of the Great Falls Tribune, headlined "METCALF Protests Ban on New Water Development."

I commend to the Senate particularly the following paragraph which appeared in the editorial:

Water development, in fact, cannot be put down on the balance sheet as a drain on the public purse. It is a returnable and profitable investment for the Government as well as for the regional and national economy.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

METCALF PROTESTS BAN ON NEW WATER DEVELOPMENT

Leading a six-man delegation, Representative LEE METCALF appeared this week before the House Public Works Appropriations Subcommittee in opposition to President Eisenhower's policy of no new starts on water resources projects.

In a plea for three Montana water development projects, METCALF asked for $7½ million to get started in the next fiscal year. If approved, the major portion of the funds would be allocated to Yellowtail Dam in southeastern Montana.

To many in less arid sections of the country the policy of no new project starts may look like a happy way to strike a blow for reduced spending and budget balancing. But in the section of which Montana is a part, at least, it should be recognized that the no new starts gimmick has a blighting influence on the whole water development program.

Water development, in fact, cannot be put down on the balance sheet as a drain on the public purse. It is a returnable and profitable investment for the Government as well as for the regional and national economy.

METCALF and others pleading in Congress for a program of continuous water development growth are deserving of public support in their efforts.

Economy and the Conservation Program

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, May 15, 1959

Mr. MURRAY. Mr. President, we in Congress who are concerned with conservation of our natural resources occasionally restate what we believe to be the basic principles of conservation. Then we seek to apply them to the current legislative proposals and appropriation bills. Last year, I sought to restate these principles in two speeches on the Senate floor which subsequently were presented as Senate Document No. 121, entitled "Theodore Roosevelt and the Conservation Movement," by one of the truly great leaders and spokesmen of the conservation movement, the distinguished junior Senator from Oregon [Mr. NEUBERGER].

There has just come to my attention an incisive commentary on some of the current conservation issues. The May 1959 issue of Field and Stream carries an article, by its editor, Harold Titus, entitled "Economy and Your Outdoors."

The subhead of the article succinctly summarizes the justified fears of conservationists by stating:

President Eisenhower's economy drive to balance the budget may have grave effects on many of this Nation's important wildlife projects.

Editor Titus points up the need for expanding the Federal water pollution control program. He shows how the National Park Service Mission 66 program and the Forest Service Operation Outdoors program are stymied by completely unrealistic budget requests. As I pointed out in my testimony before the Senate Interior Appropriations Subcommittee earlier this week, the Congress—after years of prodding the administration—has before it a long-range program for the national forests for tomorrow, but a budget geared to yesterday.

Mr. Titus also points out that the wraps have not been removed from the 10-year program for the U.S. Fish and Wildlife Service, which was given great advance billing 2 years ago. I recently expressed to the Secretary of the Interior my hope that this program soon will be released.

Mr. President, I ask unanimous consent to have the article from Field and Stream printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ECONOMY AND YOUR OUTDOORS—PRESIDENT EISENHOWER'S ECONOMY DRIVE TO BALANCE THE BUDGET MAY HAVE GRAVE EFFECTS ON MANY OF THIS NATION'S IMPORTANT WILDLIFE PROJECTS

For the conservationist it could not be said that all was quiet along the Potomac as Congress began to roll out its legislative record. Fortunately, alarms of the sort that have plagued the movement in some recent years were not sounding. For example, no mass assault on the public lands by stockmen seemed to impend, as it did in 1953, and threats like that directed against wildlife refuges by oil interests in 1955 were not manifest. Nevertheless there were enough pressing problems to keep the interested workers in constant action. And as is all too often the case, much of their effort was necessarily directed at holding the line rather than toward positive and progressive achievements.

Like all officials, natural-resource managers on the national level were confronted by the insistence of the administration that expenditures be restricted in the interest of budget balancing. To be sure, there were differences of opinion in both House and Senate as to where cuts should be made, and some Congressmen had plans to force through larger appropriations than the White House wanted, but even the most optimistic could find little hope that conservation interests were not going to be hurt here and there.

The one measure on which all national organizations of sportsmen were concentrating was Representative JOHN BLATNIK's bill to double the appropriation for Federal aid to pollution control. He wants to increase it from $50 million to $100 million annually for the next 4 years, thereby very definitely tangling with White House policy. This one is going to develop into a very good scrap indeed before the session ends.

The first Blatnik bill, passed 2 years ago, put the Federal Government into the chore of cleaning up the country's streams in a big way. It provided, among other things, a percentage of Federal aid for local sewage-reduction plants. The limit of help was $250,000 for any one installation. In the beginning it was not too enthusiastically received even by the officials who had been unable to stir their communities to action without outside help. But after 2 years of experience those local people are all for it, and vocally. Eighty-two percent of them, says Mr. BLATNIK, not only want the program continued but urge that the appropriation be increased so that more communities may get in.

This comes slambang against President Eisenhower's thinking. Months ago he singled out this project as one that should be abandoned and responsibility, if any, turned back to the States. This brought cheers from, among others, the National Manufacturers Association, but those of us who had been in this decades-long fight to clean up public waters knew well that the State agencies never could or would discharge that burden of responsibility. They've tried for many years and failed miserably. With Federal aid, construction, and enlargement of disposal plans stepped up from 300 or fewer a year to nearly 700, and if that isn't evidence of success I don't know evidence when it kicks me in the teeth.

I think the most potent argument against the President's recommendation on this one came from his own Water Pollution Control Advisory Board. On that board are Milt Adams of Michigan, I. T. Bode of Missouri, and Seth Gordon of California—all men who

have been known and respected by wildlifers for years. As late as February they met and reported to President Eisenhower that a poll of local authorities showed a doubling of Federal aid was favored by 38 States, with only 13 opposed. Two States or Territories wanted to throw the construction-grant feature back to the States, and only one thought well of the President's suggestion that a State tax on telephone bills be relied on for financing the work. In other words, the President's own committee told him he was dead wrong, but admonitions from topside about curtailing expenditures still carry weight.

With the outcome of this controversy will be is anybody's guess as I write these lines. Representative BLATNIK is working hard, and the big national conservation organizations are behind him, but there's always the gamble of the final vote to consider and, at the very end, the chance of veto. To those of you who want to help in this most necessary job of cleaning up public waters I'd say the very least you can do is write your Congressman a personal letter tonight, telling him you favor his plan and why. Water is our most necessary recreational resource, and good water is slipping away from the public so fast that it scares any understanding person stiff.

Other projects stand a good chance of going down the drain in whole or in part, because of this economy drive. Among the first of these is a considerable portion of National Parks Mission 66 for the current year. The lads in the outfit don't talk much about this one because budget says they shouldn't speak their mind after it has gone on record. But the proposed appropriations for new national park facilities and expansions have been cut by about $6 million. That's a lot of dough and means many fewer new facilities just when use pressure is piling up to a screaming pitch. So if we haven't the dough to spend we haven't the dough to spend, and you stay home, bud, and try to add your overcrowding to the overcrowded national parks. Of course, you could talk it over sometime with your Congressman. He'll be home some weekend before the voting is over.

Part 2 of the U.S. Forest Service's Operation Outdoors appears to be completely stymied unless a popular protest brings it to life. It will be remembered that the first section of this program called for repair and expansion of recreational facilities on the national forests and got off to a nice start in the current year. The second section was intended to do for wildlife what the other had done for humans; that is, make the forests nicer places to be. A number of State game departments had drawn plans for cooperating with the Service on habitat improvement, and the effort promised much to sportsmen. State officials who have been left high and dry in their planning don't like it a dime's worth, and some have protested vigorously, but if those protests get positive results I, for one, will be a surprised citizen.

Then there is the 10-year program of the U.S. Fish and Wildlife Service, which trailed the other land-use agencies in planning but was so strongly heralded 2 years ago. At that time a task force of career men was assigned the chore of plotting a course for the Service to follow that might hasten attainment of some of its objectives. From time to time it has been rumored the plan was about to be announced, but, as I write, nothing definite has been released. The economy move seems to be the big obstacle here, and although some of this plan may be revealed to the public before too long, very little can be accomplished unless funds are available, and they simply aren't available now.

One of the anomalies of this situation is that in his budget message the President noted that receipts from public lands—the national forest grazing lands, Indian reservations, etc., would be $300 million in 1960, or an increase of $20 million over any other year. At the same time, President Eisenhower assured Congress that expenditures for the agencies controlling those properties would be somewhat lower. So here we have assets that are paying a big part of their freight, yet draw no special consideration for that virtue.

But even if the administration is all set to hold the management of natural resources to an appropriation level that will be a little hard to take, its own party members don't always go along. Representative BEN JENSEN, of Iowa, demonstrated this when staff members of the Fish and Wildlife Service were testifying at hearings on their budget requests. Under questioning by Mr. JENSEN, it was brought out that the Division of Sport Fisheries is no more than fractionally doing the job it is supposed to do because of lack of personnel, which, in turn, is due to lack of money. This is the branch that operates the Federal hatcheries, about 100 of them, and distributes the millions and millions of fish they produce.

We spend about $4.2 million a year on those hatcheries, and yet we appropriate only about $7,000 annually for the staff that decides where those fingerlings and fry and legal-sized trout shall be planted. It is no secret that qualified people suspect that an embarrassing portion of those fish never do any angler any good. It is one thing when the fisheries administration of a State concerned is competent and on the ball, and there is good cooperation with the Federals on stocking plans; but quite another when the administration is weak and the State staffs are not strong.

Too many fish are planted where they don't belong, or at the wrong time, or in improper numbers, or where they won't be caught. Representative JENSEN brought this out and didn't like it. He evidently wants more money for more qualified personnel to make the gears of State and Federal agencies mesh better and save us all dollars. What will come of his efforts remains to be seen.

More than a few persons in Washington are a bit dismayed at the way commercial-fishery interests seem to be dominating the Fish and Wildlife Service. Their appropriations keep going up while some others are cut; press releases from the Service have so much a commercial-fishery slant that sportsmen are coming to criticize it. Movements are shaping up to demand, for one thing, a Federal agency within the Service to conduct fishery research on the vast new impoundments that Army Engineers and Reclamation are constructing.

Many of these huge reservoirs are in States with limited conservation funds, so that the employment of technical staffs sufficient to tackle the biological problems sure to come up is out of the question. This magazine 6 years ago advocated a special research section for these reservoirs that might point the way to good management. It would be financed by Federal funds, of course. The idea was belted down most promptly in Washington, but here it is again and being discussed by interested Congressmen, and maybe it will get somewhere.

And still on this subject of fisheries: What we don't know about marine species that appeal to sportsmen would fill libraries. It's an astonishing fact that even the life histories of some important salt water game species are only sketchily known, and what is needed to keep these fish productive and thrifty is a complete mystery. Demands that this situation be rectified are snowballing. The Fish and Wildlife Service is, of course, the only agency to do the job, because the species we're talking about don't recognize State boundaries. The Bureau of Commercial Fisheries could if it would tie such a project right in with other activities. When will such a need draw official recognition? That is up to the individuals and organizations especially interested. Some call them pressure groups. A lot of you readers probably belong to one or more. Or should, for your own good.

Congressman HENRY REUSS is carrying on his valiant battle against the subsidized drainage of farm wetlands. He again has a bill to deny to farmers these benefits if the Secretary of Interior declares that the area to be drained is beneficial to wildlife. The absurdity of what goes on should be unmistakable; we tax ourselves to bring more farmland into the production of surplus crops that we tax ourselves to store and carry. I have yet to talk with a Congressman who doesn't shake his head in despair when the situation is summed up, and yet they keep voting these subsidies in. That's because almost nobody except those who get the farm-support money takes his pen in hand.

Aside from appropriations, the most controversial piece of legislation in which outdoorsmen and women are interested is the wilderness bill. The attempt to have Congress recognize and protect some sections of the native landscape has failed to come to a vote in two sessions but may get there this time. Vigorous forces are lined up in opposition, but from the arguments their spokesmen use it is evident that many of them have not read the bill. It puts no penalty on livestock men; it will not affect the timber interests. But these two groups insist they don't want any part of it, and they will control an alarming number of votes when the time comes. Supporters of the measure simply cannot relax.

Some apprehension exists in Washington over a threat to the amended coordination act of 1934 that was made as long ago as December by the powerful Mississippi Valley Association. This act, as revised in the last session, obliges construction agencies to consider all fish and wildlife resources in planning for river-basin developments. Not only must losses due to the project be mitigated, but enhancement of the potential must also be attempted.

The act was just coming into actual use at year's end, and the Mississippi Valley Association resented it. Made up of important financial, industrial and navigation interests, its leaders contend that work on important navigation projects will be held up indefinitely while fish and wildlife surveys are made. How they get that way is not clear, but in its December newsletter the association warned that unless there was prompt clarification of the intent and scope of the law—whatever that may mean—its repeal or amendment would be sought.

As late as March no move in this direction had been detected. Should it be, the ruckus would become a dandy, because wildlifers fought and bled for nearly 20 years to make the act what it is today and, in final form, it had the support of every State Governor in the land. In such a situation a last-minute assault in force is always to be anticipated.

One of the most perplexing administrative developments to confront wildlifers in years is the recent big-scale appropriation of water rights by stockmen on the public lands in Arizona. In late February strong protests were made to Assistant Secretary of Agriculture Peterson by a delegation from national conservation organizations, and it could be that action will be forthcoming at any time.

The situation involves so many complexities of law that a simple statement of facts is difficult. Suffice it to say here that old laws, from the Desert Land Act of 1877 on down, place responsibility for and authority over water in the Western States in State hands. This has been challenged recently by the U.S. Supreme Court, but as yet the issue is clouded for most of us, and for a lot of good lawyers, too. As is true elsewhere, the Arizona statutes do not recognize the use of water by wildlife as beneficial.

About 2 years ago the State's land commissioner suddenly relaxed requirements for filing on water, and at the same time stockmen were urged by their organizations to increase their claims for priority on springs, seeps, and waterholes. Observers naturally suspected teamwork. As a result, 1,202 applications for water rights were promptly made on national forests, Taylor Grazing District lands and State lands, all in the name of stockmen and for use by livestock.

The Arizona Game and Fish Commission protested 214 of these on the grounds of wildlife conservation, but the land office refused to recognize the protests because wildlife use is so far down the legally beneficial list. The Federal regional forester protested another block of applications on the grounds that he was responsible for the livestock on the descriptions. Again the commissioner said no, this time because the forester did not own the livestock ranging there but merely issued permits for its presence. It sounds silly, I know, but it's the law.

Under arid conditions, he who controls the water controls the use of the land. The land, in this case, belongs to the public, but the water belongs to the appropriator. For years stockmen have attempted to translate their grazing privileges into vested rights. To establish an airtight claim to water is another bar to the public on these public lands, and this appears to be the objective of the drive.

Thus far the movement has been confined to Arizona. Should it appear in other States, it would call for vigorous action. Action of some sort in Arizona by top echelons of the U.S. Department of Agriculture is surely to be hoped for. If it doesn't come there might and should be considerable disturbance. The delegation that put the matter before Mr. Peterson represented the Wildlife Management Institute, National Wildlife Federation, Izaak Walton League and Sport Fishing Institute. They spoke for many million Americans who are keenly interested in our out-of-doors.

Award to Henry Alaniz, Postal Clerk at Artesia, N. Mex.

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Friday, May 15, 1959

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Artesia Postal Clerk Honored for Achievement," published in the Artesia (N. Mex.) Daily Press of May 6, 1959. The article refers to an award made by the United States Post Office Department to Henry Alaniz, a postal clerk in the Artesia Post Office.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARTESIA POSTAL CLERK HONORED FOR ACHIEVEMENT

Henry Alaniz, postal clerk in the Artesia post office, was recognized this morning by the U.S. Post Office Department.

Alaniz' immediate supervisor, Gilbert E. Perry, superintendent of mails, presented him a certificate signed by Postmaster General Arthur E. Summerfield and W. D. Brewer, regional operation director.

The award also included $50 cash and was presented for superior achievement above and beyond his day-to-day duties in the post office.

Alaniz, during recent "scheme exams," sorted and filed 330 cards in 5 minutes with one error, giving him an average rate of 66 pieces per minute.

Mrs. Marion Dunnam, postmaster of the Artesia office, has high praise for Alaniz. In a letter recommending him for the award she said, "I do not feel I can speak in too glowing terms of the far above average ability and dependability of this employee and I will appreciate your consideration in properly recognizing him."

This morning, during the presentation she told postal employees she is very proud that Alaniz has been selected for recognition, but she felt that all the Artesia postal employees are above average.

Library Service Act Funds Effective Aid To Extension of Library Facilities to Rural Areas

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, May 15, 1959

Mr. NEUBERGER. Mr. President, the Library Services Act passed by Congress in 1956 has stimulated a significant and beneficial expansion of library facilities in rural areas of the United States. Today persons living in farm communities across the Nation enjoy an access to books which was denied them prior to enactment of this law.

Despite the obvious advantages inherent in efforts to encourage extension of library services to all segments of society, the Eisenhower administration this year requested only $5,150,000 for matching grants to the States. The House of Representatives appropriated $6 million. A total of $7,500,000 is authorized for expenditure on the program during fiscal year 1960. I hope that the Senate will give careful consideration to the need to maintain the program at the maximum level. Certainly the experience of Oregon demonstrates the wisdom of such action.

My own State of Oregon has been an enthusiastic participant in the program. In the May 1959 issue of the Wilson Library Bulletin, Eloise Ebert, able State librarian at the Oregon State Library, recounts our State's experience in working with this law. Because her comments so effectively reveal both the operational questions faced and the benefits derived from this program, I ask unanimous consent that Miss Eloise Ebert's article be printed at this point in the Appendix of the RECORD, together with a brief summary of provisions and program highlights of the Library Services Act.

There being no objection, the article and summary were ordered to be printed in the RECORD, as follows:

THE NEW STATE GRANT PROGRAM

(By Eloise Ebert, State librarian, Oregon State Library, Salem)

"It is the policy of the people of the State of Oregon to provide a more equitable opportunity for all citizens of Oregon to have direct access to books and reading material for the furtherance of education. It is the purpose of this act to encourage the combination or cooperation of public libraries in order to extend the coverage and increase the efficiency of library service throughout the State."

This is section 1 of the bill passed by the Oregon Legislative Assembly of 1957 which culminated years of effort of members of the Oregon Library Association, the State library staff, and many library friends. The key to its success was William J. Griffith, library development chairman, and Mrs. Eugene Kelty, a dedicated library lobbyist who had formerly been a member of the State Legislature. It was to be the beginning of intensified demonstrations, projects and activities to encourage library cooperation.

A total of $154,078 was appropriated for the 1957–59 biennium to provide minimum funds required to match a $5 million congressional appropriation under the Library Services Act. The Oregon State Library Board of Trustees adopted the following goals to be considered in approving awards: The promotion of general understanding of what constitutes good library service, the establishment of adequate service to unserved or inadequately served areas, and the inauguration of modern services now lacking.

The rural library services program in Oregon can be roughly divided into two parts—services and activities carried on from the State library, and development projects in the field to be administered locally under a grant-in-aid. Areas requesting a project grant were not required to have voted any new or additional county or multi-county tax to become eligible. This was due to a legal stumbling block to library development in Oregon known as the 6-percent constitutional tax limitation. This limitation meant that no local tax base could be increased by more than 6 percent of the amount levied in any of the 3 preceding years without a special vote. Such an unrealistic limitation has necessitated placing special library levies on the ballot in almost every instance. Local budgets were adopted before final action was taken by the Oregon Legislature and the U.S. Congress, so it would have been almost impossible to have made new local funds a requirement for a local project.

OBJECTIVES AND MEANS

Policy is defined as "a series of objectives which a governmental body strives to attain and the means which it consciously plans to use in the pursuit of these objectives." The people in Oregon are agreed on the desired objectives of a library development program; it is the means upon which they disagree. Agreements between the State library board and the respective jurisdictions were drafted and redrafted. The attorney general, district attorneys, city attorneys, county courts, city councils, library boards, librarians, and the State library staff all got into the act. Some asked "What do you mean 'seek to encourage the continuance of library service established'? We do not like 'shall utilize our resources to supplement bookmobile service to rural residents.' 'Shall' must be changed to 'may.'" Budgets for the projects were part of the contracts; and local budget committees checked, criticized, amended, and scrutinized each item. Salaries suggested according to State civil service salary schedules were too high. Some county clerks were not agreeable about assuming the extra work load for local accounting, and quick adjustments were necessary to add to their salaries.

The press was not unanimous in its support of the local projects. While not actually opposing books and reading, the editors were not convinced that this Federal-State grant-in-aid program was the best way to improve library services. One editorial captioned "What You Pay for Libraries: That 'Match Money Gimmick'" referred to this program as a "thing of horror." Another editor in an adjoining town retorted.

"If there is a 'gimmick,' as they put, in the match money program, we regard it as a darn

good one. In this age when learning and education are of perhaps greater importance than ever, especially in the field of science, this program certainly is of real value. Even aside from this, it is important becaues it is an opportunity which should not be denied the small town or country boy or girl, man or woman simply because they can't afford to do it on their own. Let's forget the almighty dollar long enough to remember the value received but if you can't just stop and consider it is the rural folks tax money too, not only the city dwellers which pays for governmental expenditures. They often are helping foot the bill for benefits received by townspeople."

Five different field projects were approved covering the gamut from cooperative cataloging, bookmobile demonstrations, to a tricounty regional demonstration. Project directors are now preparing budgets for the 1959–60 fiscal period when Federal-State funds will diminish and local budgets will need to continue the services. Whether the demonstrations will become permanent and maintain the same level of service still remains to be seen in Oregon. The Oregon Legislative Assembly now in session will undoubtedly appropriate matching funds to continue the rural library services program. The State library in its budget requested funds to match the anticipated $7,500,000 congressional appropriation but this was reduced by the budget division to match $6 million. The Library Development Committee of the Oregon Library Association will work to secure the full amount of matching funds.

Oregonians would understand Ranganathan when he says:

"Library is like river. The water in the sea gets distilled and transferred to land; river collects it and feeds most of it back into the sea. So it is with library. The thought in the mind of man gets expressed and recorded; library collects it and feeds most of it back into the mind of man. This is an everlasting cycle. New uses are found for river—irrigation, navigation, hydraulic power, hydroelectric power, and so on; even so, an ever-increasing use is found for library. New canals are led out of river, and a river system is formed; even so, library is diversified, and library system is formed to serve an increasing purpose."

To establish new library systems can be as earth-shaking as the digging of canals for a new river system. All parties concerned may have different ideas as to where the canals are to be placed, how deep and wide they should be, what legal limitations must be adhered to, and once the river system is established how it will be developed to serve its many purposes. We are digging new canals in Oregon.

[From the Wilson Library Bulletin, May 1959]

LIBRARY SERVICES ACT, PUBLIC LAW 597, 84TH CONGRESS, JUNE 19, 1956

MAJOR PROVISIONS

The act authorizes an appropriation of $7,500,000 annually for 5 years for grants to the States for the extension and improvement of rural public library service.

Rural area is defined as any place of 10,000 population or less, according to latest U.S. census. However, funds may be utilized by urban libraries to extend service to rural areas.

The State library extension agency in each State prepares and submits to the U.S. Commissioner of Education a plan which will, in its judgment, assure the use of the funds to maximum advantage.

Funds under a State plan may be used for salaries, books, and other library materials, library equipment, and other operating expenses, but not for the erection of buildings or purchase of land.

Funds are allotted to the States on the basis of their rural population and are matched by the States on the basis of their per capita income.

To remain eligible for a Federal grant a State must maintain its expenditures for all public library service at least at the same level as in fiscal 1956; and State and local expenditures for rural public library service must not fall below the 1956 level.

The U.S. Commissioner of Education is authorized to make studies, investigations, and reports as to the values, methods, and results of the various State demonstrations under the act.

PROGRAM HIGHLIGHTS

Fifty States and Territories are participating in this public library development program.

Federal appropriations have been:

Fiscal 1957	$2,050,000
Fiscal 1958	5,000,000
Fiscal 1959	6,000,000

State funds for the extension and improvement of public library service to rural areas have increased more than 45 percent since 1956—evidence of the stimulating effect of the program.

Over 800 rural counties across the Nation are receiving new or improved public library service. Some 30 of these counties had no library service within their borders prior to the Library Services Act.

More than 120 new bookmobiles and other vehicles have been placed in operation in rural areas by State library agencies.

Over $7 million was expended under the program in the first 2 years to buy books and other informational materials for use in rural areas.

State library agencies have been able to strengthen their staffs by adding more than 70 field consultants, 100 other professional librarians, and 300 clerks, bookmobile drivers and other employees to improve library service.

State plans indicate that over 130 county and regional library projects have already been organized. Cooperation between libraries and areas without libraries plays an important part in this development program.

Reports reflect many accomplishments. One example from the Oklahoma State Library: "The passage of the Library Services Act meant the beginning of library development in Oklahoma."

La Salle College Centenary Fund

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, May 15, 1959

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared regarding La Salle College, located in Philadelphia.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

LA SALLE COLLEGE CENTENARY FUND

As the crisis of higher education approaches its climax, it is heartening to see that our independent colleges are exerting themselves to the fullest so they may be ready for the matriculation of the wave of youngsters born during World War II. Though our independent colleges are and have been operating under a severe financial and teacher shortage over the past decade, they have not been deterred in attempting to do all in their means to provide the opportunity for students who are ready for college.

An outstanding example of the never-ending struggle to meet the educational problems of today may be found at La Salle College, Philadelphia. This independent college is administered by the Brothers of Christian Schools.

The Christian Brothers brought their educational heritage to the United States in 1845. Their outstanding record of administration in the field of education may be observed in the growth and expansion of La Salle College under their tutelage.

From its original site, the college moved three times, due to the vigor of the Christian Brothers movement in meeting expansion needs.

When World War II finally ended, the veterans of our country turned to the colleges to finish or begin their college training. The brothers, in keeping with their philosophy of meeting the need, met the challenge though operating with virtually unchanged facilities. Veterans were admitted, with the result that the Day Division alone swelled to 400 percent above its prewar enrollment.

Since 1946, the Christian Brothers have increased the student body three times; the present enrollment is over 4,000.

Aware that college entrance demands will reach a new peak by the mid-1960's, the brothers have initiated a centenary fund raising drive to begin this fall and run to La Salle's Centenary in May 1963. The brothers plan to use centenary fund contributions to support the college's present and future expansion.

Private Financing Would Be Detrimental to Rural Electrification

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, May 15, 1959

Mr. YARBOROUGH. Mr. President, the Farm Credit Administration has requested that Congress remove interest ceilings on Federal land bank bonds and loans.

The rural electric systems were built to serve families in rural communities and on the farms, where operating and installation costs are high because of the wide spaces between customers. Loans at low interest rates are the keystone of this program. We cannot let big financiers cooperate with big electric power companies to drive the vital systems bankrupt.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from Rural Electrification magazine for May 1959 entitled "Illusion of Private Financing."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ILLUSION OF PRIVATE FINANCING

A press wire service report last month contains a brief warning for rural electric officials. We have been told that some sort of private financing, patterned after the Farm Credit Administration setup, could be worked out for the rural electric program without

any severe increase in interest costs for REA borrowers. The report was:

"The Farm Credit Administration asked Congress today to remove interest ceilings on Federal land bank bonds and loans. R. B. Tootell, FCA Governor, told the Senate Agriculture Committee his agency feared that its money sources might dry up without removal of a 5 percent interest rate limit on its bonds.

"He said this will not result in farmers having to pay higher interest rates on their mortgage loans from the banks. However, he also called for a removal of the 6-percent interest rate maximum on land bank loans to allow them to increase the level of the new loans if the future cost of money should require such action."

This should destroy any illusion that private financing for the rural electrification program would prove either reasonable or stable.

With their confinement to service areas still averaging only three per mile, and other economic disadvantages and restrictions, is it any wonder that the rural electric systems are almost desperately determined to resist the farm credit type of program the administration wants them to accept?

Israel's 11th Anniversary

SPEECH
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. FRIEDEL. Mr. Speaker, I would like to take this opportunity to call the attention of my colleagues in the Congress to the achievements of the State of Israel on the occasion of its 11th anniversary. I do so because of our ties with that brave little nation mean so very much to the free world today. There, across the ocean stands the Holy Land, from whence came our Bible which is the rule and guide of our faith. There, democracy and freedom were reborn 11 years ago, and Israel stands as an outpost of our free world and as a beacon light against the dark and evil forces of international communism.

As Americans we salute this reborn nation and encourage her in her very brave stand. We recognize full well the strategic position of Israel in the vital and important Middle East and the essential part she plays in helping to keep the democratic processes alive. We must also acknowledge Israel's truly phenomenal development during the past 11 years and the valuable aid she is rendering to the other new and developing nations in Africa and Asia, thereby making more needed friends for America and the entire free world. Scientific and technological progress has been brought to a portion of the world that was most in need of it and as a result, natural resources are being developed, public health vastly improved, and the bright light of human rights shown to backward peoples.

After 11 years this young and vigorous sister democracy of ours has become a stable and important nation of the world despite almost insurmountable handicaps imposed by geography, prejudice, and international politics. Enlightened self-interest alone requires us to lend every possible assistance to the State of Israel since her achievements in this very brief time are impressive indeed. As Israel enters the second decade, we in the Congress of the United States most sincerely extend our felicitations and wish her well in her valiant fight for the right.

Preserving Our Natural Resources

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, May 15, 1959

Mr. WILEY. Mr. President, as a nation we face a serious challenge in the years ahead of preserving our soil, water, timber, and other natural resources.

Today, for example, there is the problem of supplying adequate volumes of water to meet the ever increasing needs of the population. According to statistics, it takes 200,000 gallons of water to grow a ton of alfalfa and 600,000 gallons to make a ton of synthetic rubber. Unless constructive action is taken to preserve, conserve, and reutilize our water, the Nation will find itself "water shy" in the not-too-distant future. In 1955 the quired 221 billion gallons daily. In 20 years, it is expected we will need 597 billion gallons. Fortunately, the U.S. Department of the Interior is moving ahead on legislation enacted last session for desalting water, and utilizing brackish and otherwise now unusable waters.

However, this is only one field in which constructive effort is needed to conserve a natural resource.

By recent estimates, the Nation's population is expected to double in the next 40 years from the present 175 million to a predicted 350 million people. Consequently, there will be an ever-greater demand for our resources.

To provide for sound conservation, we need an educational program. A recent edition of National Parks magazine carried an editorial entitled "The Three 'R's' and Resources." The editorial contains some thought-provoking ideas on instilling sound principles of conservation in our youth.

I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE THREE "R's" AND RESOURCES

"The great American public has grown up under an educational system which taught that America could feed the world; that our natural resources were inexhaustible and why Hannibal crossed the Alps, but not one hint as to the future which awaited a nation depleted of its natural resources."—Jay N. "Ding" Darling.

Plants and animals depend on soil and water for their existence. Unfortunately, man too seldom realizes that he is equally dependent upon these basic resources. Not only do they supply him with food, shelter, and clothing, but through their prudent use, he is permitted to enjoy the esthetic values of outdoor recreation, including those derived from national parks and wilderness.

To bring about conservation of natural resources in a democracy, large dependence must fall on education. As a prominent educational organization points out, "This is not something to be accomplished by fiat or decree. Instead, children now in school and grownups in the world of business and industry must learn the true importance of natural resources and acquire both the incentive and the know-how to use them wisely."

Resource conservation is so broad a field that it can be incorporated into most classroom subjects. Students of history can be taught that poor soil and water practices contributed to the downfall of once-great civilizations. Geography teaches that settlements of man were located on streams, lakes, or seas for reasons of transportation and commerce and that good soil and forest resources gave rise to rich farming and lumbering areas. Science and health have other obvious relationships to our natural resources, as do economics, politics, and current events.

In addition to inclusion of the subject in formal instruction, there are also many opportunities for teaching conservation outside of the classroom. In a Claiborne County school in Tennessee, children improved a terrace in the background of their play area with vines and grass. After heavy rains in Whittier, Calif., the grounds of a school showed signs of soil erosion. Fifth graders developed a rock garden to protect the soil and then established a bird sanctuary. In a Georgia school the students have planted a school vegetable garden. At a midwestern school students planted and cared for a windbreak, while Oregon youngsters are replanting a burned-over forest.

School grounds are not only places to play, but are the nearest real laboratory the children have for learning how to conserve soil and water. Sad is the schoolground covered entirely by concrete and asphalt, with no thought given for any natural outdoor study area or school forest.

A crying need during the past decade has been more materials for the classroom teacher to use—textbooks, pamphlets, pictures, photographs, charts, films, and slides. Now that a start has been made in this direction, there seem to be other limiting factors. One is a lack of teachers having conservation training. Teachers colleges can correct a part of this, but workshops and summer training should also be expanded. The most important failing, however, is lack of public support and understanding of the needs for conservation education. We must win the backing of community leaders and organizations. All the books and pamphlets in the world will do no good in a community whose leaders fail to sense the need for resource training.

"Conservation in the schools" is the goal of this year's National Wildlife Week, March 15–21, sponsored by the National Wildlife Federation. Each member of the National Parks Association can help in this year-long effort by: (1) Finding out if conservation is being taught in the schools of your community; (2) learning if children in your schools have an opportunity to take part in outdoor conservation projects or camp programs; (3) talking with your local newspaper, radio and television editors about the importance of this program and asking for their support; (4) urging the program chairman of your local civic organizations, women's clubs, and sportsman-conservation clubs to include speakers on the need for more adequate conservation education; and (5) aiding in the establishment of a conservation education committee in your community.

Such a committee should include as many civic and conservation agency representatives as possible—teachers and school ad-

ministrators, women's clubs, service groups, churches, and conservation agencies as well as farm organizations, PTA groups, youth groups and community planners. This group can be most helpful in interesting school administrators in appropriate conservation projects and in assisting them in securing materials and guidance from professional resource managers and specialists.

You can also help through your association. We are planning a special fall issue of National Parks magazine devoted to conservation education. It will emphasize the materials on national parks which will be useful to teachers in explaining the purposes and need for these great areas. Your suggestions of materials to be included are welcome.

The ultimate aim of conservation education efforts must be to develop a people in whom the attitude of conservation is as much a part of their personality as courtesy, good manners, honesty, and thrift. Your association's primary concern is the preservation of the national parks unimpaired for appropriate public use by this and succeeding generations. Only a public informed about conservation of all resources can insure such protection.—B. M. K.

The Corn Tassel Lady

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Nell Womack Evans in her column "Sweet and Sour" in the Free Press, of Colorado Springs, May 7, 1959:

SWEET AND SOUR
(By Nell Womack Evans)
DEDICATION—SACRED OR SILLY?

Margo Cairns, of Minneapolis, is a dedicated lady—to making the corn tassel our national floral emblem. Competition for her and the "male inflorescence of Indian corn" comes from Maine's Senator MARGARET SMITH; and the rose, Colorado's Senator GORDON ALLOTT; and the carnation, and maybe others unknown to me.

Arguments pro and con scheduled in the U.S. Senate for May 7 could be classed as trivia, a silly something to take time and taxpayers' money.

Such is not the case for Miss Cairns who has spent a lifetime crusading for corn. She has nothing to gain economically, and she is not, according to my Washington spies, a "dedicated nut." She just likes the corn tassel on the basis of logic and partiotism for our honored flower. She does not want America to forget its heritage.

In the first place, corn is of American origin, born in the Western Hemisphere and found nowhere else before 1492. That ought to speak well for its tassel. It has roots in every State, has sustained and strengthened people of each State when it was the only food available and as a tasty addition to menus in time of plenty.

As a floral emblem the corn tassel would not have mere prettiness, but possess the rare beauty of practicality and of productivity—just like our country.

Longfellow called corn "the gift of the Great Spirit." Thomas Jefferson ordered six graceful columns carved in the likeness of bundles of cornstalks and topped with open ears of corn at the entrance of the law library of the U.S. Supreme Court. They're still there, of course, as payment of "the great debt the Colonists owed corn."

These are some of the corn tassel lady's arguments for corn, the remarkable wonder food of antiquity. I'm not so sure her dedication is silly.

Strengthening Incentives for Freedom and Progress—Address by Don G. Mitchell, President, General Telephone & Electronics Corp.

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Friday, May 15, 1959

Mr. GOLDWATER. Mr. President, Mr. Don G. Mitchell, president of the General Telephone & Electronics Corp., and chairman of the board, Sylvania Electric Products, Inc., addressed the U.S. Chamber of Commerce during its recent meeting in Washington.

Mr. Mitchell stressed, among other things, that automation creates jobs. He said we need not apologize for big business, that we should be proud of it. In other countries efforts have been made in that direction, and have not been successful.

He also called our attention to the fact that 95 percent of this country's businesses employ less than 20 people.

He also mentioned inflation, and, in this respect, among other things, he said that we cannot take more out of the economy than we put back in productivity. If labor takes much out of productivity increases, there is nothing to plow back.

Mr. President, because of the importance of this address, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

STRENGTHENING INCENTIVES FOR FREEDOM AND PROGRESS

(Address by Don G. Mitchell, president, General Telephone & Electronics Corp., and chairman of the board, Sylvania Electric Products, Inc., New York City, at the 47th annual meeting, Chamber of Commerce of the United States, Washington, D.C.)

I am very grateful for your asking me to be with you this evening not only because of my great respect for the Chamber of Commerce of the United States, but I also say it because you represent a true cross-section of American business—with all of its drive, its accomplishments, its public service, and its tremendous faith in this country.

It goes without saying that all of us in business have a great many problems and questions in our minds these days. If you happen to be an exception, I warmly congratulate you. However, most of us are in the other category, and I thought it would be in order for me to act tonight as a sort of catalyst for your thoughts, and first take a brief look at the current business situation and then make some predictions about the future.

I am going to direct my attention for the next few moments not only toward the opportunities that will be available to all of us between now and 1970, but also to the challenges that you and I will have to deal with if these opportunities are to be turned into real progress for this country. Ladies and gentlemen: Let's not delude ourselves. These opportunities can be missed. The choice is squarely up to us. Whether or not you and I succeed is entirely in our hands.

First, let's look briefly at how our economy is doing today, before we start thinking about tomorrow. Just a year ago, you will recall, the recession hit bottom, and here we are with the economy producing goods and services at a new record annual rate of $465 billion—think of it: a national output of nearly half a trillion dolars. Once again, the amazing resiliency of our free enterprise system has confounded the pessimists who felt that we were in for a long, hard pull, and it has disappointed the Communists who hoped that we would go into a state of collapse and demoralize the free world.

It is extremely important to bear in mind that this has been a steady, relatively solid recovery in most areas of our economy, and this has been achieved without any increases in consumer prices. There are soft spots, of course, particularly in the unemployment situation. At the same time, however, employment is at a high level, and unemployment should continue to show a marked improvement in the coming months, particularly as the automobile and capital goods industries get back into full swing. I don't think my namesake need worry about having to eat his hat on the steps of the Labor Department Building.

In other words, ladies and gentlemen, the American economy is once again pointed toward a decade of unprecedented growth and development on every front. We are approaching the soaring sixties, if you will pardon my enthusiasm, and the eyes of every American businessman should be fixed on the future more firmly and more piercingly than ever before. I don't know of any better way to express my confidence in the future than to tell you that General Telephone & Electronics is planning to double its capacity over the next 7 or 8 years—and that will mean substantially more than a billion dollars of new facilities and equipment.

There are enormous opportunities ahead for all of us businessmen in doing our basic job of satisfying human needs—and I mean satisfying them more fully, more effectively, and more broadly than any of us would have dreamed possible just a few years ago. During the next few moments, as I project into the 1960s some of the trends which already exist and which have clearly indicated that they are going to keep right on climbing, just ask yourselves this question: "Will I be ready for it, or will I muff the ball?"

First, let's look at our potential markets. Today, there are 180 million of us here in America, and that represents an increase of more than 30 million in the past 10 years, and now the trends are pointing to another 30 million in the next decade with our population easily exceeding 200 million before 1970. Families are getting bigger, people are living longer, and more women are getting married—and that may come as a surprise to this city of Washington where, I understand, there is a superabundance of unmarried young ladies. All of this adds up not only to more people but to more households, and the next 10 years will see the number of households rise from 51 million today to more than 60 million in 1970.

From the standpoint of sheer numbers of consumers, there will be a staggering growth in your markets in the years ahead. And then when you consider such additional major factors as a steadily rising standard of living, increased leisure time, broader

interest in travel, recreation, and hobbies, you begin to see what this will mean to the manufacturing industries, to housing, to agriculture, to transportation, to distribution, to communications, to entertainment, and every other segment of our economy. These enormously increased demands will require a greatly increased flow of new and better goods and services, new ideas and new ways of doing things, new methods of making our products, and new ways of getting them to the consumer.

If you would like to reduce all of this to numbers, our national total of goods and services should at least continue to increase at the present average rate of 4 percent per year, and should rise gradually to 4½ percent or even higher. That will mean a gross national product of more than $725 billion and probably $750 billion by the end of the soaring sixties, and would represent about $3,500 for each man, woman, and child in the country, against $2,600 today.

However, if you stop right there, and think only in terms of dollars and cents, you will be ignoring one of the most dramatic aspects of our way of life. I am referring to the expanding frontiers of technology—ranging all the way from the unearthing of new fundamental information about the laws of nature, to the application of that information to new products and new services to meet human needs.

The great expansion of research and development in recent years is demonstrated by the fact that the entire country's research and development expenditures have increased during the past 10 years from less than $3 billion to more than $10 billion last year—and that enormous effort reaches not only into the traditional fields but into some that are so new that we don't know how to describe them.

The time lag between laboratory and the marketplace is becoming narrower all the time, and today it ranges anywhere from 7 to 12 years, depending on the industry. I would guess that the average is about 10 years, but the point is this: If you were to interview a cross-section of leading companies today, they would tell you that from 50 to 75 percent of their sales are derived from products which did not exist or are basically different from the products of 15 years ago.

As we move into the 1960's, the spending for research and development will climb to $20 billion annually because our technology is becoming more and more complex with each passing day. Industry knows that research is its life-blood, and we must keep narrowing that gap between laboratory and market. "No research, no future" is our motto today, because we know from past experience that research has paid off at the rate of from 100 to 200 percent a year, and over a 25-year period that means $100 spent on research will bring back anywhere from $2,500 to $5,000, realizing that there will be variations from industry to industry and for different companies within an industry. Progressive management certainly doesn't need any more proof than that.

Here are some of the developments you can expect to see over the next few years: A single communications system in your home, combining telephone, television, and radio; your television screen will be a flat panel hanging on the wall; there will be radar steering on your automobile; machines will type spoken words directly on paper, and other machines will translate foreign languages as fast as they are spoken. There will be scores of new synthetic materials, and gas-turbine-powered automobiles, and the production of electricity direct from atomic energy. These are only a few high spots because the new products of the 1960's will extend across the entire spectrum of science.

Paralleling these achievements in the laboratories will be extremely significant technical progress in the manufacturing plants * * * and I am speaking about greatly increased mechanization and automation. Industry has no choice in the matter if our national output is to keep pace with the demands of our growing population. Although the working force will approach 80 million in the next 10 years, there won't be enough people in that working force to produce $750 billion of goods and services by 1970 unless we speed up our automation program. An enormous variety of new types of manufacturing equipment will be needed—not to throw people out of work, but to help them do their jobs, by extending the breadth of their minds and the skill and power of their hands.

There have been some rather emotional attacks on automation in some quarters, and some people try to portray the machine as a Frankenstein. But you and I know the truth of the matter is, as it always has been, that broader mechanization eliminates obsolete jobs and eliminates drudgery, and creates many more new jobs and better jobs than the ones it obsoletes. Certainly there are some short-term dislocations. I don't like to see them any more than anyone else does, and a major responsibility of management is to minimize those dislocations as much as humanly possible. But the fact remains that mechanization or automation, or whatever you want to call it, is part of that phenomenon known as progress, and it symbolizes man's eternal struggle and determination to improve his entire way of life.

Every so often, when someone sounds off about big business, I feel like calling him on the phone and asking him this question: "If it weren't for big business, where would all the impetus for billions of dollars for research and new products, and new manufacturing processes come from?" I have no quarrel with anyone who is seeking to correct the abuse of bigness—whether that abuse come from big business, or big labor unions, or big government. But all I can say is thank heaven industry was big enough to tackle those challenges in the past, and let's hope we're big enough for the challenges ahead of us.

This opportunity to do a little missionary work for big business is especially welcome to me, but I'm not going to apologize for our size. You don't grow big and stay big unless you produce something the public wants. We in industry should be proud of it, because there are all too many countries where big business is nonexistent, not because they don't believe in it, but because they haven't been able to produce it.

Big business means big opportunities and big progress—and it means enormous benefits to the shareowners who have invested their savings in our enterprise, and the employees, the plant communities, the customers, and the country as a whole. But we're not so big that we have lost sight of the fact that we are completely dependent upon millions of small businesses, and that we wouldn't get very far without them, any more than they would get very far without us. The person who tries to create an image of big business against small business is talking through his hat. We're inseparable, both ways, and down deep he knows it.

He should remember that 95 percent of this country's business enterprises employ fewer than 20 people. And he should read "David and Goliath" again, or attend one of our company's staff meetings where the boys describe how some smaller company is giving them a run for their money. Those small businesses may be small in sales or payroll, but in some lines of activity they can do a better job than any big company ever hoped of doing.

For the past few minutes, we have been looking at the opportunities ahead of us—and I want to stress that word "opportunities" again, because there is nothing that I know of that will deliver them on a silver platter or guarantee their happening. We will have to go out and work for them. This means we will have to face up to a number of extremely serious challenges during the next few years.

No. 1 on the list, of course, is inflation, and I want to say right here and now that I don't know of anyone who is more acutely aware of the dangers of inflation, and who is doing a better job of pointing out these dangers to the public than the President of the United States. Several weeks ago Mr. Eisenhower challenged you, and me, and every other businessman in the country to do something about it. And I want to repeat his urging to all of us to help assure a balanced Federal budget, and to let our Congressmen know how we feel about it. Let me repeat his words: "The need for a balanced budget is not an isolated issue but is inseparable from our national strength in all of its aspects. To indulge in the short-sighted luxury of continued deficit financing in the face of both growing prosperity and incipient inflation would be a denial of public responsibility."

And you, Mr. Vice President and your Cabinet committee, deserve the strongest praise for your anti-inflation program, especially in the area of price stability.

One aspect of this inflation problem is the feeling in some quarters that a little inflation is a good thing. Secretary Anderson effectively buried that argument when he pointed out the other day that you are only courting disaster when we let the demands upon our resources run ahead of our productivity. Let me repeat his basic theme: If we cannot live within our means today, when economic conditions are at record-breaking levels, when can we ever expect to do so?

It seems to me that we must bear constantly in mind that you cannot create prosperity out of thin air—you cannot take more out of our economy than you put in it. Some people are always tempted to try, however, and if they keep trying hard enough, this country certainly will end up with a recession that will curl your hair. If labor takes all of the productivity increases in the form of wage increases, there will be nothing left to plow back into the business. If industry simply passes along its increased costs by raising prices, inflation will go up still higher. If Government keeps on financing deficits, there won't be anything left for anybody. The danger is particularly strong in our international trade, because inflation will price us right out of the market, and will create a host of unhappy situations, both here and abroad.

There isn't any bucket of gold for labor, or management, or government, or anybody else. But if enough people think there is, we will end up the victims of a type of creeping socialism that will turn this country from the dynamic economy that it is today into a mass of mediocrity from top to bottom. Gone will be the challenges, the incentives, the competition, and the thrill of accomplishment.

Certainly, I am not unmindful of the fact that urgently needed advances in social legislation have been made in the past 25 years. At the same time, however, there are always those who would like to carry this further and further, until we would become an economy in which Big Brother leads you and me around by the hand. That kind of thinking isn't what developed this country in the first place, and it isn't the kind of thinking that will get us anywhere in the future.

Britain seems to have learned what creeping socialism can do to you. The tax cuts they announced the other day mean one thing: They have learned that a national budget must be the best budget for everybody. It must be a budget which increases the demand for goods by increasing the pub-

lic's real purchasing power. This is the kind of "pump priming" that really means something, and I think we should be tremendously encouraged by what we see going on over there.

As I read the newspapers these days, the whole spirit is that somebody is against somebody—that management is against labor, and labor is against management; that big business is against little business, and little business is against big business; and the Government is against everybody, and everybody's against the Government. There is an enormous danger in that philosophy. Why can't all of us be for something—why can't we take the positive approach and think in terms of everybody for everybody, and everybody for the entire country. Certainly, I realize that every group in our society has its own story to tell, and they are always going to try to put their best foot forward. But we're all in this together. Let's take that emphasis away from who is going against whom. The differences are really pretty trivial when you compare them with the enormous stakes we all have in attaining our common goals. Let's be statesmen in our respective fields, and take a broader and more constructive point of view, and do what is best not only for us but for everybody.

This, ladies and gentlemen, is what I am talking about: Every businessman in this country has to make up his mind that he cannot operate his business in a vacuum. He has to roll up his sleeves and do something about assuring that the businessman isn't required to approach the opportunities of the next decade with one hand tied behind his back. You and I must work vigorously for a better business climate. This doesn't mean simply a better climate for businesmen; it means a better climate for every segment of this economy—no special privileges, no undue influence—just a climate that works for everyone, in the best interests of everyone.

Other groups are campaigning, effectively tirelessly, and sometimes viciously for what they want. When are businessmen going to realize that they not only have the same opportunity and the same responsibility, but an even greater opportunity and an even greater responsibility to stand up and be counted—and to campaign for what you know is good and right for the entire country.

Does any other group know more about what is right for this country? Does any other group have a greater interest, a greater awareness of what is needed for the 1960's? Of course they don't but the answer is that some of them are doing something about it—and you and I are not doing nearly enough.

For many years, all of us have understandably been preoccupied with the day-by-day demands of running a business. We felt we were doing enough, and congratulated ourselves warmly—when we were able to get the goods out and sell them at a reasonable profit. If we were able to do some long-term planning in the bargain, that was a bonus—but most of the time we dealt with the problems that were staring us in the face, with little time given to thinking about problems that might arise in the future.

Then we began to learn the facts of life, and we saw that we had to look farther ahead and develop a long-range course for our ship, instead of being confronted with one series of uncharted reefs after another. Today, the challenge to every businessman is to think more and to plan more about the long-term—not only about such matters as scientific research, new product development, bigger and better facilities, and new ways of getting the goods to market, but about the entire backdrop for our business—the overall climate in which business operates.

Let me emphasize the basic principle upon which this entire better business climate activity is based. It is based upon the fundamental fact that when there is a healthy business climate in your community, every man, woman, and child in that community benefits from it. That is far more than a case of helping business; it is a case of helping the entire community—the people who own businesses, those who work in them, those why buy their products, those who sell to them.

Some of you here tonight are already engaged in better business climate programs, but for those of you who have yet to get started, let me reassure you for a moment. In this complex economy of ours, the idea of doing something about the conditions in which you and I do business might seem impossibly complicated. Where do you start? What do you do? Well, you will find to your surprise that instead of some vast complicated situation beyond your control, the business climate in your community can be broken down into identifiable, tangible situations that you can do something about. Just bear this in mind: What goes on here in Washington, and what goes on in your State capitals, reflects the active and expressed points of view in all of the hometowns across the Nation.

If you need one clinching argument to convince you of the job that needs to be done, let me remind you that Government at all levels—Federal, State, and local—is spending an amount equal to about one-third of this Nation's income. How can you help but be involved; you have no choice, because you already are. Your only choice is whether you are going to sit back and watch, or stand up and do something. To the businessman who says he hasn't time to be actively interested in what the Federal, State, and local governments are doing, I would like to point out that government certainly has shown it has the time to be actively interested in you.

Let me say this in conclusion, ladies and gentlemen. When you say to yourself: "I'm going to be ready for the soaring sixties, and I'm going to get out from under my bushel basket and not only stand up and be counted but go out and do some counting of my own"—when you say all that and mean it, then there won't be any roadblocks to worry about. There isn't a roadblock in the world that we American businessmen can't circumvent by imaginative, straight thinking, and applying our ideas and convictions with strength and determination.

If we work with others, if we work together, we can attain every goal we can ever dream of, but if we work against each other, we will muff those opportunities, and the soaring sixties will soar right out the window. The decision is entirely up to you.

Let me wish you and the folks back home minding the store the very best of success and good fortune in the years ahead.

Thank you very much.

Poland

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. LINDSAY. Mr. Speaker, I am delighted to join with so many of my colleagues in observing the anniversary of Polish Independence Day. It is important that we set aside a bit of time each year to remind ourselves just how much the endeavors and achievements of this remarkable people has meant to the United States.

Their single-minded struggle to achieve and maintain independence has been an example and signal to oppressed peoples at many times and in many corners of the world. They are now engaged, as so often before, in an effort to throw off the schackles of foreign oppression. The dramatic Posnan revolution of 1956, and the successful achieving of some degree of equilibrium afterward, gives promise that Poland will again achieve its independence. I hope the United States will, as it always has, continue to befriend the Polish nation in this struggle.

"No Start" Policy Endangers Port

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. FRIEDEL. Mr. Speaker, the world seaport of Baltimore, which last year was second in the Nation in foreign trade, is having its position and growth jeopardized because of lack of funds to implement the omnibus river and harbor bill of 1958.

The Congress in its wisdom passed the act which authorizes, among other things, the dredging of the Baltimore Harbor and approach channels to a controlling depth of 42 feet. However, no action has been taken to appropriate funds to carry out the projects in the act. The sum of $7 million is urgently needed to start work on the project.

I sincerely hope that the appropriations measure will soon be reported from committee and that the Congress will act speedily to approve the same.

The very capable editor of the Baltimore American-News Post pointed out the situation and commented thereon in the Sunday, May 10, 1959, issue of that paper.

The editorial follows:

"NO START" POLICY ENDANGERS PORT

A shortsighted budget policy of "no starts" in Federal engineering projects in 1959 may sesriously endanger the port of Baltimore's economic future.

Thirty Baltimore business leaders, 15 of whom testified before the House Appropriations Committee in Washington last week, showed conclusively that harbor dredging is an urgent need, not just another request for vague improvements.

Baltimore's harbor and approach channels are now limited to 39 feet, only 35 feet in two main branch channels to ore and oil terminals—limiting ship drafts to 33 feet in most instances. Second in the Nation in foreign trade in 1958, the port has less adequate channels in proportion to its tonnage volume than any other harbor in the United States.

The river and harbor bill passed by Congress in 1958 authorized dredging to a new controlling depth of 42 feet here. But there was no appropriation to begin the project, estimated at $30 million.

Because of the rapidly increasing size of bulk ore and petroleum carriers, the limited

harbor depth becomes a more urgent problem daily. One local ore terminal cites the loss of 236,000 tons of iron ore imports in 1958 because of a shift to super ore carriers exceeding channel draft limitations in the port.

Shipping experts have no way of estimating loss of a much greater volume anticipated this year and every year harbor deepening is delayed.

By the end of 1959, ships of 100,000 deadweight tons with drafts of 47 feet will be launched. Even superore carriers in the 63,000-ton class must come into Baltimore loaded light. Their operators won't tolerate our shallow harbor very long if they can unload full cargoes at Philadelphia or Norfolk.

Baltimore has earned her position as a world port through the diligence of her business community. Harbor terminal operators have already spent millions preparing their facilities in advance of the dredging authorized by Congress. To deny the Nation's second foreign port the $7 million needed to begin this urgent project would be the worst kind of myopic pennypinching.

Until the dredging appropriation is made, port leaders will do well to refrain from statements hailing Baltimore's well integrated, efficient port. In view of our seriously restricted harbor depth, we are already years behind the more progressive ports on the Atlantic seaboard and in Europe. The pity is that more and more ship operators are becoming aware of this deficiency—gravely endangering the city's world trade position.

Ore and petroleum cargoes, representing the major volume of Baltimore's shipping, aren't important to Baltimore alone. They have a national strategic importance Congress can ill afford to ignore.

Analysis by Edward P. Morgan, of American Broadcasting Network, of Federal Support of Medical Research and Medical Education

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, May 15, 1959

Mr. NEUBERGER. Mr. President, at President Eisenhower's press conference of May 13 the distinguished commentator of the American Broadcasting Network, Mr. Edward P. Morgan, asked the President about the whole question of Federal support for medical research through the National Institutes of Health.

The President's reply was extremely disappointing to many of us who are urgently interested in expanding this vital undertaking. In his network commentary of that evening, Mr. Morgan placed in perspective the whole question of further intensive inquiry into the causes and possible cures of such grim and serious diseases as cancer, heart disease, muscular dystrophy, and many other maladies. He also analyzed the vital problem of educating sufficient physicians and other scientists to maintain the health and welfare of our population.

I ask unanimous consent that this portion of Mr. Edward P. Morgan's news commentary of May 13, 1959, be printed in the Appendix of the RECORD.

There being no objection, the extract was ordered to be printed in the RECORD, as follows:

EDWARD P. MORGAN AND THE NEWS, MAY 13, 1959

One of the most somber problems of the Eisenhower administration, as the President himself hardly need be reminded, has been the health and welfare of its own top officials. The Pentagon's No. two man, Donald Quarles, died unexpectedly last week of a heart attack. John Foster Dulles is fighting a game but losing battle with cancer. The chairman of the Joint Chiefs of Staff, General Twining, had a piece of lung removed yesterday.

At the President's news conference this morning, a reporter wondered if these and similar emergencies had inclined him to upgrade the importance of basic medical research and the need of more Federal support for it. Mr. Eisenhower replied that the mass of scientific conviction and opinion he had noted indicated we are doing a remarkable job in this field already. Indeed he saw both waste and danger in the possibility of moving too fast. One of his supporting arguments for making haste slowly was that if you steered too many medical men and others into research you wouldn't have enough left to care for the population from day to day.

Ironically, there is another mass of evidence to refute the President's whole concept and some of it comes from within his own administration. For fiscal 1960, the Department of Health, Education, and Welfare had justified an expenditure of $337 million for NIH, the National Institutes of Health for research. The Budget Bureau cut this to $294 million, more than $100,000 below what Congress had appropriated for this fiscal year. As a matter of fact, every recent increase in research funds for NIH has been made over President Eisenhower's opposition.

A number of the most distinguished medical men in the country, including Boston's famous cancer specialist, Dr. Sidney Farber, Dr. Paul Dudley White, who treated the President after his heart attack, and Philadelphia's Dr. I. S. Ravdin, who assisted in his operation for ileitis, have all urged that a total NIH budget of $474 million is reasonable and necessary.

The argument that we can't afford to divert doctors to research is a poor one to use on Senator RICHARD NEUBERGER, Democrat of Oregon, a cancer victim who says he owes his life to developments made possible by NIH research funds. By the Presidential reasoning, it is conceivable that Dr. Salk would never have had time to discover his antipolio vaccine. The fact is, according to NEUBERGER, who scored the President's stand as ridiculous, we need more both of practicing physicians and researchers. He recalled a 1958 report of a blue ribbon committee of doctors appointed by the Department of Health, Education, and Welfare, and headed by Dr. Stanhope Bayne-Jones, ex-dean of Yale Medical School which said we need 10 to 20 new medical schools in the immediate future to keep from falling further behind. NEUBERGER also cited the fact that Soviet Russia has proportionately more doctors than we have, 164 for each 100,000 of population, compared to our 130.

President Eisenhower complained of mounting hospital and nursing costs, said that problem should be the subject of some research, too. One realistic way of meeting it would be to encourage group medical insurance but the administration, like the American Medical Association, looks with suspicion and disfavor on such ideas.

There is, in the end, the matter of values. Medicine has indeed made great strides but it is still barely beginning discoveries in many fields. Nearly 900,000 persons a year die of heart disease just in this country, more than a quarter of a million of cancer. According to a vividly impressive brochure recently issued by the National Health Education Committee, the Federal Government is spending $34.2 million on heart disease research this year, against $720 million in research and development for the Air Force alone. There are similar gaps in values all down the line.

Congress will again boost the appropriation for Federal medical research. Of course, there is a limit to what we can afford. As the bill cleared the House it totaled $344 million. That's a little more than what Americans spent last year on greeting cards. And as one of those might say, here's to your health.

This is Edward Morgan saying good night from Washington.

Nuclear Power Is Miracle in the Making

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. HOSMER. Mr. Speaker, speaking under the title "Miracle in the Making," Robert E. Ginna, chairman of the board of the Rochester Gas & Electric Corp., told several hundred brilliant young Americans of the Nation's progress and future in the development of nuclear electricity.

His address was made April 30 before the First National Youth Conference on the Atom. Conferees consisted of outstanding high school science students from all over the Nation. They were selected through stiff competitions which won not only them, but their science teachers as well, participation in the conference. The event, aimed at stimulating the will of young Americans to pursue careers in science, was sponsored by the country's privately owned public utilities.

Mr. Ginna is also president of High Temperature Development Associates, a nonprofit company financed by U.S. electric power companies, which is proceeding in combination with General Atomics, Inc., to build an advanced design nuclear electric central power station in Pennsylvania. The installation will incorporate improvements in the reactor art far beyond that of any ever before achieved and assure continued world leadership by the United States in peaceful uses of the atom. Mr. Ginna's authoritative knowledge and his leadership of America's fast growing nuclear power industry is well evidenced by the following extracts from his presentation to the conference:

MIRACLE IN THE MAKING

(Excerpts from address by Robert E. Ginna, chairman of the board, Rochester Gas & Electric Corp.)

Today is truly an age of miracles and perhaps the greatest miracle in the making is the harnessing of energy which has been locked up in the atom since the beginning of time. We, of my generation, will be passing on to you young men and women the bare rudiments of knowledge in this

field and it will be your challenge to develop the science to its full potential.

* * * * *

The human thirst for adventure, self-preservation and a better way of life motivates an ever-expanding search for new and more efficient sources and applications of energy in the form of mechanical power. To satisfy this thirst on a continuing basis, another form of energy is required—young minds, with the drive of youth, schooled in the more complex means of energy derivation and utilization.

It is hardly necessary to tell you that, without energy, the world's entire industrial machine would come to a standstill and we would revert to the Dark Ages. Our American economy is perhaps the most vivid proof of this statement. The constructive use of energy in this country has resulted in more and better housing, more and better food, and the almost complete elimination of drudgery from our industries, business establishments and homes.

A hundred years ago, 65 percent of the work done in the United States was accomplished through the muscle power of men and animals. Wind and water power accounted for 22 percent of the work, and only 13 percent was accomplished through the burning of various fuels such as wood, coal, and the limited amount of oil and gas then available. Today, less than 1 percent of the work being done in the United States is accomplished through muscle power, only 7 percent by wind and water power, and the remaining 92 percent is accomplished through the use of fuel power—that is, energy derived from burning fossil fuels, such as coal, oil and gas.

In 1946 the annual average use of electricity by a single industrial worker was just over 10,000 kilowatt-hours. Today it is over 25,000 kilowatt-hours. A man can only exert about 35 watts of energy in an hour, so each worker today has the equivalent of 357 electrical men working beside him.

Since an industrial system is merely an energy system, the amount of energy consumed in a country can be looked upon as a bench mark of its productivity. United States energy consumption from all sources has more than doubled in the 38-year period from 1920 to 1958. By 1975 it is anticipated that our energy consumption will be 3½ times that of 1920 and energy supplied by the atom is expected to equal the total usable water energy.

Since a significant portion of the total energy consumed is converted to electric energy, the United States power generation per capita presents an impressive picture of our industrialization and standard of living. Back in 1920, the total annual kilowatt-hours generated per person in the United States was a lowly 500 kilowatt-hours. By the end of 1958, this had grown to approximately 4,500 kilowatt-hours per year—a growth of 800 percent. In spite of recessions and major depressions, this growth has been constant with only minor changes in the trend line to indicate periods of economic instability.

To meet the tremendous increased demand for electricity in our country, the utility industry has increased generating capacity over 900 percent since 1920. Today we have in excess of 150 million kilowatts of electric generating capacity supplying our needs. Authorities in the electric field, when asked to predict the electric generating capacity required to meet the industry's load during the next 17 years, have computed varying amounts. But, regardless, of which crystal ball you use, it is anticipated that there will be a minimum increase of almost 200 percent in generating capacity to meet our Nation's needs over the next 17 years.

To supply these enormous quantities of electric energy requires equally enormous quantities of fuels. In 1958, coal provided energy to generate 55 percent of the Nation's electric requirements, gas and oil 25 percent and water power 20 percent. In that year almost 700 billion kilowatt-hours of electricity were generated and consumed. In 1975, it is anticipated that coal will provide approximately 57 percent of the electric industry's requirements, gas and oil will shrink to 15 percent, hydro also will drop to 15 percent and the 13-percent balance, we have every reason to believe, will be generated by nuclear energy. Thus, in 1975 we anticipate that nuclear power will be producing approximately 240 billions of the almost 2 trillion kilowatt-hours that will be consumed in our country.

* * * * *

In the brief 5 years since the atomic field was opened to private industry, an exciting story has unfolded. Since I am representing the electric power industry, my remarks will be limited to that field. I hope I can convey to you the drama and challenge in this new science—a science which in its modern application is just about as old as you are.

When we started out in 1954 to develop atomic power we had a lot of theory but very little practical knowledge. Theoretically, we knew there were many ways—and combinations of ways—to convert the heat given off by fissioning atoms into steam to drive turbines and generators. We knew reactors could be fueled with either uranium 235, uranium 233 or plutonium. The fuel could be solid, an aqueous slurry or a metal liquid compound. There were a variety of methods by which the heat could be carried off using water, organic fluids, or gases. But in practice we did not know, nor do we have any certainty today, of the one best way—the one method so efficient that it would render all other obsolete.

The objective of America's atomic power development program has been to find the best way of achieving economically competitive nuclear power. This called for building many experimental reactors, embodying many different principles.

* * * * *

Today, in this country, over 30 electric generating projects are underway by Government, industry, and other groups, to find the best means of generating electric power from atomic energy. Some of these projects are purely research, some are experimental, and some are full-scale atomic powerplants.

The United States has four civilian nuclear power reactors presently in operation. These include two small boiling water reactors—one at Chicago, Ill., and the other at Vallecitos, Calif.; a small sodium-graphite reactor at Santa Susana, Calif.; and the world's first large-scale atomic powerplant designed primarily for the production of civilian power at Shippingport, Pa.

Seven other nuclear powerplants are under construction. They include a medium-sized sodium-graphite reactor at Hallam, Nebr.; two boiling water reactors—one, a large unit at Dresden, Ill., and the other, a smaller one at Elk River, Minn.; two large pressurized water reactors—one at Rowe, Mass., and the other at Indian Point, N.Y.; a large fast-breeder reactor at Lagoona Beach, Mich., and a smaller breeder reactor at Idaho Falls, Idaho.

In addition, preconstruction development work is currently underway on six more reactors. These include two medium-sized boiling water reactors—one at Eureka, Calif., and the other at Sioux Falls, S. Dak.; a reactor at Hanford, Wash., designed primarily for the production of military plutonium but capable of being used for production of electricity; two heavy water moderated reactors—one of medium size in west Florida and the second, a smaller unit at Parr Shoals, S.C.; and lastly, a small organic moderated reactor at Piqua, Ohio. I will explain these different types of reactors in more detail later.

Finally, four other civilian power reactors are awaiting authorization by Congress, several more are in the planning stage, and well over a dozen design and development studies are underway.

* * * * *

Producing electrical power from the atom has called for mastering dozens of problems, many of which did not even exist as problems prior to World War II, and every day additional problems arise.

We have had to develop new materials, new ways of doing things, and change our thinking on many phases of metallurgy and engineering because we were confronted with a new set of rules, and many more which are still to be written.

We have developed new tools to handle radioactive materials such as a manipulator which can lift an egg without cracking it or grip with a force of hundreds of pounds and yet the feel to the operator at the control handle is as sensitive as if his own fingers were doing the work.

We have developed new standards of strength and tightness in joint welding and new kinds of welding alloys to join exotic new metals and to insure that radioactive gases and liquids do not escape from reactor vessels and tubing.

We have designed many new kinds of equipment to meet the demands of this new technology. Some of this equipment is destined to be buried under 6 feet of solid concrete for unknown periods of time.

We have achieved new peaks of percision in the fabrication of heavy equipment. The 300-ton pressure vessel destined to hold the uranium core of the Dresden reactor took 2½ years to design and build. It is over 12 feet in diameter and over 42 feet high.

New instruments had to be designed to operate with precision and reliability and be able to respond to an emergency not in seconds, but in thousandths of a second.

In the electric generating field a reactor simply replaces the firebox or furnace of the boiler. What kind of fuel you burn, how you design the fuel elements and how you transfer the heat generated by the fissioning atoms to the steam which will eventually drive the turbine at the conventional end of the plant are the keys to economical power. The scope of our problem is emphasized by the fact that there are over 1,700 different reactor concepts possible from various combinations of fuels, fertile materials, moderators, coolants, and the like. I would like to discuss with you only the eight major reactor concepts on which Government, industry, and others are presently working together in their search for the best and most economical source of nuclear power.

Our earliest work with specific reactor types was on the pressurized water reactor. This was because of the extensive research and development data available from the work carried out on the *Nautilus*—the first atomic power submarine. In this concept, heat is removed from the reactor core by water pressurized at about 2,000 pounds per square inch to keep it from boiling. The pressurized water is then forced through a heat exchanger where steam is generated.

The boiling water concept is another water cooled class of reactor. This concept differs from the pressurized water reactor in that saturated steam is formed by water boiling in the reactor core (rather than keeping the system under pressure to prevent boiling) with steam passing directly from the reactor to the turbine.

The heavy water moderated concept is a third class of water cooled reactor in which the heavy water moderates or controls the fissioning of the fuel atoms. One problem with this type of reactor is that heavy water is still very expensive, but the use of heavy water as a moderator is of interest to us be-

cause it permits high neutron economy. Neutron economy, in turn, means we can use natural or only slighty enriched uranium fuel, with the possibility of reducing the cost of the fuel cycle.

Organic cooled reactors hold some attraction for us since they provide a means of obtaining somewhat higher steam temperatures at relatively low reactor pressures thereby permitting the use of less costly materials and equipment. However, the advantages of a simple and relatively inexpensive system, must be evaluated with the disadvantages and problems resulting from the tendency of organic coolants to decompose under irradiation.

Gas cooled reactors hold out the promise of providing steam conditions suitable for use with modern electric turbines at costs which may be lower than those achieved with water cooled reactors. Temperatures of 1,000° F. and pressures of 1,450 pounds per square inch are essential unless we are to lose hard won turbine efficiency. Potentially, very high temperatures are obtainable from this concept. However, until recently, the high capital costs of gas cooled reactors made this type less attractive to us than other reactor concepts. Today we believe we have a high temperature, gas cooled reactor concept that will lick this problem.

The sodium-cooled reactors hold promise for the future because of the high boiling point of sodium. This means we can eliminate a high-pressure circulating system and at the same time derive steam at fairly high temperatures and pressures. However, containment of molten sodium, reliable pumps to circulate it, and the heavy shielding of radioactive sodium in the heat transfer system present very serious metallurgical and mechanical problems with which we are presently wrestling.

Fluid fuel reactors hold potential promise in the long-range future. Their attraction lies in the elimination of fuel elements which are costly to fabricate, in elimination of control rods, and other factors. It might even be possible to build into such a system the continuous chemical reprocessing of the reactor fuel.

Finally, we come to the general category of fast breeders. Fast breeder reactors hold great interest for us because they can produce more fuel than they consume. This is particularly important from the standpoint of conservation of our resources of fissionable material. The development of reactors of this type is a major objective of our long-range atomic program and currently we have an extensive program underway in the field.

These eight reactor concepts are not drawing board dreams. They are realities today, or will be, before you get your first college degree.

Shippingport, Pa., a pressurized water reactor, developed from the prototype of the *Nautilus*, was the world's first large-scale atomic energy plant devoted exclusively to the generation of electric power. This 60,000-kilowatt plant has been in operation since December 1957 and has provided us with much valuable data which will be incorporated in the improved 134,000-kilowatt Yankee atomic pressurized water reactor plant, presently under construction at Rowe, Mass., by a group of New England companies. Yankee is scheduled for completion in 1960.

Another improved, but still different, version of the pressurized water reactor is being constructed at Indian Point on the Hudson River, by the Consolidated Edison Co. of New York. This 275,000-kilowatt plant is scheduled for completion in 1961.

A 180,000-kilowatt boiling water reactor, known as the Dresden plant, is nearing completion at a site approximately 50 miles southwest of Chicago. Dresden is being built by the Commonwealth Edison Co., nuclear power group, a combination of private utilities, in conjunction with the General Electric Co. The major structures at the plant site have been completed, startup tests are expected to be finished by the end of 1959, and the plant should be in full operation by the middle of 1960.

The prototype of this plant, built by General Electric Co. and Pacific Gas and Electric Co. at Vallecitos, Calif., was actually in operation, generating electricity in October of 1957. Although the plant was only designed for 5,000 kilowatts of electrical capacity it has exceeded the design capacity and has provided tests facilities and invaluable information for the Dresden Plant design.

Elk River plant being built by the Rural Cooperative Power Association in Minnesota, is another variation of the boiling water reactor. This plant, which is scheduled for operation in 1960, is designed to produce 22,000 kilowatts of electricity.

Other variations of the boiling water reactor, which are under construction or contract, include a 60,000-kilowatt natural circulation unit by the Pacific Gas and Electric Co. at Humbolt Bay, Calif., that will be completed by 1962 and a 66,000-kilowatt advanced type reactor employing nuclear superheat, by the Northern States Power Co.-Central Utilities Atomic Power Associates group at Sioux Falls, S. Dak., also scheduled for 1962.

In the category of the fast breeder reactors, a 100,000-kilowatt plant known as Enrico Fermi, is being constructed near Detroit, Michigan, by a group of utilities, including my own. This plant is scheduled to go into operation in 1960.

These nine plants I have mentioned represent almost 900,000 kilowatts of atomic generating capacity that will be in operation by 1962, but it is by no means a complete picture of all nuclear plants under construction or ready to begin construction. I have barely touched on the tremendous research contributions of the Atomic Energy Commission, with their experimental and test reactors. There are a variety of other projects, underway by government and utilities which I have not discussed because of the limitations of time, but I hope these illustrations have given you some idea of the scope of our work and our many problems.

Today the electric generating capability in the United States amounts to 150 million kilowatts. By 1980 600 million kilowatts will be required, and it is estimated that the portion that may be atomic power will amount to as much as 135 million kilowatts—almost 25 percent of our total generating capabilities.

* * * * *

So far we are in the position where we know how to make electricity with the aid of the atom, but we have not yet been able to cut costs to the point where atomic power is comparable in cost to power produced from coal, oil, or gas. This cost figure will vary in different parts of the world and even in different parts of our own country, due to the large variations in the cost of conventional fuel. Thus, atomic energy will become economically competitive in England, which has very limited supplies of fossil fuels, many years before it will be competitive in the Ohio Valley, where there is plenty of coal, or in Texas, where they have high reserves of natural gas. Although at the present time England has more kilowatts of electric generating capacity powered by atomic reactors than we have in our country, it is due solely to economic pressures resulting from the lack of natural resources. Today, as a result of the broad program of reactor research and development undertaken by our Government, utilities, and manufacturers, the United States is the acknowledged world leader in reactor technology.

The Reign in Spain

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. PORTER. Mr. Speaker, our policy in Spain needs a careful reexamination and some drastic changes.

The end of Mr. Franco's reign is in sight. Unless we change our ways immediately, the successor government is almost certain to be anti-American. Not only do we have a huge investment in Spain and an important military stake but we have an interest in sympathetic relationships with the Spanish people.

Recently a distinguished Spanish exile, Dr. Felix Gordon Ordas, president of the Council of Ministers of the Spanish Republic in Exile, came to my office and, at my request, prepared a statement presenting certain facts about the situation in Spain today. Under a previous unanimous consent, I am inserting a translation of his statement following these remarks.

The facts he presents show that we should not urge the admittance of Spain to NATO; that we should arrange for our radio broadcasts to be heard by the Spanish people; that we should not be fooled by the nature of the Communist danger in Spain; and, finally, that we should reexamine our whole program of financial assistance to Spain.

The statement follows:

[Translation (Spanish)]

1. The admission to NATO of the government of General Franco, supported so persistently by the Government of the United States, would be contrary to the spirit which governed the constitution of the international defense organization, which had been brought into being for the exclusive purpose of safeguarding the European democracy against possible attacks from Communist or Fascist totalitarianism.

Idealogically and practically, the government which usurped the power in Spain is Fascist and cannot honestly defend democracy in other countries when it prohibits its existence in its own country. Nobody is ignorant of the fact that in 1945 and 1946 some collective, conclusive, and very plainly stated proposals were underwritten to that effect in the United Nations. And in Spain the people were asking themselves with apprehension: If General Franco, because he is antidemocratic, cannot defend the democracy which he repudiates—what other purpose would the admission of his government to the above organization have?

There can be only one. Recognition by France and Spain of the independence of Morocco would in a very short time leave the troops of both countries, who are stationed on Moroccan soil, without anything to do. Spain would be left with a surplus of generals, chiefs, officers, and soldiers amounting to 80,000 men. Only a small number of them could be professionally placed in Spain. What, then, is to be done about the others? For a long time the Franquistas have been fondling the idea of offering this army to NATO to further their own ends. Wouldn't that be the price which Spain would have to pay so that its dictator might satisfy his great wish of being admitted to an organiza-

tion defending the democratic way of life, within which, ideologically, it could perform no useful duty?

If this were so, and that is what a large segment of Spanish public opinion is afraid of, it would be desirable for the governments capable of making an agreement of that type to know in advance that we liberal- and democratic-minded Spaniards, i.e., the overwhelming majority of the nation, feel that the Spanish army in Morocco would be transformed into an army of mercenaries, and that this offends the honor of our country which we would neither forget nor ever forgive.

2. The Spanish Communist Party is entirely free to make any number of radio broadcasts every day from a broadcasting station, supposedly Radio Pirenaica, but actually situated behind the Iron Curtain and supported by the Government of the U.S.S.R. and the governments of its satellite nations. In exchange, neither the Government of the Spanish Republic nor the parties of the Republic may carry on similar propaganda activities because no democratic government permits us to install and make use of a broadcasting station within its territory. The result is that inside Spain only the Communist voices are heard because it is not possible to hear the democratic and liberal republican voices of the Republic. That is to say, that the small Communist minority every day gives the false impression that all of us Spanish exiles are Communists, whereas the truth is that there is only a very small number of them; and that this may be due to the perspicuous aid given to these activities by the Communists governments, and to the lack of all aid for similar activities on the part of the republicans owing to the inconceivable blindness of the democratic governments.

3. The Spanish Communist Party may likewise flood Spain with all the printed propaganda that its heart desires, and bring into the country a great number of activist (militant) elements because the generosity of the Soviet Government is lavishly providing it with the necessary financial resources, while the Government of the Republic-in-exile and the parties of the Republic are receiving no financial aid from the democratic governments, owing to which its liberal and democratic propaganda activity on Spanish soil had to be forcibly stopped; and this monstrously contradictory behavior of the Government favors Communist propaganda and makes it difficult for freedom propaganda inside Spain.

4. The heavy financial aid given by the United States to the Franco Government has had no favorable effect on Spain. It engaged in stepping up industrialization, which necessarily had to fail, due to the lack of consumers (the plain truth, which explains the meaning underlying the following phrase, formulated by the director of a large bank and printed in El Economista, of Madrid, in its issue of January 1 of this year: "The Spanish industry, while not exporting, has nothing to do"), which is consuming enormous sums of money, as proved by these two figures: In 1957, 16,800 million pesetas, and, in 1958, up to 20,000 million pesetas were wasted on the mad industrial venture, while the primary and essential agricultural progress was completely neglected.

According to official statistics, Spain received in the 6 years between 1953 and 1958 from the U.S. Government the sum of $1 billion in economic aid, independent of the enormous amounts deployed for military, naval, and air bases, and for sundry bellicose material. A portion of the considerable loan was consumed by payments for the agricultural surpluses which North America had been selling to Franco. It should be stated that Spain, an essentially agricultural country, has never before had to make purchases of this nature, save for wheat every 3 or 4 years. Between April 1955 and January 1959, five economic agreements of this type were signed between the U.S. Ambassador in Madrid and Franco's Minister of State, which cost Spain some 15,000 million pesetas. Under the last of these conventions 415,000 tons of U.S. surplus food valued at $96,800,000 were sold to Spain. And among the products included in the sale were 153 million liters of vegetable oils—to Spain which has always been the principal world supplier of oil.

These figures suffice to show that Spain has ceased to be a country with a preponderantly agricultural economy, yet has not succeeded in becoming an industrial country, and to prove the misuse to which the Franco government has been putting the generous financial aid of the U.S. Government. There are many other figures that I might add, to put in evidence the incontainable deterioration of the Spanish economy under the Franco dictatorship. The following may suffice: The foreign trade deficit was 1,183 million gold pesetas in 1957, and 1,111 million gold pesetas in 1958; the drop being due to fewer imports and no increase in exports. In 1957, the ordinary budget estimate was 43,096,9 million pesetas, but since we should add to that sum the 29,842 million pesetas consumed by the 820 independent agencies established by the dictatorship, the total expenditures come to 72,-938,9 million pesetas, an appalling figure for an economy as poor as the Spanish. Then the costs climbed still higher in 1958; they had been estimated to read 48,004 million, but rose to 55,754 million pesetas; the difference being due to most naturally [likely] the amount consumed by the 820 independent agencies. This enormous misappropriaction of funds explains why Spain's public debt is now over 150,000 million pesetas, not counting U.S. loans; and it also explains the low quotations on the stock exchange since 1957.

These figures, which may seem insignificant to the powerful U.S. economy, are astronomical for the weak Spanish economy, and have brought Spain's economic and financial system to the brink of disaster. Because of its malpractice and immorality [corruption], the Government of Spain is irredeemably doomed, despite the "oxygen tanks" with which the U.S. Government is regaling it with a generosity so misplaced as to be becoming a responsibility.

FELIX GORDÓN ORDAS,
President of the Council of Ministers of the Spanish Republic in Exile.
(Address in Paris, France: 35 Avenue Foch.)

WASHINGTON, D.C., *May 8, 1959.*

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

A Bill That Would Take Positive Steps To Correct the Farm Problem

EXTENSION OF REMARKS
OF

HON. EARL HOGAN
OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. HOGAN. Mr. Speaker, I am today introducing a bill that would take positive steps to correct the farm problem. Members of this House are fully familiar with the problem. I shall not dwell upon it.

During the past 6 years, the farm program has been so completely mismanaged that farm prices and incomes have fallen, retail prices of food have gone up, and the costs to the U.S. Treasury have soared. Thus, while farmers have been injured, so has the general public.

Farmers produced about a fifth more of the basic essentials of life but received a fourth less. But Federal policies of the executive branch have been so contrived that the general public paid more—more as consumers in higher grocery store prices and more as taxpayers in higher Government costs of operating the program.

The bill I am introducing is an attempt to reverse these adverse trends.

No farm program can be justified that does not contribute to the general welfare. Our Nation needs a new Federal farm policy that contributes to the fulfillment of the great basic national priorities of needs: long-term national security, full employment in a rapidly expanding national economy, the building of economic strength and moral spirit of the free world. To do this we need a program that will foster and improve the economic health and strength of the Nation's family farms.

Even more importantly, we need a program that will make certain that we shall have the strong resource base we need to insure an abundant and continuing supply of food for the future. We must provide a reserve of resources and a stockpile of strategic food commodities to insure against any national emergency. The program we need should provide the basis for the expanded use of food to build a lasting peace and provide the entire free world with the security of a strong and continuing base of ample reserves.

The bill I am introducing is my attempt to meet a part of these needs. Its provisions would, I think, be helpful if put into operation along with other parts of the needed national policy.

My bill recognizes that the population of the United States is increasing at one of the highest rates in the world; and the free world population is expanding at a rapid rate. Security, safety, and welfare of these generations yet unborn demand that our generation take the utmost care with the use and development of the precious soil and water resources that have been given us to utilize.

We have a magnificent soil and water conservation program in this country. Our progress along this line, beginning in 1933, has been tremendous. But, we still are not doing enough. We are still using up our resources at a faster rate than we are rebuilding them.

We need still further to emphasize and expand our national agricultural conservation efforts.

My bill would amend the Soil Conservation and Domestic Allotment Act of two decades ago to do this. My bill provides for the establishment of a national soil-building base on every farm of the Nation.

The soil-building base would be made up of two parts: one part contributed without payment by the farmer and the second part which would be rented by the Government. But to preserve our rural communities, and to prevent the further development of ghost county seat towns as the soil bank is now doing, no farm could be eliminated and no communities completely wiped out, as is now happening in some parts of the country.

Under the provisions of my bill each farmer would be required to contribute without payment 10 percent of his tillable acres above 20 on his farm to the national soil-building base; and he would be required to rent to the Government another 10 percent of the tillable acres, above 20, to be added to the soil-building base. No farmer would be allowed to put more than 60 percent of his tillable acres in the base.

All of the land placed into the soil-building base would have to be placed into its optimum soil conserving condition according to the highest land use and conservation standards. Such land could not be used for soil-depleting crops and practices.

On the Government-rental part of the base, the Secretary would arrange for the Government to share in the cost of this soil-building program along lines of familiar land restoration practices of the agricultural conservation program under the Soil Conservation and Domestic Allotment Act.

Payment per acre would be at a rate equal to the farmer's net income plus overhead carrying costs plus the cost of conservational treatment of the land placed in the soil-building base, but not more than one-third of the value of the annual yield of the land and not more than $45 per acre. In lieu of cash payments, the farmer could elect to accept payments in kind out of Commodity Credit Corporation stocks. Since this would help reduce storage and carrying charges that the President has estimated at $1 billion per year, I have suggested that payments in kind per acre be made at a rate of one-half the acreage yield of the land.

My bill provides that until such time as the unnecessary surplus of Government-owned stocks, above a national security reserve, are worked down, the program would carry upward of 65 million acres in the soil-building base; this would be for 2 or 3 years. Following that the program would provide for about 40 million acres in the soil-building base.

Adoption of this program would be a great stride forward in developing a permanent land reserve to insure food for the future in our domestic policy even while the Nation is making maximum utilization of food for peace in our foreign policy.

My bill also provides that the Nation consciously and specifically establish a national security and safety reserve of food, fiber, and biological oils as a deliberate program on its own merits and not as a side-issue adjunct to the price-support program. My bill places the responsibility for decisions concerning the magnitude, nature, and geographic dispersion of this food security stockpile strictly on the shoulder of those other than the executive branch who have been assigned the responsibility to make such determinations and to provide for the national safety against national emergencies arising from natural causes such as drought and flood as well as enemy attack—the Defense Mobilization Administration and the National Security Council.

In return for requiring each farmer to devote not less than 20 percent nor more than 60 percent of his tillable acres to the national soil-building effort, my bill provides that all of our important tilled crops—corn, wheat, cotton, rice, peanuts, soybeans, oats, sorghum grain, rye, barley, flaxseed, cottonseed, dry edible beans, and potatoes shall be supported at 90 percent of parity.

Estimates of reliable farm economists indicate that if the excess of production over demand is removed from the farm picture, a 90 percent of parity program can be operated without little, if any, cost to the Federal Treasury, if the Nation maintains full employment.

To make certain that production would not be reduced to low in event of growing unemployment, my bill would authorize the Secretary of Agriculture to use price support deficiency payments. Such payments could also be used to maintain to cotton producers' income while allowing market prices to drop to competitive level with synthetics and the world situation.

While I have been assured that placing of 60 million acres of tillable land into the soil-building base would make a 90 percent of parity program fully workable, my bill provides that for any

individual commodity that gets out of balance, the Secretary is authorized to place into operation whatever specific marketing regulations or additional soil-building base requirements as are necessary to keep the market supply of each commodity in balance with market demand at 90 percent of parity.

My bill does not repeal the existing marketing quota programs but builds on them to set up an improved and more workable operation.

Placing of the provisions of my bill into full force and effect would, I am confident, greatly reduce the Government costs of the farm program, better insure the future food supply of the nations, and improve farm income without requiring higher retail prices of food.

My bill applies exclusively to crops, to the direct products of the soil. I am continuing to study the deteriorating poultry situation and to take part in the efforts of the House to deal with their current emergency in broiler and egg prices. I am watching the hog situation carefully.

At the appropriate time, I shall wish to make suggestions to my colleagues of the manner in which we may prevent the deep drop, now predicted by the Department of Agriculture, in hog prices in 1960.

Mr. Speaker, I do not contend that the bill I am introducing is the last word. I know it does not cover everything that needs to be done. I offer it as a further contribution to the ultimate development of a workable comprehensive agricultural conservation and farm income program. I have been deeply impressed by and favorably inclined toward the suggestions made by my colleague, the gentleman from Montana [Mr. METCALF], the gentleman from Minnesota [Mr. MARSHALL], the genlemen from South and North Dakota [Messrs. MCGOVERN and BURDICK], and my colleague who several weeks ago joined with the gentleman from Iowa [Mr. COAD], and other Members in the bills they have introduced. I hope to work with them and with the members of the Committee on Agriculture of which I am a member.

I shall welcome suggested improvements in, and additions to, the bill I am introducing. I hope that together we can develop a comprehensive Federal farm policy that will reverse the adverse and disastrous trends of the past 7 years. I offer my bill as a modest contribution to the broad effort that is being made in this direction.

Utilization of Military Manpower

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. WOLF. Mr. Speaker, our brilliant and courageous colleague, FRANK KOWALSKI, has given testimony before the House Armed Services Subcommittee on Manpower Utilization which should be read by every Member of Congress and the ranking officers in the Pentagon. Mr. KOWALSKI clearly shows that a better utilization of manpower, and an elimination of questionable servant and occupational duties would result in an increased combat force while strengthening the possibility of ending our outmoded military conscription system.

Congressman KOWALSKI does not come to this subject as a neophyte. He is a West Point graduate, a recently retired Army colonel, a former commandant of the Army Command Management School, and the former deputy chief of military government in Japan. We are indeed fortunate, and the people of this Nation are indeed fortunate to count as one of their Representatives a man who is so knowledgeable on matters of defense—an area which is truly a puzzle within an enigma. His testimony can be read in the RECORD of last Wednesday, May 13, page 7195, under the remarks of Mr. PROXMIRE.

Civil Rights Legislation

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. ADDONIZIO. Mr. Speaker, I am proud that the General Assembly of the State of New Jersey recently adopted the following resolution, urging prompt passage of the pending civil rights legislation. As the sponsor of this legislation in the House, I believe strongly that the time is long past due to secure for all citizens those rights and liberties guaranteed by the Federal Constitution. We insist this is a government of law, not of men or a coalition of men imbued with spirit of viciousness. The Congress has the duty to provide the statutory instruments that will command respect for law and order, and demand of every citizen protection for the unalienable rights of any other citizen.

The resolution reads as follows:

Whereas one Mack Charles Parker, a Negro, was kidnaped from the local jail and possibly murdered at Poplarville, Miss., on Friday, April 24, 1959; and

Whereas the FBI despite their swift arrival on the scene have been unable to unearth any clues as to the identity of the perpetrators of this hideous crime; and

Whereas this is the second such lynching that has occurred in the State of Mississippi in the last 4 years (Emmett Till) without bringing anyone to justice; and

Whereas mob rule has replaced the order of legal jurisprudence in Mississippi to the embarrassment of our country; and

Whereas the time has come for the Federal Government to exert strong positive action to protect the lives and rights of all citizens in this country: Now, therefore, be it

Resolved, That this general assembly in executive session on the 4th day of May 1959, memorialize the Congress of the United States to quickly pass such legislation that is embodied in the Douglas-Javits bill (S. 810) to end once and for all times the rule of mobs in place of democratic court action; and be it further

Resolved, That copies of this resolution be sent to our 14 New Jersey Members of the House of Representatives and our 2 New Jersey Senators.

Pan American Round Table, San Antonio, Tex.

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I include an address, delivered by Hon. John F. Killea, American consul general, Monterrey, Mexico, before the Pan American Round Table of San Antonio, Tex., in celebration of Pan American Day, 1959.

The Pan American Round Table of San Antonio was organized in 1916. Consistently since that time, the Round Table has devoted itself to a study of the relations between the United States and its Latin American neighbors. It has accomplished a great deal in promoting good relations with Latin American countries.

As evidence of the interest of the Pan American Round Table and its work in cooperation with Latin American countries, present at the meeting at which Mr. Killea's address was delivered, were as honored guests, Mexican Consul General Lauro Izaguirre, Guatemalan Consul General Col. Mauricio Dubois, Mexican Consul Joel S. Quinones, and Nicaraguan Consul General Alonso S. Perales, as well as a number of honorary consuls of several Latin American countries, which do not have career consuls in our city. Also present were a number of local educators, a member of the Texas Good Neighbor Commission, military commanders, and three members of the State Board of Pan American Round Table Clubs of Texas.

Mr. Killea's address is as follows:

ADDRESS DELIVERED BY HON. JOHN F. KILLEA, AMERICAN CONSUL GENERAL, MONTERREY, MEXICO, BEFORE THE PAN AMERICAN ROUND TABLE OF SAN ANTONIO, TEX., IN CELEBRATION OF PAN AMERICAN DAY, 1959

The director, honored guests, members of the Pan American Round Table Clubs of Texas, it gives me considerable pleasure to be with you on this occasion and I am most grateful for the opportunity you have given me to address this conference of the Pan American Round Table and to meet personally so many of you who have done so much to improve relationships over the years between the United States and Mexico. I consider it a great honor to be asked to speak to you on this occasion.

While it is a distinct privilege and pleasure to meet with the Pan American Round Table, it is also a severe test for anyone to attempt to discuss American foreign policy, as it refers to Latin America, with a group so well informed as yours. I think it is most interesting to speak here in San Antonio and in Texas in view of the trail blazing that your organization has done in the foreign relations field. By your work over the years

since 1916 you have put into actual practice what is the now official policy of the United States and which as you know is embodied today in the President's people to people program. You and your organization are truly pioneers in the field of international relations.

I am sure that if our Ambassador to Mexico, Robert C. Hill were here today, he would say that there is no doubt in his mind that the closer the association of our Department of State with the informed public opinion which is represented here, that the more effective we shall be in coping with the multiplicity of problems that press on us today. He has asked me to convey to you here, his best wishes for the continued success of your organization and his hopes that the next 60 years will be as productive as your first 40 have been.

We have both watched with interest the work of the Pan American Round Table in Mexico and were both pleased to see that your newest club comes from Saltillo, Coahuila, which is in my consular district. Ambassador and Mrs. Hill recently entertained in their residence, the Pan American Club of Mexico City and recently Mrs. Killea was hostess to the first national meeting of the six Pan American Clubs of Mexico. You can see, therefore, that we in the Department of State are well acquainted with your organization and your work.

The basic objective of American foreign policy is the preservation and enhancement of the security of our country, our people, and our fundamental values and institutions. There is no doubt in my mind, nor I am sure in yours, that the principal threat to that security is found in the policies of the Red Soviet-Chinese bloc of countries. It is also significant to recognize that there is no such threat from our good neighbors to the south or in Canada to the north. As we face this highly competitive situation with the Soviet, it is clear that our central problem is to minimize this threat, to use all our resources and diplomacy, to maintain the peace, to provide the military and economic strength, to deter general war as well as more limited hostilities. We seek to build our economic, scientific, and cultural assets, to maintain our independence and our institutions, and to offer the leadership which the world is entitled to expect from us.

I would like to talk to you today about the importance of our relations with Latin America. In Latin America, we are, of course, faced with a series of active and interesting problems. The far-reaching social and economic changes which are now sweeping that area have intensified the aspirations in those countries for large scale development and prompt improvement of living standards. There is a sense of urgency on the part of many of our southern neighbors. "For the land of 'mañana,' mañana ya llegó. Es ahora el memento de trabajar." This drive manifests itself primarily in a pressing concern by several of the Latin American communities for adequate flow of capital necessary to finance their need for widespread economic development. There are acute problems of increasing trade and the overwhelming ones of foreign-exchange requirements. Of course, these problems are not new; they are merely more acute and have become so because of the threat of communism.

Your Government has appreciated for some time past the depth of the growing impetus toward urgent economic development and has long since been conscious of the area's impatience on that account. Thus, President Eisenhower proposed in 1956 that the Presidents of the American Republics designate personal representatives to meet and consider their mutual economic and social problems within the context of the Organization of American States. This act was designed to stimultae active interest and participation by all the American Republics in multilateral approaches to these problems. As a result of this proposal, there have been a number of tangible measures in many fields, such as public health, housing, agriculture, and technical training.

Our trade with Latin America in recent years has been greáter than that with any other area of the world except Western Europe. Some 22 percent of our total exports go to Latin American countries. Our direct private investments in the area are in the neighborhood of about $9 billion, and this has been increasing at a rate of over $600 million annually. In 1957, the increase was $1.3 billion, the largest for any area in the world.

In the past 10 years our Government's Export-Import Bank has loaned more than $2 billion to Latin America, representing more than 40 percent of all the bank's loans. These lending operations are in addition to those of the IBRD (International Bank for Reconstruction and Development), to which the United States provides more capital than any other participants. They are also in addition to the stabilization loans of the International Monetary Fund, to whose capital the United States is also the largest single contributor. Under our surplus agricultural commodities law, we have transferred in the neighborhood of $400 million worth of surplus farm products for local currencies, most of which has been loaned back to the purchasing countries for their economic development. As a concrete example of our policy of cooperation, of which I am reminded by the forthcoming visit to this country of our friend, President Lopez Mateos of the Republic of Mexico, we recently concluded with that country a loan program in conjunction with the International Monetary Fund and U.S. public and private sources of a total of several millions of dollars. Likewise, over $329 million has been loaned to Argentina.

The recently created Development Loan Fund is making an important contribution to the area's economic development. And our able Under Secretary of State, Douglas Dillon, has given yeoman support to the creation of the Inter-American Development Institution, the so-called Latin or Inter-American Bank. This project is being worked out within the context of the Organization of American States. We are proposing an institution that would make both hard and soft loans but with major emphasis on the former. Final steps are being taken with respect to this Bank during this month.

I think tribute should be paid to the role of U.S. private investment and enterprise in Latin America. U.S. private enterprise is carrying a payroll of somewhat over 700,000 Latin Americans. U.S. companies in Latin America are paying the equivalent of over $1 billion in annual wages and salaries and well over $1 billion in local miscellaneous. expenditures. Thus Latin America gains annually from the activities of U.S. private enterprise in the neighborhood of at least $3 billion. I think these facts are worthy of mention because so often, when the somewhat superficial question is asked, "What is the United States doing for Latin America"? the important role played by U.S. private enterprise is rarely mentioned. There is no doubt that Government aid is of great importance, but the bulk of the job of practical assistance to the area comes, and should come, from private-enterprise sources.

Thus briefly, you can see what is being done on this continent and in this hemisphere. You know from your readings, from discussion, with your friends south of the border that these accomplishments are coming about not because of threats, intimidations or show of military force but as a result of greater exchanges across the conference table, through the visits of Presidents, through the OAS, through exchange of professors and students, through tourism, through friendships built up over the years by organizations such as the Pan American Round Table. I must point out here the major role which our Ambassador to Mexico, Robert C. Hill, has done to promote friendship and understanding. There is hardly a city or state in Mexico which he has not visited. He has met Mexicans of high and low degree and he has won their hearts. Truly such an effort cannot go unappreciated.

Elsewhere in the free world we see cooperation and understanding. It is only when we face the realities of this cold war and the armaments race that we can recognize the basic difference between the free world and the Soviet bloc. Recall if you will, these statements from Messrs. Khrushchev and Mikoyan to the effect that they want better relations, and we hope they do. But weigh these words against relatively recent statements by Mr. Khrushchev as this:

"Whether you like it or not, history is on our side. We will bury you."

Or this: "We are convinced that sooner or later capitalism will perish, just as feudalism perished earlier."

Or this: "All the world will come to communism. History does not ask whether you like it or not."

I am confident that you do not or will not hear statements such as these from our responsible friends south of the border. Our neighbors to the south, like those of us in the United States, want to pursue the free way of life without the dread specter of communism hanging over them. We need only to look to the recent examples of the meeting between the President of the United States and the President of Mexico to recognize the differences which exist between our free world and the Soviet world. This meeting was a symbol of the historical and cultural ties of friendship, cordiality, and mutual confidence which unites the peoples of Mexico and the United States, as well as their two Governments. Let us emphasize again that the chiefs of state of our country and our great neighbor to the south, Mexico, met in an atmosphere of friendly cordiality and frank understanding which characterizes our diplomatic relations. Such a meeting is not only a heartwarming and encouraging sign but is a clear indication of what can be accomplished by men of good will.

Finally, I am happy to have this opportunity to share with you some thoughts on questions which are so vital to all of us. You may not be aware that San Antonio is my adopted home and that my wife is a third-generation Texan. In speaking to you today, I felt that I was home among friends in this splendid city of ours. It is the same feeling of home and friendship which I find in Monterrey and in my visits through northern Mexico in my duties as consul general, where the phrase "aquí tiene Ud. su casa" is more than a superficial courtesy.

In closing, let me say Mexico and Latin America have won my heart, and I know it has won yours or you would not be joining here today in observance of Pan American Week. Let us join to extend an invitation to others in the United States whose hearts will be won by Mexico and Latin America if they will study its history and visit it and to those in Mexico and Latin America who by visiting us and learning about us will reach the conclusions that our hopes, aims, and ambitions coincide. Your motto is as effective in Spanish as it is in English, "Uno para todos y todos para uno." Let us suggest to our fellow Americans the extension of friendship through organizations such as the Pan American Round Table, wherein exsts the true spirit and philosophy of our President's people-to-people policy.

I thank you for your kind attention. Muchas gracias.

Friendship Through Singing Week in Chicago

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. PUCINSKI. Mr. Speaker, I have the privilege today of inserting in the RECORD the proclamation issued by the mayor of Chicago, the Honorable Richard J. Daley, proclaiming the period beginning May 25 to be Friendship Through Singing Week in Chicago.

It is significant that this particular period should be so designated when the Polish Singers Alliance of America is meeting in convention in Chicago in observance of its 70th anniversary.

I have said on the floor of this House many times that America has drawn its culture from many countries of the world, and it is perhaps because this Nation has recognized all that is beautiful in the cultures of the rest of the world that our own Nation's cultural institutions are today being respected throughout the world.

The Polish Singers Alliance of America in its 70 years of existence has brought to our land superb music and song of Poland, the native land of Chopin, Paderewski, Moniusko, Szymanowski, and many others of great renown in the field of music.

Through their efforts, the members of the Polish Singers Alliance of America have made known to our own people of this country the depth and beauty of Polish music, and it is indeed fitting that the mayor of Chicago has chosen to single them out with this special proclamation. I join the mayor in his tribute to this wonderful organization.

Chicago can indeed be proud to be the host city for this dedicated organization on the 70th anniversary of the Polish Singers Alliance of America, and I am confident that my colleagues will join me in wishing this organization continued growth and continued success in its endeavors.

It is from organizations such as the Polish Singers Alliance of America that we in this Nation have found our cultural and intellectual strength. May they be blessed with many years of success in their efforts.

The proclamation follows:

Whereas the Polish Singers Alliance is this year observing its 70th anniversary; and

Whereas the purpose of the alliance is to promote better understanding and friendship among all people through Polish song and music; and

Whereas the alliance has a proud record of having performed for innumerable charitable causes; and

Whereas the alliance is composed of sixty active choruses in many States of our Nation, and representatives of these groups will be in attendance at the 32d international convention to be held in our city May 28 through May 31:

Now, therefore, I, Richard J. Daley, mayor of the city of Chicago, do hereby proclaim the period beginning May 25 to be Friendship Through Singing Week in Chicago, and call attention of all citizens to the special events arranged for this time.

Dated this 12th day of May, A.D., 1959.

RICHARD J. DALEY,
Mayor.

Two Awards to Hon. Harry F. Byrd of Virginia

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. HARRISON. Mr. Speaker, on successive days recently, the distinguished senior Senator from Virginia, the Honorable HARRY F. BYRD, received the highest commendations of national organizations of business people and of farmers.

On April 27, Senator BYRD was honored in Washington by the Chamber of Commerce of the United States which selected him as one of seven individuals to receive the chamber's annual award to great living Americans.

The citation, as presented by Chamber President William A. Donnell, was as follows:

We are honoring this evening, a truly great statesman—a man of principle—a man who has always put the long-range good of America ahead of all else—a man who, because of his wisdom, common sense, understanding and character—is held in the highest esteem by all his colleagues in the U.S. Senate, even by those who do not always find themselves in complete agreement with his principles, and with his views on major legislative issues.

He has always stood firmly against wasteful and unnecessary Federal spending.

He has fought—often in the face of terrific opposition—to keep this country on a sound financial basis.

He has been in Congress since 1933—and, during all that time, he has been battling for economy—and against Federal deficits.

No one can say how much greater those deficits might have been—or how much higher our taxes might have soared—if this man of courage and conviction had not been in there, standing vigorously and tenaciously for fiscal integrity.

He began his career as a newspaper publisher, at an age when most of his friends were still in school.

He learned early that few people attain financial independence through borrowing.

As a businessman, he lived strictly by the policy of pay-as-you-go. And later, when he was elected Governor of his State, he continued to follow that policy.

He still believes in pay-as-you-go. He believes that the Government—like a responsible citizen—should pay its bills when they come due.

He is one of the few political thinkers in this country who was alert enough and astute enough to see at the outset that "liberalism"—so-called—was merely a pleasant-sounding name for statism and controllism.

In Congress today, he represents fidelity to public duty.

His front porch, ladies and gentlemen, is not for rent.

This great statesman of our day—this great living American—is Senator HARRY FLOOD BYRD, Democrat, of Virginia.

On the following evening, April 28, Senator BYRD was honored in his home community of Berryville, Va., when President Charles B. Shuman, of the American Farm Bureau Federation, presented him with one of its two distinguished service awards for 1958, the federation's highest recognition of public service.

Mr. Shuman read this citation:

Senator BYRD's long and distinguished record in the Senate of the United States has earned him the respect of all who are concerned over preservation of national solvency, the rights of States and individuals, and the traditional American liberties.

A foe of nonessential Federal spending and socialistic proposals regardless of the political party opposing them, Senator BYRD is one of the Nation's most forthright advocates of States rights.

Among those present for the ceremony were Roger Fleming, secretary-treasurer of the American Farm Bureau Federation, and T. T. Curtis, president of the Virginia Farm Bureau Federation. Gen. Pleas B. Rogers, president of the Clarke County Farm Bureau, presided.

The Logic of H.R. 3

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. HARRISON. Mr. Speaker, if we view H.R. 3 in a nonpartisan, nonregional light, we can see the clear and unmistakable outline of its logic. The issue it presents should have the active, dispassionate interest of every citizen who subscribes to the principle of an orderly body of law within the constitutional framework.

In this connection, I include an editorial which appeared in the Wall Street Journal on May 14, 1959:

THE RECONCILABLE CONFLICT

It would be a great pity if the opposing claims about the virtues and vices of Representative HOWARD SMITH'S bill to clear up conflicts between Federal and State law should come to obscure the basic constitutional question involved.

What Mr. SMITH seeks to do is to have Congress make a clear, when it passes a law, whether Congress intends that law to override or limit or prevent State law on the same subject or in the same area.

The public is told, on the one hand, that if the bill becomes law neither Congress nor the courts will be able to further encroach on the rights of the States to pass their own laws. And on the other hand, the public hears that if the measure passes, the Republic is in the direst danger. The Justice Department, for example, calls the legislation the most hazardous bill before Congress.

We think these are overstatements. As to the wording of this particular bill, Congress will, we hope, comb it carefully to see that it does not open the Pandora's box of troublesome relitigation the Justice Department says it will. In doing so, however, Congress would do well to remember that the Justice Department is the agent of the Federal Government, and that matters would be much easier for the Federal Government if the only law were Federal law.

But as to the philosophy behind the proposal, we would like to ask a simple question: What is wrong with Congress putting everyone on notice that no one should read into a Federal law more than Congress intended should be read into it?

It seems to us that this philosophy, if enacted into law, would provide a guidepost all the courts should welcome. There would be no guesswork attached to the intent of Congress; unless a law passed by Congress specifically provided that the intent was to occupy a particular field of legislation to the exclusion of the States, then the States would be free to legislate on the same matters.

That was at least the intent of the drafters of the Constitution and the intent of the States that ratified the Bill of Rights. Certain grants of power were necessarily made to the Federal Government, but they were specific and article 10 reserved to the States or to the people the rights not granted. No place in the Constitution does it say that once Congress has passed a law, the States cannot pass the same kind of law.

In recent years, tough, a doctrine of preemption that holds that where there is a Federal law a similar State law only muddies the judicial waters, has come to be accepted more and more by the U.S. Supreme Court. And it has been in the execution of this doctrine that the Supreme Court has been accused of writing law rather than judging law. The Court is certainly not wholly to blame, for there are areas where Federal and State legislation may well come into irreconcilable conflict.

But it is unrealistic to say that there are no areas where Federal law and State law may consistently stand together, as in the taxing power, or even strengthen one another, as in the Federal and State kidnaping laws.

So Congress has not only the right to tell the courts that it is the intent of Congress that this Federal law should supersede State law and that this one should not. It seems to us that the Representatives and Senators have a duty to do so, unless it is the intent of Congress to shape the Nation's laws so that in the end the last word on a local law comes from Washington.

Israel's Independence Day

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mrs. GRIFFITHS. Mr. Speaker, Israel, now in its second 10 years of development deserves our sincere congratulations. Just 11 years ago a half million Jews in Palestine proclaimed their independence and established the State of Israel. At that time Israelis constituted only one-third of Palestine's population, and the country was surrounded by many foes. But the new state, faced with what appeared to be insurmountable obstacles, fought a life and death struggle and was victorious.

To simply relate the remarkable progress this little country has made in a decade is impossible. She has trebled her Jewish population, still wanting to bring in another million Jewish immigrants; her trade has expanded; her natural resources have been developed; and her public health vastly improved.

But most important of all is the strategic position of Israel in the vital and important Middle East. She has done a tremendous job in helping to keep the democratic processes alive.

In a short period of time this young democracy has become an important nation of the world. May our best wishes go to Israeli citizens for a peaceful and prosperous future.

Modern Mother Unprepared for Motherhood

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an excellent sermon delivered on Mother's Day by Dr. Walter R. Courtenay, pastor of the First Presbyterian Church, Nashville, Tenn., and published in the Nashville Banner.

This very moving sermon on the subject of motherhood is one you will want to read. It follows:

[From the Nashville Banner, May 11, 1959]

MODERN MOTHER UNPREPARED FOR MOTHERHOOD

(By Dr. Walter R. Courtenay)

Is there a perfect mother in the house? If so, let her stand.

Is there present a mother who feels that she is all a mother ought to be? Let her stand.

Is there here a mother who feels that she deserves a halo-crown and a poem of praise because she has been so outstandingly successful as a mother? Let her stand.

Is there present one who prior to her marriage did all she could have done to be prepared for the tremendous task of homebuilding, mind building, body building, soul building, and community building? Let her stand.

NO ONE RISEN

I am relieved to see that no one has risen, and for that I am grateful. What would I have done if at some point in this series of questions someone had stood?

My point is made: There are no perfect mothers. As I have known my own mother and the mothers around me I am convinced of this:

Mothers are as earthy as cows' hoofs, and yet as heavenly as May mornings.

Mothers are as much flesh and bone as pork chops and mackerel, and yet are as unearthy as stars.

Mothers are as prone to fail as studyless students, and yet I marvel at their brilliant successes.

They are as stupid as morons; as insulated as thermos jugs, as explosive as firecrackers, as sputtery as hot green logs, as stubborn as messed-up zippers, as unpredictable as horse races, and as demanding as revenue agents.

And yet, being all of these, they are at times: As wise as Solomon, as outgoing as lovely trees, as receptive as gardens, as pliable as shoelaces, as dependable as salt, as knowledgeable as a high hill, as touchable as a ripe peach, and as constant as the North Star.

They are a strang combination of success and failures, smiles and frowns, praise and blame, aches and pains, hopes and fears, flesh and fancies, wishes and prayers. There is nothing on earth as down to earth as mothers when they are not "up in the air." There is nothing more natural, and nothing quite as supernatural. Mothers are people like the rest of us.

RUTH IN OLD TESTAMENT

No person in the Old Testament points up these observations more dramatically than Naomi's daughter-in-law, Ruth. When Naomi said to Ruth, "Your sister-in-law has gone back to her people and to her gods; return after your sister-in-law." Ruth replied in unforgettable words, "Entreat me not to leave you or to return from following after you; for where you go I will go, and where you lodge I will lodge; your people shall be my people, and your God my God; where you die, I will die, and there will be buried."

Ruth had what every woman needs and so few possess: Integrity, intelligence, poise, patience, loyalty, tact, honor, humor, perspective, resourceful love, and undying faith.

No wonder she was the great-grandmother of one of Israel's greatest kings and leaders, David. He who slew Goliath, who wrote the words, "The Lord is my shepherd," who sang, "the heavens declare the glory of God," who sinned as few men have sinned, and served as few have served, who extended the boundaries of his nation and blessed her with prosperity—a man after God's own heart was the great-grandson of a woman whose name was Ruth.

EQUIPPED BY MATURITY

I call attention to her on this observance of Mother's Day because she was equipped by maturity for marriage. So few are. The state demands that people reach a certain age, that they take a test to prove that they are not carriers of venereal disease, and that the marriage service be performed by a qualified person. That is all, and I say to you it is almost nothing. No test is given to see if the parties are emotionally mature, financially responsible, morally sound, socially compatible, and spiritually sincere.

The forces that destroy homes we never ask about before homes are formed. An applicant for a driver's license must prove he can drive, but an applicant for marriage needs nothing but an intent. A man must be licensed to operate a tavern and he must operate it within the law, but the State does nothing to set up regulations concerning the minimum requirements for the operations of homes.

MRS. NASH VISITS

It is reported to me that when Mrs. Nash visited Nashville recently she gave statistics that were startling. These I quote may not be exact, but they are close enough to be used:

"Among teenagers, one marriage out of three ends in divorce.

"Among college graduates, it is 1 out of 70.

"Among college graduates where the girl holds a bachelor of science degree in home economics, it is 1 out of 270."

I am startled at the figures concerning the latter group, but I can see the reason why: Home economic majors are the best qualified people for the task of homebuilding. In some respects, they are the only ones.

In terms of broad college training they are the best prepared people in the Nation. Oh, some of you who hold bachelor of arts degrees, who can read Latin and quote copiously from literature, look down your noses on girls who become home economics majors. You hold yourself as superior to them. But are you? Look at their courses:

Two years of liberal arts education which contains literature, history, languages, mathematics, and kindred subjects.

Two years of science, for example, physics, chemistry, bacteriology, nutrition, and biology.

Elective courses in music, art, creative writing, and so forth.

Two years of practical subjects, for example, home furnishings, home decorating, preparation and serving of meals, sewing, dress designing, the care and nurture of children, and may I add, the care and nurture of husbands.

When one analyzes the broad cultural and practical courses open to girls in modern home economics departments, one can only conclude that these people are among the select few who are being trained for the most important task in the life of our Nation, the task of creating happy, integrated, useful homes.

FINGER OF CRITICISM

This fact points the finger of criticism at universities and colleges which prepare girls for everything except this major task. We offer them a catalog of courses, few of which have any practical value in helping prepare them for marriage and the running of happy homes. We give them the same courses we give men, and in pretty much the same way. But women are not men, thank goodness, and most of them are not going to follow professional careers. What they need for their own sanity, security, and usefulness is a solid base of liberal arts subjects topped off by practical courses such as are included in a home economics major. Most of the girls graduating from our universities and colleges look toward the future as brides-to-be, and we do almost nothing to help them meet and fulfill their major role in the earth and the kingdom.

Nor are homes taking up the slack. It used to be that mothers in the homes of America prepared their daughters for marriage by teaching them the rudiments of house management, the preparation and serving of meals, sewing, decorating, flower arrangements, and so forth. Too little is being done in this area now. More needs to be done. It is to be regretted that in many instances neither mothers nor universities are helping prepare girls for marriage and the tasks that follow.

IN FARM HOME

Recently I sat in a farm home watching breakfast being prepared. The fried potatoes looked as a woman looks when she is well coated with cold cream. If the eggs had been dropped in the yard and then served they would not have been altered in appearance. Here was a girl of 19, the mother of two children, and she was absolutely lost in the kitchen and the nursery. I thanked God she was neither my wife nor my cook. No one could be less prepared for a major task. A friend of mine, rooming in that home, recently commented that it was truly tough when you ate three kinds of beans in the same meal and all of them cold.

Ah, you say, but she was a simple, untrained country girl. True. But would the case be different if I made a study of the graduates of most of our universities this June? Would they really know much more about their futures as wives and mothers? When a man gets around to marrying, he wants an attractive wife, a wife of intelligence and integrity, one who has some concept of culture and propriety. Every man wants to marry a woman with character, and not just character—one who is above all a wife, a mother, a house manager, a safe nutritionist, and a person who is fun to live with.

UNPREPAREDNESS

Nothing is more appalling about modern American life than the unpreparedness of men and women for marriage, homemaking, and the care and nurture of children.

I personally feel that I owe a double duty to life; a solemn duty to my ancestors, and a pressing duty to my descendants. To fail either is to fail. Homes are places where we ought to keep faith with those who have preceded us, and those who follow. When homes fail, where do you look for success?

So much has been written and said in a derogatory manner concerning those who peopled America and Great Britain during the last century, called the Victorian Period, that I get red in the neck just thinking about it. We accuse them of being authoritarian, indifferent to social problems, and ignorant where sex was concerned. Men and women have splashed that era of history over and over until it now looks like certain types of modern art which can only be characterized as the products of bewildered minds.

Two things the so-called Victorian era did: It taught children to respect authority, and it taught them manners. Now that we are all authorities on sex and freedom, what has happened to respect for authority, and what has become of good manners? And what, may I ask, are we to do with the fact that the Victorian era produced some of the finest men and women who ever graced the earth?

A recent writer in the British Weekly was contrasting the maligned period of Victoria and our own. In those depraved days children were taught manners. To enable them to learn what was expected of them they were taught this bit of verse:

"In silence I must take my seat
And give God thanks before I eat;
Must for my food in patience wait
Till I am asked to hand my plate;
I must not scold nor whine nor pout,
Nor move my chair and plate about;
With knife, or fork, or napkin ring
I must not play—nor must I sing;
I must not speak a useless word—
For children must be seen—not heard;
I must not talk about my food,
Nor fret if I don't think it's good;
My mouth with food I must not crowd,
Nor while I'm eating speak aloud;
Must turn my head to cough or sneeze,
And when I ask, say, 'If you please';
The tablecloth I must not spoil,
Nor with my food my fingers soil;
Must keep my seat when I have done,
Nor round the table sport or run;
When told to rise, then I must put
My chair away with noiseless foot
And lift my heart to God above,
In praise for all his wondrous love."

I know it sounds like prison life, but youngsters did learn the rules, and they did master good manners.

Now what of today? In Glasgow, Scotland, recently, children on buses became so rowdy and abusive that the drivers refused to work. Nelson Gray, the British Weekly commentator, remembering the bit of verse for children a hundred years ago, wrote one for this generation. Here it is:

"When in the queue, I musn't try
To trip, or push, the passer-by.
I must not chalk up words obscene,
Nor put slugs in the slot machine.
I must not fight to get upstairs,
Nor gamble for the unpaid fares.
I really must not slash the seat,
Nor on the upholst-ry wipe my feet.
I must not push folk off the bus,
Nor shout, nor kick, nor smoke, nor cuss.
I must not smash the window glass,
Nor spit upon the folk we pass.
I must not keep a chain or razor
In the pocket of my blazer—

But if you do, you need not fret,
A talking-to is all you'll get.
We can't deny the simple truth—
You're just a maladjusted youth,
You're really mummy's pride and joy,
Her mixed-up, teenage Teddy-boy."

We live in a day when our major attention is directed toward solving the gigantic problems of economics and politics on a worldwide scale. Conferences between free nations and the Communist lands grab headlines, and we wonder whether we can win the cold war that now exists and the hot one that may follow after. And while this goes on almost nothing is being done about the only basic defense we have against the atheism and brutality of Soviet lands—the American home.

EMPHASIZED SUBJECTS

We boast of the number of students graduating from colleges and universities, but are they prepared to become part of the great American team majoring on making marriages successful and homes secure? Have we done our job when we have emphasized subjects to be mastered, rather than life to be lived? If girls are not being adequately prepared for their main task on earth, that of wife and mother, whose task is it to prepare them?

Of one thing I am sure: If we do not do something drastic and thorough about preparing our young people for marriage, and our girls for the task of home making, mind making, body making, life making, community making, it will not make too much difference who wins the cold war, for America will already have been lost.

Awards Day Review, Air Force ROTC, Pennsylvania State University, State College, Pa., May 14, 1959

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. VAN ZANDT. Mr. Speaker, in the presence of Dr. Eric A. Walker, president of the Pennsylvania State University, and Col. O. H. Rigley, Jr., USAF, professor of air science of the Pennsylvania State University, the annual awards day review of some 2,600 Air Force ROTC cadets was held on Beaver Field, May 14, 1959. In addition to presenting the awards to the year's outstanding cadets it was my privilege to deliver the following address on the subject of the Nation's ROTC and its contributions to our national security:

As a member of the House Armed Services Committee, I am particularly interested in every phase of our Military Establishment.

The ROTC training programs effective throughout our Nation today are an important part of our Military Establishment.

During the early days of the Civil War, the military reverses suffered by the Union Army staggered the North, which was wholly unprepared for war. To guard against a recurrence of this condition, the Congress, in July of 1862, enacted the Land Grant Act, which is the foundation of the whole ROTC program. This act facilitated the establishment in every State of at least one college in which military tactics would be taught.

In general reorganization of the Military Establishment in 1916, the Congress enacted the original National Defense Act. Provisions were included in this act for the establishment of the Reserve Officers' Training Corps as a source of officers for the newly authorized Officers' Reserve Corps.

In 1920, the Air Corps, then part of the Army, established ROTC units at the Universities of California and Illinois, Massa-

chusetts Institute of Technology, and Texas A. & M. The current program now includes 100,000 students at approximately 177 institutions in 46 States and in the Territories of Hawaii and Puerto Rico.

Historically, then, the ROTC became a part of the educational scene as an effective way to prepare citizens in time of peace for military leadership in time of war, as well as to benefit those who will remain civilians.

Here at the Pennsylvania State University we have the third largest AFROTC unit in the United States with over 2,600 cadets enrolled, and I am honored to have been invited to participate in your annual awards day review.

In congratulating the officers and cadets of the Penn State units I do so in appreciation of their great contribution in advancing the objectives of the Air Force ROTC.

At this time I should like to briefly discuss our overall military programs and to encourage your continued interest in maintaining for the Nation the highest possible degree of military preparedness. I have in mind three points.

First, the international challenge facing the United States.

Second, the responsibilities of our defense program in supporting our national policy and, finally, the Air Force program within the Defense Establishment.

In connection with our international challenges I am sure all of you have read or have heard that "the aim of Soviet-directed communism is to establish its ideology throughout the world." In a theoretical sense the purpose is to create a Utopian society, with everybody equal, and without government. Their real interest is world control.

Based on what we know, the Soviets are increasing the capabilities of their military forces with a vigor and zeal available only to a forceful dictatorship. Concentrated scientific, industrial, educational, and military programs now underway in the Soviet Union are primarily geared to the creation of an aggressive force. We must call it an aggressive force—it is not a defensive structure—for no one has indicated an intent to attack them.

As a guarantee of future progress, the Soviets are increasing the number of graduates in the technical fields.

Unlike our own programs which incidentally will produce 10,000 fewer engineers than were needed this year—their educational plans virtually guarantee as many as the state requires.

It appears, then, that on the homefront the Soviets are gearing their capabilities to continued aggresson, indirect or direct.

In discharging our responsibilities in meeting this challenge the pressure exerted by the Soviets against the free world has posed both political and military challenges to the United States. As a result, the Defense Department—which has the responsibility of equipping a force complex to counteract the military challenge—has created a versatile defense—offense capabilities in support of national policies.

These capabilities are inherent in our defense team that must be able to defend the homeland from attack, deter all-out war—or win such a war if deterrents fail—and maintain flexibility to cope with local crises whenever and wherever they occur. In all sincerity, I am convinced that we possess the ability to meet these requirements.

And when I say "We," I am referring to all the services—Air Force, Army, Navy, and the Marine Corps.

Time will not permit me to discuss in detail the Air Force program within the Defense Establishment. However, I want to assure you that the Air Force is ready to perform its assignments, and in a superior manner. Its integrated system that includes missiles, modern aircraft, radar warning lines, and the semi-automatic ground environment creates a formidable network ready to meet a potential aggressor. In a few words, our Air Force represents the air might we need within our Defense Establishment.

Again, let me congratulate the officers and cadets of the Air Force ROTC units here at Penn State because when we speak of the military might of our Nation we must include the ROTC cadets—college students today and officers of tomorrow's Air Force. Congress and the American people are proud of your fine contributions to the security of our Nation.

German Sudeten Day Celebrated in Austria

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. BROCK. Mr. Speaker, the attention of the House is called to the annual Sudeten German Day, which will occur on Whitsuntide, May 17–18, in Vienna, Austria—free Austria.

On that occasion, several hundreds of thousands of people will gather, to reaffirm their dedication to the principles of democracy, the freedom and dignity of the individual, and the welfare of mankind.

It is significant that this testimonial should occur during the period that two other events of world interest have taken place. I refer you to the recent free elections in Austria, conducted without force or violence, when the last few seats held by the Communists in the Austrian Legislature were voted out of office. At the same time, the foreign ministers of the free world will be meeting with the representatives of the Soviet Union, in an effort to work out settlement of the German question and bring about reduction in the "cold war."

The Vienna gathering in the interest of democracy may not set too well with the Russian delegation at Geneva but should have a salutary effect on the foreign ministers of the free world, to hold fast in the determination that any negotiations must be concluded only on an honorable basis—without retreat from established principles and prior commitments.

Mr. Speaker, I, therefore, request permission to extend my remarks and include in the RECORD a copy of my letter to Dr. Walter Becher, Secretary General, Sudeten German Council, commending these people meeting at Vienna for their formidable stand in the face of adversity.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., May 4, 1959.

Dr. WALTER BECHER,
Secretary General, Sudeten German Council, Munchen, Germany.

DEAR DR. BECHER: This will acknowledge your letter of April 15, advising me of the annual Sudeten German Day occurring on Whitsuntide, May 17–18, in Vienna, Austria.

In these days of international stress and military and diplomatic uncertainty, it is refreshing to contemplate a gathering of several hundreds of thousands of willful people reaffirming their dedication to democracy and freedom of the individuals—at the same time expressing their opposition to the fallacy of communism, which fails to recognize the dignity and the welfare of mankind.

The Third Congressional District of Nebraska, which I have the honor to represent, has a majority population of native Germans, and German extraction. They are very substantial, law-abiding and God-fearing citizens. The majority belong to and worship in the Lutheran Church. The present division of Germany is very distressing to these people.

I recall we had a German-language newspaper, published in Omaha, Nebr., which had a wide circulation in the Third District and throughout the State of Nebraska.

It is encouraging to know that your people stand firmly for the reunification of the German nation, under democratic principles of self-government and will vigorously oppose any attempts to foster Soviet-dominated rule in it's stead.

May I take this opportunity to commend your people for their courage and determination and to restore their nation, free from totalitarianism, atheism, and Marxism.

Sincerely,

LARRY BROCK,,
Member of Congress.

On Keeping the Record Straight

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I wish to include the following brilliant editorial from the altogether exceptional pen of William Bohn, the distinguished editor of the New Leader.

This column is a satirically intelligent analysis of the CONGRESSIONAL RECORD and the Appendix. Knowing that institutions should be kidded, and many times are strengthened by such kidding, I am introducing into the RECORD, Mr. Bohn's "deathless piece":

ON KEEPING THE RECORD STRAIGHT

(By William E. Bohn)

The CONGRESSIONAL RECORD is both a record for the future and a source of information for the present. Though it is published only when Congress is in session, it plays a great part in the life of the Nation. There are few papers and fewer Washington correspondents who give their public any adequate picture of what goes on under the Capitol dome. You can read every word that is published in most papers without getting much of an idea of what really happened. I always reserve my judgment on deeds and events until I can get hold of the RECORD. There I get the exact wording of bills and the arguments on both sides.

I don't know how many copies are printed and distributed. I must find out. But it is obvious that thousands of copies cover the country and are read by editors, writers, scholars, and other people who need exact information about our Government.

Each issue of the RECORD contains a second chapter called the Appendix. This is a record only in the most general sense. It is made up of items of the most varied sort contributed by Members of the two Houses. Obviously there is no general consensus as to the purpose of this extensive and amusing

publication. Each statesman introduces his contribution with a modest preamble: "Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following brilliant editorial from the altogether exceptional paper published in my hometown."

Many of the speakers mention unanimous consent. In any case, it is taken for granted. If some opposing statesmen were to rise in wrath and say, "What this low-lived fellow proposes to print is beneath contempt," the man would be forced to sit down and pocket his contribution. But as far as I know this has never happened. Every Member of the Senate or House has as one of the perquisites of office the right to print, without expense, anything that takes his fancy.

In order to arrive at some sort of opinion about this strangely selected and edited collection of literary items, I have spent a good deal of precious time in recent weeks making an analysis of five issues of this Appendix. For no reason at all I picked on five consecutive numbers from March 16 to March 20. How typical the production for this week is I cannot tell. I feel sure, at least, that it is average in that it contains every sort of item that an imaginative man could think of.

My five numbers contained 312 pages, an average of 62. On these pages, tightly printed in small type, I found 385 items. Of these, 245 were contributed by Democrats and 140 by Republicans. These figures roughly represent the comparative strength of the two parties. Members of the House made 284 contributions and Members of the Senate added 101. It is obvious that Senators make more use of their privilege than do Members of the larger and theoretically more lowly House.

I take for granted that the purpose of this department of the RECORD is to furnish in ready and convenient form material which will be useful to Members of Congress in their lawmaking activity. I found in the issues of those 5 days 45 articles containing substantial material connected with public affairs. Some were reports of addresses, some were statements presented to committees of one of the Houses, some were the results of investigations carried on by groups of experts outside the Government.

The newspapers of the country naturally furnished a substantial proportion of the material reprinted. In the 5 numbers of the week which I chose as typical, there were 90 editorials and 50 news stories or newspaper articles—many of them in the form of columns.

Most Members of Congress make no demands on the space of this publication. On the other hand, certain others are constantly popping up and asking unanimous consent. For example, the doughty THOMAS J. LANE, a Democrat from Lawrence, Mass., injected nine deathless pieces which he obviously considered worth their space. Most of his contributions dealt with St. Patrick, whose gaily celebrated day came in the week I chose for my little study. In one case, LANE devoted more than 6 pages to a report of a friend's travels through Ireland.

I am not objecting. I am merely desirous of learning how such a charming and detailed report on the scenery of the old country can help our Congress attend to its business. Senator JACK KENNEDY, Democrat, of Massachusetts, shares with us a large number of editorials in support of himself and his proposals. Here and there is a Congressman with a hobby. JOHN DINGELL, Democrat, of Michigan, God bless him, brings in every item he can find which puts in a stroke for purifying our water.

There is a commendable effort to warm the hearts of the folks at home. If some high school boy has won a prize, if some preacher has observed his 100th birthday, if some constituent has sent in a letter in favor of lowering taxes and simultaneously balancing the budget, you may be sure that the event will not pass without mention.

Editorial Comments Preserved for History

EXTENSION OF REMARKS
OF

HON. WILLIAM J. RANDALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. RANDALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I think it is fitting and appropriate that there be consolidated into one brief summation a sort of résumé or roundup of excerpts from editorials of a few of the great papers of America, along with some of the columnists and commentators, drawings together in this entry what they had to say editorially or in summary about our former President, Harry S. Truman, on and following the event of his 75th birthday, commemorated by the diamond jubilee in New York City and 16 other cities throughout the United States on Friday, May 8.

The New York Times said:

It is hard to believe that Harry Truman is 75 today. Those brisk early morning walks, the keen wit and alert mind he shows when testifying before congressional committees, the vigor of his pronouncements on matters domestic and foreign, all these contradict the calendar's testimony.

Mr. Truman's place in our country's history is for the historians to decide, but we can be sure it will be no small place. His place in the affection of his countrymen on this, his 75th birthday, is already secure and beyond question. May there be many more birthdays in good health and good spirits.

The Evening Star, Washington, D.C., commented:

Harry Truman, 75 today, wears his years well and proudly. * * * In a sense, Mr. Truman's is the American story—as Americans have believed it for generations. Of modest family heritage and preparatory background, he found his true metier in politics and stayed with it from the precincts of Kansas City to the White House. In his nearly 8 years as President of the United States, Mr. Truman carried responsibilities that were awesome in their bearing upon the safety and welfare of his country and indeed upon world history * * * likely to assure the Missourian a respected place among those who have held this Nation's highest office.

Columnist Doris Fleeson had this to say about Mr. Truman:

Wide acclaim and affection for a public figure are always easier when that person's ambitions are behind him. Harry Truman is seeing happen to him the same process by which his friend, Alben Barkley, once a truly controversial figure in Kentucky and national politics, was raised to eminence of a party saint even in Kentucky. * * * Mr. Truman's happiness these days is not the careless kind. He cares very much what happens to America and to mankind. What is remarkable about him is that with all his knowledge of what we face, with all his concern, he remains a happy man. He has risen triumphant from threatened defeat himself. The light of victory still shines for him in the dark hours.

Then from the Washington Post, Washington, D.C., which asks a question and gives its own answer:

Why is it that Mr. Truman has become so much an institution? There is great admiration, of course, for his courage in big decisions when he was in the White House. No President, we suppose, can be wholly immune to the thought of his ultimate place in history; but Mr. Truman seemed to approach many important issues with the simple objective of giving them the best evaluation and judgment of which he was capable—and then ceased to worry. Undoubtedly some of the admiration also stems from Mr. Truman's humble origin which lingers even in his metaphor, his self-education, his quiet willingness to shoulder huge burdens. He was the average man risen to uncommon heights. * * * But he emerged undaunted, and in the net his exaltation of the Presidential Office enhanced the dignity of it. More than anything else, however, we suspect that Mr. Truman's great zest is what gives him such a unique position today. He can be angry, but not mean.

Coming from the New York Herald Tribune:

Harry Truman is 75 today, or so the records say. Actually he doesn't seem a day over 60. * * * Vitality is one of Mr. Truman's great gifts to the American scene, and the astonishing thing is that he didn't lose it to the Presidency. During his 8 years in office he made many epochal decisions which would have sapped the strength and ruined the sleep of other men. These were decisions that helped end World War II, begin the atomic age, launch the United Nations, and contained the spread of communism by such dramatic steps, as the Berlin airlift, the Korean war, the NATO Alliance, and extensive foreign aid. Time is likely to judge these decisions well, just as it now favors Mr. Truman himself, giving him the zest to lecture and to write, to talk to countless students and scholars, to assemble at Independence a museum that will illuminate the Presidency for future generations.

The Chicago American in speaking of the birthday festivities said:

The general holiday air about the celebration emphasies a fact that has bothered many of Truman's critics. It is that Americans by and large like Harry Truman very much, whether it's because of his politics or in spite of them. (His) * * * energy and zest for living, his liking for a good fight, his unglamorous forthrightness, even his flat midwestern drawl, somehow project an image of themselves that Americans like.

From down at the end of the Florida Peninsula, and in the editorial columns of the Miami Herald, we read:

The man from Independence is 75 today. * * * It is good indeed to have his likes around, ever willing to sound off on any subject and giving it to the opposition at every opportunity except in matters concerning his Nation's foreign policy. * * * His birthday cake today might properly be spiced with ginger.

Drew Pearson, one America's most widely read columnists, who was at one time a strong critic, but now a stanch friend, writing from an Independence, Mo., dateline at the Truman Library just a few days before the birthday, found it very easy to say:

A guided tour through the Truman Library by the man who so vigorously molded American history is a fascinating experience. * * * It's like rolling back the pages of history.

After concluding the tour, Pearson pointed out that one of Mr. Truman's most prized possessions is a picture of Winston Churchill and himself which has a scrawled inscription by the Prime Minister:

To President Truman, whose decisive strike against aggression in Korea turned the fortunes of the free world to sure hope of peace.

Although the Christian Science Monitor did not say so editorially, in a prominent news article, one of its correspondents has this to say of the birthday:

The general theme of the tributes was that whether or not history ranks the 33d President of the United States among the greatest, he will be revered as a man of decision, energy, and full of deep respect for the high office into which he was catapulted by the passing of Franklin D. Roosevelt in April 1945.

The well-known commenator, H. V. Kaltenborn, who appeared on the closed TV circuit and who at midnight on election night in 1948 had forecast Mr. Truman's defeat, speaking from Boston recalled that night in 1948:

Mr. Truman went back to sleep while I waited for the Dewey votes that didn't come in.

And on the serious side, Mr. Kaltenborn summed up the Truman contributions to the world:

He led the free world in the fight against communism, launched the point 4 economic aid program, and helped Greece and Turkey defeat the Communist menace. Best of all he took the bold step of using force to defeat Communist aggression in Korea.

Along with some of the rest of us, Mr. Truman likes to refer to Kansas City, Mo., our large neighbor to the west, as just a suburb of Independence. There, the Kansas City Star which over the years has not always thought best to be enthusiastic about Mr. Truman in an editorial entitled "The Man of Independence Reaches 75," proceeded to observe:

On the night of January 21, 1953, * * * the former President began his latest career, retirement. * * * Few men during the busiest periods of their lives have been as active as Harry Truman in the recent years. As author, he has turned out his two-volume "Memoirs," and many articles on world affairs. Financing was completed on the Truman library project, the building constructed, and turned over to the people of the United States. * * * The role of university lecturer has delighted Dr. Truman (honorary doctorate, Oxford University). * * * As a senior guide at his library, he has amused guests of world fame and bus loads of schoolchildren with choice comments. * * * Men of good will in all parts of the free world will be wishing the man from Independence godspeed and many more vigorous years on this, his diamond jubilee.

Of all the great newspapers, perhaps some of the best comments came from the conservative Atlanta Constitution, and it devoted quite a lot of space to a review of his achievements, touching upon some phases of his career not mentioned by other papers when it said:

It is interesting to note that in the years which have passed since he left the White House the esteem and affection in which the people hold him still is growing. He is a remarkable man, Harry S. Truman. History will acknowledge he was a remarkable President. He has a sense of optimism, faith in the right, in himself, and his country. He possesses a great knowledge of history and reverence for the office he held. But he acted less like the image the Nation holds of the Presidency than perhaps any other. It was his responsibility and decision to usher in the atomic age. He brought the country into the United Nations. He did not hesitate to meet the Communist challenge headon in Korea. The cost was great as he knew it could be. But containment of communism's geographic advances began there. He did not falter in his duty to dismiss a popular and ambitious general who seemingly had forgotten that in the United States the President is Commander in Chief. He buoyantly and confidently won an election everyone said couldn't be won. * * * So today when there are so many weaseling words and so much of the legalistic "whereas and whereof" in our language, it is good to have Harry Truman around, speaking out of his heart and faith with no mincing of words. So, Mr. Truman, the Atlanta Constitution wishes to join in the happy birthday chorus and to wish you many more years of happiness and health.

Management Participation in Political Education

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a copy of an address made on May 6, 1959, by J. C. MacQueen, manager of employee and community relations, General Electric Co., Cincinnati, Ohio, before the 20th Ohio personnel institute at Ohio State University, Columbus, Ohio, on the subject of "Management Participation in Political Education." I am sure every Member of Congress will find Mr. MacQueen's address to be very interesting and informative:

MANAGEMENT PARTICIPATION IN POLITICAL EDUCATION

(By J. C. MacQueen)

I certainly appreciate your extending to me this opportunity to meet with you tonight to discuss one of the most serious challenges facing business management today.

One of the phenomena of our generation—and one that will have some of the most far reaching impacts of all history—has been the rapid expansion of Government.

For example, two decades ago our Federal Government had less than a million civilian employees with an annual payroll of about a billion and a half. Today, there are 2½ million civilian employees of the Federal Government with an annual payroll of more than $11 billion.

During those same 20 years, the Federal budget increased more than 800 percent. This expansion was more than twice as fast as economic expansion during that period as measured by the gross national product.

The figures would be even more impressive if we looked at them over three decades rather than just since 1939. Government mushrooming growth began well before 1939. For example, the per capita portion of the national debt has increased from about $140 three decades ago to almost $2,000 now.

With this expansion, Government has extended itself into areas long considered outside its orbit. It has grown with all the instinct of a vegetable, feeding like a tumorous growth on the rights of States and individuals and the vitality of free enterprise.

The Hoover Commission found a few years ago that our Government was engaged in about 3,000 different enterprises in direct competition with private business—usually small business. They range all the way from steamship lines to diaper laundries and include 20,000 business units.

The Federal Government is, today, our Nation's largest electric power producer, insurer, money lender and borrower, landlord and tenant, holder of grazing land and timberland, shipowner, and truck-fleet operator. It owns a sizable percentage of the total real estate in the United States. It is liable for the medical bills of one out of every five Americans. It can control the profit and loss of American business.

Business management has howled a bit about the encroachment of Government on its role, but generally it has gone back to business as usual without taking any action steps. It seems to have been a basic tenet among businessmen to consider that Government was not our business.

It has now reached the point that we can no longer ignore the plain fact that government is our business. Whether we like it or not, government is our not-so-silent partner at the shop. And, at the rate it is moving it will soon be firmly established as the senior partner.

Already it takes more than half our profits in a direct slice right off the top and lots more indirectly. In the day-to-day operation of the business, more and more business decisions that have been traditionally made in the competitive marketplace are being transferred to government bureaus and legislative halls.

Government policy has contributed to the inflationary forces that are infecting our entire economic system. They have contributed to a threatening growth of union monopoly and to a business climate that stifles growth and development.

The fact is, and we must face up to it, we have reached the stage where to have an effective voice in many of the major decisions that affect our business, we must make that voice heard through government. Our corporate survival is at stake and with it the blessings of the free-enterprise system that accrue to all Americans.

A relatively few businessmen will be able to have a direct voice in government as elected or appointed officials. But the great majority of us cannot play such a role. We must make our voices heard from back home. We can do this through politics.

Now this is easier said than done. Many people do not fully appreciate the need to take an active interest in politics. And many who do recognize the need do not know how to go about being effective in this field.

A vast segment of America is going to have to go back to school and study their lessons in practical politics. Business management is going to have to be ready and willing to be the schoolma'am.

The fact that you have invited me to come here tonight and discuss our experiences at General Electric in Cincinnati in political education shows that you do not need to be persuaded that action is necessary, but that you want to know what to do and how to do it (or at least how we do it).

Unfortunately, not all business management shares your recognition on this score.

The first step is going to have to be to motivate our business associates and the friends of free enterprise to take an interest—to build in them an appreciation of the role that politics plays in modern civilization—to impress upon them the vital importance of citizen participation in government through

politics—to tear down the all too prevalent idea that politics is a nasty word.

At General Electric in Cincinnati we have utilized every means of communication with our employees at our disposal to try to accomplish this phase of political education among our employees.

For example, our plant newspaper, distributed each Friday to 15,000 employees, has repeatedly discussed the need for citizen interest in government and, thus, in politics. One of the many full-page display-type features that we have employed in this effort was headed "Politics and You" and went right to the point. Under a picture of the Capitol Building in Washington, the feature read:

"Like the weather, many people talk about politics but few do anything about it. Beyond occasionally voting, they are content to be spectators as far as politics is concerned. They see no reason why they should be active in politics.

"Yet, there is hardly a facet of modern life that is not affected by local, State or National Government. Government tells us how fast we may drive on our streets and highways. Through taxation, Government decides how much of the money we earn we may take home. It builds dams to control floods and generates electricity and manufactures ice cream; it buys surplus farm crops. It stands guard over our freedom and preserves law and order.

"Yes; the course of government directs the course of our lives, and politics controls the course of government.

"That is the reason we should all be actively interested in politics—that is the reason we should not be content to be political spectators. Through political participation in support of the type government we believe best for our country, We can help direct the course of history as well as the forces that influence our lives."

The feature was supported by an editorial that attacked the idea that politics is a dirty business. Headed "Hands in Our Pockets," it stated:

"Some joker is reported to have said that one can always tell a Washington tourist from a politician because the tourist will have his hands in his pockets and the politician will have his hands in someone else's pocket.

"Actually," the editorial continued "this is very unfair to the many deeply dedicated men and women who take an active part in politics, often at great personal sacrifice. However, it reflects the all too prevalent feeling among many Americans that politics is a dirty business and that politicians are shady characters. This idea discourages many citizens from participating in political activity.

"If politics becomes a dirty business and shady characters get control of important positions in our government, local, State or national, it is the fault of those of us back home who have our hands in our pockets where politics is concerned. As Howard Crosby, an American clergyman of the 19th century wrote: 'To let politics become a cesspool and then avoid it because it is a cesspool, is a double crime.'

"It is not enough just to vote on election day. To take full advantage of democracy, we must take our hands out of our pockets and put them to work for the political philosophies we believe best for America—present and future—and in support of candidates who uphold these philosophies.

"The best way," the editorial concluded, "to be certain of having decent politicians is to be one."

These are only examples. We have repeated this idea time and time again in the Plant News. We have utilized our management memo and newsletter to direct more concentrated appeals to some 3,000 members of our management group. We have supplemented these with reprints of pertinent articles and speeches by national political and business figures, including top General Electric management.

Nor have we confined our efforts to just General Electric people. We think all Americans should take a serious, constructive interest in Government. We have used direct mailing to community through leaders, editorial comments on the radio, paid institutional advertisements and speakers who go before community organizations and groups.

But inspiring an interest and desire among citizens to be effective politically is not enough. Most of us just do not know how to go about getting into politics or how to be effective in that realm.

The practice of politics is an art. It is an intricate and complicated business. It is not just an election day activity—it requires constant attention. Success pretty much requires practical know-how. And, an amateur without understanding of its processes and know-how, can do more harm than good for the cause he would support.

Therein is found the second challenge to management in its role as a political schoolmarm—teaching the art of practical politics.

At our General Electric plant we have taken two long steps in this direction.

The first was last September. We held a 3-day seminar for about 25 of our top management and invited representatives of 5 neighboring businesses. It was conducted by Joe Eley and Cliff White, of Public Affairs Counsellors, Inc., both old hands in the give and take of politics. They are professional consultants on the subject. (Incidentally, there are a number of consultant firms in America now that are geared up to give management practical help in political education.)

On the first day of the seminar, the chairmen of the political parties in Hamilton County met with us. They discussed their organizations with us very frankly and drew on their years of experience to give us a firsthand insight into politics at work.

During the afternoon and all day the next day, Joe and Cliff led us in discussions of political organization and function from the precinct to the national level. On the third day, we rolled up our sleeves and worked out ways to multiply the information we had received and to put this new knowledge and insight to work.

In concert with this, a task force of five members of our management prepared a course in practical politics to be offered to a broader base of management and eventually to any employee who is interested.

They prepared a manual to serve as a basis for the course of study. It considers the structure of government from the local to national levels and shows how political organizations parallel this structure. It traces the histories of American political parties, considering the influences that have been exerted on them in their formation and development and the situations that they face today.

To supplement the manual, a number of booklets and pamphlets were selected from a wide variety of sources including political parties, government, and pressure groups. A textbook was obtained that presents the campaign experiences of its authors.

Participants in the course meet in a 2-hour session each week for 8 weeks. During these sessions they reported to their fellow participants on research projects that they have pursued. The entire course is built on the basis that we learn best by doing. It stresses practical participation.

During the 8 weeks, participants interview political figures including legislators and grassroots party workers. Each participant writes a Congressman or Senator and discusses a current issue of government; then the group compares the replies received. Participants also visit a session of a governmental body such as a city council.

The results to date have been excellent. The course was introduced early this year with maximum enrollment of 180. Now we are offering the second series of classes, broken down into 12 classes with 15 in a group. Before the end of 1959, about 850 members of our management at Evendale will have completed the 8-week series.

There is evidence that more political interest is being demonstrated by a broader base of citizens in Hamilton County today than for many years. Some of the local political organizations that had gotten sleepy at the switch have been revitalized into renewed action by the interest of these men. A number of the persons who took the course in the first term have been given positions of authority in the Republican and Democratic Parties of the county. Several are candidates for office in municipal elections this fall.

We feel that this course is a particularly valuable phase of our management effort for political education. I believe that other companies that follow suit will find this is true for them, too.

Incidentally, for those who cannot or do not want to prepare their own courses, there are readymade courses available from a number of sources including the U.S. Chamber of Commerce. Or, for that matter, the consulting firms I mentioned before are available to come in and prepare courses tailored to the particular needs and desires of your management. In some cities—notably, Syracuse, N.Y.—several companies have pooled their resources to prepare and offer such courses jointly.

The third phase of political education in which we are engaged down at Evendale is that of creating an appreciation of sound political philosophy and support for sound issues.

Here again, we utilize our employee communications media. Through them we discuss general political and economic philosophy.

We try to explain that Uncle Sam isn't Santa Claus, that there is no such thing as something for nothing from the Government. We try to explain with clear logic the stake each American has in free enterprise. And we discuss particular issues that are current. For example, last year we discussed the President's defense reorganization and we presented the facts as we saw them in the right-to-work controversy.

To help us monitor the actions and trends of Government, General Electric has recently established on a national level a government relations service. This organization maintains offices in Washington to keep a firsthand finger on the pulse of our National Government. Its staff of analysts issues regular bulletins to General Electric management in all parts of the country to keep us in touch with happenings in Washington so we can direct our attention to timely and important issues.

Here in Ohio, we have established a similar watchdog operation in our General Electric legislative council. This council is composed of representatives of the several General Electric operations in the State, each of whom keeps a close personal watch on a particular segment of the activity of our State government and passes on his information to the other company locations.

In the use of the communications media I mentioned earlier, we do not tell our people how they should feel on a particular issue. We present facts and urge them to study further if they wish, and then make up their minds and followup.

By followup, we explain that they are exercising good citizenship when they let their representatives in government have the benefit of their views on matters of public

interest. We urge them to let their representative government really represent them.

A word of caution: in communicating on political issues and philosophy, extreme care must be exercised to make certain that the wrong kind of reaction does not result. There are forces in our society that are only too anxious to interpret any business message on politics, regardless of the logic of the argument, as big business against the little man.

We must make sure that the words we use in carrying our message are so clear and so meaningful that there can be no doubt as to their meaning and intent. It is also important that we listen as much as we talk so we can tie our messages to the things that really interest our audience.

We must make ever certain that our audiences recognize that we are not trying to create a controlled pressure group that, on signal, will exert its influence for or against any particular party, candidate or issues. There are too many elements in society trying to do that now. We don't want that at General Electric even if we could have it.

Ours is the objective that should be common to any effort toward education—to get people to think for themselves. We want them to consider the issues of the day from the framework of a working knowledge of government and politics, to make up their own minds and then act to make sure we have good government.

We are trying to show them that the best way for them to be effective in doing this is to have a voice in the selection of sound candidates, to get out enough enlightened votes to elect those candidates and then to keep those candidates apprised of what they, as good citizens back home, are thinking.

This is not the end of our story. Our efforts to meet the challenge to management in political education will be a continuing effort. We hope that others will join us in this. If they do, we will probably learn from them, and we hope they will learn from our efforts.

We hope that all citizens—not just businessmen—will heed this call and assume the duty of good citizenship to be politically astute and active.

In that way we can have more responsive government—that will benefit the free enterprise system and thus all citizens, present and future—to assure a better America.

That is the objective of our management efforts in political education—a better America for all Americans. There is no more important objective. We feel that there is no more certain way to contribute to it.

Thank you.

San Luis Reservoir Bill, H.R. 5687

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. COHELAN. Mr. Speaker, typical of the growing interest and correspondence with reference to the San Luis reservoir bills, S. 44, H.R. 301, and H.R. 5687, is a telegram I have received from C. J. Haggerty, secretary-treasurer of the California Labor Federation, AFL–CIO, which I submit for the attention of my colleagues.

It is distressing that legislation of such great interest in the U.S. Congress which was the subject of 4 days of brilliant and extended debate in the other body should be receiving very little attention in the California press and particularly in the San Francisco Bay area press. It is hoped that before a final decision is made a full account will be available:

Hon. JEFFREY COHELAN,
House of Representatives,
Washington, D.C.:

California Labor Federation, AFL–CIO, requests that House consideration of H.R. 5687, San Luis unit, Central Valley project, be postponed until report of House Interior Committee is published and distributed. Record of published information in California is so meager, inadequate, and in some cases inaccurate that publication of committee report is fully necessary so that people of California may know the truth about the issues involved. We, therefore, request that you read this telegram into the printed record of the House and use your influence to postpone debate until the committee report is printed and distributed to us and to other interested citizens. H.R. 5687 raises issues of such great principle that public interest demands the fullest possible publicity and ample time for analysis and consideration. We urge your cooperation.

C. J. HAGGERTY,
Secretary-Treasurer,
California Labor Federation, AFL–CIO.

Testimony of Hon. Leonard G. Wolf, Before Manpower Utilization Subcommittee

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extent my remarks I would like to insert in the RECORD a copy of my testimony before the Armed Services Subcommittee on Manpower Utilization:

TESTIMONY OF HON. LEONARD G. WOLF, DEMOCRAT, OF IOWA, BEFORE MANPOWER UTILIZATION SUBCOMMITTEE OF THE HOUSE ARMED SERVICES COMMITTEE, MAY 12, 1959

Mr. Chairman and members of the subcommittee, I consider it on honor to appear before this committee today. I consider that the duty of this committee is one of paramount importance. And it seems to me that the committee in order to a comprehensive job must undertake to investigate fully all aspects of our manpower procurement and manpower utilization programs. Hence, I suggest that the committee undertake a full and complete investigation and study of:

1. The operation of the Universal Military Training and Service Act, the Reserve programs and the programs of procurement of military personnel by the Amed Forces.

2. The alternatives to the system of induction of civilians for military training and service as a method of maintaining the personnel strength of the Armed Forces; and

3. Manpower utilization within the armed services in a way which will be the most efficient and give us maximum national security while protecting basic freedoms of the individual.

Clearly, this is a difficult task. I might suggest as you are already well aware, that there are going to be certain interests who out of a personal desire to potect themselves, will not necessarily help this committee in its task. On the other hand, there will be those who will honestly feel that no changes are necessary; that the present haphazard system is the best of all possible systems. Or some may be conservative in particular matters as, for example, Secreary Finucane was in his testimony before the Armed Services Committee. He stated that "conformity with habits of the past" governed much of the thinking on the draft issue, and in fact, seemed to be the reason that 4 years was chosen as the number of years for the draft extension. However, I do not wish to discuss this issue directly.

Clearly, the problems that will be considered by this committee will go to the very question of our defense posture and our methods of defense. It will be the task of this committee to shake out the cobwebs from the thinking on defense that has gone on in the administration in the past few years.

Because the title of this subcommittee is indeed "Manpower Utilization" is might be a good idea to start with a short discussion of possible ways to change the present armed service idea that almost every cook, bookkeeper, and warehouse employee who is not attached to a combat outfit must be given combat training. It should be noted that at present no more than 25 percent of the men in the Army are actually combat troops. The rest fall into the category of supply or support personnel. It seems clear to me that a great number of the jobs presently performed by soldiers could be better performed by nonmilitary or civilian personnel. Certain illustrations tend to prove that the size of the Army could be cut drastically and improved as an effective fighting force if certain steps would be taken along the lines suggested by other similar projects.

In Aviation Week, September 6, 1954, there appears a discussion of a project called Project Native Son, which the Air Force put into practice. This program is described as essentially the replacement of a military man by an indigenous civilian. "We would save military personnel in support-type activities." In turn, this makes an airman available for a new combat unit. "This project also reduced requirements for military housing and supplies, thus saving money. This project uses civilians of the country where the Air Force maintains bases. In 1954 the Air Materiel Command found it could reduce its size by using 14,000 civilian personnel." I suggest that if such a program can be undertaken with foreign nationals, an even larger program could be undertaken by employing American civilians in the continental United States.

It is certainly the task of this committee to examine the extension of such programs in the United States in those activities that may just as well be performed by a civilian. Obviously, there will be some close questions in this field, but this should not stop the Congress from making some policy determination on this matter instead of letting the problem continue to slide.

A second illustration showing the ways of replacing armed services personnel with civilian manpower is given to us by the Seabee example. Congressman THOMAS B. CURTIS, before the Seabee veterans convention in St. Louis back in 1954 made the following remarks. His thoughts on this subject are still relevant today. "When we examine * * * the work performed by men in uniform for the Military Establishment, we will find that at least 80 percent (and some even estimate higher) is not fighting nor will it ever be fighting. It has to do with supplies, transportation, warehousing, maintenance, overhaul, bookkeeping, housing, feeding, overhead. Nor am I referring to the borderline cases, such as field or frontline maintenance, or frontline feeding, and so forth. Obviously any work on the frontlines will involve the need for military discipline."

Now if 80 percent of the men in uniform are never going to be engaged in fighting, what in heaven's name are we talking about training 100 percent to fight? If indeed an analysis of the job requirements of these 80 percent reveals, as it does, that the skills needed in Seabees, then we had best follow the Seabees' formula in our personnel practices as it relates to the 80 percent.

The Seabees' formula was to take men of all ages and physical condition from civilian life and use the civilian skills without putting them through basic military training or into uniform or under the military code.

Representative CURTIS added: "The men in the Seabees were put into jobs they already knew. The guiding light of the personnel system was to utilize civilian skills * * * The military knows full well that they need civilian skills. What they have not yet learned is that the civilian enterprise is better equipped to train men in these skills than the military and incidentally at one-tenth the cost because we don't have to provide room, board, and wages for our civilian trainees. Following such a formula we need neither universal military training, socialism, nor destructive high taxes."

Another problem similar to this one is that of duplication of military activities. For example our Military Establishment has three supply systems, not counting the supply systems organized under the single manager plan. Needless to say, duplication in supply activity results in endless economic waste and manpower personnel. I suggest that this committee investigate the possibility of a civilian managed agency under the Secretary of Defense, to handle the procurement, production, warehousing, distribution of supplies and equipment, standardization of control and supply functions for common supply items. Coincident to this would be an authorization by the Congress to the Secretary of Defense to take such actions as are necessary to acheive economy efficiency and effectiveness in noncombatant services by the elimination of overlapping and duplication. Within this context I believe it is wise to authorize the Secretary of Defense to expand contractual and civil service arrangements with men who fall within the supply or noncombat category. The areas that I think this committee should look into could possibly result in the ending of our present conscription system.

With your indulgence I would like to take a few moments to discuss the constription problem.

It is my feeling that our national military security policy must be a fairly long-run policy, based on the assumption that the cold war may continue for an extended period. (Obviously, all of us agree that the military should not add to the tensions. And, for the most part, I do not believe that this has been the case.) While our security plans must provide for dealing with individual Soviet offenses, these plans will fail if they consist only of a series of crash programs designed to meet specific Communist challenges.

Our military manpower programs, a vital element of our security policy, have been piecemeal responses to particular cold war crises. They have not been related to the circumstances and requirements of military preparedness in an era of crises and nuclear weapons.

The heart of our present military manpower programs is conscription. Indeed, it would be more accurate to call conscription the crutch upon which American military manpower programs lean.

In a free society, conscription is not a good crutch upon which to lean, because conscription violates a fundamental democratic principle—the principle of voluntarism. Moreover, conscription—at least as it now operates in the United States—is highly discriminatory, especially against the economically underprivileged. It is they who are generally drafted into the Army because this group of men cannot avail themselves of the sixty different ways of avoiding the 2-year obligation.

Finally, even if conscription were not a weak crutch, it would still be an inappropriate crutch. It would be inappropriate, because our national military strategy assumes that an all-out war would be decided quickly by a rapid and decisive nuclear exchange between the Soviet Union and the United States. Thus, our military manpower requirement for total war will be relatively small and highly trained forces.

Conscription has no place in a modern Military Establishment. Even if conscripts can be trained to operate the complex instruments of modern warfare, they are separated from service soon after they are trained. If they are not taught to operate the complex instruments of modern warfare, what real contribution can they make to our military power?

With respect to limited war, our national military strategy assumes that nuclear weapons will be employed to meet most situations short of general war. It would seem, therefore, that our military manpower requirement—quality rather than quantity—is basically the same for both limited and total war. If, on the other hand, we have a limited nonnuclear war what is needed are strong and large reserve forces that are well trained. Such a program would not necessitate a large standing army.

Instead of paying the costs of drafting and training 2-year men, and instead of paying the costs of training and then losing conscription-induced 3- and 4-year enlistees, would not the Nation save money and produce a better nuclear age defense force, if we eliminated conscription and invested the money saved thereby in the kinds of salaries and benefits necessary to maintain highly competent, professional Armed Forces?

It seems clear that continued reliance on the crutch of conscription can only perpetuate our irrational military manpower policies. We should continue to lean on this crutch only for so much time as is necessary to make a fundamental reevaluation of our military manpower policies.

A basic reevaluation of our military manpower policies would have to include an examination of the extent to which maximum benefit has been obtained from the Cordiner Committee's recommendations and realization that pay incentives to enter the Army are much too low. But more than this, a reevaluation of our military manpower policies should consider the extent to which a solution for our manpower problems presupposes major changes in military philosophy, in military life, and in the military way of doing things. Because our Army is seemingly bulging with enough men we do not stop to consider whether or not the service of draftees or reservists is helpful to the national defense. Nor do we consider whether or not these men learn anything about modern warfare, or indeed, can learn anything about modern warfare and modern weapons in the short time they serve. We might openly inquire and examine whether these men (draftees and noncombatants) actually hinder in the functioning of a modern army. Furthermore, we must show that the ever-changing level of technology demands a new kind of soldier. Obviously, he must be one who is conversant with modern weapons. He must be someone who will make the armed services a career. He must be someone who will stay longer than 2 or 3 years of his own volition. He should not be someone who thinks only of the time he is wasting in the Army.

Our Nation's military manpower problems call for decisive and major action. We cannot afford to tinker any more with these problems. We can no longer delude ourselves into believing that the shaky crutch of conscription gives us real military security.

Decisive and major action on our military manpower policies, if that action is to be wise, must be preceded by a careful study and analysis of the needs and weaknesses of our whole Military Establishment. This kind of study and analysis, I am sure, this committee will do. Thank you.

U.S. Policy and Actions in High Energy Accelerator Physics

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. PRICE. Mr. Speaker, I would like to call the attention of the Members of the House to a recent report to the President by a special panel of experts on "U.S. Policy and Actions in High Energy Accelerator Physics." One part of this report, namely, the proposal for constructing a $100 million accelerator at Stanford University, has received a good deal of publicity, but I call the attention of the House to the fact that there are other major recommendations in this excellent study which are deserving of our serious consideration.

For instance, the report states that in addition to substantially increasing our outlays for high energy accelerators in the years just ahead, "it is necessary to give particular attention to providing early support to plans for initial experimental facilities in order that these facilities be efficient, flexible, and available once an accelerator is operating."

We on the Joint Committee on Atomic Energy have been hammering away at this point for the past several years in connection with the AEC basic research program. We have been particularly troubled by the tendency of the Bureau of the Budget to approve the large experimental machines themselves and then fail to follow up by approving funds for associated experimental facilities which are necessary to realize the full potential of these costly machines.

A good example of this can be found in this year's authorization bill for the AEC. The Commission, after due consideration by its technical experts, recommended to the Budget Bureau that a so-called high flux magnet facility be constructed at Argonne National Laboratory to permit maximum effective use of the large high energy accelerator currently under construction at the laboratory. This recommendation by the AEC was turned down cold by the Bureau of the Budget. It seems a pity that the Bureau cannot get together with the President's top scientific advisers who are recommending urgently that we proceed with such facilities.

Mr. Speaker, I think this report to the President is a highly significant document and confirms the findings of the Joint Committee in its hearings on physical research last year that this country

must continue to give such research adequate support in the future if we are to compete effectively in the race with the Russians for scientific supremacy. I include the full report in the RECORD at this point and urge that every Member of this House read it because of its important implications for the future of our Nation:

U.S. POLICY AND ACTIONS IN HIGH ENERGY ACCELERATOR PHYSICS

(Report by a special panel of the President's Science Advisory Committee and the General Advisory Committee to the Atomic Energy Commission).

(Panel members: SAC: Dr. Emanuel Piore, Chairman; Dr. Hans A. Bethe, Dr. L. J. Haworth; GAC: Prof. Jesse W. Beams, Dr. Edwin M. McMillan.)

BACKGROUND

1. High energy physics is one of the most active fields in contemporary science, and one which has attracted many of the best experimental and theoretical scientists throughout the world. In a sense, it is the most fundamental branch of physics, since its aim is to discover and investigate the elementary particles from which all matter is made. Many of these particles are now known, and the majority of them are unstable; in order to investigate their properties, the experimenter must have means for creating these unstable particles in the laboratory, which is done by converting the kinetic energy of accelerated protons or electrons into the equivalent mass of the new particles. Hence the need for high energy.

The exact energy needed depends on the particle to be produced, as well as the bombarding particle. The better-known class of pions and muons can be made at energies as low as 200 million electron volts, while the still very mysterious strange particles require energies starting at about 1 billion electron volts for electron bombardment and about 2 billion elcctron volts for proton bombardment. To produce some types of strange particles in pairs (in order to get the anti-particles, in analogy to the antiprotons) requires many billion electron volts. In our opinion, the importance of this field in understanding the basic nature of matter and its behavior cannot be overestimated.

2. Experimentation in high energy physics requires expensive devices to accelerate particles to the desired energy, expensive instruments to measure and control particles traveling at speeds approaching the velocity of light and large numbers of scientific and technical personnel. Thus, not only the construction of these high energy physics accelerators, but also their utilization require the expenditure of large sums of money.

3. Immediately after the war, the Federal Government encouraged and supported the construction of high energy accelerators in several universities and national laboratories and, at the completion of these accelerators, funds were provided for the operation of these machines to perform the necessary and desirable experiments. In addition to providing important research results, these accelerators also have provided the training ground for the group of young scientists who are now carrying the responsibility for the future of this field and for many who have since made contributions in other fields.

4. Later requirements were recognized for more and more powerful, and thus more expensive, accelerators. The Federal Government supplied support for these new accelerators, some of which are now operating, others still under construction. Funds for the construction and operation of all new high energy accelerators initiated since 1953 have been provided by the Atomic Energy Commission. Other countries throughout the world—Western Europe and Russia—also have development programs for construction and utilization of particle accelerators for the study of high energy physics.

5. There is now need to review the high energy accelerator program and needs at the Presidential level. This stems from: (a) the extraordinarily high cost of the construction and utilization of high energy accelerators; (b) the fact that all support in this scientific area comes from the Federal Government; (c) the interest of a number of Government agencies in the science and technology associated with both the construction and the experimental results; and (d) the desire to have an orderly national program taking full account of the activities abroad.

6. A number of groups within the Federal Government have studied this problem. The most detailed examinations have been made by the Advisory Panel on High Energy Accelerators of the National Science Foundation.[1] Other advisory groups which have also been concerned with this general area are the President's Science Advisory Committee, the General Advisory Committee to the Atomic Energy Commission, and the Defense Science Board. There is general agreement on the recommendations contained herein among the several groups listed above.

DISCUSSION

7. An adequate approach to high energy physics research requires well-rounded coverage of the basic accelerator parameters—most importantly, the type of accelerated particle (protons and electrons), the energy, the intensity, and the beam geometry. Progress in the field will require, in addition to full exploitation of existing accelerators, extensions of certain of these important parameters.

8. Current situation: The United States has 15 high energy accelerators in operation with energies above 200 million electron volts (table I); 4 of these have energies in excess of 1 billion electron volts and are capable of producing strange particles. The highest energy particles now available are 6.2 billion electron volt protons and 1.2 billion electron volt electrons. Four additional accelerators are under construction—a 6 billion electron volt electron synchrotron at Cambridge, a 25 to 30 billion electron volts proton synchrotron at the Brookhaven National Laboratory, a 12.5 billion electron volts proton synchrotron at the Argonne National Laboratory, and a 3 billion electron volts proton synchrotron at Princeton University that will greatly increase the intensity available at that energy. The Argonne and Brookhaven accelerators will be capable of producing all known types of particles.

9. Needed extensions of parameters: The most urgent additional needs at present are to extend electron energies, to improve both electron and proton intensities at the higher energies and, where feasible, to improve the beam geometries.

(a) Electrons: The important electron experiments requiring extended parameters are (1) electron-nucleon scattering at higher energies and especially at better beam geomitries than the Cambridge accelerator will provide; (2) electron- and photo-production of hyperon pairs. Fortunately, significant extensions of the energy with moderately high intensity and excellent beam geometry are feasible by the linear accelerator method.

(b) Protons: Although there appears to be no immediately compelling requirement for extending thep roton energy parameter beyond the 25 to 30 billion electron volts to be available at Brookhaven National Laboratory (and at CERN, the European center in Geneva), there is an urgent need for higher proton intensities. Although accelerators now in operation produce strange particles in sufficient numbers to study their production processes, their intensity limitations make very slow and difficult, and in some cases impossible, adequate study of the interactions of these particles with other particles. These limitations will be only partly remedied by the accelerators under construction. Interaction studies are indispensible to a determination of the properties of these strange particles and hence to an understanding of their nature and of the role they play in the structure of matter. Hence there is a need for a multi-billion-electron volts proton accelerator of much higher intensity than any in the present program, to produce adequate beams of strange particles, including antinucleons. Its energy should be at least 8 billion electron volts.

10. In addition to the need for extending the ultimate energy and intensity limits, the problem of understanding in a quantitative way the detailed processes involved in high energy interactions requires multiple beams of different energies and intensities and floor space to accommodate a large variety of experimental setups. Although present accelerators are properly operated as national assets and are made available to any qualified scientist to the fullest extent practical, the capacities of these instruments are limited both for research and for training even though operated on an around-the-clock basis.

The disruption of the teaching and other academic activities of university scientists makes it difficult for them to conduct experimental research programs on remote accelerators. The need for additional research space, experimental beams and accelerators accessible to university scientists justifies the construction of additional regional or university accelerators, not necessarily of the most advanced design.

11. Needs: The committee has carefully reviewed the present program (table I) in the light of the above factors and finds that the future U.S. requirements fall into four major categories.

(a) Presently operating accelerators: It is necessary to continue and to expand the support of presently operating accelerators to assure maximum exploitation. This requires continuous updating of facilities, expansion of research space, and the support of major efforts aimed at the augmentation of existing techniques for beam analysis, particle detection, and data reduction and analysis.

(b) Accelerators presently under construction: It is necessary that the accelerators now under construction be finished without undue delay and that adequate funds be provided to equip and operate them. It is nec-

---

[1] The following NSF Panel Reports have been issued:

Report of the NSF Advisory Panel on Ultra High Energy Nuclear Accelerators, MPE Study S-5, May 2, 1954.

Report of the Advisory Panel on High Energy Accelerators to the NSF, October 26, 1956.

Supplement to the Report of the Advisory Panel on High Energy Accelerators to the NSF, NSF 58-29, August 7-8, 1958.

essary to give particular attention to providing early support to plans for initial experimental facilities in order that these facilities be efficient, flexible, and available once an accelerator is operating.

It is clear that the Federal Government is committed to provide adequate support to those accelerators which are now in operation or under construction in order to fully exploit the capabilities of the instruments. Thus, regardless of decisions which may be made with respect to the construction of additional accelerators, high energy accelerator physics can be expected to be costing the Government about $75 to $80 million annually by 1963.

This figure must be considered as a base cost upon which any future forward steps must be built. The projected costs shown in table II and figure I have been jointly developed by the Atomic Energy Commission, Department of Defense, and National Science Foundation and reflect the present degree of diversity of support.

(c) New construction: There is a clear need for the construction and operation of additional accelerators both to increase the energy and intensity parameters and to increase the U.S. capacity for experimentation in this field.

(1) Extension of energy, intensity, and geometry parameters. There does not now appear to be a clear need for extension of the energy parameter for protons beyond the 30 billion electron volts now in sight at the Brookhaven National Laboratory and CERN (par. 9 (b)). As stated in paragraph 9(a) there is an immediate need for a moderately high intensity electron accelerator in the energy region of 10-15 billion electron volts. There is also a need for a high intensity proton accelerator at an energy of 8 billion electron volts or above. Accelerators to meet these needs will cost approximately $15 to $20 million each per year to build and operate. Thus, these two needs can be expected to increase the costs of high energy accelerator physics from $75 to $80 million to about $120 million per year in the course of the next 5 years.

(2). Increased U.S. capacity for experimentation: As explained in paragraph 10, the faculties and students of the Nation's universities must have increased access to high energy accelerators. The additional accelerators need not necessarily be unique or extreme in their energy or intensity characteristics in order to fully justify their construction at a site where they may exploit the unique capabilities of a single university or group of institutions. It is our best judgment that by fiscal year 1963 an additional $15 million per year will be required to meet these needs, thus raising the total cost of high energy accelerator physics to between $120 and $135 million per year by 1963.

(d) New accelerator concepts: Research and exploratory development of new accelerator concepts must be strongly supported without prejudice to a later determination of need for full-scale construction. In addition, in order to make optimum use of the accelerators, strong support will be required for advancing the techniques of particle detection, data reduction, and data analysis.

12. Policy considerations and conclusions:

(a) Need for expanded support: The basic importance of research in the field of high energy physics and its high cost, well beyond private resources, requires the Federal Government to continue to expand its support of this field consistent with valid scientific needs and the availability of qualified research personnel. Consequently, Government planning must be based on the need for an increasing level of support from some $59 million in fiscal year 1959 to approximately $135 million in fiscal year 1963, in accordance with the needs outlined in paragraph 11 (see fig. 1).

(b) Effect on other areas of basic science: Concern has been expressed that increased financial support for high energy physics may have an adverse effect on the support of other areas of science. In our judgment it should not.

It is not possible to assign relative priorities to various fields of basic science nor should they be placed in competition. Each science, at any given time, faces a set of critical problems that require solutions for continued growth. Sometimes these solutions can be acquired at little cost; sometimes large expenditures of funds are needed. Hence, the cost may not reflect the relative value but rather the need.

Each area must be funded according to these needs. The peculiarly high cost of high energy accelerator physics is due to the size and complexity of the research tools required to attack the fundamental problems of the field. The tools required are proposed by active leaders in the field anxious to devote their talent and energy to developing those tools. Hence, in high energy physics the necessary combination of qualified people with sound ideas for meeting widely recognized scientific needs does exist and the field should be supported.

(c) Priorities: Within the field of high energy accelerator physics, first priority should be given to fullest utilization of existing accelerators including their modification and the continuing provision of new instrumentation. Next priority should be given to adequate facilities for effective use of the accelerators now under construction. Next in importance is the construction of new accelerators required for the exploration of new scientific phenomena beyond the capabilities of existing accelerators and the provision of university facilities.

(d) Guidelines for implementing priorities: The following guidelines should apply in order to assure that the needs outlined in paragraph 11 are met:

(1) New accelerator construction to extend energy and intensity parameters: Construction should be recommended only when the accelerator is designed to meet a clear research need in physics and after the technical feasibility has been firmly established.

(2) University accelerators: A university accelerator need not necessarily extend either the energy or the intensity parameter; the accelerator and associated laboratories should be within the administrative and technical capabilities of the university.

(3) Regional accelerators: Regional accelerators need not necessarily extend either the energy or intensity parameters. The construction of conventional accelerators or accelerators of advanced design and established technical feasibility may be justifiable on the basis of an expressed regional need and a regionable capability.

(e) Diversity of support within the executive branch: It is important that the Atomic Energy Commission, the National Science Foundation, and the Department of Defense each support research in high energy physics because of their separate responsibilities for the support of basic research, because of the fundamental nature and significance of high energy physics and the corresponding need for each of these agencies to keep in direct and intimate contact with the scientists in this field and their research. Accordingly, the construction and operation of future high energy aceclerators should not be considered the responsibility of any single Federal agency.

The Atomic Energy Commission, Department of Defense, and the National Science Foundation should each maintain strong interests and contacts in the field of high energy accelerator physics. This can be achieved only through direct financial responsibility and participation in the construction of high energy accelerators. The budgeting for the total cost of construction and operation of a particular accelerator should be the responsibility of a single Federal agency, as sole agent on behalf of all, supplemented by appropriate coordination with the other agencies active in this field.

These large particle accelerators constitute a national asset and should be made available to competent scientists elsewhere in this country and abroad to the fullest extent practicable. The support of any given accelerator project by a particular Federal agency should not be construed to prevent or limit the financial support of outside groups using the accelerator by other agencies, public or private.

(f) Coordination: The parallel interest of several Federal agencies in the support of high energy physics and the impact of this support on national budget planning and programing require a coordinating mechanism to assure effective planning and review at the national level. An interdepartmental council on high energy accelerators should be established to assure coordination of budget and technical planning. The membership of the council should consist of policy level representatives from the Atomic Energy Commission, the Department of Defense, and the National Science Foundation. Technical assistance to the council should be provided by the scientific staff of the three agencies (Atomic Energy Commission, Department of Defense, and National Science Foundation) directly concerned with the administration of high energy physics research programs. The council should be responsible for continuing reformulation of national policies on high energy accelerator physics and the implementation of this policy. This should include the review and coordination of agency programs and plans in the field of high energy accelerator physics and the review of agency proposals for new accelerators.

(g) Review of contracting practices and prefinancing: There should be a review of contracting procedures by the Atomic Energy Commission, Department of Defense, and National Science Foundation to assure that such procedures properly support scientific undertakings of this magnitude and character. Present procedures should be revised where necessary so that agencies can provide funds in the contract, for a period of 1 to 3 years in advance, for the support of research operations connected with high energy accelerators.

(h) International collaboration: The worldwide scientific significance of research in high energy physics, the extensive, high quality of scientific activity abroad in this field, and the limited number and costliness of high energy accelerators present a unique opportunity for a high degree of international collaboration and cooperation in the planning for and design of future accelerators and in the increased use of facilities. As a first step in the direction of international collaboration looking toward the development of new high energy accelerators, representative scientific groups from other countries, including the U.S.S.R., should be

encouraged to meet with us in order to lay plans for cooperative research on new accelerator concepts. The National Academy of Sciences should be requested to advise on the best means for accomplishing this objective.

13. Specific proposals on hand: Consistent with the needs and guidelines outlined in paragraphs 11 and 12(d) above, the following comments apply to the three major proposals before the Federal Government:

(a) Stanford University: The Stanford proposal for an electron linear accelerator adequately meets the requirement discussed above (par. 12(d)(1)) of a research need for a new electron accelerator and its technical feasibility has been adequately demonstrated. It should be supported fully with the ultimate objective as described in the proposal and with an initial energy of at least 10 billion electron volts. It is desirable that this accelerator project be initiated in fiscal year 1959 in order to avoid an undue delay in high energy research. Because of its dependence on advanced microwave technology, this proposal should be of particular relevance to the interests of the Department of Defense.

(b) MURA: Although the technical feasibility and research utility of the specific accelerator recently proposed by Midwestern Universities Research Association have not been established, many of the important new accelerator concepts of recent years have come from the ideas and work of the MURA group. Continued progress in these developments is strongly dependent on the continuation and intensification of the MURA program. The group should be supported on a continuing basis with the funds and facilities necessary for its participating intensively in the development, construction, and operation of high energy accelerators.

(c) Oak Ridge National Laboratory: The research need for a high energy accelerator at the Oak Ridge National Laboratory should be further explored with the Laboratory and the southern universities concerned. The Oak Ridge group should be supported in continuing design and development activities. The technical feasibility of the accelerator proposed by Oak Ridge has not been established.

RECOMMENDATIONS

14. The SAC/GAC panel recommends that the Federal Government:

(a) Expand its support of high energy accelerator physics in a manner consistent with valid scientific needs (par. 11) and the availability of qualified research personnel.

(b) Plan for an increasing level of support for construction and operation of high energy accelerators to a level of approximately $135 million by fiscal year 1963 with the priorities and guidelines outlined in paragraph 12 (c) and (d).

(c) Note that the increased funds for high energy accelerator physics should be provided without affecting the support of other areas of basic science.

(d) Note that specific needs exist for an electron linear accelerator of at least 10 billion electron volts and a high intensity proton accelerator of at least 8 billion electron volts.

(e) Approve the initiation in fiscal year 1959 of the proposed accelerator project at Stanford University as modified in paragraph 13(a).

(f) Note that construction of the Stanford accelerator can be expected to cost approximately $100 million.

(g) Note that initial operating costs of the Stanford accelerator will be approximately $15 million per year once the accelerator comes into operation and that instrumentation and initial experimentation should be undertaken several years in advance of the completion of the accelerator.

(h) Reject the present MURA accelerator proposal but continue to provide adequate support and encouragement to the MURA development group.

(i) Reject the present Oak Ridge accelerator proposal but encourage the further exploration of the research needs of the region and the design of accelerators capable of meeting those needs.

(j) Note that the interests of the Federal Government and the scientific community are best served by the direct financing of projects in this field by the AEC, DOD and NSF with the contract authority and budget responsibility for a given project being vested in a single agency.

(k) Approve the establishment of an interagency council at the policy level to assure coordination of budget and technical planning, this council to be assisted by the scientific staff of the agencies concerned.

(l) Approve the provision of contract funds for periods between 1 and 3 years for the support of research operations connected with high energy accelerators.

(m) Encourage international collaboration and cooperation in the planning for and design of future machines and the increased use of facilities.

(n) Request the National Academy of Science to study and advise the Government on the best method for proceeding with international cooperative research on new accelerator concepts, such cooperative activity including the Soviet Union.

Our Ambassador Problem

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Evening Herald, Rock Hill, S.C., of May 5, 1959:

OUR AMBASSADOR PROBLEM

Many Senators are apparently quite willing to appoint a career diplomat to the Brazilian ambassadorship now.

It is something they should have done in the first place. But it took a mud-slinging open-air quarel between Clare Boothe Luce and Senator WAYNE MORSE, Democrat, of Oregon, to make them realize it.

Mrs. Luce, wife of powerful publisher Henry Luce (Life, Time, etc.) and quite an influential person herself, had won nomination to the Brazilian post. Then she got into the childish fuss with Senator MORSE and, on advice of her husband, resigned before officially filling the post.

Now the Senate is quite anxious to quietly appoint some career man to the position.

Ambassadorships have been poorly handled by the United States for some time. Generally, the diplomatic posts are treated as political plums.

This might have been all right in the past but it's a risky business today. International affairs are of the utmost importance today whereas they were rather secondary not too many years back. We must have the most qualified persons handling today's international picture.

Ambassadorships shouldn't be treated as political plums. Because a person donates a large sum to a campaign fund or offers some other political support does not qualify him or her for an ambassadorship. And being wealthy enough to entertain lavishly at your own expense isn't necessarily a qualification.

We need career personnel in our diplomatic posts. We need people who have been trained for ambassadorships.

And it shouldn't take a front-page squabble between an Ambassador and a Senator to force us to appoint a career person.

The Murray-Metcalf Bill

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a letter from the

California School Boards Association relative to the Murray-Metcalf bill:

CALIFORNIA SCHOOL BOARDS ASSOCIATION,
Long Beach, Calif., May 11, 1959.
Congressman J. ARTHUR YOUNGER,
House of Representatives,
Washington, D.C.

DEAR MR. YOUNGER: In accord with our recent correspondence I presented your letter regarding the Murray-Metcalf bill to the meeting of our executive board last Friday and Saturday.

The board asked me to express their appreciation of your interest in the bill and they reaffirm the position which had already been adopted by this organization in the following resolution:

"Resolved, That except for aid to federally impacted districts, the California School Boards Association is opposed to the extension beyond the present provisions of Federal aid, either for school construction or operation."

Yours truly,

LAWRENCE B. WHITE,
Executive Secretary.

New Direct Air Service From Detroit to the Orient

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. MACHROWICZ. Mr. Speaker, the past few weeks have witnessed a considerable manifestation of interest on the part of Detroit's three great newspapers toward the application of Pan American World Airways to service Detroit on a new air route to the Orient.

Pan American recently applied to the Civil Aeronautics Board for permission to operate from Detroit to Alaska and then on to Tokyo and beyond with jet aircraft.

This proposal by Pan American has been enthusiastically embraced by the governments of the State of Michigan and the city of Detroit as well as local civic bodies. It is to be hoped that the Civil Aeronautics Board will quickly expedite hearings in order that Pan American can provide service linking the two great industrial centers of Detroit and Tokyo.

Mr. Speaker, I ask unanimous consent to have published in the RECORD an editorial and two news stories recently carried in the Detroit Times, the Free Press, and the News:

[From the Detroit (Mich.) Times, Apr. 19, 1959]

FLY DETROIT TO TOKYO

One-stop flights from Detroit to Tokyo are the newest item on our jet air age agenda.

The Civil Aeronautics Board in Washington is holding hearings on a petition by Pan American World Airways to establish the route.

Flights presumably would originate in Boston, or another east coast city, stop here, then in Fairbanks, Alaska, then Tokyo.

Travel time to Tokyo would be 14 hours, cutting the present flight time by one-half.

This development should make Detroiters more proud than ever of the Detroit Metropolitan Airport, most advanced in the Nation.

Detroit, through this facility, will become increasingly important in future years as a hub of air transportation linking the Midwest with the rest of the world.

[From the Detroit (Mich.) Free Press, Apr. 16, 1959]

WILLIAMS SUPPORTS AIRLINE BID

LANSING.—Governor Williams and three other State officials Wednesday urged Civil Aeronautics Board approval of a Pan American World Airways petition to fly the Great Circle route to the Orient.

The service would provide a direct connection from Detroit to Tokyo via Fairbanks, Alaska. CAB hearings now are underway in Washington.

Besides Williams, telegrams were sent by Lt. Gov. John B. Swainson, House Speaker Don R. Pears, Republican, of Buchanan, and Senator Harold M. Ryan, of Detroit, Democratic floor leader.

Pan Am's original application is being opposed by Northwest Air Lines which flies the Great Circle route from Seattle with connecting service to Minneapolis and Chicago.

J. P. Smith, Jr., Detroit, Pan Am district manager, said that CAB approval for Pan Am would cut Detroit-to-Tokyo flying time more than in half.

"Tokyo will be only 14 hours distant, and the new State of Alaska will become a neighboring market for Michigan commerce," Smith said.

[From the Detroit (Mich.) News, Apr. 20, 1959]

DETROIT-TO-TOKYO FLIGHT IS SOUGHT

Mayor Miriani said today that Detroit is supporting a petition by Pan American World Airways to provide direct one-plane, 14-hour jet service between Detroit and Tokyo.

The mayor said that at his request members of the Detroit Aviation Commission, the Wayne County Road Commission which operates Detroit Metropolitan Airport, and the Greater Detroit Board of Commerce have appeared in Washington to support Pan Am.

The Civil Aeronautics Board, which regulates all routes flown by American airlines, is holding hearings to determine which carriers will fly on all routes over the Pacific. Pan Am proposes to fly from Detroit to Tokyo with one stop in Alaska.

Additional Research Needed in the Great Plains Region

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. BROCK. Mr. Speaker, certain areas of the Great Plains region, which over the past decades has been ravaged by drought, dust storms, and floods, should have the benefit of carefully planned and long-range research to develop the two basic resources of soil and water.

Such action has been studied and recommended by various recognized agricultural groups, including a research committee appointed by the Secretary of Agriculture. This committee and the independent research groups in the area have recommended that this purpose can be best carried out by the establishment of a research laboratory, to be located in a strategically selected spot of the Great Plains region.

The establishment of this research center would do much to develop the natural resources and raise the economy of the areas affected, which fact has been recognized by the Legislature of the State of Nebraska. It will also insure a more adequate income for the family farmer who has been constantly fighting these adverse elements from year to year. Contributions from such research would be of material benefit to agriculture at large in other areas of the Nation and would be in the national interest in times of emergency.

Mr. Speaker, I, therefore, under the unanimous consent of my colleagues extend my remarks and place the resolution adopted by the Legislature of the State of Nebraska in the CONGRESSIONAL RECORD:

LEGISLATIVE RESOLUTION 34

Resolution memorializing Congress to enact legislation relative to the establishment of a soil and water research laboratory in the Great Plains States

Whereas there is a tremendous need for additional research in the conservation and development of the soil and water resources of the Great Plains region of the United States of America; and

Whereas the conservation and development of these two basic resources will do much to stabilize the economy of this vast area, which in the past has been ravaged by drought, dust storms, and floods; and

Whereas the establishment of a major soil and water research laboratory located in the Great Plains area has been recommended by the Great Plains Agricultural Council, the National Association of Soil Conservation Districts, and a Soil and Water Research Facility Committee appointed by the Secretary of Agriculture of the United States of America; and

Whereas there are presently pending before the Congress of the United States of America several bills authorizing the establishment of a soil and water research laboratory in the Great Plains area: Now, therefore, be it

Resolved by the members of the Nebraska Legislature in the 69th session assembled:

1. That the Legislature of the State of Nebraska is wholeheartedly in support of the establishment of additional facilities for an expanded program of research in soil and water conservation in the Great Plains area;

2. That the President and the Vice President of the United States and the representatives in Congress of the United States be hereby urged and requested to take all necessary action to provide such assistance as may be necessary to establish a staff, equip and maintain, one major and strategically located laboratory in the Great Plains States to conduct research in soil and water conservation that is not possible or practical through existing programs;

3. That certified copies of this resolution be promptly transmitted to the President and Vice President of the United States; Secretary of the U.S. Department of Agriculture; President of the U.S. Senate; Speaker of the House of Representatives of the United States; chairman of the Committee on Agriculture and Forestry of the U.S. Senate; chairman of the House Committee on Agriculture; chairman of the U.S. Senate Appropriations Committee; chairman of the U.S. Senate Agricultural Subcommittee on Appropriations; chairman of the House Committee on Appropriations; chairman of the House Agricultural Subcommittee on Appropriations; U.S. Senator ROMAN L. HRUSKA; U.S. Senator CARL T. CURTIS; U.S. Representative

PHIL WEAVER; U.S. Representative GLENN CUNNINGHAM; U.S. Representative DONALD F. MCGINLEY; and U.S. Representative LAWRENCE BROCK.

DWIGHT W. BURNEY,
President of the Legislature.
HUGO F. SBB,
Clerk of the Legislature.

Eleventh Anniversary of the Independence of Israel

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. CANFIELD. Mr. Speaker, 11 years ago the independence of Israel was proclaimed. The new nation at once became a sanctuary for immigrant Jews throughout the world, a haven after centuries of wandering.

We have watched Israel with a fascination as its population leaped to 2 million, as it applied the techniques of the industrial revolution to agriculture and brought fertility to the Negev, as its democratic institutions solidified, and as its voice among nations became more and more respected. During these past formative years we are happy and proud to have helped Israel with grants, loans and other forms of assistance.

In an area of the world undergoing the tensions of nationalism and the revolution of rising aspirations, as it has been called, Israel represents economic, political, and social stability. A living example of what a free society is and what it can do, Israel, considering its strategic location, is a model for the underdeveloped but determined nations of Africa, Asia, and the Middle East.

At this time, Mr. Speaker, I am inserting in the CONGRESSIONAL RECORD an editorial that appeared in the Washington Evening Star on Saturday, May 16, on the departure of Abba Eban, Israel's Ambassador to the United States for the past decade:

MEMORIAL MISSION

Abba Eban has well earned all the accolades bestowed on him during the past week at special farewell gatherings here and in New York. As Israel's Ambassador to the United States and permanent representative to the United Nations, he has spent a decade among us in the service of his country. The secret of his success in that respect has been compounded of an attractive personality, exceptional energy, a taste for hard work, brilliant historical scholarship, and an articulateness that has made his mission to America and the U.N. a truly memorable one.

Within recent times, of course, few ambassadors have had a more difficult assignment than Mr. Eban's. It has been an assignment in which he has had to call upon all his talents in promoting the best interests of the fledgling Jewish state in recurrent periods of immense challenge and crisis. Now, however, thanks largely to his fine efforts, Israel has amply demonstrated its ability to survive, and he is giving up diplomacy to go back there and run for office. Young, vigorous, and eloquent, he undoubtedly will be a formidable political campaigner, and none of his friends here in the United States will be surprised if one of these days—perhaps sooner than later—he becomes his country's Prime Minister.

In any event, now that his ambassadorial mission has come to an end and he is about to return to Israel, he can be sure that he is leaving behind him a very large measure of good will both for himself and his country.

Just a Little Fallout

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks, I wish to have inserted into the RECORD a provocative editorial which appeared in the latest issue of New Republic. I hope there will be clarification of this matter by the Joint Committee in its report:

JUST A LITTLE FALLOUT

The congressional hearing on atomic fallout last week was a complete farce. The committee which held the hearing was assured by atomic energy scientists that there was no need to worry. And since this was apparently what most of the Congressmen wanted to hear, they made no attempt to call scientists who might tell them otherwise. When the statements of witnesses conflicted—as happened a few times—they tried not to notice. When questions turned out to be too sticky, they helped pull the witnesses out.

Chairman CHET HOLIFIELD, Democrat, of California, and Senator JOHN O. PASTORE, Democrat, of Rhode Island, castigated the Washington Post for delving into the mass of AEC reports that were quietly inserted into the record. The Post came across some figures which showed that bread and flour being sold in a New York City supermarket on February 10 had 4 to 18 times as much radioactive strontium 90 as considered permissible. "Irresponsible reporting," said the Congressmen. The scientists who testified in person pooh-poohed the danger. Other scientists, permitted to insert statements into the record, sounded ominous warnings but were not called upon. The committee said it didn't have time to hear everyone. The newspaper reporters and the radio and TV commentators, buried under an avalanche of reports each day that they had no time or inclination to read, reported only on the oral testimony—as must have been expected. Whenever the questions became too difficult, AEC scientists pointed out that 40,000 people are killed each year in automobile accidents. When one was asked if the New York City bread and flour were not just isolated cases, he talked about the danger of polluting ants and auto exhaust fumes. The committee let him slip by.

During the 4-day hearing an Air Force scientist said the fallout at one location he checked was producing half as much radiation as that from natural sources of radiation in the earth, air, and water. AEC scientists added that radiation from fallout was less than 5 percent of the natural background level. The committee didn't worry about the difference, for the words "natural background" made it seem safe. No mention was made of studies in New York State and Maryland which were beginning to show a correlation between cancer and the natural background radiation.

The AEC's General Advisory Committee of civilian scientists reassured the committee that all was well, pointing out that the background radiation in some parts of the world was five times that in the United States and that the people there seemed to be getting along fine. They didn't bother to add that no studies have been made in these areas on which to base such a conclusion. Or that the AEC has stated in an official publication that a level of radiation three times the background level may produce about 500,000 genetic defects per generation, 17,000 per year.

The Chairman talked blithely about scraping off a few inches of topsoil when the fallout became too high. The scientists talked about testing underground and halfway to the moon in order to eliminate the fallout problem, but a weapons expert said useless: Testing must be done in the environment in which the weapon is to be used. The committee didn't seem to hear the quiet explosion when the AEC revealed that the weapons tested during the past few years were dirty superbombs, not the clean bombs piously talked about by Lewis L. Strauss when he was Chairman of the AEC. Nor did they challenge witnesses who kept blaming the fallout on the Russians although official AEC data released during the hearings showed that the U.S. tests during the last few years were equally dirty.

No one seemed to be concerned about the fact that England had begun to test weapons, that France was about to begin, and that Sweden was debating the step. No one seemed worried about what would happen 5 or 10 years from now when Red China begins to develop nuclear weapons.

When the Joint Atomic Energy Subcommittee on Radiation holds a further hearing next month on the effects of a nuclear attack, opponents of an atomic test ban will argue, citing last week's hearings, that a little fallout from testing and a few tens of thousands of cases of genetic and somatic damage will not be too great a price to pay if it prevents a war that will kill hundreds of millions. And who will answer their arguments?

The Outlook for the Michigan Economy

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to call the attention of the House to the following article by Dr. William Haber which appeared in the May 1959 issue of the Michigan Business Review which is published by the School of Business Administration of the University of Michigan. The following article presents an analysis of some factors that influence economic growth, employment, and unemployment in Michigan and was adapted from the author's testimony before the U.S. Senate Committee on Production and Stabilization which held hearings on area development legislation. Dr. Haber, a professor of economics in the University of Michigan, has been a member of the Federal Advisory Council on Employment since 1948. He specializes in labor economics and industrial problems. His report on Michigan employment problems and prospects will be

published by the W. E. Upjohn Institute for Community Research this summer:

THE OUTLOOK FOR THE MICHIGAN ECONOMY

(By Dr. William Haber)

(About the author: A professor of economics in this university, Dr. Haber has been a member of the Federal Advisory Council on Employment Security since 1948. He specializes in labor economics and industrial relations. His report on "Michigan's Employment Problems and Prospects" will be published by the W. E. Upjohn Institute for Community Research this summer. This paper is adapted from his testimony before the U.S. Senate Committee on Production and Stabilization which held hearings on area redevelopment legislation.)

This article deals with some of the factors which explain the present problem of unemployment and the long-run outlook for employment and business activity in Michigan.

Many areas in the United States have had persistent and substantial unemployment and underemployment for a number of years. The factors which explain the economic distress and high unemployment of such communities as those in western Pensylvania, West Virginia, Massachusetts, Rhode Island, Indiana, and Wisconsin are generally known. In some areas the problem is related to the recession, from which we have not had a full recovery. Over 75 major labor market areas have rates of unemployment which exceed 6 percent of the labor force and in many of these, as in Michigan, the problem is far more serious.

In many localities, however, the causes are not primarily related to the recession. This is so in communities like our own Upper Peninsula which suffer from a depletion of natural resources which in earlier periods accounted for their growth and prosperity. Other communities, like those in western Pennsylvania, are in difficulty because of a shift in demand for a product, or a substitution of new machinery. These factors create serious maladjustments and lead to local distress which has in many areas become chronic.

SOME GENERAL OBSERVATIONS

First, a few general observations and then specific discussion of Michigan.

The first is that these local problems of economic distress or economic change are frequently manifestations of a national problem. Its incidence is obviously local, as it is now in Detroit and some other Michigan cities, or in Scranton or Altoona, Pa. Its causes are not pathological. Economic growth and change do not proceed at an even pace and are not uniformly distributed over the entire Nation. California, Florida, and Michigan, for example, have grown at a rapid rate for a long time, and will, I believe, continue to grow. Other areas have declined or grown at a slower rate. The adjustments in such areas are not automatic and, as we know, often take a long time. Until they occur, thousands of families suffer acute hardships and privation and the community's economic life is in serious distress.

The second observation is that these State and local areas of economic difficulty represent large waste of manpower and resources. Their correction calls for a joint program requiring the collaboration of the State and local community, and our experience tells us also that of the Federal Government. It calls for careful planning, often of a long-range character, for development loans, and for technical assistance in working out a program. Such a program may involve steps to improve labor mobility in order to move surplus manpower to other areas of economic growth; it calls or may call for manpower retraining and guidance to other jobs if not to other areas. Or, if it cannot stimulate the movement of workers, such a program should aim to bring in new jobs and industry through diversification and area development.

THE ROLE OF THE FEDERAL GOVERNMENT

It is axiomatic, so it seems to me, that the Federal Government's obligation under the Employment Act of 1946 requires it to assist the States and communities to achieve maximum employment. The idea is not startling and it certainly is not radical. It has the endorsement of the President, and his Council of Economic Advisers recognizes its importance. The only question is whether we should nibble at the problem or make a bold attempt to improve the situation.

My third observation is that a clear distinction should be made between measures which are temporary in character, designed to help until the community can carry on by itself and those which require long-range programs and much planning. The criteria for eligibility should in my opinion be sufficiently rigid so that the Federal Government gets involved in area redevelopment programs which call for loans and grants only when it is clear that the problem is chronic and stubborn.

The primary objective of the Federal Government, it seems to me, is to develop the policies which will insure high levels of employment for the Nation as a whole. A large number of local area redevelopment programs, unless clearly justified by the economic potential of these areas, can interfere with efficient allocation of resources and be economically wasteful. I cannot conceive of a Federal program under the proposed area redevelopment legislation being effective in as many as 70 or 80 areas. The participation of the Federal Government should be restricted to those areas which have had long periods of difficulty and for which State and local measures alone were proved inadequate.

THE MICHIGAN SITUATION

The Michigan problem represents a special case. I would not refer to Detroit or to Michigan as a distress area or one which calls for a massive Federal area redevelopment program. We have an acute and serious unemployment situation at the present time. Our problem is not entirely or perhaps not even primarily a problem of the recession. It is deeper and more stubborn. Our immediate concern is with the more than 335,000 unemployed in the State. A large majority of these out of work in Detroit have exhausted their unemployment insurance benefits and cannot again become eligible for such payments until after they return to work. This is the most immediate and serious problem facing the city and the State. Only one-third of the unemployed in Michigan at the present time are eligible for unemployment insurance and were receiving such in the last quarter of 1958. The public welfare rolls in Detroit already contain over 12,000 families, twice the number on the rolls a year ago. This number is bound to increase as more family heads exhaust their unemployment insurance rights and their benefits under the temporary unemployment compensation law.

Nor is there an immediate prospect for any substantial improvement in the unemployment situation. The probabilities are that under the most reasonable estimates of automotive production for 1959 the number of jobless in the State will average 335,000 for the year and about 275,000 in 1960. Thus even in 1960, when the situation improves somewhat, over 10 percent of the labor force will still be out of work. The immediate short range problem is therefore our most serious concern. Public welfare is hardly the most appropriate solution for men and women who have had a regular attachment to the labor force, indispensable though it is for the basic necessities of life.

It is for this reason that I urge the extension by the Congress of the Temporary Unemployment Compensation Act which is scheduled to expire at the end of March 1959. I realize that a large number of Detroit's and Michigan's unemployed have also exhausted their temporary unemployment benefits to which they were entitled. I urge, therefore, that there be exploration of a formula which would qualify jobless wage earners whose regular and substantial attachment to the labor force is clearly established and who were entitled to TUC payments, if the expiration date of that legislation is postponed. In the past 23 years the Feedral Government has collected from employers in the States over $750 million in excess of the sums returned to the States for the operation of their State employment security programs. Part of these funds can appropriately be used to meet the cost of such TUC extensions, if it should be determined that such costs should not be allocated to the States for repayment at a later time. The outlays for such extended unemployment should not be charged to employers.

THE COSTS OF UNEMPLOYMENT INSURANCE

The problem of unemployment insurance costs is of deep concern to employers in Michigan and other States with excessively high unemployment rates. Michigan is the most industrialized State in the United States. About 50 percent of our wage earners work in the manufacturing industry. Nearly 37 percent of personal income received by people in Michigan in the form of wages and salaries comes from manufacturing. As a result we are especially allergic to national developments which adversely affect manufacturing production and employment, especially automotiev production. Michigan is hit harder in a recession than most other States. The percentage of our labor force out of work is often twice as high as the national average. This is not a recent development. Our present experience conforms to what happened in 1921, 1929–33, and 1937, in 1949, and again in 1954.

As a result, the costs of unemployment insurance in a serious recession are likely to fall most heavily on employers in States like Michigan and other high cost States and impose upon them an exceptionally large burden. This puts our employers at a distinct disadvantage in competition with employers in most other States not so industrialized and whose manufacturing industry is more diversified.

In 1958, for example, the benefits paid to Michigan wage earners from the trust fund and employers' contributions exceeded $326 million. This represented more than 6.5 percent of the taxable payroll. The unemployment insurance payments in 1959 will, of course, be smaller since most of those now out of work are not eligible for benefits. Even so, however, unemployment insurance payments will exceed $200 million and represent about 4 percent of taxable payrolls. The average unemployment insurance tax paid by Michigan employers in 1959 may be close to 2.8 percent of taxable payrolls, way above that paid by employers in States producing products in competition with Michigan.

INTERSTATE DIFFERENCES IN COST

When this legislation was adopted, the object was to eliminate interstate differences in cost of unemployment insurance. The way it has worked out these differences have been accentuated. As a result Michigan employers could be placed at a distinct disadvantage for this reason alone. The Government should explore the practicability of creating a national unemployment equalization or reinsurance fund. There is no good reason why a State like Michigan or Pennsylvania or any other State should be penalized because of a recession which is national

in origin and has a more serious impact on that State. Such a fund could easily be financed by changing the three-tenths of 1 percent unemployment insurance tax retained by the Federal Government to four-tenths of 1 percent or more, if necessary. And the equalization fund could carry the unemployment insurance costs which exceed a fixed percentage of the payroll in any State. If such a fund were in existence it would not be necessary for the unemployment insurance costs of Michigan employers to increase in 1959 and in 1960 as is definitely required if our fund is to remain solvent.

PROPOSALS TO REDUCE UNEMPLOYMENT

In addition to these observations on unemployment insurance whose enactment would provide immediate aid to the unemployed, I urge the following:

(a) That every effort be made to channel public contracts concerned with defense work and with research and development to Michigan. The managerial skills and the labor reserve are here and their full utilization is not too promising in 1959 and 1960.

(b) Many of our unemployed are in the upper age group, not old, just older. Their unemployment is often the result of technological changes in their former jobs. And an imaginative vocational training program may be of real aid in assisting them to locate work in other lines.

(c) I urge also that such people who have skills or are retrained be aided in relocating to other areas by being provided with travel funds for such purposes and vocational guidance. There is no reason why our Federal-State employment service cannot be authorized to finance such transfers when it appears that another area is likely to solve the job problem for an individual and his family.

These are all measures designed to deal with the immediate situation. I turn now to some observations about the larger problem and its long run character.

FACTORS IN THE MICHIGAN PROBLEM

I said earlier that the Michigan problem is not primarily the result of the recession. It follows that complete recovery from the recession is not likely to fully correct our job shortage and wipe out our unemployment problem.

The Detroit and Michigan problem is a complex of several factors. The first is a major shift in defense procurement with a concentration on aircraft and missiles. In 1959 it is estimated that of the $14 billion to be spent on major procurements by the Defense Department, 74 percent will be spent on aircraft and missiles. In 1953 the comparable figure was 43 percent. Michigan benefited more from defense procurement when tanks and ordnance which we produced were more important items than missiles and aircraft which have until now been less important in our industry. It has been estimated that 125,000 to 150,000 Michigan jobs may have been lost as a result of this shift.

The second factor is to be found in the decentralization of automobile assembly and production to other States. This process has been going on for a long time. It is not clear whether most of it has already occurred. I doubt whether this is so and we may see somewhat more decentralization in the years ahead. The effect on unemployment, however, is already measurable. In 1949 about 57 percent of U.S. automotive employment was located in Michigan. In 1958, 48 percent of such employment was in this State.

It should be emphasized that such decentralization is primarily motivated by market considerations, by locational factors designed to take advantage of population concentrations, to reduce transportation costs and to achieve similar economies. It is not a flight from Michigan because of taxes or wage rates or "economic climate." This sort of change is always going on. It is not unhealthy for the country although it causes difficulties in the area from which the movement is taking place. Most States have been affected by it at one time or another. In Michigan its full impact came in the postwar period, simultaneously with a shift in defense procurement.

CONSOLIDATION AND AUTOMATION

A third factor is to be found in certain consolidations among the smaller automobile companies and the retirement of one producer in the postwar period. This reference may seem like ancient history. But a check of the occupational background of many welfare department clients would reveal employment with one or another of these departed firms. The Michigan Employment Security Commission estimates that more than 75,000 job stations have disappeared as a result of these developments.

A fourth factor is related to the technological changes in which automation is one element. This is difficult to measure except in the roughest form. The impact of these changes on employment should not be underestimated. It is quite clear that the auto companies can reach prerecession levels with considerably less than prerecession employment.

Taken together these four factors combined with the recession provide an explanation of Michigan's present plight. They appear to me to be more impressive and logical than most of the talk about taxes, labor costs, and unfavorable business climate. These issues are of course always present and while some may think that they may have an important influence on the rate of future economic growth in Michigan, they do not in my judgment have an important bearing on the causes of our present problem.

MICHIGAN'S ECONOMIC OUTLOOK

Assuming high levels of employment nationally one can be decidedly optimistic about Michigan's economic outlook. Given time, an accurate interpretation of Michigan's economic advantages plus a cooperative relationship between the Michigan business community, labor, and the State government, the State's economic growth can be resumed at the rate which prevailed before 1955.

One factor which will influence this growth is the expansion of Michigan's population. Since 1950 Michigan has experienced a very rapid population growth. Its July 1, 1958, population of 7.9 million represented an increase of 1.5 million persons since 1950, a gain of almost 25 percent in 8 years time. In fact our population has grown rapidly for a long time, increasing between 15 and 30 percent in each 10-year period since 1890 except for the depression decade of the 1930's. We have grown at a more rapid rate than the Nation generally; faster than the east-north-central States with which we are usually compared. In fact, only two of the larger States—California and Florida—have grown more rapidly than Michigan during the last 8 years.

FUTURE POPULATION GROWTH

Nor is there anything to suggest that this rapid rate of population increase is about to be checked. On the contrary, even allowing for a much smaller estimate for in-migration, an important factor in Michigan's population growth in the past, it appears that by 1970 the population of this State will be at least 9.4 million persons and may be as high as 10.5 million compared with 7.9 million in 1958. Under either estimate Michigan will still be one of the fastest growing States in the United States.

On the basis of these estimates of population growth, it appears that Michigan's labor force in 1970 will be at least 1 million persons higher than in 1958.

Population growth by itself does not generate jobs. It provides, however, a sound basis for economic growth. And there is no reason to assume that Michigan's rich resources in manpower skills and in management competence, coupled with its natural resources in water and chemicals, are not likely to be develop and to provide for our growing population and expanding labor force.

There is no exodus of industry out of Michigan. The facts are to the contrary. There are more manufacturing establishments in this State now than there were in 1949 or in 1953. And even the automobile companies, while they are building elsewhere, have made substantial investments and expansion in their Detroit and other Michigan facilities in the postwar period.

Michigan's industry is overconcentrated in manufacturing and especially in automotive production.

There is a crying need for a greater degree of diversification to bring about a better balance and lesser dependence upon the economic fate of one or two major products. This must be achieved in the next 10 years and it can be, with everyone recognizing its importance and with support for a concerted program toward that end. Such a program has not been pursued with any vigor thus far, since it did not appear necessary. An opportunity to develop aircraft production and electronics after the war could easily have been exploited and this would have provided a more balanced economy. Such diversification is necessary now and critically needed if more balanced growth is to be assured. We need an industrial redevelopment program and our resources promise its success once we pursue it with a vigor which has made Michigan a great industrial State in the past.

Status of Democratic Legislative Program as of May 8, 1959

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. PORTER. Mr. Speaker, except for the final category, education, the items below were listed by the majority leader of the other body in Big Spring, Tex., shortly after election day last year.

This information was compiled at my request by Albert M. Perry, legal digester, American Law Division, Legislative Reference Service of the Library of Congress.

The report is included hereafter under a previous consent:

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION (EXPLORATION OF OUTER SPACE)

S. 1096, Mr. JOHNSON of Texas and Mr. BRIDGES; February 17, 1959 (Aeronautical and Space Services): Authorizes $48.3 million supplemental appropriation for fiscal 1959 to expedite projects of the National Aeronautics and Space Administration. (Approved April 12, 1959; Public Law 86-12.)

S. 1582 (H.R. 6512), Mr. JOHNSON of Texas and Mr. BRIDGES; April 7, 1959 (Aeronautical and Space Sciences): Authorizes $485 million for the National Aeronautics and Space Administration for fiscal 1960.

H.R. 6512 (S. 1582), Mr. BROOKS of Louisiana; April 20, 1959 (Science and Astronautics): See S. 1582, supra.

CONSOLIDATION AND/OR COORDINATION OF SCIENTIFIC RESEARCH

Legislation designed to consolidate certain functions and agencies responsible for scientific research has been introduced as follows:

S. 586, Mr. KEFAUVER, January 20, 1959 (Aeronautical and Space Science): Department of Science Act of 1959: Establishes a Department of Science and Technology transferring thereto scientific activities now performed by certain other agencies, commissions, bureaus and/or administrations.

S. 676, Mr. HUMPHREY and others; January 23, 1959 (Government Operations): Department of Science and Technology Act of 1959: Establishes a Department of Science and Technology transferring thereto scientific activities now performed by certain other agencies, commissions, bureaus, and/or administrations.

DEVELOPMENT OF PEACEFUL USES OF THE ATOM

S. 683, Mr. GORE; January 27, 1959 (Atomic Energy): Atomic energy amendments of 1959: Authorizes $1 billion for the development and/or construction of power reactors of various sizes by the Atomic Energy Commission. Directs the Commission to conduct a vigorous program of international cooperation and assistance in the development of power reactors, to accelerate existing programs for the development of nuclear rocket propulsion, and to proceed with the development of a manned vehicle powered by nuclear propulsion.

H.R. 4822, Mr. TOLLEFSON; February 19, 1959 (Merchant Marine and Fisheries): Authorizes the construction of a nuclear-powered tanker for operation by the Maritime Administration.

CONSERVATION OF WATER FOR THE WEST

S. 13, Messrs. ENGLE and KUCHEL; January 9, 1959 (Public Works): Provides Federal assistance for the planning and construction of municipal and industrial water development projects on a multiple-purpose, comprehensive basis.

S. 943, Mr. ENGLE and others; February 5, 1959 (Interstate and Foreign Commerce): Authorizes $10 million for a program of weather modification directed at increasing the annual average usable supply of water in the Colorado River Basin.

S. 1591 (H.R. 8), Mr. KERR and others; April 7, 1959 (Public Works): Water Conservation Act of 1959. Sets forth national policies and procedures for the development of water resources on a multipurpose basis.

Senate Resolution 48, Messrs. MANSFIELD and MURRAY; January 27, 1959 (Interior and Insular Affairs): Establishes a select committee to make studies of water resources and future needs thereof. (Agreed to April 20, 1959—House action not required.)

H.R. 8 (S. 1591), Mr. TRIMBLE; January 5, 1959 (Public Works): See S. 1951, supra.

H.R. 289, Mr. TRIMBLE; January 7, 1959 (Interior and Insular Affairs): Establishes criteria to be used to determine the feasibility of constructing or modifying reclamation projects.

H.R. 1863, Mr. CLEMENT W. MILLER; January 9, 1959 (Public Works): Authorizes Federal assistance for municipal and industrial water development projects.

H.R. 2145, Mr. BECKWORTH; January 12, 1959 (Interior and Insular Affairs): Authorizes $200 million annually for Federal assistance to the States or local subdivisions for the planning, construction, operation, and maintenance of projects for water conservation and storage.

Certain bills dealing with specific projects or problems are under consideration by appropriate committees. Committee action has been completed in certain cases as follows:

S. 44 (H.R. 301), Messrs. KUCHEL and ENGLE; January 9, 1959 (Interior and Insular Affairs): Authorizes $290 million for the construction of the San Luis unit of the Central Valley project, California. (Reported in Senate April 8, 1959.)

S. 994 (H.R. 804), Messrs. JACKSON and MAGNUSON; February 6, 1959 (Interior and Insular Affairs): Authorizes the Secretary of the Interior to construct, operate, and maintain the Spokane Valley project, Washington and Idaho. (Passed Senate April 30, 1959.)

H.R. 301 (S. 44), Mr. SISK; January 7, 1959 (Interior and Insular Affairs): See S. 44, supra.

H.R. 804 (S. 994), Mr. HORAN; January 7, 1959 (Interior and Insular Affairs): See S. 994, supra.

H.R. 4405, Mr. ROGERS of Texas; February 11, 1959 (Interior and Insular Affairs): Provides for a study of the feasibility of developing the water resources of the Salt Fork of the Red River, Tex. (Passed by House April 8, 1959.)

FOREIGN POLICY (REVIEW)

S. 1094 (H.R. 4452), Mr. FULBRIGHT (by request); February 17, 1959 (Foreign Relations): Authorizes an increase in the U.S. subscription to the International Monetary Fund and to the International Bank for Reconstruction and Development. (Passed House, amended, March 25, 1959.)

S. 1711 (H.R. 6526), Mr. HUMPHREY and others; April 16, 1959 (Foreign Relations): International Food for Peace Act of 1959: Provides for the use of surplus commodities to assist in the economic development of friendly nations.

H.R. 2159, Mr. CURTIS of Missouri; January 12, 1959 (Foreign Affairs): U.S. Trading Corporation Act: Establishes a U.S. Trading Corporation to undertake measures to meet the threat of long-range economic penetration of world markets by the Soviet bloc.

H.R. 4452 (S. 1094), Mr. SPENCE; February 12, 1959 (Banking and Currency): See S. 1094, supra.

H.R. 6526 (S. 1711), Mr. JOHNSON of Wisconsin; April 20, 1959 (Agriculture): See S. 1711, supra.

Draft bill to amend the Mutual Security Act of 1954, as amended, and for other purposes. (Consideration by the House Committee on Foreign Affairs began on March 16, 1959.)

House Resolution 113, Mr. MORGAN; January 15, 1959 (Rules): Authorizes an investigation of the policies of Federal agencies engaged primarily in the implementation of our foreign policy. (Passed House January 29, 1959; Senate action not required.)

House Resolution 114, Mr. MORGAN; January 15, 1959 (House Administration): Provides funds for the investigation authorized by House Resolution 113. (Passed by House February 24, 1959; Senate action not required.)

FOREIGN POLICY (LATIN AMERICA)

Senate Resolution 17, Mr. SMATHERS; January 12, 1959 (Foreign Relations): Favors the establishment of an inter-American regional development bank.

Senate Resolution 31, Mr. GREEN; January 20, 1959 (Rules and Administration): Authorizes a study of the U.S. foreign policy with special reference to Latin America and Canadian affairs. (Passed by Senate February 2, 1959—House action not required.)

House Resolution 49, Mr. O'HARA of Illinois; January 7, 1959 (Rules): Creates a select committee to make an investigation of our affairs with the Latin American countries.

FARM PROGRAM

S. 1211, Mr. HUMPHREY and others; March 2, 1959 (Agriculture and Forestry): Reactivates the program of adjusting repayment schedules of loans to farmers to the net earnings of borrowers on a year to year basis. Provides for long-term, low interest loans, and insurance of loans to farmers.

H.R. 838, Mr. MARSHALL; January 7, 1959 (Agriculture): Provides for the election of a National Agricultural Board to establish national production and marketing goals and to allot such goals to farmers. Requires referendums to be held on programs proposed by the Board and, unless disapproved by a majority of the producers, provides for such programs to become effective.

Bills concerned with specific commodities and/or farm problems which have received favorable committee action are listed below:

S. 690 provides program of research for the use of agricultural commodities for industrial purposes. (Reported in Senate April 16, 1959.)

S. 1289 extends the school milk program. (Passed by Senate April 30, 1959.)

S. 1455 authorizes cotton acreage allotments to be leased under certain conditions. (Passed by Senate April 15, 1959.)

H.R. 5247 increases the authorization for the school milk program. (Approved April 3, 1959. Public Law 86–10.)

H.R. 5432 provides price supports for feed grain based on the support price of corn. (Reported in House May 6, 1959.)

ECONOMICALLY DEPRESSED AREAS

S. 722, Mr. DOUGLAS and others; January 27, 1959 (Banking and Currency): Establishes an area Redevelopment Administration and authorizes revolving funds, not to exceed $300 million, for loans for the development of areas having excessive unemployment. Authorizes additional funds for grants, etc.

S. 1631, Mr. JOHNSON of Texas and others; April 8, 1959 (Labor and Public Welfare): Establishes a Commission to study unemployment problems. (Passed Senate April 10, 1959.)

Bills similar or identical to S. 722 have been introduced in the House.

INTEREST RATES

S. 860, Mr. PROXMIRE; February 2, 1959 (Banking and Currency): Permits member banks to count coinage and currency as reserves required to be kept on hand.

S. 1120, Messrs. ROBERTSON, FULBRIGHT, and CAPEHART; February 19, 1959 (Banking and Currency): Permits member banks to count currency and coinage as reserves. Reduces the percentage of demand deposits required to be kept on hand. (Reported in Senate April 17, 1959.)

LABOR

S. 1555, Mr. KENNEDY and others; March 25, 1959 (Labor and Public Welfare): Labor-Management Reporting and Disclosure Act of 1959: Requires full and complete disclosure of the financial affairs of labor unions, union officials, and other parties which might give rise to conflicts of interest. Regulates trusteeships and requires democratic processes for the election of union officials. (Passed by Senate April 25, 1959.)

HOUSING

S. 57 (H.R. 2357), Mr. SPARKMAN and others; January 9, 1959 (Banking and Currency): Housing Act of 1959: Reduces downpayments required for FHA loans; increases the FHA repayment period; authorizes a reduction in FHA insurance premiums; authorizes a 3-year program of slum clearance of $500 million per year; extends the low-rent public housing program, authorizes an additional $400 million for college housing; establishes a new program of housing for the elderly; and extends the military housing program. (Reported in House February 5, 1959.)

H.R. 2357 (S. 57), Mr. RAINS; January 15, 1959 (Banking and Currency): See S. 57, supra. (House committee substituted H.R. 2357 for the Senate passed version of S. 57.)

AIRPORT PROGRAM

S. 1 (H.R. 1011), Mr. MONRONEY and others; January 9, 1959 (Interstate and Foreign Commerce): Extends Federal aid for the development and construction of airports through

fiscal 1963 and authorizes $248 million for such aid on a 50–50 matching basis and an additional $45 million as a discretionary fund for expansion of airports to handle jet planes.

H.R. 1011 (S. 1), Mr. HARRIS; January 7, 1959 (Interstate and Foreign Commerce): See S. 1, supra.

URBAN RENEWAL

S. 57 (supra): In addition to the provisions dealing with housing, etc., this bill authorizes a $1.5 billion 3-year program of slum clearance. (Reported in House February 5, 1959.)

EDUCATION

S. 2 (H.R. 22), Mr. MURRAY and others; January 9, 1959 (Labor and Public Welfare): Provides Federal assistance for the construction of classrooms and compensation of teachers. (Hearings on this and similar bills held February 1959, to be continued.)

S. 8, Messrs. MCNAMARA and HART; January 9, 1959 (Labor and Public Welfare): Provides Federal aid for the construction of schools. (Hearings held February 1959, to be continued.)

S. 57 (supra): This bill contains provisions for expanding the program of Federal aid for college housing. (Reported in House February 5, 1959.)

S. 234, Mr. LANGER; January 12, 1959 (Labor and Public Welfare): Provides loans for qualified students to continue their education beyond the high school level.

H.R. 22 (S. 2), Mr. METCALF; January 7, 1959 (Education and Labor): See S. 2, supra. (Hearings held by Subcommittee on General Education.)

Unjust Discrimination in Employment Because of Age Destroys Human Dignity and Should Be Abolished

SPEECH

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. VAN ZANDT. Mr. Speaker, it is my earnest hope that the day will soon come when we can sincerely and honestly repeat the words of Emerson: "We do not count a man's years until he has nothing else to count."

This quotation seems to touch directly upon a problem confronting our society today. The unpleasant truth is that we tend to count a man's years without even considering his other qualities and characteristics. Many of the more thoughtful persons in our country have spoken out sharply against this narrow, cruel, and wasteful attitude, which is throwing many of our middle-aged and older citizens into a life of stagnation and hopelessness. Yet, too many of us have continued to evaluate a man by his years, thinking not of the wisdom and experience that these years have brought him, but only of the often imagined loss of vigor and strength which are too frequently associated with the passage of youth.

It is essential, I believe, that Congress take the initiative in promoting a more rational attitude toward our aging population. That is why I am urging passage of my bill, H.R. 1180, which is identical to my bill, H.R. 11918 of the 85th Congress, and which would be a progressive step in eliminating discrimination in employment because of age.

My bill, entitled the "National Act Against Age Discrimination in Employment," would eliminate this kind of discrimination for all our country's employees to the fullest extent permitted by the Constitution. This would include employees involved in all interstate or international commerce.

Congress cannot determine employment policies for everyone. By passing this bill we shall not immediately solve the job problems of all our older workers, but we shall have made an impressive start and demonstrated our firmness of opinion on this question by taking affirmative action instead of merely urging others to adopt a policy which we are not ready to follow through on ourselves.

There is one group in this country which I know is working hard on this problem facing older workers, and I should like to pay tribute to that organization at this time. It was the Fraternal Order of Eagles of which I am a member that supplied the inspiration behind the introduction of my bill, H.R. 1180, and other similar legislative measures on the subject.

The "jobs after 40" campaign launched in 1957 by the Grand Aerie of the Fraternal Order of Eagles embraced the entire Nation under the sponsorship of local lodges commonly known as local aeries. This well-directed grassroots movement has contributed greatly to focusing national attention on the determined effort to explode the myth that older workers are unreliable and should be consigned to the scrapheap of human wreckage.

The Eagles' campaign, headed by Grand Aerie Program Chairman Judge Robert Hansen, earned nationwide acclaim, being enthusiastically received as evidenced by the fact that an estimated 1 million signatures were obtained on petitions circulated by local Eagle aeries focusing attention on the need for immediate action to the plight of those 40 years of age or over seeking employment. In addition, the "jobs after 40" campaign elicited warm praise from outstanding leaders in government, business, and labor circles.

It is pertinent to state at this point that the Fraternal Order of Eagles has always been interested in vital issues that affect the American home and family life in the Nation.

Through its widespread influence in fraternal circles the Eagles championed America's first workmen's compensation law in 1903 and the first mothers' pension law in 1911, to be followed later by its advocacy and support in seeking approval of the old-age pension law in 1923, and the Social Security Act in 1935, with its subsequent amendments designed to strengthen and improve the original law. Finally, the pages of the Eagles' magazine, the monthly publication mailed to all members, has since its inception devoted a large portion of its space to publicizing the need for developing and maintaining interest in the necessity of providing for the health and welfare of American wage earners and their families.

Mr. Speaker, as a member of the Altoona, Pa., Aerie No. 286, Fraternal Order of Eagles, I am proud of the many splendid projects sponsored by this great fraternal organization, and especially of the fact that the Eagles are responsible to a marked degree for the introduction of legislation such as my bill, H.R. 1180, which if enacted would crown with success the "jobs after 40" program so earnestly advocated, and the principle of which deserves at this time our enthusiastic support.

Many of us are acquainted with the story of the middle-aged worker, with children still in school or college, and with many good, productive years ahead of him, who loses his job because of company reorganization, production cutbacks, or some other reason beyond his control. He does not consider retirement, not only because he needs the income, but because he cannot yet conceive of himself as too old and decrepit to be able to contribute something to society. I venture to say that most of us here, well over age 45 ourselves, can understand this feeling.

It is frightening to realize that this man—and there are many thousands in a similar position—is now subjected to the humiliation of being told that he is "too old" to even be considered for a job. His previous training, experience, and his maturity are counted as nothing next to the number of his birthdays.

It is my belief that the right to employment without discrimination based on age is a right that belongs to each of us and should be guaranteed by law. I believe this not only because of the principle involved, but because any other policy or attitude is wasteful and impractical.

This does not mean, of course, that older workers should be given overall preference in hiring when the situation doesn't warrant it. Rather, it is the hope that employers will begin to evaluate their applicants on the basis of individual characteristics and not on the basis of restrictive age limitations. There is no question in my mind that too many of our country's employers are unwittingly hurting themselves by imposing meaningless age barriers.

Mr. Speaker, the cold, hard facts will bear me out on this. Many objective studies have been made showing that the job performance of older workers is often not only equal, but superior to that of many younger workers. Let me give you one of the major conclusions about older workers which resulted from a recent study. The experts stated categorically that their findings showed that the values of workers over 50 from the standpoint of productivity far exceed any drawbacks of physical deterioration.

On the question of productivity, for example, older workers often show up even better than persons many years younger. Studies show that variations in output of individuals within any age group are very great—greater, in fact, than differences among groups. Productivity can-

not be equalized with age alone. One expert has made this observation:

"Certainly," he says, "older men are less likely to accelerate the work pace in a short burst. But for sustained and steady work they are at least the equal of the younger men and women. Having less energy to waste, they tend to make more efficient utilization of their time by avoidance of waste motion and better use of their experience by developing and using efficient shortcuts."

I do not think anyone could argue that an inexperienced worker is better than an experienced one. An older person who is still vigorous and healthy is almost certain to acquire a mellowness of judgment and a sense of dependability that can rarely be found in younger workers.

A recent evaluation of the overall performance of older workers showed that they rated better or the same than younger persons on extremely vital considerations for management. This was overwhelmingly true on such questions as quality of workmanship, attitude toward job, loyalty to company, dependability, response to supervision, and overall performance.

These workers showed up just as well on matters of attendance and illness. This included evaluation of reports on lateness, turnover, accidents, frequency of illness, and general attendance. One of the most frequent reasons given for discrimination against the older worker is that he is a greater accident risk than his younger counterpart. Clearly, if an employer has had this in mind when establishing age limitations, he is badly underrating the mature man.

Mr. Speaker, surveys have consistently upheld the position of older workers, in showing that they almost always have accident records which are superior to other employees. The International Labor Organization, for example, found in one of its studies some years ago that there was a progressive decline in the frequency of accidents per 1,000 man-years worked, with increasing age. In fact, the accident frequency for ages 60 and over was less than half that for ages 20 to 29. The frequencies for ages 40 to 49 were less than three-fourths of those for ages 20 to 34.

It can also be said that no employer is going to suffer because an older employee is not in good physical condition. The great advances in medical science have reduced the argument that workers who have reached middle age are poor health risks. Out of a group of unemployed older workers the Department of Labor found that four out of five were in excellent physical condition, certainly fully capable of meeting regular production standards.

Both management and labor can benefit from having older people in the working force. They have knowledge and experience that younger workers simply cannot duplicate. There is little question that they exert a stabilizing influence on labor relations. They tend to be better informed and have more mature judgment, and so are more likely to act carefully and wisely on the problems which confront them.

One observer has noted: "With one hand society does everything possible to extend the life of man, while with the other it writes him off as useless because of the date of his birth certificate." I think it is regrettable that we must recognize this observation as a reality of our society. And I, for one, cannot understand why we are maintaining such a costly and absurd struggle with ourselves. Our older workers have much to contribute if we will only let them. To discriminate against them is to lose the benefit of our best developed minds and hands.

Thinking of the plight of our older workers, I am tempted to recall the words of one of the world's greatest creative thinkers. It was Michelangelo who adopted this simple, but eloquent motto: "I am still learning." It is important that we remember that these words apply not only to the schoolboy, but also to our mature men and women. The ability to learn is not something we automatically lose with the first gray hair, although many employers seem to think this is true. A person who is hired at age 45 is still perfectly capable of learning a new job, while still drawing upon his experience of years past.

Our Federal Government, as well as many other groups, is conducting an educational campaign against imposing discriminatory barriers on the sole basis of age. Such campaigns may have some slight effect. But it is perfectly clear that they are not going to solve our problem for us.

We in Congress have also occasionally raised our voices in behalf of the older worker. Perhaps our words, too, may be having some effect. We have failed, however, to take the most effective step open to us, to pass legislation which would eliminate this kind of discrimination within the limits of the Constitution. That is the objective which I am urging you to consider now. My bill, H.R. 1180, would do what I believe we would all like to do—enable the older worker to contribute to his own and the country's well-being through regular and efficient employment of his abilities.

It would be hazardous to delay passage of effective legislation on this issue much longer. The problem of the older worker is a growing one, and one which will continue to grow rapidly in the coming years, as the number of older persons in the population increases. Further delay will only mean more hardship, more people needing governmental assistance ,and more waste in a period when we obviously cannot afford it.

Then too, at a time when we are concerned, as we certainly should be, with other problems of discrimination, we might examine the evils which accompany discrimination on the basis of age. We have already demonstrated that problems of discrimination are not untouchable. We can make progress against them. The fact that we have long erected age barriers does not mean that these barriers are indestructible. We can and must make an earnest effort to crumble them.

Businessmen and politicians are frequently thought of as people who make decisions based on practical considerations. The facts which I have presented today should be sufficient to convince realistic persons of the practical advantages of the legislation which this "National Act Against Discrimination in Employment" embodies. But there is a humanitarian side which also cannot be forgotten. We owe our older citizens some consideration for what they have already contributed to our country. We shall have fulfilled our obligation to them only when we can say, in the words of Browning:

"Grow old along with me!
The best is yet to be,
The last of life, for which the first was made."

It is my ardent hope that the 86th Congress will take the step necessary to alleviate the position of this growing segment of our population. As just and reasonable men and women, we can do no less.

Act of Bravery in San Francisco

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. SHELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to call attention of my colleagues in the House to an extraordinary act of heroism and bravery which occurred in the San Francisco Bay this past week. On Thursday, May 7, two young San Franciscans were enjoying our California weather and swimming at Baker's Beach, which is located at the Presidio in San Francisco, when the young man, Mr. Albert Kogler, was suddenly and viciously attacked by a shark swimming in close the the beach. Mr. Kogler's companion, Miss Shirley O'Neill, without thought to her own safety, swam out to Mr. Kogler and brought him into shore notwithstanding his shouts and screams to stay back on the beach. Young Kogler was fatally wounded by the shark and died within hours after the attack. This act of selflessness was an outstanding deed by this young lady, Mr. Speaker, and I am pleased and proud to say this girl has already been commended by official persons and bodies in San Francisco and is being recommended for a Carnegie Life Saving Medal. I direct your attention to the following newspaper articles concerned with this event:

[From the San Francisco Examiner, May 8, 1959]

STUDENT KILLED BY HUGE SHARK OFF GATE BEACH—CO-ED BRAVES ATTACK TO TOW YOUTH ASHORE

An 18-year-old San Francisco State College freshman was fatally mangled and all but devoured, apparently by a great white shark, while swimming at Baker's Beach off the Presidio with a girl companion yesterday.

Marine experts said the tragedy was unprecedented in San Francisco Bay or adjacent waters, at least in recorded history.

The victim, Albert Kogler, of 2426 26th Avenue, a former high school football and baseball star from Paradise, Butte County, died at Letterman Hospital several hours after the savage attack, despite emergency measures to save him.

HEROIC GIRL

Witnesses said the youth would never have reached shore but for heroic rescue efforts by Shirley O'Neill, of 2570 40th Avenue, also 18 and a co-ed at San Francisco State.

She and young Kogler were treading water and chatting approximately 40 yards offshore when the youth suddenly screamed in mingled pain and terror:

"It's a shark. Get out of here."

SHARK STRIKES

The girl, an attractive brunette, said she saw a large grayish "thing" thrashing about underwater as she started to swim for the beach.

She said Kogler screamed again and that she watched him struggle to free himself from the grip of what is assumed was a maneater shark.

Miss O'Neill said Kogler apparently broke away several times but that the shark, if it was a shark, struck repeatedly, its tail or a fin flailing above the surface again and again as the youth screamed in agony.

GOES BACK

By that time she had turned about, determined to help him if she could.

She reached his side and grabbed one arm, which as she recalled later, was "hanging by a thread."

The valiant young woman said the attacking fish vanished without menacing her but that the water around her was reddened by Kogler's blood.

She said she told him to lie on his back and then half dragged him through the surf.

She noted that many spectators had witnessed the desperate struggle from shore but that none offered assistance until a fisherman threw her a line as she reached shallow water.

SWIMMING SPOT

Baker's Beach lies in the Golden Gate at the foot of 25th Avenue in the Richmond District, a short distance west of the Golden Gate Bridge.

It adjoins Phelan Park, perhaps better known as China Beach, a favorite swimming and sunbathing spot for several generations of San Francisco teenagers.

Young Kogler was taken to nearby Letterman by a Coast Guard crash truck.

Attendants said he was in deep shock on arrival there.

Nurses and doctors were unable to detect his pulse a few moments later.

MEASURES FAIL

Surgeons cut into his chest cavity and massaged his heart for 1 hour and 35 minutes. Oxygen and seven pints of blood were administered but the emergency measures failed to revive him.

Capt. Sterling Mutz, an Army surgeon, said the nature of the youth's wounds indicated he was attacked by a fish of tremendous size and power.

The surgeon noted that the entire left shoulder girdle had been ripped away to the ribs and that the youth's body was torn by jagged lacerations of the back, abdomen and both arms.

Captain Mutz said the left shoulder wound appeared to have been inflicted by one clamp of the jaws.

OTHER ATTACKS

The Army surgeon said in his opinion, young Kogler was attacked by a killer shark.

Dr. Earl S. Herald, curator of aquatic biology at Steinhart Aquarium, concurred in that opinion after hearing the wounds described and surmised that the attacker was a great white shark, commonly known as a maneater. He added, however, that it may have been a killer whale.

He recalled that a 17-year-old boy was attacked and killed by a shark off Lovers Point, near Monterey, in 1952, and one at Morro Bay in 1957, but said he had heard of no such incident in the bay area until yesterday.

KILLER SHARKS

Dr. Herald noted that two shark types—the six-gill and seven-gill—are common in San Francisco Bay and northern California coastal waters and that either type is capable of attacking humans and inflicting wounds such as those that proved fatal to Kogler.

The scientist stuck to his first surmise, however, and said in his opinion the youth was killed by a great white shark, otherwise known as the maneater, although that type is rarely found hereabouts.

Kogler is the son of Mrs. Elizabeth McGrath, with whom he lived at the 26th Avenue address, and of Albert Kogler, Sr., of Ten Echo Avenue, Corte Madera, an insurance man.

Both parents were waiting in an anteroom of the hospital when their son died last night.

[From the San Francisco Examiner, May 8, 1959]

"COULDN'T LEAVE HIM"—HEROIC GIRL'S STARK TALE OF GATE TRAGEDY

(The following words are Shirley O'Neill's, just as she gave them to Examiner reporter Howard Watkins in an exclusive interview at Letterman Army Hospital.

(They are her account of how she and Albert Kogler went to Baker's Beach yesterday afternoon and of what happened after they got there.

(There is no mention of Miss O'Neill's bravery because Miss O'Neill did not refer to it.)

(By Shirley O'Neill)

Al and I were in a diving class in school together. I saw him at school today and he asked me if I wanted to go swimming with him afterwards. "Okay," I said.

We got down to Baker's Beach about a quarter of 5. I'd been there before, but we'd never been there together. In fact, this is the first time I'd ever been out with him.

FIFTY YARDS OUT

We spread out a blanket and sunned for a while. Then we went in the water.

We'd been in for about 15 minutes and were out maybe 40 or 50 yards when he said:

"We're out pretty far now, let's not go any farther, it'd be too dangerous."

We were treading water as we were talking.

We were just about to start back, and I was looking away from him, toward the Golden Gate, when I heard him scream.

WARNS GIRL

I turned around and saw this big thing flap up into the air. I didn't know if it was a fin or a tail. I knew it was some kind of fish.

There was a thrashing in the water, and I knew he was struggling with it. It must have been pretty big.

He screamed again: "It's a shark • • • get out of here."

I started swiming back. I swam a few strokes, but then I thought to myself: "I can't just leave him here."

SWIMS BACK

I was scared. I didn't know what to do, but I knew I couldn't leave him.

I turned around and took a couple of strokes back.

He just kept screaming and screaming.

I could tell the fish was chewing him up. It was a horrible scream.

All I could see was blood all over the water. He was shouting: "Help me, help me."

I grabbed for his hand. But when I pulled, I could see that his arm was just hanging on by a thread.

HEROIC ACTION

So I grabbed him around his back, but it was all bloody and I could see the insides.

He kept screaming and yelling.

So finally I told him: "The only way I can do it is if you lie still on your back, lie back and relax."

He did that. If he hadn't, I never would have been able to get him back.

He didn't scream after that. The pain must have been awful, but he wasn't complaining. He was helping me all he could.

There were people lining the shore, but no one got in the water. We got within 10 feet of the shore and a fisherman threw in a line. I managed to grab it and the people on shore pulled us in.

There doesn't seem to be anything more to say.

[From the San Francisco Examiner, May 8, 1959]

"BRAVEST ACT I EVER SAW," SOLDIER SAYS

From a rocky point high above Bakers Beach, an Army sergeant yesterday watched a boy and a girl rise above terror to heroic heights.

"It was the greatest exhibition of courage I have ever seen or am likely to see in my life," said M. Sgt. Leo P. Day, an assistant unit adviser to the 91st Division.

SEES FROM CLIFF

Sergeant Day had taken his supper to the edge of a cliff above the beach, he said.

"Screams suddenly swelled up on the air current, and I looked down to see a great red splotch in the blue-green water below."

Taking field glasses from his car, the sergeant focused on the red splotch and witnessed, as as he put it, "a drama that seemed to move in slow motion."

"I could see the boy in the foaming red water, shouting and signaling someone to 'Go back. Go away.'

"Then I saw the girl, swimming toward him with frantic strokes, completely ignoring his warning.

"Suddenly it was quiet, and she was easing him on his back and tugging him toward the shore as fast as she could go."

Sergeant Day jumped into his car and dashed down to the beach. The girl, Shirley O'Neill, 18, had already brought the boy, Albert Kogler, also 18, to the shore.

I SAW IT

The youth, mangled terribly in the shark's swift passes, was being placed in an ambulance.

The sergeant placed a hand on the girl's shoulder and said simply, "I saw it."

Shirley's reply had equal depth and simplicity:

"He told me to get out. I started to, but I couldn't. I went back and got him."

[From the San Francisco Chronicle, May 8, 1959]

SHARK KILLS SWIMMER IN SAN FRANCISCO ATTACK—STUDENT, 18, DIES OF WOUNDS AFTER COED PULLS HIM FROM WATER

A shark attacked and killed an 18-year-old San Francisco State College student while the youth was swimming off Bakers Beach yesterday afternoon.

Albert Kogler, of 768 Elizabeth Street, died at 8:05 p.m. in Letterman Army Hospital, 2½ hours after the shark's onslaught.

His right arm had been badly cut, his chest gashed and his left shoulder was nearly gone.

Army physicians said his death resulted primarily from loss of blood.

An account of the shark's bloody attack was given by Kogler's attractive 18-year-old companion, Shirley O'Neill, a fellow San

Francisco State student who lives at 2570 40th Avenue. She made a heroic attempt to save him.

She said they had decided to take advantage of the fine weather and walked northward along the western edge of the Presidio almost to where the beach runs into the rocks. Then they waded into the surf.

They were swimming about 50 yards off shore at 5:30 p.m. and had been in the water about 10 minutes when Shirley said she heard Albert scream: "Go back."

She turned to look at him and saw "a big, black shape and what looked like a tail flip over."

"It's a shark," she said Albert screamed again. "Go back. Go back."

CALL FOR HELP

Shirley then swam for shore as he cried again: "Help me. Help me."

These cries were heard by Joe Intersonine, a fireman, and John D. Dennis, a mailman, who were fishing nearby.

Once the girl reached the beach, she courageously plunged back into the surf—this time with Intersonine's fishing line around her waist.

"I wrapped the line around myself," said Shirley, "and when I reached Albert, I took him by the arm.

"I pulled and then the man pulled on the fishing line and reeled us in.

"I saw Albert struggle and he couldn't make any progress," she added, going back to the moment of the attack.

"He was a good swimmer, and so I knew he must have been hurt badly. I couldn't leave him.

"When I got back, I asked what had happened and he answered: 'It was a shark.'

"There was blood all around us and the first thing I thought was, 'God help him.' I was scared to death."

MORE HELP

The patch of blood was seen from a bluff above the beach by M. Sgt. Leo Day, of 1003 Anza Drive, Pacifica, and he ran down to the beach to aid in the rescue.

At about the same time, Police Officers Harry Paretchan and Stanley Odman arrived on the scene only to find there was no way to get an ambulance down to the beach.

The youth kept crying "air * * * air," but they could not give him artificial respiration because of his injuries, Paretchan said.

As Odman dashed off to get more help, Paretchan and the girl tried to blow air into the stricken youth's lungs by mouth.

But he said it was no help.

Paretchan then fired three shots into the air, thus alerting a Coast Guard patrol vessel, which radioed for assistance.

A half-ton Coast Guard pickup truck was run down the beach and took Kogler to Letterman, where he was placed immediately in surgery.

Pretty Shirley, with her short Italian-style haircut and blue eyes, was composed at first when she told police of the shark's slashing attack and the arduous rescue.

But on the drive back to Letterman with Sergeant Day she broke down and began to cry.

She was treated at the hospital for shock.

Bakers Beach, a popular swimming place for San Franciscans, is just north of 25th Avenue.

There were about 30 persons enjoying the sun on the long stretch of sand when the shark struck.

In 1952 a 17-year-old boy was killed by a big, white maneater shark that attacked him 50 feet off the municipal beach at Pacific Grove.

At that time he was believed to have been the first person to be killed by a shark off the State's long coastline.

COMMON HERE

An expert in the field said a shark most common to the bay is the seven-gill, a big, black variety that grows to a length of 15 feet.

The city's head lifeguard, Eddy Ukini, said he had never heard of such an incident in the bay during his 25 years of service.

The boy was the son of Albert E. Kogler, an investment broker of 10 Echo Avenue, Corte Madera, and Mrs. Harold McGrath, of 2426 26th Avenue.

They were at his bedside when he died.

His Elizabeth Street address was his Delta Phi Gamma Fraternity, where he stayed while at college.

GIRL TELLS HOW SHE BAPTIZED VICTIM—RITES IN BLOODY SAND

(By Arthur Hoppe)

At 18, Shirley O'Neill seems like any healthy teen-ager, prettier than most, with short, dark hair, freckles and blue eyes.

Wednesday afternoon she swam through the bloody waters off Bakers Beach in an attempt to rescue a friend who was being torn apart by a man-eating shark.

And after she had dragged his ripped body ashore, she knelt over him and baptized him into her church before he died.

And the first anxious question she asked her priest when she emerged from a drugged sleep yesterday afternoon was:

"Is salt water all right for a baptism?"

The priest assured her it was.

And amid all the fear and panic that swirled up yesterday at the thought of a man-eating shark in San Francisco waters, the conduct of Shirley O'Neill was nevertheless on every tongue.

AWED COMMENT

At city hall the top officials paused during the morning meeting of the Mayor's legislative committee to talk in awe for 5 minutes about Shirley's bravery.

"Incredible," they said. And "I'm not sure I could have done it." And "Imagine, a girl like that * * *"

And the same words were repeated in homes and offices and taverns and at the corner grocery.

The mayor said there should be a plaque to honor her. The president of the board of supervisors said the city should nominate her for the Carnegie Medal of Honor.

The story of her heroism in swimming to the rescue of 18-year-old Albert Kogler was revealed at the time of tragedy Thursday afternoon. The story of her devoutness came to light only yesterday.

Rural Mail Carrier Retires

EXTENSION OF REMARKS

OF

HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. O'HARA of Michigan. Mr. Speaker, Mr. Frank Pawlowski, a citizen of Ruth, Mich., has recently retired after over 40 years of service as a rural mail carrier. On the occasion of his retirement it is fitting that we should give recognition to his long years of dedicated service to the people of his community.

Following the example set by his father, who was also a rural letter carrier, Mr. Pawlowski served as a substitute rural carrier at Ruth from 1915 to 1918. On May 23, 1921, he was appointed a regular carrier on route No. 1. Over the years he traveled one of the longest rural routes of its kind in the Nation. With perseverance typical of his fellow carriers, he covered his 66-mile route in fair weather and foul. Each winter he battled snowstorms hostile to all movement in the service of his patrons. He can take pride in a lifetime of work well done.

Along with his wife, Gertrude, he can be proud, too, of the fine family they have raised. Their son was educated in law, and is now a colonel in the Air Force. Among their four daughters, they have two nurses and a schoolteacher.

I am sure the Members of the Congress join me in wishing him long years of healthy and happy retirement.

Central Ohio Plan—Mutual Security Program

EXTENSION OF REMARKS

OF

HON. SAMUEL L. DEVINE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. DEVINE. Mr. Speaker, about a month ago, I inserted in the CONGRESSIONAL RECORD the results of a poll conducted among my constituents in the Columbus and Franklin County area of Ohio. At that time, I indicated that a further questionnaire had been mailed to over 2,100 persons concerning primarily the proposed mutual security program.

During the 30-day period following the issuance of this questionnaire, I received 535 replies which amounts to a 25-percent return. The mutual security proposal was set forth in seven separate questions relating to each program.

In reply to the military assistance feature of $1.6 billion for material, weapons, and training to mutual security countries, 302 voted yes, 58 percent—180 voted no, 34 percent—and 43 were undecided, 8 percent. Ten percent of the group felt the amount should be reduced.

On economic assistance for defense in the amount of $835 million to Greece, Turkey, Iran, Pakistan, Thailand, Laos, Cambodia, Vietnam, Philippines, Republic of China, Korea, and Spain, 264 voted yes, 51 percent—206 voted no, 40 percent—and 50 were undecided, 9 percent. Eight percent favored reducing the amount.

On special assistance funds of $272 million for health programs, medical research and economic assistance to the Arab Nation, Tunisia, Morocco, Libya, Sudan, Jordan, West Berlin, and United Nations Emergency Fund, 243 favored the program, 47 percent—225 were against it, 43 percent—and 50 were undecided, 10 percent. Six percent wanted the amount reduced.

On technical cooperation programs in the amount of $211 million for technical assistance and training for governments, farmers, and scientists in 49 countries and 9 dependent Territories, 229 favored the program—44 percent—245 opposed—47 percent—and 46 were undecided—9 percent. Six percent of those answering wanted the amount reduced.

On the $700 million development loan fund to help new countries get started, such as Libya, Israel, Jordan, India, Pakistan, Formosa, Sudan, and Nigeria, only 162 favored this fund—31 percent—284 opposed—55 percent—and 71 were undecided—14 percent. Many people questioned whether this would be a loan in fact, and 4 percent of those answering felt the amount should be reduced.

On the special contingency fund of $200 million for emergency use by the President, 306 were in favor—59 percent—163 opposed—31 percent—and 54 were undecided—10 percent. Four percent of those answering felt the amount should be reduced.

On the program of $112 million in miscellaneous funds for U.N. children's funds, ICA costs, and so forth, the vote was not conclusive as 230 favored—44 percent—232 opposed it—45 percent—and 60 were undecided—11 percent. Six percent voted to reduce the amount.

Our questionnaire contained one inquiry unrelated to the mutual security program, involving a proposed increase of minimum wage in all business subject to Federal regulation from $1 to $1.25 per hour. The poll indicated 208, or 40 percent, of the persons favored an increase, 281, or 53 percent, were opposed and 38 persons, or 7 percent, were undecided.

Vassar Carrier Retires

EXTENSION OF REMARKS
OF
HON. JAMES G. O'HARA
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. O'HARA of Michigan. Mr. Speaker, for the purpose of giving recognition to Mr. Arthur B. Bates on the occasion of his retirement, I wish to insert in the Appendix of the RECORD an article that appeared in the National Rural Letter Carrier for April 11, 1959:

VASSAR CARRIER RETIRES

When Arthur B. Bates, often called "Mr. R.F.D.," retired December 31, 1958, he had a world of memories of his long career.

In reminiscing Mr. Bates relates that his boyhood ambition was to be a carrier, always admiring the mailman and the horse-drawn vehicle that left the daily mail.

"My initiation in this type of service came in 1917 when I served as substitute mail clerk from the Detroit terminal on the Bad Axe and Saginaw run. This, however, did not come up to my expectations and I resigned the position in 1918. After serving a few months with Uncle Sam followed by varied jobs, an opportunity arose that formed the basis of my life work. James Carr was appointed postmaster and after his resignation as rural carrier I was named temporary carrier in October. I took the required examination on November 22, 1922, and on March 1, I received my appointment as regular carrier. I continued on route 2 until August 1932, and was then transferred to route 4, which I have continuously served for 26 years. Some of these patrons are 3d generation families.

"At that time the length of the route was 27 miles and served 80 families. The present route services 343 families and covers 50 miles.

"When I began as carrier, it was necessary to keep two horses besides the car, for motor transportation was only for the summer months. The salary was $1,890."

He was married to Relva Lennox on December 25, 1918. The couple have two children, Mrs. Lyle Jones of Big Rapids and Mrs. Lloyd Tinglan of Bay City. The family circle also includes six grandchildren.

Mr. Bates is an active member of the First Methodist Church of Vassar, served on the official board in numerous capacities, has been a member of the church choir for 35 years as well as Sunday school song leader. He is also a member of the National Rural Letter Carriers' Association.

He with Mrs. Bates plan to spend several months in Florida after which he will devote his time between his family, travel, and his two hobbies, photography and woodworking.

A testimonial dinner was given on Saturday evening, December 27, in the I.O.O.F. dining room with Post Office associates and their guests and members of Mr. Bates' immediate family attending.

The tables were decorated with a styrofoam mailbox centerpiece and placecards featuring a mailbox theme. A "This Is Your Life" scrapbook history was narrated by Shurley McIntyre. The table and scrap book committee included Mrs. Ivan Perry, Mrs. Wilbur Servis, and Mrs. Shurley McIntyre. A gift of luggage and also gold cufflinks were presented to the guest of honor as a memento of the occasion.

Taxation and Handout Spending

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. SMITH of Kansas. Mr. Speaker, it would appear from mail reaching my desk that the rank and file citizens are becoming more aware of the big spending programs as advocated by pressure groups in Washington. We also see advertisements appearing in the rural press paid for by individual citizens. I set forth one of these advertisements that recently appeared in big bold type in rural Kansas.

It said:

VOTE, VOTE

But do not vote for any politician who promises you a handout from the Federal Treasury.

No matter how nice a fellow he may be or how wide his grin, he is misleading you down the road toward socialism.

ZANIS RADIO & TV.

Another example of what many Americans are thinking. There is more and more realization that the concentration of economic power in the Federal Government by excessive taxation and the resulting big spending is a sure road to socialism for the United States. The more socialism a nation has the greater the concentration of economic power in the Federal Government. The two biggest dangers today for the future of America is big labor-bossed unions and the expansion of Federal Government.

Here is a letter from a small American businessman to his employees which points out the danger to our basic American form of Government. This letter is from the National Economic Council weekly letter:

EMPLOYER'S LETTER TO HIS EMPLOYEES

As you look at your paycheck this week, please look at the amount we actually paid you, not the final figure. Couldn't you use the difference to good advantage? The difference, which is your money, we must promptly send to the Government for them to spend as those in authority deem wise.

What they are actually saying to you is, "We, the people you have elected, have decided that we know better than you how to spend your money."

They do the same to my paycheck and I don't like it. I think it is downright stupid. I think I can spend my paycheck, and that you can spend your paycheck, better than some man in a swivel chair living off the fat of the land in Washington, D.C.

Actually, the situation is ridiculous. We, the voters, elect these officials as our representatives. They run for office to get on your, and my, payroll. In short, they are supposed to be working for us. Then they turn around and tell us we are too dumb to spend our wages wisely. They can spend the money better.

If they are right, they are sane people and we are insane. They say they must be our guards and wardens. Since when has it been good policy to allow insane people to elect their guards? If they are correct, we shouldn't be allowed to vote.

Isn't it about time for us to look around for a representative who wants to reduce our taxes, and is not hellbent on giving us all these free services that cost us so much money?

Creeping Inflation

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article on "Creeping Inflation" as published in the May 1959 issue of the Morgan Guaranty Survey:

CREEPING INFLATION

The Congressional Joint Economic Committee has recently been holding public hearings in an effort to determine whether price stability is compatible with maximum employment and an adequate rate of economic growth. Price stability in this context does not mean the absence of advances and declines in the general price level, which have always occurred and must occur in an economy of free markets, but the absence of a persistent upward trend, such as has taken place in almost all countries since World War II. In other words, the committee is trying to determine whether maximum employment and adequate economic growth are possible without chronic price inflation.

There was a time when such an inquiry would have been inconceivable. Only in very recent years has it been seriously proposed that inflation could be regarded as anything but a monetary disease resulting from abuse of power over money. The constitutional duty of Congress to coin money and regulate the value thereof was generally understood to give control over the size or metallic content of the monetary unit; maintenance of the soundness and stability

of money was taken as an implicit mandate, too obvious to require specific mention.

But now a congressional committee has been soberly considering whether deliberate participation by the Government in a regime of progressive, long-term monetary depreciation might be desirable in the public interest. This fact in itself illustrates how widely some sectors of economic thought have departed from a genuine belief in sound money. There is a present-day school of thought which holds that maximum employment and growth are impossible without a degree of gradual, or creeping, inflation. This theory apparently has so impressed the Joint Economic Committee as to become the subject of official inquiry.

WHAT CREEPING INFLATION IS

"Creeping" inflation is usually taken to mean a rise in the general price level at a rate of about 2 or 3 percent a year. This rise occurs, according to those who are prepared to accept it, primarily because powerful labor unions demand and obtain wage increases exceeding gains in productivity. The result is an increaes in labor cost per unit of output, and employers pass this increase on to consumers in the form of higher prices. True enough, the rise in prices could be prevented by the refusal of the fiscal and monetary authorities to make additional money available, but it is pointed out that this would curtail demand, cause large-scale unemployment, reduce output, and check economic growth. Hence creeping inflation, its condoners say, must be accepted as the lesser evil, the inescapable cost of substantially full employment and growth at a maximum rate.

THE COST OF CREEPING INFLATION

The cost would be high. Granted, inflation at the rate of 2 or 3 percent a year sounds relatively mild. That is the illusion of the creeping theory. The fact, of course, is that inflation in any amount is an evil, that 1 percent inflation is worse than one-half percent, that 2 percent is worse than 1 percent, and that we cannot be complacent about any degre of inflation. Further, the seemingly small annual rate is far from small when cumulated over a normal lifetime. At 2 percent a year, money would lose more than half its purchasing power during an average working life of 45 years. If the rate were 3 percent, only a little more than a quarter of the original purchasing power would be left.

With the unit of value eroding at such a rate, persons living on fixed or relatively fixed incomes would not only be deprived of the benefits of technological progress but would be forced to reduce their standard of living while the general standard rose. Pensioners, bondholders, bank depositors, beneficiaries of trust funds and life-insurance policies would be among the helpless victims—helpless because there is no real protection against inflation, especially for persons of small means who cannot afford to take risks. Money and claims to money are the only possible refuge for such people, and when money fails there is nothing left. No economic misfortune is more tragic than the plight of the old, the very young, and the disabled who feel the purchasing power of their incomes shrinking year by year, and can do nothing about it. And these dependent groups constitute a rapidly increasing proportion of the total population.

Who would gain from creeping inflation? Not the workers whose increases in money wages would be canceled out by increases in their cost of living. Not those in industries where wages would lag behind the spiral. And assuredly not those who would lose their jobs because their employers were unable to meet the rising labor costs.

The chief beneficiaries of creeping inflation would be the borrowers and the successful speculators—those who could repay loans in cheaper dollars than they had borrowed, and those effluent enough, shrewd enough, and lucky enough to take large risks and to guess right.

Creeping inflation, like all inflation, would redistribute wealth and income. It would do so blindly, without regard to equity, needs, or desirability. Generally speaking, those who would lose by it would be those least able to afford it.

DUBIOUS ASSUMPTIONS

While claiming to be based on the practical realities of today's economy, the doctrine of creeping inflation actually rests on a number of highly dubious assumptions. One of these is that inflation is a stimulant which can be administered to the economy in measured doses with predetermined effects. The idea of price inflation at the rate of so much a year, nicely modulated by a sensitive hand at the controls of monetary policy, assumes a much closer short-term relationship between the money supply and the price level than actually exists. In real life, price changes take place sporadically and unpredictably, because they result from a variety of ever-changing conditions. They reflect, for example, alternating moods of optimism and pessimism in the business world, which cause wide swings in business investment, inventory holdings, and some types of consumer demands. They reflect also the tendency of prevailing expectations (such as the expectation of inflation) to generate speculative movements that sometimes get out of hand.

The tendency for a regime of creeping inflation to give rise to speculation would be strengthened by the fact that it would be a program, not an accident. Inflation as an unwelcome byproduct of too-ambitious spending schemes is bad; inflation as an instrument of long-term policy is much worse. Historically, inflations have been due, for the most part, to fiscal deficits arising from the needs of governments for more revenue and the political difficulty of meeting these needs by taxation. Under such conditions, inflation is a reluctant yielding of ground under financial pressure. There is almost always some hope and expectation that the Government's finances can be put in order and currency depreciation stopped.

With acceptance of creeping inflation, on the other hand, monetary depreciation would be the acknowledged long-term program. The people would be put on notice that their money was to be allowed to cheapen progressively year by year for an indefinite future period. Under such conditions, how long could creeping inflation be relied upon to creep?

WOULD GROWTH BE STIMULATED?

Another very dubious assumption is that an acceptance of creeping inflation would stimulate economic growth in the long run. Admittedly, the immediate effect of an increase in the money supply may be to stimulate demand and thus make it easier for employers to take on higher labor costs and charge higher prices without suffering a loss of markets and being forced to reduce output. But such artificial stimulation puts off the moderate adjustments that are needed and natural from time to time in a free economy moved by fallible judgments and responsive to a wide variety of factors, both material and psychological. Such adjustments cannot be postponed forever. The need for them gains cumulative force through repeated deferment and eventually results in violent corrections.

Creeping inflation would tend to amplify rather than moderate the swings of the boom-and-bust cycle. In the long run, it would retard economic growth rather than accelerate it.

Every onset of the downward phase of the cycle would certainly bring political and popular pressure for increased doses of the inflationary stimulant. This pressure has appeared regularly, in one form or another, in past business recessions. The most insidious feature of inflation is that, for a time, it seems to work. Its stimulating effects are plainly visible and highly agreeable while they last. When the inevitable readjustment occurs and the painful price begins to be paid, it is natural for the unwary to assume that prosperity can be restored by the same inflationary treatment that appears to have produced it in the first place.

THE EFFECT ON SAVING

There are other reasons for doubting that creeping inflation would stimulate economic growth. Growth is limited by the size of the labor force and the average output per worker. The size of the labor force depends mainly upon the growth of population. The average output of the worker depends primarily upon the tools he uses, that is, the investment in productive equipment. Investment is made possible by saving, and the prospect of progressive currency depreciation would be more likely to discourage saving than to stimulate it.

To acquiesce in the gradual destruction of the value of money, with all the blind injustice that the process would involve, in the unwarranted hope that such a policy would stimulate economic growth over the long term, would be a strange way of administering money for the benefit of the people. A policy of accepting creeping inflation voluntarily would be a tragic error. Almost as tragic would be the error of allowing it to occur by default through failure to deal decisively with the factors that cause it.

Balanced Military Forces Necessary for Survival of the United States

EXTENSION OF REMARKS

OF

HON. LeROY H. ANDERSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. ANDERSON of Montana. Mr. Speaker, Montana is proud that the national commander of the Veterans of Foreign Wars, John W. Mahan, is a native Montanan. His first loyalty, however, is to the security of America.

Balanced ground, air, and sea forces are necessary if we are to survive. A short time ago, I inserted in the RECORD some telling arguments presented by Commander Mahan for strengthening our ground forces.

Today, Mr. Speaker, under unanimous consent, I insert another provocative analysis by Mr. Mahan, concerning our naval requirements. It is as follows:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Kansas City, Mo., May 13, 1959.

Hon. LEROY H. ANDERSON,
House of Representatives,
Washington, D.C.

MY DEAR CONGRESSMAN ANDERSON: As commander in chief of the veterans of Foreign Wars, I recently wrote to you regarding the cutback of American ground forces. The great majority of our U.S. Senator and U.S. Representatives who answered that letter, and there were over 300, indicated to me that they, too, were concerned with further cutbacks in our ground forces.

Today, I wuold like to bring to your attention another matter which the VFW deems to be of vital importance to our national

security. The matter I refer to pertains to the maintenance of U.S. supremacy on the seas. I have recently returned from an inspection trip of our naval units in the Mediterranean. And now, I write to you with the sincere belief that one of the most vital threats facing our Nation and the free world is the quiet but ominous growth of Soviet seapower.

Obviously, the Kremlin planners have correctly realized that the United States is dependent in war and peace upon freedom of the sealanes. Also, the Communist leaders have correctly sensed that the free world is actually an oceanic confederation bound together by the sealanes. Thus, if the sealanes are severed, the United States is isolated and the free world is fragmented. Our Nation can certainly derive no feeling of well-being from the fact that the Nazis began World War II with 57 submarines and almost won the battle of the North Atlantic, and that today, the Soviet Union has between 450 and 500 undersea craft with a large and modern surface navy.

On behalf of the 1,300,000 members of the Veterans of Foreign Wars, I request that you support the following proposals designed to further our national seapower supremacy:

(a) A fully adequate naval construction program. At the present time, our combat vessels are wearing out faster than they are being replaced. We cannot survive with a second-best Navy.

(b) An appropriation in the 1960 budget for another large aircraft carrier. Such carriers give us an important margin of strategic superiority over the forces of communism. We believe the carrier to be a highly effective and economic weapon; it has unsurpassed strategic mobility, and frees the United States from the military disadvantages and political complications of fixed bases on foreign soil. It has a unique versatility in that carrier-based aviation can apply a precise degree of naval air power required, ranging from a show of the flag and the dropping of leaflets to the delivery of a thermonuclear bomb.

(c) The appropriation for and mandatory requirement of a Marine Corps of not less than 200,000. A combat-ready Marine Corps, as part of our balanced fleets, provides our Nation with an unsurpassed force-in-readiness in cold or all-out war.

The Veterans of Foreign Wars believes that the citizens of the Nation are ready to pay for these items as a required element of our defense organization and for that reason we believe that the above proposals should not be thwarted by false arguments of fiscal economy. If we lose control of the seas, we will lose our power for survival and ultimately our independence.

I know that you have many demands upon your time as a Member of the Congress; however, I would appreciate hearing from you at your convenience relative to your position with respect to these proposals by the Veterans of Foreign Wars.

Sincerely,

JOHN W. MAHAN,
Commander in Chief.

Eleventh Anniversary of the Founding of Israel

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. WALLHAUSER. Mr. Speaker, I am most happy to join in the celebration of the 11th anniversary of the founding of Israel, the gallant little nation that stands as a bastion of democracy in the Middle East.

In the 11 years of its history, Israel repeatedly has proved the wisdom of the United States of America in supporting its independence and integrity. Those who aided in the establishment of Israel can well be proud of their efforts.

Israel is founded on the same solid bedrock upon which our own United States of America was founded. It is a homeland and haven for those who love liberty; for those who want to be free.

There is no question that the existence of Israel and the dedication and determination of its people have proved a major stumbling block to the Communist penetration that has threatened the position of the free world. For this, the free world owes a deep debt of gratitude to the people of Israel.

Israel's first 11 years have not been easy ones, but the accomplishments of its leaders and its people have been many. Israel is an example of what a virile, valiant people can build in a backward area. A less brave people might have retreated or succumbed in the face of overwhelming odds that faced them, yet Israel has moved steadily forward. It will continue to move steadily forward, for the Jewish people always have been freedom loving.

For its remarkable accomplishments and its dedication, we salute Israel on its 11th anniversary. We are confident that its centuries-old destiny of peaceful leadership will be attained. We pledge Israel and its people our support and friendship.

Recovery and Politics

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 7, 1959

Mr. RHODES of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post and Times Herald, dated Monday, May 18, 1959:

U.S. PROSPERITY: RECOVERY AND POLITICS
(By Roscoe Drummond)

The news of the Nation's resounding recovery should not be limited to the financial pages. It has the most far-reaching political importance—at home and overseas, now and into the elections of 1960.

1. The fiscal policies of the administration are looking better than ever. They are being justified by events. There is no better test. The refusal of the President and Secretary of the Treasury Robert Anderson to panic in the face of the recession and to attempt frantically to manipulate the economy by lower taxes and deficit spending is now showing itself demonstrably sound. The whole country can see it.

2. The President's legislative program is going to fare better in Congress. To have been "right" on the recovery means that the Democratic congressional leaders will not find it easy to refuse the President or override him on other matters. The principal need is not how to deal with the problems of the recession but how to deal with the problems of prosperity—and here it is easiest for the administration to take the initiative.

3. Just as the recession helped to strike down the Republicans in the 1958 election, so the oncoming prosperity will greatly enhance Republican prospects next year in both the congressional and presidential campaigns. The outlook is that by mid-1960 the economy will be producing at the rate of a half-trillion dollar ($500 billion) gross national product. This should enable the President to keep the budget in balance, which his critics said would be impossible, and should pay large political dividends in 1960.

4. The strength and resilience of the American economy are enhancing our position abroad as well as giving the lie to the Communist fixation that capitalism just has to curl up and die. It isn't doing any such thing. And both the raw-material-producing countries and the more industrialized nations in the free world are benefiting.

The wisdom of U.S. economic policies is winning new praise, one illustration is this remark from a recent speech by Heathcoat Amory, British Chancellor of the Exchequer:

"I am glad to have this opportunity of paying tribute to the calm and enlightened U.S. policies which did so much to prevent the spread of serious recession throughout the world. U.S. production has now fully recovered and continues to expand beyond previous peaks. In western Europe, also, the trend is now upwards; and indeed the recession in production has never amounted to more than what will appear in retrospect as a ripple on the trend."

All this does not mean there will be no deficiencies in the economy despite the high levels of prosperity. There will be. We face the prospect of considerable unemployment—perhaps 5 percent—in the midst of the Nation's highest employment. This is, in part, a technological unemployment brought about by shifting consumer tastes and new automation. It is visible in Pennsylvania and West Virginia coal towns, in New England textile communities, and some heavy-industry cities. There is also likely to be displeasure among farmers who experience declining hog prices.

Secretary of Labor James Mitchell has been rightly warning his own party not to neglect "these valleys of trouble in our prosperity." If they are not neglected, there can be no doubt that the Republicans will go into the 1960 election with the strongest possible domestic argument in their political quiver—unprecedented national prosperity.

"Johnny Shiloh"

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. LEVERING. Mr. Speaker, it was my pleasure on Sunday afternoon, May 17, 1959, to take part in the dedication ceremonies for the Gen. John J. Clem elementary school in Newark, Ohio, one of the many fine cities in the 17th District of Ohio, which I am honored to represent here in Congress.

I am sure that many of my colleagues know John L. Clem more familiarly as "Johnny Shiloh," who became famous as a drummer boy during the Civil War, first at Shiloh battlefield in Tennessee. He also was known as "Johnny Chickamauga," for he was in the thick of the fighting there, and in other battles in

the Civil War. Two men who later were to be Presidents of the United States—James A. Garfield and Ulysses S. Grant—were at Shiloh when Johnny Clem rolled out the battle call on his drum.

Because I believe that my colleagues will be interested in reading a brief history of the career of "Johnny Shiloh," under leave granted me, I am inserting a brief article by Dean Jauchius, about Gen. John L. Clem as it appeared on the printed program in connection with the dedication of this new school:

"JOHNNY SHILOH"

(By Dean Jauchius, coauthor of "Johnny Shiloh")

Johnny was born August 13, 1851, the first child of Roman and Magdalene Klem, and christened John Joseph Klem. Sometime during the heated presidential campaign of 1860 Johnny decided to change his middle name to Lincoln in honor of the somber man with the anguished brow who was to have to make such agonizing decisions in the years to follow.

Twelve days after his mother's death, Fort Sumter fell and Newark's wide-aware drill team, under the command of the dashing Leonidas MacDougal, a Mexican War veteran, was redesignated as Company H, Third Ohio Volunteer Infantry, the first 3-year enlistment regiment to cross the Ohio River. Johnny, infected with an unusually virulent strain of patriotism even for a wide-eyed boy, ran away with the outfit when it left Newark the evening of May 24, 1861. His father, Roman, went to Camp Dennison, Cincinnati, to get him, but Johnny jumped train on the return trip and made his way back to his outfit. The following day, the Third Ohio Volunteers shipped out for western Virginia.

It was at Pittsburg Landing, near Shiloh Meeting House, where Johnny was to become a living legend and be given the sobriquet "Johnny Shiloh," a nickname which remained with him for a lifetime. There, on April 7, 1862, in the second day of fierce fighting, Johnny stood next to Gen Ulysses S. Grant and defied the indescribable fury of close-range cannon and musket firing, beating the long battle roll on his drum until shell fragments shattered the instrument. Then Johnny picked up a musket longer than his 30-odd inches of height and weighing more than his 40 pounds, and began to shoot back.

Some time after that sanguine battle, Johnny began spelling his last name with a C, or Clem, a switch which has caused some confusion through the years. But while he signed his letters "Jno. Clem," his War Department records, now the John L. Clem Papers, invariably carry the K spelling, or Klem.

On September 20, 1963, Johnny participated in an assault by Gen. Gordon Granger's Reserve Corps in relief of the forces of Gen. George H. Thomas, "The Rock of Chickamauga," and while in the thick of critical fighting, shot a Confederate colonel from his horse when the rebel officer called upon him to surrender. Subsequently, Maj. Gen. William S. Rosecrans ordered Johnny's name entered upon the roll of honor and promoted him to the rank of sergeant.

Johnny was discharged from service at Atlanta by order of the Secretary of War, September 19, 1864, "in order that he might complete his education with a view to becoming a commissioned officer in the U.S. Army." Prominent generals, headed by Grant and Thomas, paid his tuition at a private school, but when Thomas seemed in trouble at Nashville in December 1864, facing the desperate Rebel army of Gen. John B. Hood, Johnny ran away from school and returned to "Old Pap" Thomas. Using "ragatag" troops because Sherman had taken the flower of his army for his march to the sea, Thomas soundly whipped Hood in the final decisive battle of the west. Johnny returned to another school, ultimately received his graduation diploma from Newark High School, and was appointed a second lieutenant in the Army by President Grant.

His Army career was a distinguished one and he saw action in the Spanish-American War and in the Philippines. He sought desperately to get into action during World War I, but President Woodrow Wilson denied him that opportunity. He retired in 1919 as a major general and died May 13, 1937, at San Antonio, Tex., John Lincoln Clem is buried in heroes' ground, at Arlington National Cemetery, near the grave of an old friend who'd long preceded him, Gen. Philip H. (Little Phil) Sheridan, and near Thomas Circle, named after his beloved "Old Pap" Thomas.

The last echo of the shots fired in such tragic anger in the 1860's have long fled, and the world has turned many times since a little, blond-haired lad stood defiantly beating the long battle roll of the drum at bloody Shiloh where brother slaughtered brother in the yellow mud, but John Lincoln Clem of Newark, Ohio, remains alive in the breasts of other young Americans today as an inspiring example for the youth of all times.

The Air We Breathe

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 14, 1959

Mr. SHELLEY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address by Hon. HUBERT HUMPHREY, U.S. Senator from Minnesota. This address was delivered to the Democratic Luncheon Club of San Francisco:

THE AIR WE BREATHE

(Remarks of Senator HUBERT H. HUMPHREY, Democratic luncheon meeting, San Francisco, April 23)

All of us nowadays are more conscious of the air we breathe than we used to be.

In Los Angeles they have smog. In San Francisco you often enjoy—so I hear—salubrious fog. All of which makes me wonder whether it was the smog or the fog or the grog that caused our Republican friends to manhandle their colleague Joe Smith out here in 1956. At any rate you must have had mighty clear skies on election day last November when all the Republicans got manhandled.

Today it isn't fog or smog that concerns people most, it's the radioactive dust that's in the air and settles on the water we drink and the food we eat—particularly strontium-90.

This strontium-90 is one of the radioactive products of atomic reaction. It has a natural affinity for calcium and builds up in our bones—where it can cause bone cancer as well as leukemia.

People have to be pretty upset about something to sit down and write their Senators and Congressmen. And they are thoroughly upset by the latest news about strontium-90. Every one of us in Washington has stacks of mail about it. I quote just one letter:

"We have asked ourselves time and time again, how could the Atomic Energy Commission keep saying that there is no danger."

Now the Atomic Energy Commission belongs to all of us, to the people of the United States. One of its prime duties is—within the limits of security—to inform the people about matters of grave concern to themselves, and to their children's children.

Of course, that was not Admiral Strauss' idea, when he was head of the AEC. To him the AEC was a ship, he was captain, and any difference of opinion was mutiny. Also, he kept the key to the radio room in his pocket, so that no one else could let people know where the ship was going, or even where it was.

At the AEC, the Strauss song has ended, but the malady lingers on. The AEC is still doing its best to keep the American people in darkness, and radioactive darkness at that.

In December, AEC Commissioner Libby was faced with new data from the Defense Department which indicated that half the strontium-90 released in an atomic explosion falls to the earth within 2 years, instead of taking 7 years to filter down from the atmosphere, as it was hitherto believed.

The same data indicated that, instead of the strontium-90 being evenly distributed throughout the world, as previously assumed, its fallout was heavier right here in the United States than anywhere else in the world.

The evidence against the AEC's old 7-year theory was so strong that AEC couldn't even begin to defend it. Instead, Dr. Libby sought to fall back to a new line at 4 years.

On February 20 the Joint Congressional Committee on Atomic Energy received the Defense Department data. It took Senator CLINTON ANDERSON, my good friend and fellow-Democrat, a solid month of hard fighting to clear the way for putting this information before the public.

Meanwhile, Dr. Libby seems to have looked for a way to air his new 4-year theory, a way that would look almost casual, as if it were just a minor afterthought.

He was scheduled to speak at the University of Washington March 13, as one of the events in its annual lecture and concert series.

Everyone in that audience—except possibly the physics majors—must have come out pretty baffled and bewildered. It was more like a scientific monograph than a lecture. Believe it or not, there were 24—yes, 24—pages of tables and charts appended to the prepared text of the speech.

Everything was in it but the kitchen sink—and the Defense Department findings, which Dr. Libby coyly kept to himself. By so doing, he apparently sought to take the edge off their release by Senator ANDERSON 8 days later.

I'll say two things about this sorry record of evasiveness on a matter of the most urgent public concern:

First, if it took as long for strontium-90 to fall out of the stratosphere as it does for information to fall out of the AEC, we could all feel a lot safer.

Second, the AEC is still—after having been caught time and time again misleading the public—trying to play down the dangers of radioactive fallout.

Much of what we know about this subject we know in spite of—not because of—the AEC; and particularly from the hearings which Congressman CHET HOLIFIELD conducted in 1957, and which I'm pleased to say he will reopen next month.

What are the dangers of fallout?

As you know, I don't believe in States rights being used as an argument against the Federal Government doing something the States cannot or will not do. But I do believe a State has the right to protect the health of its citizens—particularly when our Federal Government defaults in its plain duty.

It's for this reason that Gov. Orville Freeman of my own State of Minnesota set up a special committee on atomic problems. At the request of that committee, the AEC tested samples of wheat from Minnesota and neighboring States.

In samples from 1956, 1957, and 1958, strontium-90 content in micro micro curies per gram of calcium ran 107, 152, and 155—and the so-called permissible level is 100.

There was one sample which tested out at 606. This sample, the report notes, was excluded from the averages. I wish it were that easy to exclude this and like samples from people's stomachs.

In communicating these facts to me, Dr. Maurice B. Visscher, of the University of Minnesota Medical School wrote:

"The really shocking thing to me is that the AEC itself has no other significant number of analyses of wheat."

The point is that we just don't know enough about the degree to which strontium-90 gets into our food and drink. Some work has been done on milk and water, and a smattering on a variety of other foods, but not on a regular and continuous basis. Apparently nothing would have been done about wheat if our Minnesota people had not insisted.

We are equally in need of more knowledge about the so-called permissible levels of radioactivity. These figures were first worked out many years ago for radium workers and X-ray technicians—that is, for adults. Now it seems, however, that the greatest danger is to children under 10.

As our knowledge has grown, these figures have been revised downward again and again. Many scientists believe that there is no such thing as a permissible level, that each increase of radioactivity increases the risk of disease and of damage to future generations.

Not only are we walking in the dark; we don't even know where the precipice is.

There is another tragic aspect to the AEC's blackout on fallout data. It leaves us tongue-tied about the shocking extent to which the Russians have been polluting the stratosphere.

We talk of dirty bombs, and, although not so much lately, of clean bombs. The ones the Soviets exploded last October can only be described as filthy. Dr. Libby estimates that this series of massive Soviet explosions increased the pollution of the stratosphere by a full 50 percent.

Had we been on our toes—and not so guilt-ridden about our own fallout showing—we would have gone straight to the United Nations, and laid these terrifying facts on the line.

The Soviets, we should have charged, are poisoning the whole world, not with their wornout dogmas but with the deadliest dose of radioactivity that has ever been inflicted upon the world. But the AEC's dirty hands prevented us from exposing Russia's dirty bombs before the United Nations.

It was just over a year ago that the Soviets first announced their suspension of nuclear tests—as usual, catching us flatfooted. Their timing of the announcement was the rankest hypocrisy. They had just completed a series of extremely dirty tests. Those were the tests which caused radioactivity in the rainfall right here in San Francisco to increase by 200 percent.

I said in the Senate at that time:

"I feel we should have exposed this information rather than guarding it as though it were a top state secret. It is these facts relating to the Soviet tests that the world should know, back into the smallest village in the faraway corners of Asia and Africa."

I was trying, as best I could, to get our Government out of the corner into which the Russians had backed us. But all I got from the AEC and its friends was a barrage of criticism.

We aren't going to get anywhere in stopping excessive fallout if we leave it up to the AEC. They're in the business of conducting tests, and also of assessing how dangerous their tests really are. No man, or Government agency, should be the judge in his own case.

For a considerable time, a number of us in the Senate have demanded that the administration put primarily responsibility for research on radioactivity where it belongs, with the Public Health Service. And I welcomed the introduction of a bill by my good friend, Senator LISTER HILL, to do just that. The Public Health Service will draw, of course, upon the expert knowledge of the AEC and of other agencies, State and Federal, public and private. It will be the responsibility of the Surgeon General, as the head of this Service, to present to Congress a comprehensive program for the control of radiation hazards. I heartily support Senator HILL's proposal; it's high time we get some honest figures on radioactivity.

But further measures are also worth considering. It might be well to require that one of the AEC Commissioners be a biological scientist—just as one is now a physical scientist. We should give to the U.N. Scientific Committee on the Effect of Atomic Radiation full information on the results of our recent studies. We should, at the next session of the World Health Organization, urge that it concern itself with the effects of radioactive fallout, as it already does with radiation from the peaceful uses of atomic energy. We should do all this and more.

For out of this great evil there may yet emerge some good. Fallout is no respecter of persons or doctrines. It settles upon the caviar the Soviets serve at their wingdings just as it does upon the food we are eating now.

Indeed, if Mr. Khrushchev succeeds in swearing off vodka—as he urges upon the Russian people constantly, and also on himself—it may simply put him in all the greater peril. On the basis of present tests, there seems to be much less strontium 90 in hard liquor than in tea or milk. The more the danger from strontium 90 becomes known on both sides of the Iron Curtain, the more pressure there will be for an end to atomic explosions.

My Democratic colleagues, Senators GORE and CHURCH, have suggested that tests be, at the very least, limited to underground caverns and outer space. This would greatly reduce radioactive fallout. Last week the administration caught up with the Gore-Church proposal.

But I hope that we can achieve the ending of all tests—with adequate safeguards for inspection and detection—not only because of the fallout danger, but because it would be a great step forward to wider measures of disarmament.

We are concerned, and rightly concerned, about present levels of radioactivity. But they are as nothing compared to the seething wilderness a third World War would make of our planet.

We must give fresh impetus to the Geneva negotiations looking toward the suspension of tests. To this end, I have introduced a resolution to put the Senate on record in support of the efforts of the United States to achieve an agreed suspension of tests, and endorsing the principle that an adequate inspection and control system must be part of any such agreement.

We are entirely willing to open our doors—to let the Russians send technicians to check on our compliance with a test ban—but we want to be able to do likewise. They say they will permit inspection, but only by the native citizens of each country, and not by an international team.

This is arrant nonsense. Still, our aim must be to continue to achieve agreement not merely to prove that failure to agree is their fault.

My friends, it is no accident that the Senators and Congressmen who have been foremost in the fight to disclose these atomic facts are Democrats. We in this party are steeped in the belief that, if you give the people the facts, they will make the right choices.

That can be—in the short run—politically dangerous. Do you recall what happened in 1956, when Adlai Stevenson called for the suspension of hydrogen bomb tests? The Secretary of State said Mr. Stevenson was "not fully conversant with the details of the problem."

Thomas E. Dewey called it "an invitation to suicide."

Vice President Nixon denounced him for "playing dangerous politics with American security."

Yes, it can be politically perilous to be too right too soon. But it can be national suicide to be right too late.

There may still be some of our fellow-citizens who doubt that there is one world. But no one can deny that we have only one stratosphere, and that we must somehow stop using it as a rubbish dump for radioactive debris.

After all, unless we all decamp to another planet, it's the only stratosphere we have.

New Frontiers—1959

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. AVERY. Mr. Speaker, the following is a speech delivered by Mr. Donald F. Carpenter, general manager, film department, E. I. du Pont de Nemours & Co., delivered May 14, 1959, before the Topeka Chamber of Commerce in observance of the opening of the new Du Pont cellophane plant located near Topeka at Tecumseh, Kans. Mr. Carpenter's address is most enlightening. The speech follows:

NEW FRONTIERS—1959

Passing through Tecumseh today, Hunter Lewis pointed out a monument marking the Oregon Trail. It recalled the important and colorful role played by Kansas in the westward expansion of our country. The Oregon Trail, as well as the Santa Fe and Chisholm trails and the Pony Express route were famous paths to the challenging opportunities of the West. In spite of the substitution of the jet airliner for the prairie schooner, the paths to opportunity are still open in the United States. One is the path to industrial progress, and this is the path we are taking here in Tecumseh.

We appreciate the warmth of your greeting here tonight. We are glad that we have an important plant in Kansas. We investigated 100 possible locations, but when we learned that the Topeka area had outstanding people, good power, water, and transportation, we looked no further and here we are.

Now you are overwhelming us by your welcome. Like a Kansas steak, we have learned that the enthusiasm, friendliness, and cooperation of the community must be tasted to be fully appreciated. You have already helped us greatly by your friendly spirit and we hope we may deserve your continued support.

You have not only greeted our employees with enthusiasm but you have made their families feel the warmth of your welcome. The kids are in seventh heaven to grow up in the land of Wyatt Earp, "Doc" Holliday, Matt Dillon, and the Pawnees. Thank you for your Kansas hospitality.

As Kansas was a land of opportunity for early settlers, it is also an exciting new frontier for Du Pont and for cellophane. It is part of the industrial expansion of our great country which is so important to the prosperity of the West and of the entire United States. The industrial activity initiated here will have an impact in varying degrees throughout the entire country.

Many communities offer important inducements to attract industry. Some provide immediate advantages of a short-range character. Others provide less obvious but longer range benefits. We prefer the latter and we believe you offer them here.

As in every walk of life and every community, your greatest asset is the high caliber of your people. We have found them to be friendly, intelligent, alert, willing to learn new customs and duties, trustworthy, fearless, and capable. What more could a manufacturer ask?

If we can offer sound direction and support, it is those same people who will spell success to our new enterprise. They will bring this huge investment to life. Under their operation, it will become a vital factor in the industrial world. I fully expect that they will establish the highest levels of quality, productivity, and efficiency that will be attained anywhere in our country.

It will not be easy. Others have been striving to reach these levels in the production of cellophane for 35 years—they knew the methods, they have plants which were built at a fraction of the cost in days when a quarter would buy a haircut and a nickel would buy a cup of coffee. But there are advantages here too; there are outstanding people and what we believe is the most modern cellophane plant in the world.

It will be an interesting competition, the type of competition that has made our country great. Here a determined group of people working with modern tools will be competing against other producers of cellophane and also producers of other films such as polyethylene, vinyl chloride, polystyrene, vinylidene chloride, rubber hydrochloride polyesters and also against many types of paper, foil, and other materials.

Whether this operation will succeed or not is in the hands of the customer. He will be the judge and the jury. His decision will be final. If he says cellophane made in Kansas meets his requirements, the operations here will prosper. We expect that he will.

These same Kansas people determine the attitude of your government toward industry. In some communities industry seems to be treated in such a manner that it cannot do its best. Sometimes industry is taxed more than its fair share and restrictive regulations are imposed. All too frequently the industrial goose, while trying hard to produce golden eggs, finds itself attacked by those who prey upon it until it can no longer benefit its employees, its owners, its customers or its community.

You have demonstrated a very different attitude here. Your people are sound and substantial. They look for the long-term good rather than the illusory temporary advantage.

When we locate in a new community, we intend to become a part of that community. We expect to assume the responsibility for our share of its operating expenses. On the other hand, we do not think it proper to expect du Pont or any other business to assume the rightful burdens of others in the community, or be subjected to special penalties. We appraise the level and the trend of taxes on business in relation to all taxes. We take note of the trend of State and community debt, for this is a measure of the willingness of government to live within its income.

We are confident that our operations here will be treated fairly by your people. If our plant calls for services which increase governmental costs, we naturally expect to pay for them, and I assume the same would apply to our employees. If special regulations and restrictions are necessary, they should, of course, be applied. But we know, as do you I am sure, that just so soon as a community commences to impose unreasonable and unjust burdens upon an industry, it follows as the night the day that the industry will begin to decline, its products can no longer compete in the marketplace, its volume drops off, its employment decreases, and the enterprise which had once been an asset in a community becomes a liability.

We tried to appraise these probabilities before we came. We felt certain that we would be treated with wisdom and understanding. We are glad we are here and we hope that our operations will always be an asset in this community.

Much is being said these days about the importance of the education of our youth. We've all known it but maybe we have let someone else worry about it when we ourselves should have been personally more active in supporting our educational system. It's a national problem and one of great importance to us.

Our limited contact indicates to us that your educational system is good. The members of your community who have joined our organization bring a knowledge and adaptability which results from good schooling. We are also impressed with your universities.

In our highly specialized business we need many employees who have had advanced education, mostly technical. The proximity of excellent engineering schools gives our employees the opportunity to increase their knowledge in the scientific fields. The need for advanced education is becoming more apparent every day. This need emphasizes the importance of your excellent educational institutions. In our own operations at Tecumseh, one of every four employees will probably have a college degree.

Thus the community climate of Kansas has been instrumental in our selection of your locality for the establishment of this enterprise. Now it is important to determine what Du Pont will bring to Kansas.

The first thing we hope to share with you is confidence—confidence in the industrial growth of our country and of the dynamic nature of our free-enterprise system. We have confidence in the Tecumseh plant because it typifies the operation of the modern industrial corporation—a pooling of financial resources, technology, and a multitude of individual skills and abilities to fill human needs in a way that could not be done through individual effort alone. The cellophane business is complex and can only be performed effectively by a large organization.

Perhaps I can explain this better by telling you something about our business. The basic chemistry of cellophane is fairly simple. It is possible to reduce to a single sheet of paper the instructions that would permit an individual chemist to produce cellophane with simple laboratory equipment. But the result of the individual's effort would be a far cry from an acceptable commercial product, and the product would probably cost something over $50 a pound. The experiment would be interesting, but scarcely of practical value to the producer, the community, or the economy at large.

The story of cellophane—its development from an obscure specialty product to a familiar household institution—is a spectacular business success story. Thirty-five years ago this spring, the first cellophane in America was rolled from a casting machine at our Buffalo plant. Robert L. Richards, who is with us this evening, devoted many years of his early career to cellophane. He was there at the startup and can tell you that a 50-pound roll was a triumph in those first months of confusion.

As we were learning the ins and outs of the highly technical cellophane process, tons of product were sent to the scrap dump to be burned. There have been bonfires on the Tecumseh scrap dump, too, and for the same reason. It is better to destroy questionable product that to permit it to reach our customers. The reputation for quality must be established and preserved. Tecumseh has made a good start.

Since 1924, cellophane's growth has been phenomenal. Last year, cellophane volume was over 400 million pounds. Even though 1958 was called a recession year, still more cellophane was sold in that year than in any year in cellophane's history.

But cellophane's road to success was not an easy one. The teamwork and ingenuity of pioneers in research, production, and sales who had the courage to persevere in the face of early discouragements were prime elements in its progress. The first cellophane contributed little more than glamorous appearance to a package. It offered no moisture protection, and wrapping with it was a hand operation. Because of its cost, it was used primarily on perfumes and expensive candies. All in all, it was a very questionable business, if, in fact, it was a business at all. We know of one prominent U.S. manufacturer who heard of the early production of cellophane in France, where it was invented. He investigated it and decided against bringing it to this country. The Du Pont Co., however, saw possibilities in the product, brought it to Buffalo, N.Y., and started the long struggle there.

Then in 1927 came Du Pont's invention of moistureproof cellophane, a research accomplishment which signaled a new era in packaging. Later, in response to a need, heat-sealable film was developed. This made cellophane practical for high-speed packaging.

Other research developments followed in rapid succession so that there are now more than 100 varieties of cellophane. Although all these varieties are called cellophane, they are actually different products, each designed to meet a specific need. Cellophane's development is an excellent case history of the dynamic and continuing ability of our free enterprise system to fulfill the expanding needs of our country. When we found that fresh meat packaged in regular cellophane discolored, our research scientists and plants provided a highly specialized film which maintained the freshness and bright red color of the meat. Similarly, other special types were developed to meet the needs of bakery, candy, and other food products.

The need for special types for special purposes has continued ever since. The cellophane developed for twist-wrapping candy kisses differs from the folding type needed for caramel candies. The cellophane that is suitable for cigarettes is not satisfactory for cigars.

Every plastic film in the past decade has aspired to capture at least a part of the cellophane markets. But competition has found that cellophane is hard to beat. From the start, cellophane had rugged competition from older packaging materials, and competition from new plastic films is steadily growing stiffer. We anticipate that a billion pounds of packaging film will be consumed in 1968, and we predict that more than half of this will be cellophane.

This means that the cellophane industry will continue to expand. A vital factor in

this expansion will come from cellophane's versatility and the ability of our research scientists to continue to build new and better types of cellophane film. Several new types have been introduced in the past year, including an exceptionally durable polymer-coated type announced just a few weeks ago. Other new types are being perfected in our laboratories and plants, while still others are in the research stage.

Many of our hopes for cellophane's future are tied to the advanced technology represented in the Tecumseh plant. Improved methods and manufacturing efficiency have always been one of cellophane's biggest assets—being largely responsible for bringing the price of cellophane from $2.65 a pound in 1924 to about 60 cents a pound for the most common types today, although prices of raw materials and wage rates have increased substantially during this period. If cellophane were made today by 1924 methods with no process improvements, it would cost—not 60 cents a pound—but $5.50, and we would have very few customers, one plant and very few employees.

As you know, we have completed our plant and have commenced operations. The plant alone has cost nearly 1,000 times as much as the investment Mr. Éleuthère Irénée du Pont had for his new company back in 1802. The capacity is more than 60 times as great as the first cellophane plant in this country. It will provide a livelihood for more than 400 persons. Wages and salaries will be about $3 million a year and our payments for goods and services in Kansas will be another $2 million a year.

On this 35th anniversary of Du Pont's introduction of cellophane to the United States it is fitting that this new plant should go on stream with our four other cellophane plants. Then we had only a few customers, now we have thousands. Then we had one small plant, now we have five. Then we had 50 employees, now we have 5,000. Then cellophane was a rare curiosity, now it is a universal staple. Then we had hopes for the future, now we have realized and exceeded those hopes and with the assurance of your support we have hopes for still further progress. No one then imagined that cellophane would be used in many of its present applications. Who can now predict what new uses will appear tomorrow?

Gentlemen, during the past few years we have thought of the parable of the sower of the seed. Some seed fell upon barren ground and withered and died, but some fell upon good ground and bore fruit one hundredfold. We are confident that Tecumseh is good ground and we welcome the opportunity you have accorded us to come to your community and to become associated with your outstanding people in this enterprise. We hope the harvest may be a good one and we welcome the opportunity of sharing it with you.

Boggs Bill Gets Nod

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans States and New Orleans Item of Monday, May 11, 1959:

BOGGS BILL GETS NOD

Treasury Department approval on a bill by Representative HALE BOGGS seeking to encourage oversea investment has the effect of bestowing administration sanction on the measure and enhances its chances of passage.

No adverse criticism was offered by the Department on provisions of the legislation which would ease the tax strain on American firms investing in underdeveloped foreign lands.

Representative Boggs' justification of the tax incentives carries considerable logic. He said:

"Income on which taxes are deferred today will be reinvested and will yield greater income and greater revenue in future years.

"Promotion of private foreign investment is of such high priority in our national policy that we should not be satisfied with doing less than is necessary."

The Boggs measure, offering as it does a supplementary method of aiding this country's less fortunate allies, deserves prompt hearing and passage.

If there is hope for reducing the U.S. foreign-aid burden, it rests with encouraging the Nation's businessmen to accelerate investments abroad, which would serve the same purpose of elevating living standards in retarded nations.

Address by Louis Stein, President, Food Fair Stores, Inc., on Acceptance of the 1959 National Brotherhood Award, National Conference of Christians and Jews, Waldorf-Astoria Hotel, New York, May 6, 1959

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. HALPERN. Mr. Speaker, it was my great privilege to attend the brotherhood award dinner of the National Conference of Christians and Jews at New York's Waldorf-Astoria on May 6 in honor of Mr. Louis Stein. Mr. Stein, president of Food Fair Stores, Inc., was presented the national conference's brotherhood award for 1959, in recognition of his many outstanding services in the field of human welfare and brotherhood.

The event was one of the most impressive I have ever attended. On the program were such eminent Americans as the Honorable James P. Mitchell, Secretary of Labor; Mr. R. Newton Laughlin, president of the Continental Baking Co.; Rabbi Simon Greenburg, of the Jewish Theological Seminary; Mr. Charles G. Mortimer, president of General Foods Co.; Dr. Carroll V. Newsom, president of New York University; Mr. and Mrs. Tex McCrary; Father Vincent F. Beatty, president of Loyola College, Baltimore; and Rev. James H. Robinson, pastor, Church of the Master, in New York.

The occasion of this dinner highlighted the significance of one of the Nation's outstanding and dedicated organizations—the National Conference of Christians and Jews. The conference was established in 1928, and in the intervening years, through a scientific program of education in schools, in churches and synagogues, among community groups, through communication media and in the Nation at large, it has made bigotry become recognized as antisocial, the hallmark of the ignorant and of the internal enemy of the United States.

The conference has mobilized religious leaders of the three faiths against the enemies of religion and brotherhood. It helped to create united action against the Nazis and more recently against the Communists.

In his address of acceptance, Mr. Stein aptly confirmed the wisdom of the conference's selection for the brotherhood award. Stressing the need for greater compassion and tenderness in a scientific and materialistic world, he asked for the creation of an organized, international, cooperative project in the field of human research—a project which, he suggested, could be termed the "Humanistical Year."

Mr. Speaker, the remarks of Mr. Stein are so pertinent to today's problems and his understanding is so deep, I, under unanimous consent, am including his excellent address in the RECORD at the conclusion of my remarks:

Mr. Laughlin, Secretary Mitchell, Father Beatty, reverend clergy, distinguished guests, and friends, at the outset, I should like to say to Father Beatty that, while my instructors taught me many things at Fordham Law School, they haven't taught me the proper words to express to you, and to the conference, my gratitude and my humility tonight.

I shall simply say that I am profoundly honored by the award you have accorded me, and I am even more touched that you consider me worthy of receiving it. I assure you that this award shall never be a cushion to relax upon. Rather, it will serve always as a spur for greater effort in behalf of the inspiring objectives of the national conference.

And may I also say to you, Father Beatty, that while I am sincerely appreciative and even overwhelmed by your very gracious expression, I shall always bear in mind a remark made by a prominent statesman. "A eulogy," he said, "is like a fine perfume—delightful to smell but fatal to swallow."

To the welcome already extended to you, I should like to add my personal greetings. To each of you—and I mean it literally—I should personally like to say thank you; thank you for sharing this auspicious occasion with me. And thank you for your wonderful support of the National Conference of Christians and Jews.

I have long felt that business leaders must assume an even more important role than they have in public welfare and public service activities. And it is a source of gratification to me, as it must be to you, to note the increasing frequency with which businessmen are singled out for awards and commendations for outstanding service in the humanitarian field.

In my opinion, it serves to point up the changed attitudes of business leaders in the last half century or so. The business executive of today has assumed a vastly increased social, spiritual, and ethical outlook. He is aware that the men who manage our corporate affairs need not only technical competence but also the deepest religious and ethical insights. These men, through their community affiliations, are providing moral and spiritual leadership.

It is a sign of the business times to have the president of the Chamber of Commerce

of the United States maintain, and I quote him: "The only valid social goal is the improvement of the lot of man, and the better relationship of men to one another, to God, and to fundamental truth."

I am not unmindful of the fact that this award is being presented at a time when the world finds itself in the midst of perhaps the gravest crisis since the industrial revolution. The air is thick with diplomatic notes and ultimatums, with statements and counterstatements. And tensions rise and fall with the latest editions of our newspapers.

And yet, this is taking place at a time when we of the Western world are enjoying material progress far beyond anything this world has ever known. Advances in the natural and physical sciences have brought us to new peaks of material abundance, lengthened our life expectancy, made possible greater opportunities for leisure, and in other ways provided more fully for the satisfaction of human needs.

Contrast this with the fact that two-thirds of the world's population of 2.8 billion people have gained little if anything in the way of material progress resulting from scientific achievements—that their standard of living is pitifully inadequate.

And these people are be found in the teeming, underdeveloped centers of Asia, Africa, the Middle East, and Latin America, where, to add to the distress of the situation, population growth is most rapid. The people of these areas are becoming restless, and demanding of a share of the material abundance enjoyed by people elsewhere. It is in these areas that a dangerous explosion may be in the making.

As business leaders with business interests and as men of good will concerned with peace and security in the world, it behooves us to give serious thought to this situation. It suggests a different type of orientation and a greater understanding and a more lively concern with events in the underdeveloped, overpopulated areas. For in these countries smoulder the sparks of future revolts and conflict which may well engulf us.

The unprecedented development in nuclear power envisions a source of further material progress for those to whom it becomes available and a source of further unrest to the have-not peoples of the world. Nuclear power for peaceful purposes—distant though it may be—holds the promise of freedom from want, greater freedom from toil, and freedom from physical boundaries. It promises expansion in the familiar things of day-to-day living—transportation, housing, clothing, food, business, social environment.

And again the question arises: "Can mankind meet the challenge of its material progress?"

Or, to put it another way: "Will man have the wisdom to manage a world with unlimited power and unlimited ability to destroy itself?"

As regrettable as is the fact, it must be acknowledged that we are finding it difficult to do so at present. Certainly not while we sit on powder kegs and fight cold wars from the Middle East to Tibet, from Africa to Quemoy, and from Budapest to Berlin.

The years ahead—the years of nuclear power—should give us even greater concern. The use of this power is fraught with danger because of the uncertainty and unpredictability of human behavior and human governments.

To the task of eliminating this danger, to the positive task of coping successfully with our material progress, business leaders everywhere must dedicate themselves in whatever sphere of influence—large or small—they operate.

In the pursuit of these tasks, we must bring to bear all our human and spiritual resources. For of this we are sure—the hope of everlasting peace and a world that is free has its source in the mind, the heart, and the soul of man.

The fulfillment of this task, it seems to me, lies in the direction of a far greater knowledge of human behavior and human relations than we possess today. In this era of the world's development, we must turn, not alone to the physical sciences, but to the science of human relations—to those who probe the hearts and minds of man and his behavior. We must turn to the foremost authorities in humanistics.

Since I voiced that very thought in this room before the Fordham Law Alumni Association, the course of world events has more than ever strengthened my conviction that a vast effort devoted to research in human relations, administered at the highest Government levels and supplemented by private efforts, must be undertaken.

Huge sums of money and unlimited resources have been provided for search and development in the physical sciences, and the resulting achievements have been nothing short of monumental. It was my opinion that resources on a similar scale must now be provided to achieve as much in the field of human research. I went so far as to suggest, as an approach to this problem, the possibility of creating a new Manhattan project to be devoted to this work.

I should like to suggest another approach.

Last year, many nations, including Russia, participated in an extraordinary project which bore the title of the geophysical year. It seems to me that the times demand a similarly organized, international, cooperative project in the field of human research—a project that, for lack of a better word, might be termed the Humanistical Year.

In venturing this suggestion, I do not by any means underestimate the importance of the work being accomplished by Government and private agencies. Certainly the national conference, in its brotherhood program and in other programs related to human relations, is doing notable service.

But the scope of the job to be done throughout the world is far too broad and wide and deep to be accomplished by private organizations, as generous as you and other supporters of such groups may be.

There is no doubt that progress has been made, but it would be foolish to claim that progress is as satisfactory as present world conditions warrant. We must find the means to bring about more rapid progress. If to achieve this we must begin with a greater accumulation of basic knowledge in human relations, then we must recognize that the job to be done centers on research—fundamental research in human behavior and the relations of man to man.

And, lastly, the undertaking of the Humanistical Year under sponsorship of an international body would merit the highest priority and abundant budgets. It would also make available to all nations the results of projects carried out by the participating nations.

Certainly, the challenge to security and peace in the world—the challenge to achieving predictable human behavior and human governments—is global, and merits worldwide study and action.

In my opinion, if such a project were undertaken, it might well be under the auspices of the United Nations or one of its intergovernmental agencies, such as UNESCO. But, howsoever it is sponsored, it merits the force of U.S. leadership such as was demonstrated in 1953 when President Eisenhower sounded the call for peaceful uses of atomic energy, leadership which eventually led to the establishment of the International Atomic Energy Agency.

In the final analysis, I am moved by the conviction that God did not bestow upon mortal man his intelligence, his ability to research, to invent, and to develop in order to annihilate the very things he was empowered to create. But, if the human race is to have the peace that men of good will crave, we must bring men closer to each other in understanding, in spirit, and in brotherhood.

This is perhaps easier said than done; yet we must not be disheartened by the magnitude of the task. In this, we must accept the Biblical injunction that we cannot shirk a duty simply because it seems difficult to complete successfully.

We cannot and must not permit the achievements of the physical sciences to create turmoil in the world.

We cannot and must not lose the God-given belief in a better world of tomorrow.

We can and must learn together to live together.

We can and must solve the paramount problem of creating a society living in harmony with itself.

And, finally, we can and must create vital programs through which mankind will live in dignity, in brotherhood, and in peace, so that history will record our era, not as the atomic or nuclear age, but as the human age.

To this end, people and government everywhere must dedicate themselves.

It Is Already Ours

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. SCHWENGEL. Mr. Speaker, much has been said and written concerning the selection of a national floral emblem. In support of the many who feel that the corn tassel best represents our history and tradition, I wish to call attention to the following statement by Margo Cairns who has done more than any other individual to get recognition for the selection of the corn tassel as our national floral emblem:

IT IS ALREADY OURS

(By Margo Cairns)

It has been said: National floral emblems are rarely deliberately chosen. They spring from history and tradition. Ofttimes they represent the hopes and aspirations of a people. The birth, history, and struggle for survival and the future of nations are often symbolized by a nation's floral emblem.

How perfectly this definition of a floral emblem depicts the corn tassel. How truly the corn tassel as our national symbol springs from history and traditions. How surely the corn tassel, with its largess of golden fruit, represented the hopes and aspirations of a people—at Jamestown and at Plymouth, at the Continental Congress of 1775 in Philadelphia—and of this Nation today.

It is being urged that the rose should be adopted as our national floral emblem. Why? Has the rose played a constructive role in the building of this Nation? Was the rose waiting on the Atlantic coast to succor the first comers to this land? Was the rose with Captain John Smith that historic hour when he pleaded with Chief Powhatan for food to save his band of starving Englishmen? Was it for the rose that the Pilgrims knelt in the wilderness in profound gratitude?

No, it was for Indian corn, the grain pre-Incan peoples revered by naming it "maize,"

meaning "mother." Having mothered countless generations of original Americans through thousands of years, maize was waiting to feed, nourish, and sustain the colonists.

Corn Hill, one of the most sacred spots on this continent. Here the Pilgrims found corn in their dire need, corn for food, corn for planting. After the first agonizing winter the 50 remaining Pilgrims prepared the soil for their first gardens in the New World. It was corn they planted—not roses. The following autumn they gathered their harvest, only a few bushels of the native grain, but ample to their grateful thought. With hearts filled with joy they inaugurated our Tranksgiving Day.

Valued more highly than money, corn was used as the medium of exchange by the early colonists. When the Continental Congress shut the door on England, it also shut the door on English coinage. Again corn became the currency of the times.

With freedom and peace won, the westward movement began. Nothing like that heroic exodus had ever occurred in all history. Armies, well equipped and well fed, had conquered people and lands, but never before did families tame a virgin wilderness and add millions of square miles to a budding nation. Singly and in groups they went, on horseback, in oxcarts, in prairie schooners, floating streams in hollowed logs, taking with them two treasures—seed corn and the Bible, material and spiritual supply.

The golden seed is the genesis of our history, our traditions, our agriculture, our economy. It is a paid-up life insurance policy, a priceless gift to this Nation from the Red Man.

The corn tassel is a symbol of our native plant, the symbol of the wealth of food and gold it has poured into this Nation's economy. In honoring the corn tassel by its adoption as our national floral emblem we are honoring the courageous colonists, the Continental Congress—founders of our Nation, the hardy pioneers who broke the tough prairie sod, the conquerors of bison-covered plains, and stupendous mountains who carried the precious seed to the Pacific coast.

The corn tassel is already the symbol of our country. It always has been. The birth, history, and struggle for survival of our Nation are inexorably bound to our native plant. The corn tassel is a symbol of plenty which has aided the United States in feeding a hungry and needy world, a symbol of fellowship with all nations, a prophetic symbol of security in the populous world of tomorrow.

Let us accept the historic facts and acknowledge the corn tassel as our national floral emblem—a symbol of our Nation.

Flood Control, Water, and Soil Conservation in Ohio

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. LEVERING. Mr. Speaker, the Ohio General Assembly has just passed a joint resolution memorializing this Congress to take appropriate action to assure the continuance of surveys, planning, and cooperation in the construction of projects in the State of Ohio that are vital and necessary to the control of floods and the conservation of soil and water by sufficient appropriations being granted for this purpose to the various agencies involved.

My good friend and distinguished member of the Ohio Senate Danny Johnson, who introduced this resolution, informs me that it was unanimously adopted in the assembly and then passed in the senate by a vote of 27 to 3.

Under leave to extend my remarks in the Appendix of the RECORD, I include this resolution and commend it to the attention of my colleagues:

SENATE JOINT RESOLUTION 36

Joint resolution memorializing the Congress of the United States to take appropriate action to assure the continuance of surveys and planning and cooperation in the construction of projects of the State of Ohio that are vital and necessary to the control of floods and the conservation of soil and water by sufficient appropriations being granted for this purpose to the Bureau of Reclamation, the U.S. Department of Agriculture, and the Corps of Engineers and other Federal agencies and departments

Whereas water and soil are the most valuable natural resources of Ohio; and

Whereas the citizens, industries, farms, and cities of Ohio have always been subject to floods, but more recently they have experienced severe hardships and great financial losses from floods; and

Whereas the nature of rivers is such that storms occurring in headwater regions of a stream in one area frequently inflict damage to points in other areas, and the benefits of stream stabilization resulting in adequate and dependable water supplies in one area become beneficial to points in other areas; and

Whereas it has become evident that we must use every means available and feasible to conserve and control all of the sources of water supply for agriculaural, municipal, indusrial, and recreation use; and

Whereas watershed development has been increasingly emphasized as vital to all programs for the flood control and conservation of water and soil by the several agencies of government, and the program is lagging because of the insufficiency of Federal funds for planning purposes; and

Whereas the Federal Government through acts of Congress has delegated to two agencies, namely, the Corps of Engineers, and the Soil Conservation Service of the U.S. Department of Agriculture the primary responsibility for flood control and conservation of water and soil: Therefore, be it

Resolved by the General Assembly of the State of Ohio, That we respectfully urge, request, and petition the Congress of the United States to take such action necessary to assure (1) continuance of surveys, planning and cooperation in the construction of projects in the State of Ohio that are vital and necessary to the prevention of floods and to the conservation of water and soil, and (2) that Federal funds for this purpose be appropriated in sufficient amounts to the Corps of Engineers and the Soil Conservation Service of the U.S. Department of Agriculture, and also other Federal agencies and departments, and that we adopt this resolution and cause a copy thereof to be spread upon the Journal; and be it further

Resolved, That the clerk of the senate transmit authenticated copies of this resolution to the President of the United States, the Vice President of the United States, each Member of Congress of the United States, and the Director of the Bureau of the Budget of the United States.

Disaster in Wheat

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. MINSHALL. Mr. Speaker, it is time to trade in our model T farm program. Year after year the farm bloc trots out the same tired blueprints for agriculture. The only change is in price, not in model. Each year the program costs more money.

Our taxpayers are sick of spending billions of dollars on farm subsidies. The family-sized farmer is tired of following a redtape rainbow with no pot of gold at the end.

Nearly a million and a half farms produce wheat. Of that number, just half—the big business farms—receive 90 percent of all Federal supports. This morning's Wall Street Journal underscores President Eisenhower's warning of what will happen if the Congress does not act promptly. The editorial follows:

DISASTER IN WHEAT

President Eisenhower wasn't exaggerating last week when he warned of the impending disaster in wheat unless Congress does something about it promptly.

The wheat surplus is already two and one-half times annual domestic consumption. Despite production controls, the last wheat crop was the biggest in history. In another year the taxpayers' investment in just this one crop will reach $3.5 billion.

Just as there is no doubt about the facts of the situation, so there is no mystery about the cause. The cause is high Federal price supports, which encourage farmers to grow far more than the Nation can possibly use. And, thanks to advancing technology, they can do it even when the acreage permitted by the Government is sharply restricted.

In view of the unmistakable plainness of both the cause and the effect, the administration has advocated lowering price props enough to discourage the accumulation of such menacing surpluses in the future. It has been less concerned about further curtailments of acreage, realizing that is not the key to the problem.

But this is not the congressional farm bloc's idea of averting a wheat disaster. The House Agriculture Committee has approved a bill to boost price supports and cut acreage allotments; the result, as demonstrated by experience, would be to build still more mammoth surpluses. The Senate Agriculture Committee then acted along similar, if not quite so extreme, lines.

In other words, the farm bloc is flying in the face of the established facts. It is taking exactly the wrong approach. It seems to be seeking to speed the day the President cautioned about—when the whole price support program, of which wheat is only the worst current instance, will crash of its own weight.

Given the upside-down attitude of the farm bloc, maybe that's what has to happen before the Nation's agriculture can get a fresh start. As Agriculture Secretary Benson has said, The economics of the farm dilemma is simple—it is the politics of the problem that is baffling. What farmers want and need is less Government in the farming business."

Politics, of course, will be in the farming business as long as the Government is in it. But it is, indeed, a baffling kind of politics that is calculated to bring ruin to the very people the farm politicians pretend they are helping.

FBI Director Hoover's Statement Was Less Than Fair, According to Journal-Every Evening of Wilmington, Del.

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. McDOWELL. Mr. Speaker, the able Director of the Federal Bureau of Investigation, J. Edgar Hoover, has just completed 35 years in that position, and last week was highly honored by several Members of the U.S. Senate who praised him highly.

However, like the rest of us, Mr. Hoover, being human, is apt to make mistakes.

The Journal-Every Evening, of Wilmington, Del., is convinced that Mr. Hoover overstated the case when he told the House Appropriations Committee the other day:

We can no longer afford to let tender age make plunder into a trifling prank, reduce mayhem to a mischievous act, or pass off murder as a boyish misdemeanor.

Commenting on this testimony by the FBI Director, the esteemed Journal-Every Evening declared editorially that—

Mr. Hoover is being less than fair, and less than accurate, in implying that society, as represented by juvenile courts, is treating any youthful crime as a jolly boyish prank. Without a single exception that we know of, juvenile courts emphasize to juvenile delinquents the seriousness of their crimes. * * *

We believed that the emphasis on youth rehabilitation work, which Mr. Hoover seems to disparage, is worth while. More should be done in that direction. * * * But there is simply no excuse for him, or anyone else, to get the idea that this means treating youthful crimes as boyish pranks—in implying without warrant that this is how they are now being treated by juvenile courts.

I include the editorial from the Journal-Every Evening, of Wilmington, Del., May 12, 1959, for the information of my colleagues.

HOOVER'S OVERSTATEMENT

Do you know of anybody who has been passing off murder as a boyish misdemeanor? We don't. But FBI Director J. Edgar Hoover told the House Appropriations Committee the other day:

"We can no longer afford to let tender age make plunder into a trifling prank, reduce mayhem to a mischievous act, or pass off murder as a boyish misdemeanor."

Mr. Hoover, who has just completed 35 years in the job of making the FBI into one of the most respected of Government bureaus, was arguing that youthful offenders should get the same treatment as adult offenders. And we agree with him—up to the point where he overstates his case.

A crime committed by a juvenile is just as serious as the same crime committed by an adult. It may even be more serious. And adults are less malleable. The adult criminal, even if he is a first offender, may be harder to turn from his antisocial ways.

So it is particularly important to show juvenile criminals that they can't get away with it: We agree with Mr. Hoover's views on that. If any youth is permitted to get the idea that he can get away with serious crimes because he is young, there is something wrong with the way he is being handled.

But Mr. Hoover is being less than fair, and less than accurate, in implying that society, as represented by juvenile courts, is treating any youthful crime as a jolly boyish prank. Without a single exception that we know of, juvenile courts emphasize to juvenile delinquents the seriousness of their crimes.

They also try to reform them. After careful study of their backgrounds, juvenile courts select youths they think might benefit by a second chance with the assistance of probation officers. Many youths are rehabilitated in this way. If that were not done, Mr. Hoover and other law enforcement bodies would have many more adult criminals to deal with.

We believed that the emphasis on youth rehabilitation work, which Mr. Hoover seems to disparage, is worthwhile. More should be done in that direction. It might be a good thing for society—reducing crime and saving tax money in the long run—if more were being done to rehabilitate adult offenders as well. But there is simply no excuse for him, or anyone else, to get the idea that this means treating youthful crimes as boyish pranks—in implying without warrant that this is how they are now being treated by juvenile courts.

Unfairness on Impact Aid

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks, I wish to call to the attention of my colleagues an editorial which appeared in today's edition of the Washington Post and Times Herald entitled "Unfairness on Impact Aid." This excellent editorial I believe clearly demonstrates the inherent unfairness in the administration's determined efforts to substantially curtail and eventually abolish Federal aid to impacted areas, legislation ccmmonly known as Public Laws 815 and 874. Each year that I have been a Member of Congress, I have had to defend this program against repeated attacks by the administration.

While it is true that the program has a tremendous effect on surrounding suburban school districts it is relied upon heavily by approximately 4,000 school districts throughout the United States. Many of these school districts are responsible for the education of the children of our key defense personnel. Many of these essential defense installations by their vary nature are located in rural communities and one such installation is located in my congressional district, the Naval Propellant Plant. The military is faced today with tremendous morale problems dealing with housing and pay matters, and now the administration once again is attempting to shirk its educational responsibilities to these dependents in a shortsighted attempt to reduce Federal expenditures.

There is a clear Federal moral responsibility involved in the continuation of this legislation until a suitable formula is found to compensate local communities for tax-free Federal land holdings.

I shall continue to vigorously resist all attempts on the part of the administration to obtain a free ride at the expense of local communities.

The editorial follows:

UNFAIRNESS ON IMPACT AID

Welfare Secretary Flemming has presented a curiously mixed bag of recommendations to Congress on the Federal-impact school aid program. One of his proposals seems to make good sense, but another appears to have been hastily conceived in an effort to cut back impact aid to school districts in the Washington area.

There is particular unfairness in his plan to reduce Federal contributions from 50 to 25 percent of per pupil local school cost in instances in which parents employed by the Federal Government reside in school districts outside the communities in which they work. As Washington area school boards know, the impact of Federal activties is often worse upon school districts near Federal installations than it is upon the district in which the Federal facilities are actually located.

The Secretary's proposal to reduce school aid from 50 to 40 percent of per pupil costs in districts in which parents employed by the Federal Government reside as well as work appears, however, to be supported by more than a mere desire to curtail Federal expenditures. In 1950, a House committee which investigated the impact program estimated that half of local school costs are paid by commercial and industrial property taxes and half by taxes on property owned by individuals. Mr. Flemming notes that the latest Bureau of the Census figures show industrial and commercial assessments ranging from only 9 to 37 percent of total assessed valuations.

The Federal program ought to make up for losses in local tax revenues resulting from the tax-exempt status of Federal installations, but it is not the proper vehicle for a general Federal aid to education program—however great the need for such a program. At the same time there is no justification for the sorts of cutbacks that would penalize suburban communities in which much of the shortage of adequate school facilities is clearly the result of the rapid expansion of the Federal Government.

Israel's Aid to Others

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. FRIEDEL. Mr. Speaker, just last week that citadel of democracy in the Middle East—Israel—celebrated its 11th anniversary of statehood. Many Members of this body extolled the virtues and accomplishments of that nation. We are all aware of the gallant efforts that Israel has made in behalf of her independence and of the self-denial practiced by the Israeli people for that purpose.

It is a great wonder then how a nation so small and with so many problems can

find the time and the means to assist other nations in the world community. Some of the economic aid and technical assistance, which Israel is extending to other freedom-loving nations of the world, is set forth in a fine editorial entitled "Israel Lending a Welcome Hand," which appeared in the May 17 edition of the Washington Post and Times Herald, and which was written by the noted political columnist and commentator, Roscoe Drummond. This article, worthy of everyone's interest, reads as follows:

ISRAEL LENDING A WELCOME HAND

(By Roscoe Drummond)

Numerous Asian and African nations are today turning to a new-found ally and benefactor. This is a development of the greatest significance which is just beginning to gather momentum. It is a development which the free world can view with satisfaction.

The new Afro-Asian ally is Western in outlook, Middle Eastern in geography. It is democratic, anti-Communist and, since it is neither a large nor powerful country, it is basically a neutral source of assistance which gives its recipients no appearance of choosing up sides in the cold war.

I am referring to the young but mature state of Israel, which was reborn only 11 years ago and which is now embarking upon a wide-ranging, diverse program of economic aid and technical assistance where it is most needed.

A nation which has been greatly helped by its own friends, Israel is now helping others—to the advantage of everybody.

Israel's expanding investment assistance and technical aid ranges from Ghana to Burma. Its scope is illustrated by the fact that trainees from Afro-Asian countries and territories are now studying Israeli agricultural settlements and cooperative enterprises.

The best example of the burgeoning economic relationship between Israel and the Afro-Asian nations is what Israel and Ghana are doing together. To begin to finance an expanding two-way trade, Israel has provided Ghana with a $20 million credit over a 4-year period.

Israel is substantially financing—but taking only 40 percent of the stock—of Ghana's newly organized Black Star Shipping Line and is providing the technical training for Ghanian personnel to man its merchant marine. It is also helping Ghana develop its building industry by providing the necessary beginning capital and by training Ghanians in construction techniques.

In other fields of technical skills, Israel is providing training in agriculture, city planning, irrigation, water resources, and in consumer and producer cooperatives.

A group of Burmese farmers is now living and working on Israeli cooperative farms and it is not to be overlooked that a Burmese army contingent is learning how the Israelis defend their frontiers with citizen volunteers who simultaneously till the fields and guard the nation.

There is no spirit of pacifism is Israel and Israel is teaching none to its Asian and African friends. Israeli universities and institutes are taking exchange students from many countries, including some trainees from Thailand, India, and Japan.

Obviously, Israel is not doing all this out of sheer goodness of heart.

For Israel, it has large political as well as economic advantages. The biggest boon from this growing relationship of trust and good will is that it enables Israel to free itself from the physical and psychological isolation of Arab encirclement. Israel's expanding trade and her enlarged horizon of friends mean that she cannot be surrounded either politically or economically by a Nasser blockade.

Israel's new-found allies are also blunting Egypt's efforts to recruit Afro-Asian support in its own cold war against Israel. At the Accra conference of independent African states a year ago, Ghana almost single-handed turned back Egypt's effort to aline all Africa against Israel.

Egypt could get nothing but a harmless resolution calling for a just settlement of Arab-Israeli disputes.

Because Israel is a small, pioneer spirited new country, deficient in many physical resources and rich in nearly all human resources, it is in an ideal position to help others. It seems to me that the friends of Israel in the United States might well look for ways to nourish and enlarge what Israel is doing so well in this field.

Nuclear Super Aircraft Carrier

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 27, 1959

Mr. CELLER. Mr. Speaker, I shall ask the House Appropriations Committee to reinstate the Navy Department's No. 1 priority—a super aircraft carrier—in the Defense Department's budget for the coming fiscal year.

Fifteen times since World War II, the United States and its allies have been faced with threats to our mutual security on foreign soil, and fifteen times our aircraft carriers were there, prepared to cope with the crisis. Aircraft carriers are, and will be, needed to meet not only world crises, but so-called local conflicts, for a long time to come. Their mightful presence had meaningful deterrent effect in such crises as Lebanon, Quemoy, Matsu, Korea, Jordan, Iraq, Suez, and so forth.

Larger superclass carriers are needed because the latest jet aircraft require minimum 750-foot runways. The only way they can be accommodated is by the building of larger carriers. In addition, American boys are entitled to as much operational safety as is humanly possible to provide. Smaller *Essex* class carriers have a higher aircraft operational accident rate.

Leadtime on the construction of new carriers is of the essence. It takes at least 4 years from the time money is appropriated to the time a carrier becomes an operational unit in the fleet. If the decision to appropriate funds for a needed carrier is put off 1 year, then a year's precious time is lost in our defense effort.

We are pouring millions upon millions of dollars into outer space research and development. Aircraft carriers concern a defense matter which is a lot closer and of more immediate need to us today.

Because of the increased fuel requirement for jet aircraft, larger carriers with greater fuel storage space are needed. Under today's naval tactics the carrier also carries fuel for its escort vessels. Increased size of our carriers will therefore increase the operational range of carrier task forces. Construction of a nuclear carrier is to be preferred to that of a conventional carrier. While a nuclear carrier will cost approximately $100 million more to construct, its cost can be amortized by lesser costs in other ships over a period of 5 to 6 years. In addition, a nuclear plant will permit less fuel space for the carrier's own operational needs, allowing for more aircraft and personnel.

An aircraft carrier can readily be converted into a mobile propulsion pad for missiles. They have a decided advantage over stationary missile sites. They are constantly on the move and thus better able to elude the enemy's lethal missiles.

As Adm. John T. Hayward stated in a recent telecast, not only are jet bombers here to stay, but in time they will be equipped with the latest missiles. Our mobile aircraft fleet will be needed to bring them within range of the vital targets within the enemy's home borders.

I believe that we must not only plan ahead but must make firm all facets of our lines of defense. Aircraft carriers today are in the forefront of that main line of defense. A delay of a year or two means a delay of 5 or 6 years in obtaining a carrier prepared to defend us.

Combating Cancer

EXTENSION OF REMARKS

OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. McGOVERN. Mr. Speaker, one of the greatest threats to the health and happiness of the American people is the dread disease—cancer. Each year this scourge destroys the lives of many thousands of Americans without regard to age or station. Fortunately, the Congress has instituted an invaluable program of cancer research under the auspices of the National Institutes of Health. We should be doing more, however, to fight this deadly enemy.

The Sioux Falls, S. Dak., Argus-Leader of May 7, 1959, carries a letter from President W. W. Ludeman, of Southern State Teachers College in Springfield, S. Dak., that is a most moving appeal for more public support in the fight against cancer. I include President Ludeman's letter in the RECORD.

COMBATING CANCER

To the EDITOR OF THE ARGUS-LEADER:

During the last 3 years our family has lost two sisters to the ravages of cancer. One only needs to watch loved ones being slowly eaten away by this dread disease to realize the tragic inroads it makes on human life. And we still appear to be helpless to stem the tide. Some progress has been made but it is slow and uncertain. More funds should be made available to expedite this fight against cancer.

Larger amounts of money will find the cure because available funds in the right place do make a difference. Several billions

of dollars properly applied perfected the atom bomb in 1945. America sent a missile beyond the moon when enough money was made available.

It is my opinion that the Federal Government should step into this fight against cancer in a bigger way. We spend over $40 billion each year for national defense and it is a good feeling to know that we are secure. One billion dollars might win the battle to defeat cancer whereas it will take many years with donated funds as the main source of revenue.

W. W. LUDEMAN,
President, Southern State Teachers College.
SPRINGFIELD, S. DAK.

Mockery of Civil Service Tenure

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. PORTER. Mr. Speaker under leave to extend my remarks in the RECORD, I include the following statement which I made in the Post Office and Civil Service Committee on Monday, May 11, which was holding hearings on the so-called loyalty-security bill. This followed the testimony of Mr. Loyd Wright, of Los Angeles, Chairman of the President's Commission on Security and former president of the American Bar Association:

Thursday, Mr. Wright, you used most of your time to make an eloquent statement about the danger of communism. You spent practically no time on the merits of the bill before us. Of course we Members of Congress, like other Americans, don't want Communists and other subversives in Government employ. I think you could have assumed that attitude on our part.

What you, as well as the witnesses who preceded you, did not demonstrate was the need for this legislation. Of course, it is not the bill you had in mind when you came before us 2 years ago. This bill was an emergency measure to tide us over until your more comprehensive bill was introduced. I wonder what happened to your bill. I know what happened to the Walter bill. It passed the House but died in the Senate. I have heard of no dire consequences. Perhaps you have.

Let's discuss need. We don't need this legislation to keep Communists out of Government service. We already have laws on the books to do that. I refer you to the Hatch Act and the Internal Security Act of 1950.

We don't need it to keep subversives out because we have laws against espionage and sabotage.

I can't see then that we need to correct the Cole decision. If you add almost 2 million employees on the theory that each must be investigated and watched, you not only put an imposisble burden on our FBI, but you are making a ridiculous and slanderous attack on good Americans.

You are also opening the way to abuses which would very soon make a mockery of the tenure assurances in the civil service system. Let's look at the bill and consider how it would work.

I am an agency chief. You are an employee with tenure under civil service. If I want you fired, for any reason, good or bad, founded in fact or not, I can do it. I don't have to have any particular grounds for calling you a security risk. I, your accuser, set up your so-called hearing and so-called appeal. You can't call witnesses, much less identify, or face, or cross-examine the witnesses against you.

As for the appeal to the Civil Service Commission, you are a lawyer, Mr. Wright. Members of the Commission are not. Furthermore, the only record they have is one prepared by the agency head, who is at the same time the accuser, judge, and jury.

This shocks me. I hope it shocks you. It shocks the League of Women Voters and many other Americans. We think that designating a person as a security or loyalty risk is a very serious matter. We think it should be done by due process of law. You know what that means. You know that the procedures set up in this bill are a travesty of due process.

We do have due process of law in our courts. I say let the courts dispose of persons, Government employees or not, who conspire or act against our Nation.

The Civil Service Commission 2 years ago took no position on this bill. I hope it will speak up strongly against it.

The Association of the Bar of the city of New York opposes this kind of legislation.

You were concerned about fairness and uniformity when you testified 2 years ago and recommended a Central Review Board (p. 47, 1957 hearings). Yet you are here endorsing this legislation which has no such Board.

[From Labor, Washington, D.C., May 9, 1959]
MUST WE SACRIFICE LIBERTY FOR SECURITY

"The scars of McCarthyism are still with us," said the conservative Denver Post recently in a significant editorial that deserves wider circulation.

"Today most of us consider that we have recovered fairly well from that period of pointless suspicion, fear, character assassination, and ruined careers," the Post continues. "Therefore, it is interesting to ask how many of the following practices are still going on:

"Punishment for the advocacy of ideas, unconnected with any immediate action.

"Loyalty checks in which unverified accusations are used against persons who then have no opportunity to confront their accusers.

"Investigations of universities, foundations, and churches, by congressional committees, even though there is no direct connection to proposed legislation."

All those practices are still going on, the editorial says. "The truth of the matter is that the assault on civil liberties began before McCarthy ever made any headlines, and still persists today."

The editorial then adds:

"An even more widespread evil than the malpractices listed above is the general disrepute into which controversy of any kind has fallen. Deep probing of the institutions and customs by which we live is considered at best impolite and at worst the sign of someone who is 'politically unreliable.'

"At the root of this attitude is the idea that, in the face of Communist aggression, liberty must be sacrificed for the sake of security." That idea, the editorial says, "is the most mischievous political patent medicine ever swallowed by the American people."

Labor which opposed McCarthyism when that destructive doctrine was at its height, feels like the Denver Post that the battle to preserve the liberities guaranteed by the Constitution is not yet won. The American people must be constantly on guard to protect both liberty and security.

Remember the Hospitalized Veterans

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 14, 1959

Mr. HOSMER. Mr. Speaker, a most excellent reminder of the debt we owe the hospitalized war veterans appeared in the May 10 issue of the Long Beach Independent-Press-Telegram. It was written by columnist Ted Krec who has a keen ability to mold the printed word into effective darts to prick our sometimes leathery consciences. Mr. Krec's column follows:

SOMETHING FOR THE BOYS: OL' TED'S APPALLED BY SPECIAL DAYS

(By Ted Krec)

Well, friends, we finally got back on the job after a prolonged stay in the East, and it's good to see Long Beach again, believe me. I've had enough rain and chilly days to last me for a while.

But now to the business at hand. A glance at my calendar tells me that today is Mother's Day, a day set aside to pick up a bunch of flowers and/or a delicious double-dip ice cream cone and go visit your mother.

You may infer from the above that I am not a whole-hearted endorser of Mother's Day, and you'd be right. Not that I think it's a bad idea for thoughtless persons to be reminded of this occasion, but I belong to the school of thought that says if a person is worthy of honor one day a year, he is worthy of honor every day of the year. We shouldn't have to rely solely on commercial reminders for us to be good to our mothers and thoughtful of them on one Sunday a year—we should maintain this attitude all the time.

But by far the worst of all this special day jazz is the relationship we have with our service people, particularly the hospitalized veterans. This really burns me up.

My father talks about this. He was in the Navy back before World War I, and he often remarks about how, in those days of the peacetime Navy, he and his buddies were discriminated against because they were sailors. A lot of people treated them pretty lousy.

And from my own observation, I know this is true. During the days before World War II, no one had much to say about servicemen. Much good, that is.

Then came the war, and these young men were the bulwark between the folks back home and the enemy. Suddenly they were knights in shining armor and suddenly it became very desirable for our young men to don these often-slighted uniforms and go out to do their bit.

And what happened when it was all over? I can tell you—we held a lot of fancy parades and receptions in towns and cities all over the country; the boys marched in, greeted their loved ones and took off their uniforms to adopt civilian pursuits once more.

Immediately they were relegated to Never Never Land. This wasn't so bad for the guys who could get jobs and make decent lives for themselves. But how about the host of others? How about all the guys who are sitting (or lying) around veterans' hospitals all over the Nation—maimed, blind and ill? Funny, I never hear too much of a fuss being made over these fellows nowadays. You never see them much anymore either, and you won't; because most of them will never leave the hospitals.

I should amend this statement, because onec a year we hold Veterans Day (there's

another one) to honor "all our heroes." John Q. Public takes his wife and children and goes down to Ocean Boulevard to watch a parade and choke back a sob as the colors go by.

But how many times a year does John Q. reach into his pocket for a donation to help the boys in hospitals, the same boys who put up quite a scrap so that John Q. could walk down and see that parade with his family? And even more important, how many times does John Q. go out to the veterans' hospital and spend a few hours of his busy schedule taking the boys some books or other treats, and maybe just a little conversation?

It makes all these special days seem a little shallow, doesn't it? Especially when you stop to consider that these boys in the hospitals didn't give us just 1 day—they gave us the rest of their lives.

Gold and Our Economy

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. DORN of South Carolina. Mr. Speaker, we hear a great deal these days about this country pricing itself out of world markets and the resulting movement of domestic capital overseas, in search of lower costs of production.

Direct private foreign investments from this country have already passed the level of $25 billion, but the outflow is increasing.

Not only that, but our total dollar balance in foreign transactions, including imports, exports, tourist expenditures and foreign investments, in 1958 left us with a deficit of $3.4 billion. Of this deficit $2.3 billion was covered by an actual outflow of gold.

What we face in this country today is a shrinkage of exports, an increase in imports and a foreign industrial buildup that will assualt us both internally and externally with lower costs. These forces of low cost, arising from low foreign wages supported by a fast-growing mechanization, will beseige our economy from the surrounding lowlands and will easily outgun us with the ammunition supplied them from our arsenal.

We will experience the severest pressure to desert to these beseiging forces one by one but as we go over and join them we only aggravate the problem by adding to their strength.

Mr. Speaker, it seems to me that our competitive situation in relation to the rest of the world confronts us with a problem of the utmost seriousness. It is so serious that the whole subject of our trade agreements program should be reopened. We cannot afford to wait out the remaining 3 years that the Trade Agreements Extension Act of 1958 still has to run.

Under leave to extend my remarks in the RECORD I offer the following communication from Mr. O. R. Strackbein to the New York Times on the subject of our international competitive position. I think that the reference to our shipment of $30 billion in machinery and equipment to other countries in the past 10 years should go far to clear up what to many economists has seemed to be a mystery, namely, the ability of low-wage paying countries to convert their low-wage levels into sharp and deadly competitive weapons. The communication follows:

[From the New York Times, May 13, 1959]

GOLD AND OUR ECONOMY—PRESENT SITUATION HELD RESULT OF YEARS OF CONTRADICTORY POLICIES

In your editorial "Gold and Trade Balance" on May 9 you mention the outflow of $2.3 billion in gold from this country in 1958 and the continuation of the outflow in 1959 after a reversal in the flow had been expected.

Altogether your explanation seems to me to dismiss too lightly the significance of this gold outflow. You point to our exports or the nonperilous facts provided by the trade figures and draw comfort from the idea that there is no reason to regard this as a new and permanent state of affairs.

Then you satisfy yourself by indicating that all we have to do is to pursue an anti-inflationary policy and keep our price structure on a competitive basis internationally.

You fall thus into the same error that has long blinded those who see in imports a magic that borders on the mystic. You cannot seem to understand that our growing competitive distress in the international field is not so much a matter of our pricing ourselves out of foreign markets through higher wages, farm price supports, etc., as it is a case of other countries' rising productivity in relation to their wage levels.

MACHINERY SHIPPED

Since the Marshall plan began we have sent overseas $30 billion of machinery, including commercial exports. What has happened to this machinery? No doubt most of it is producing, much of it producing for export.

In addition, foreign productivity teams, approaching the 10,000 figure, have come to this country to study our methods of assembly line production, scheduling, labor-saving devices, etc., Was all this traffic for nothing? Evidently not. We have succeeded very well, apparently.

Were it not for heavy subsidization of agricultural exports and foreign military and aid shipments we would be running a deficit in our merchandise account no less than in our total dollar account.

The notion that we are witnessing only a temporary derangement does not seem to fit. We are looking at the surfacing of the effects of 25 years of domestic economic policy, including farm price supports, social security, obligatory collective bargaining, high wages, all contradicted by a foreign economic policy that rides in the opposite direction, i.e., a laissez-faire policy. Today even our mass production industries, previously immune to import competition, are finding exports more difficult and imports rising. Scores of companies are looking overseas for manufacturing facilities. Why? The foreign scene looks more attractive, competitively, than the domestic. The reason? Lower costs.

EFFECT OF AUTOMATION

What, then, will happen if we continue to automate, trying to keep down costs, if other countries also automate, as they are doing? Then, operating on the theory that if we can't lick 'em we will join 'em, what happens if we fail to absorb the unemployment created by our automation and slackening domestic economic expansion?

What happens to labor that is bypassed in this country in favor of expansion in other countries? Exports will fall off. What, also, of the long list of domestic suppliers to the domestic industries that are now looking overseas? Will their employment expand if the outward trek gains momentum?

Perhaps the basic dislocation is more serious than your editorial indicated.

O. R. STRACKBEIN,
Chairman, The Nationwide Committee on Import-Export Policy.

Pan Am Plan Must Be Backed

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. FRIEDEL. Mr. Speaker, 3 weeks ago several of my colleagues joined with me in calling attention to the fact that Friendship Airport has now taken on the honest identity as an international aviation center. Much of Friendship's new identification can be traced to the institution of service a little more than a year ago by Pan American World Airways between Friendship and San Juan, Puerto Rico.

On the occasion of that anniversary my colleagues and I pointed out that the growth of Friendship as an important international air terminal could be even further enhanced if the Civil Aeronautics Board takes prompt action in granting Pan American a certificate to operate from the east coast to the Orient by way of Alaska, with new high-powered long-range jet equipment.

I am happy to report, Mr. Speaker, that the editorial page of the Baltimore News-Post of May 12 carried a most inspirational message concerning the problem that Pan American faces in its efforts to expand the services it provides for the greater Baltimore-Washington area.

This editorial follows:

[From the Baltimore News-Post, May 12, 1959]

PAN AM PLAN MUST BE BACKED

Pan American World Airways has proposed to make Baltimore a gateway point for its transatlantic and round-the-world flights.

It is difficult to think of a development which would be of greater benefit to Baltimore, our port, our other business and industry than this.

Baltimore would become an international air hub. Other flights would come in from all over the country to connect with these.

Pan American is to be thanked for its vote of confidence in this city and its citizens. But before we get too overjoyed, we must remember this is only a proposal.

It must be approved by the Civil Aeronautics Board, one of the most atrophied agencies in the Federal Government.

For instance, the CAB has been considering for more than 3 years the matter of discrimination against Baltimore by various airlines. Such speed is unworthy of a snail—and is unthinkable in the Pan American proposal.

It behooves the new city administration, as well as the Greater Baltimore Committee, the Association of Commerce, and other civic and business groups which have fought most of Friendship Airports' battles in the past, to

support PAA's application and urge CAB action.

It is to be hoped, also, the airport board will take a firm stand on this matter. Its support on past issues has varied from none at all to lukewarm.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following newsletter of May 16, 1959:

WASHINGTON REPORT

(By Congress BRUCE ALGER, Fifth District, Texas)

MAY 16, 1959.

The independent offices appropriation bill passed routinely with little controversy. The bill totaled $6,458 million, which is $387 million less than last year and $125.5 million under the budget, these reductions being significant of Congress expressing the current temper of the citizens to reduce spending. Money is provided for these governmental units—the office of the President, the CAB, Civil Service Commission, the FAA, FCC, FTC, GSA, Housing and Home Finance Agency, FPC, ICC, SEC, VA, and others.

The Veterans' Administration received the largest part, $5,040 million. Some veteran statistics used in debate are interesting. Forty percent of the population are veterans or members of their families, there being 23 million veterans, and 3,800,000 veterans receiving compensation or disability pensions, totaling $3,300 million (2,400,000 service-connected disability compensations, and 1,400,000 disability pensions). There are 25,000 VA employees, and 121,000 in hospitals. There are 172 hospitals, 123,800 beds and 17 domiciliary institutions. Inpatient care cost is $778 million and outpatient care is $83 million. Plainly, the size of these VA programs and costs demonstrate the need for Congress to scrutinize carefully non-service-connected disability costs.

King Baudouin of the Belgians addressed a joint session of the House and Senate. The King's upright bearing, dignity, and youthfulness gained the close attention of all. His concise and carefully enunciated message was most thought-provoking, including this on peace: "Perhaps never before has peace been so difficult to achieve as it is today. At other times, the possibility of war endangered our homelands and our home. Today war endangers our minds and our hearts. The older imperialism sought the conquest of lands; the new seeks the mastery of intellects. The peace for which we have to labor is not to preserve our possessions, but our very personalities." About youth, he said: "Youth is the first victim of war, the first fruit of peace. It takes 20 years of peace to make a man; it takes only 20 seconds of war to destroy him. * * * In a certain sense, America is the land of youth, because it dedicates more of its energies, talents, money, and science to the birth and preservation of life than any other country in the world * * * nor shall our confidence in you misplaced, for what is written on your coins, I have read in the hearts of American people: 'In God we trust.'"

The Rules Committee impasse on the housing bill, a 6 to 6 tie, has been broken. The multibillion bill desired by the House Democrat leadership has been voted out of Rules. The compromise was the agreement that a far more conservative bill, also Democrat, could be considered as a substitute bill (bypassing the administration bill as a substitute). This may gain the support of conservative Democrats, opposed to the big-spending Democrat bill, yet who are reluctant politically to support a Republican bill, even though a fiscally responsible one. Maybe the best condemnation of public housing and Federal money spent in the housing programs is found in Ecclesiasticus, chapter 21, verse 8: "He that buildest his house with other men's money is like one that gathereth himself stones for the tomb of his burial." The further question now occurs. Will the big spending bills be held in check or will the housing bill open the floodgates of spending, which last year exceeded the budget $13 billion. The Murray-Metcalf aid to education bill has now been voted out by the Education and Labor Committee, a bill costing $11,400 millions in the first 4 years for aid to school construction, even teachers' salaries. Then there awaits us the mutual security (foreign aid) bill and other appropriation bills.

H.R.3, just approved by the Judiciary Committee for House consideration, is most encouraging. The bill endeavors to preserve States rights, from Federal encroachment and was passed in the House last year but killed in the Senate by one vote. I doubt that the House membership will pass this bill even if the Senators, including the Texans, try to undo their damage of last year.

Attending the dedication of Garland's new post office awhile back reminded me rather forcibly of the really great strides made by our Post Office Department over the last few years. Next time the postman calls, you might well compliment him, for his organization handles well over a billion letters and parcels every week—more than all the rest of the world's post offices combined—and with really remarkable efficiency. With about the same number of employees (up to 1.3 percent) they're moving 20 percent more mail than they did in 1953. Brandnew facilities opening in Garland, Irving, Grand Prairie, and Trinty Heights, Casa View and Royal Lane areas of Dallas are part of a multibillion dollar mechanization program underway, the first really comprehensive overhaul of the system since Ben Franklin's day, further increasing the speed and efficiency of this vital service.

Company Coming—And Such Company

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. BOSCH. Mr. Speaker, I sincerely trust that recent reports with regard to a possible weakening of our position on Berlin and a visit of Khrushchev to the United States are without substantial foundation. We must be reminded on every occasion of our experiences of the past in our dealings with the Kremlin regime. Let us not be stampeded into a compromise for the sake of a conference at the summit. Of what value can conferences with the Soviets be when we consider their record of broken agreements?

Every agreement made at the summits: Teheran, Yalta, Potsdam, and Geneva—1955—has been unilaterally broken by the Kremlin, except one which was made at Yalta to enter the war against Japan. Oh, yes. This one was kept, but only after we had for all intents and purposes defeated Japan.

I believe the majority of the American people feel that unless the Soviets agree—as provided at Geneva in 1955—upon the unification of Germany under a government set up in a free and fair election and the liberation of all occupied and enslaved states, and finally the release of all U.S. servicemen who remain imprisoned by Communists regimes and satellites, no further bargains or visits are justified.

Under leave to extend my remarks, I include an editorial from the May 18, 1959, edition of the New York Daily News, which I commend to your attention:

COMPANY COMING—AND SUCH COMPANY

According to the Associated Press' John Scalli, the Eisenhower administration appears reconciled to a possible visit by Soviet Russian Premier Nikita S. Khrushchev to the United States this year, perhaps this summer.

Khrushchev could come here to open the Soviet exposition June 28 at the New York Coliseum, on the ground that Vice President RICHARD M. NIXON is going to open a similar American exhibit in Moscow in July.

Or the Geneva Foreign Ministers' conference now in progress may produce enough results to satisfy President Eisenhower that a summit conference is in order. San Francisco, Calif., is the city oftenest mentioned as the site for such a palaver of national leaders.

We condole with San Francisco or any other U.S. city chosen to be thus polluted by the presence of N. S. Khrushchev; and here is a rough idea of what manner of man this fellow is:

He was born in April 1894 at a Ukrainian village named Kalinovka. His father was a Russian coal miner. As a youngster, Khrushchev tended sheep and pigs and mined coal.

He was a World War I draft dodger, operated obscurely in the Russian Revolution in 1917, and joined the Communist Party in 1918.

Khrushchev studied the arts of intrigue, doublecross, and murder at one of the schools set up by V. I. Lenin for the training of Communists. He learned his lessons well.

HE CHOSE J. STALIN

After Lenin's death, Khrushchev figured that Josef Stalin would win out over Leon Trotsky in the struggle for control of the Communist machine. He snuggled up to Stalin, who duly won out, and just as duly rewarded Khrushchev with increasingly important political posts.

Khrushchev's most noteworthy pre-World War II achievement was the purge in the Ukraine of a lot of anti-Stalin Reds. This occurred in 1937-38, when Stalin was liquidating his enemies and fancied enemies by tens of thousands all over Russia.

Khrushchev, a native of the Ukraine, conducted that part of the purge. On one occasion, he lured a lot of his intended victims to a lavish banquet, then called in the secret police to take them into custody.

A PROFESSIONAL DOUBLECROSSER

This foreshadowed the historic doublecross in Budapest in 1956, when Hungarian rebel leaders Imre Nagy and Pal Maleter were promised Russian protection during truce negotiations. They were arrested as soon as they arrived to negotiate, and later were murdered by Khrushchev's bully boys.

Since the death of Stalin, Khrushchev has been acting completely in character.

He heaped curses on the memory of Stalin, the man who befriended and elevated him. By one devious maneuver after another, he removed possible rivals for the mastery of the Kremlin—Lavrenti Beria, V. M. Molotov, Marshal Georgi Zhukov, and others. Khrushchev doesn't often kill such persons—yet. He lets them die slowly of frustration, heartbreak, and fear.

U.S. PUBLIC ENEMY NO. 1

Like all Communists, Khrushchev is dedicated to the Red enslavement of the human race. The United States is his biggest target and the chief object of his hate.

Throughout his expected visit to this country, Khrushchev can be counted on to exhibit all the charm he has. Thereby, he will hope to kid the American people into thinking communism means them no harm—and he will most likely succeed in fooling the same big business and big labor leaders who were suckered by Anastas Mikoyan, Khrushchev's top sidekick, on his recent U.S. tour.

We doubt that many everyday Americans will be fooled, or will show this thug, this tyrant, this killer, any cordiality. He is their mortal enemy, and we think the great majority of them are well aware of that fact.

It is to be hoped that as many Americans as can do so will show Khrushchev in every way they can think of that they do not welcome him, do not like him, and do not fear him.

Wilderness Preservation

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. METCALF. Mr. Speaker, as one of the cosponsors of the wilderness preservation bill, I have been disturbed by some of the misinformation being circulated about it.

There is the allegation that there will be a loss of taxes. This is not true because the wilderness areas already are under the control and ownership of the Federal Government.

It has been alleged that the bill will violate the multiple use principle. Actually, it will follow that principle. To the current uses of the designated areas, it would add watershed protection, recreation, education, scenic, scientific, and historical uses.

It has been said that the bill would take administration of these lands out of the hands of the departments presently having control over them and turn it over to the National Wilderness Preservation Council. Actually, there will be no change in jurisdiction. The national forest areas will continue to be administered by the Forest Service, the national parks by the Park Service, the wildlife refuges by the Fish and Wildlife Service. The Council would serve mainly as a watchdog, survey, and coordinating group.

Much of this misinformation is effectively countered in the following excellent editorial by Herb Watts in the Havre, (Mont.) Daily News:

[From the Havre Daily News]

MEASURE WOULD PROTECT OUR PARKS AND FORESTS

Even in a day when we are encouraging commercial development of Montana we must take into consideration that among the greatest attractions in this great State of ours are its parks and forests.

If measures were not instituted to preserve for everybody's enjoyment the outdoors of forests, streams, lakes, and mountains it would only be a matter of time before recreation areas would be nonexistent. Therefore a proposed wilderness system somewhat along the lines of that advocated by the Citizens Committee on Natural Resources is worthy of consideration.

There is legislation pending in Congress to develop a program to protect that which is the heritage of every Montanan.

As in measures of this type there has developed opposition from livestock, timber and other commercial interests.

According to Dr. Ira N. Gabrielson, chairman of the Citizens Committee on Natural Resources, the attacks of opponents are false and misleading because the proposed program will not damage these interests and it will affect only a very small part of the Federal lands.

Dr. Gabrielson, an eminent conservationist, states that the wilderness bill has been carefully written to avoid damage to existing interests and to "fit into" the land-use program already established. He points out that existing grazing privileges in the national forest areas are continued by a provision of the bill.

Under the wilderness bill no areas open to lumbering are affected and mining on the national forest lands involved may be permitted if needed in the national interest. A special provision of the bill safeguards State water laws and two of the units in Montana to be given protection by the wilderness bill are already in the National Park System and not available for commercial use.

Nine units are all within national forests and have for a long time been set aside by the Forest Service for special protection. Seven of these units would be subject to further studies before they become permanent units of the wilderness system. Three areas are now protected by the Fish and Wildlife Service and one on Indian lands will be included in the wilderness system if the Indians so decide.

Fifteen areas in Montana are involved and their total acreage is 4,218,843 or only 4 percent of Montana's area.

The 15 areas in Montana included in the National Wilderness Preservation System are listed below:

1. Cabinet Mountains Primitive Area (national forest).
2. Glacier National Park.
3. Montana National Bison Range.
4. Mission Range Roadless Area (Indian).
5. Mission Mountain Primitive Area (national forest).
6. Bob Marshall Wilderness Area (national forest).
7. Fort Peck Game Range.
8. Gates of the Mountains Wild Area (national forest).
9. Selway-Bitterroot Primitive Area (national forest also in Idaho).
10. Anaconda Pintlar Primitive Area (national forest).
11. Spanish Peaks Primitive Area (national forest).
12. Red Rock Lakes Migratory Waterfowl Refuge.
13. Absoraka Primitive Area (national forest).
14. Beartooth Primitive Area (national forest).
15. Yellowstone National Park (also in Idaho and Wyoming).

The units which people residing in this part of Montana seem to be the most concerned with are Glacier National Park, Bob Marshall Wilderness Area and Fort Peck Game Range.

We have heard opponents of the wilderness bill say that the proposed system would tie up a large portion of Montana and hinder commercial development but they will have to get a better argument for us because out of Montana's 147,138 square miles, only 6,592 would be preserved as wilderness under this measure. More than 95 percent of our State is not affected by the bill at all.

Before it gets too late let us consider our recreational resources. Other States in their enthusiasm for commercial development didn't take into consideration the future recreation of their people and the result was that the fellow who doesn't have a backyard patio gets his elbow room by climbing to the roof of his home and he can't see the mountains for the forest of smoke stacks and television antennas.

Armed Forces Day

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. BOLAND. Mr. Speaker, last Saturday, May 16, the Nation observed Armed Services Day. Military installations throughout the country and overseas celebrated with open houses and displays of Army, Navy, Air Force, and Marine Corps equipment.

The meaning of Armed Forces Day has been related appropriately and quite clearly this year in an editorial entitled "Power For Peace" and written by Brig. Gen. Perry M. Hoisington II, commander of the 57th Air Division, Strategic Air Command, for the Westover Yankee Flyer, the weekly publication at Westover Air Force Base in Chicopee Falls, Mass.

Mr. Speaker, under leave to extend my remarks, I ask that this editorial by General Hoisington be printed in the RECORD:

ARMED FORCES DAY—"POWER FOR PEACE"

(By Brig. Gen. Perry M. Hoisington II)

Americans everywhere are beginning to realize that the Power for Peace represented by our Armed Forces flows directly from the support and understanding of the people themselves.

The cost of preserving freedom comes high but, after each of our major conflicts, Americans have looked to the future, hopeful that their country's tomorrows would chronicle nothing but progress under the glow of peace.

But history has a way of repeating itself and January, 1959, found the President of the United States opening his state of Union message to the 86th Congress with a rhetorical question:

"Can Government based upon liberty and the God-given rights of man permanently endure when ceaselessly challenged by a dictatorship, hostile to our mode of life, and controlling an economic and military power of great and growing strength?"

With the lessons of history in mind, President Eisenhower answered his own question

this way: "For us the answer has always been found, and is still found, in the devotion, the vision, the courage and the fortitude of our people."

The free world in 1959 has tensions greater than any in years past. While men of good will struggle to bridge the gulf between communism and democracy, the forces opposed are moving doggedly toward the only goal that matters in their concept of government—domination of all men and subjugation of the individual to the State.

The United States now finds itself at a crossroads of history. We have arrived at a position of world leadership in an era of remarkable productivity. It is also a time when man's power of mass destruction has reached fearful proportions.

Possession of such capabilities helps create world suspicion and tension. We at Westover know that we seek only a just peace for all, with aggressive designs against no one. Yet we realize that through arrogance, miscalculation or fear of attack, catastrophic war could result. In today's world keeping peace more than ever calls for the utmost resolution, wisdom, steadiness and unremitting effort on the part of our people as well as our national leadership.

Armed Forces Day, has become an important date in the calendar of the Nation over the last 10 years. On this annual observance all our citizens come to see for themselves the military manpower and equipment which makes our Nation's Power for Peace. Here Armed Forces Day will be observed on May 16 with an open house, and aerial demonstartions. We will show how courage, energy and dedication of a few to their special military tasks in maintaining ideals and substance of freedom contribute to the assets of the free world as it faces one of the gravest challenges in history.

The success of the program and the impressions left with the civilian visitors to Westover this Armed Forces Day will be as effective as the efforts put forth by each individual who is called upon to aid in this project. Let's all put together in showing our neighbors that Westover is an intregal part of the deterrent force which maintains the security of our great Nation.

What Answer to the Challenge of International Poverty?

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 4, 1959

Mr. UDALL. Mr. Speaker, it becomes clearer every day that this year Congress must make some basic decisions about our economic assistance programs for the underdeveloped areas of the world: at the moment, for example, there is wide discussion in Washington of various proposals that would help underwrite India's crucial third 5-year plan and assure its success.

Mr. Eugene R. Black, President of the International Bank for Reconstruction and Development, recently made a most encouraging and challenging report on the success of his organization in trying to cope with international poverty. Mr. Black calls this challenge the most difficult we face over the long run. I believe his thought-provoking recent address to the Economic Club of Detroit is worthy of careful scrutiny by our colleagues. This address follows:

WHAT ANSWER TO THE CHALLENGE OF INTERNATIONAL POVERTY?

Today I want to talk for a few minutes about three recent events in the affairs of the World Bank which I hope will suggest to you that there is more order in this turbulent world than appears on the surface.

The World Bank lends money mainly for very expensive things like powerplants and railroads, road systems, and port facilities. We get our money almost exclusively now from private investors in the free world who either buy our bonds or participate in our lending operations in one way or another. Most of our borrowers are governments who are new to the business of governing and are trying to govern in an orderly fashion populations which are becoming increasingly aroused against a life of poverty. This may seem an improbable set of conditions under which to do much business in these chaotic times.

Yet we are getting so large a volume of promising proposals from our borrowers that we are asking our 68 member governments to double our authorized capital. Congress, as you probably know, has been considering this request and it is one of the events I want to refer to today. At the same time we have just announced our first public sale of bonds in Germany, the largest issue we have yet tried to market outside of the United States. This event I mention because it is the result of a new order in Europe's finances which has implications far beyond the operations of the Bank. Then recently the Bank sponsored meetings with the representatives of five nations to work out ways and means of helping India over a difficult hurdle in its second 5-year plan. Here again an instance of order in the world which provides hopeful implications for the future.

Let me consider each of these events briefly, starting with our bond issue in Germany.

For a long time now our bonds have been well received in the market here and in Switzerland. We have also raised money in Canada, Holland, and the United Kingdom. But we have always felt that we could sell a lot more bonds outside the United States, particularly in Europe, when the price was right. Now market conditions in Germany—and in other European countries—offer good prospects. To us this is a very encouraging turn of events.

These good prospects are not just the result of the World Bank's achievements; more important, they are the result of the success of free world policy, and particularly American policy, over the past 10 years or so. Financially speaking, our first object in the postwar decade was to restore the competitive position of the industrial nations of Western Europe and Japan after the ravages of World War II. From every point of view financial independence is preferable to being more or less poor relations of the United States, as was the case in some degree with all of these nations 10 years ago.

Over and over again during these years it was said that this objective would be deemed achieved when two things had happened: first, when the gold and dollar reserves of the Atlantic community had been so increased and redistributed that currency convertibility could be restored; and second, when conditions in the industrial countries and their dependencies were such as to attract a sizable annual flow of private American investment to help meet their capital requirements.

Financially speaking, these things are what the Marshall plan and its successor were designed to do. We can say today that to a large extent our objective has been won and that "phenomenal" is not too strong a word to express the success of the past 10 years. Last year the stamp of success was clearly marked on the record. In 1958 alone more than $3 billion net of U.S. private capital was invested abroad, a substantial part in the industrial nations of the Free World. In the same year more European governments came to the American capital market with bond issues and found buyers there than at any time since the war. This year Japan followed suit. And in 1958 it became possible for any trader who could earn sterling or guilders or deutschemarks or almost any West European currency with his merchandise to change those currencies into dollars at will.

It would be tragic, I think, if controversy over the recession here last year and its aftereffects eclipsed the fact that we have achieved our long-sought goal of restoring the financial strength of the Atlantic community. It would be particularly tragic if, in our preoccupation with short-term movements in our own economy, we adopted policies which had the effect of undoing what we have built up so painstakingly in the international economy. I ask, for example, those of you who are concerned over the fact that last year the United States shipped abroad some $3 billion in gold out of Fort Knox to think a moment before jumping to conclusions. The United States still has about a third of the free world's gold reserves. What was lost last year was more than matched by what was gained in private investment abroad. If we traded some liquidity, which we did not need, for the acquisition of real wealth abroad, isn't it really a pretty good trade, the kind of trade, we've been trying to make for 10 years now?

I do not say that all the business of the postwar decade has been completed. For one thing there are still restrictions on dollar imports into Western Europe—and, for that matter, restrictions against European imports into the United States. But these exceptions do not dent the degree of success achieved in the postwar decade. We can say now that financial relations among the industrial nations of the non-Communist world have become something like normal, if anything is normal in this changing world.

Our bond issue in Germany, and our hope of being able to follow suit in other European countries soon, are but symbols of the restored financial strength of the free world's industrial nations. At the same time we have had considerable evidence that these same nations are now willing and able to bring a measure of their restored strength to bear on the outstanding economic problem of the this day—the problem of poverty in the countries of the free world which have yet to achieve their industrial revolution.

More and more so-called underdeveloped countries are building up the organizations and adopting the administrative practices necessary to invest money in a way that promises to lead to higher living standards. One proof of this progress came last year when the Bank's volume of lending increased 75 percent over the average of the previous 3 years. We are now lending over $700 million equivalent a year.

In the face of this substantial increase we had to look to our own sources of capital. Since we raise virtually all our money in the private markets, we naturally looked to strengthening our links with those markets. Our major link, particularly with the American market, is the guarantee which stands behind our bonds in the form of that portion—80 percent—of our authorized capital which is subscribed by our member governments but which may only be called to meet the service of our own bonded debt. Our directors recommended doubling our authorized capital—increasing it from $10 billion equivalent to about $20 billion—but leaving all of the increase uncalled, and thereby more than doubling the amount of the guarantee behind our bonds. We believe that this action will help assure our

ability to raise the funds we will need for a good many years to come.

I am pleased to say that this proposal has had a very kind reception in Congress as well as in the British Parliament and elsewhere in Europe. Here is further evidence, I think, that the free world's industrial nations are ready and willing to divert a measure of their restored financial strength to helping overcome poverty where poverty is so much the root cause of disorder in the world.

The momentum of development in some of our member countries has carried them to the point where they cannot prudently borrow further funds abroad on conventional terms of interest and repayment. This is probably the most difficult fact of economic life facing the free world's industrialized nations today for it involves each one deciding how much it is in its national interest to give further financial help in the form of what is loosely called foreign aid. I do not intend to plunge into this complicated matter today, but I will cite one instance which suggests that there is growing order here, too.

The country concerned is India, which perhaps presents the greatest challenge of all. In India undernourishment and mass unemployment are living realities for more than 350 million people. At the same time India has taken economic development into the center of its life, with all the radical changes economic development inevitably entails. No one privileged to play even a small part in India's great adventure today can help but feel that the destiny of free institutions in the 20th century will be profoundly influenced by the extent of India's success in absorbing these changes without sacrificing respect for individual liberty.

India is the World Bank's biggest borrower; we have invested in India more than half a billion dollars, almost all to help finance projects in the current second 5-year plan. It was natural, then, that when signs of a foreign exchange crisis appeared in India last summer the Bank should take the lead in convening a meeting of interested nations to see what could be done. The plan had already been cut back to the core; the Indians faced a stark choice: either more foreign exchange had to be found somewhere or still further cutbacks, some which might involve abandoning projects already started, would have to be made.

Last August and again this March the Bank sat down with representatives of Canada, the United States, Britain, Germany, and Japan to see what could be done. We hoped that by bringing several nations together at one time we could obtain a broad measure of agreement on what India's needs were, and how they should be met in the light of the measures which India herself was prepared to take to bring matters under control. As it was, both meetings were successful; the foreign exchange will be forthcoming and the momentum of India's development effort will not have to be slowed further at this time because of a foreign exchange shortage. The response encourages me to think that a community of interest exists in the free world which could support more permanent collective arrangements for meeting these emergencies.

The financial strength of the free world has been restored. Partly because of the threat of communism, partly for other reasons, there is a growing realization that the most compelling challenge in the chapter of history now being written is how to help the poorer nations in our midst find an escape from poverty, an escape, not into the jaws of communism, but one in which there is a chance that free institutions will take root and grow. And there is a growing realization that this challenge applies equally to all free nations and commands a collective use of their resources and resourcefulness.

There are, in short, encouraging signs of order in the non-Communist world; signs of a growing response to what is clearly the most difficult challenge which we face over the long run. But if we are to build on these hopeful beginnings there is one fact which must always be reflected in any policies or arrangements we may adopt to serve our ends. That fact is that a good deal more than money is needed to overcome poverty.

From the point of view of a development banker the most difficult problem by far in giving effective help to these people is the problem of promoting the right economic and financial policies. Now I could give a hundred illustration of what I mean by "the right economic and financial policies"; they would range all the way from checks on inflationary pressures to laws and regulatory practices which allow public utilities to pay their own way and set aside out of revenues something toward their expansion. But you are as familiar with the prerequisites for economic devlopment as I am. The point is that if financial assistance is to be effective, both lender and borrower must agree on such policies, however they may be adapted to the peculiar circumstances of a given country. This is true whether the assistance is made from one nation to another or through regional or international organizations. It is true whether the assistance goes in the form of loans or grants or something in between.

The admittedly fine line between what is economic and what is political often makes us very shy about talking about sound economic and financial policies with the representatives of other nations. Certainly, those who would make a political manifesto out of these ideas are guilty of crossing that line. We should leave it to the Russians to say that there is a hard and fast set of rules which a poor society must follow if it is to escape poverty today. We should leave it to the Russians to say to the leaders of these countries that they must be willing to ride roughshod over the entrenched habits and cutoms of their people and impose wholly new institutions on them with all the repressive paraphernalia of totalitarianism in the name of economic growth.

We should avoid slogans and make it crystal clear that our values tolerate great diversity in economic matters as well as political forms. But this does not mean that we have to fall into the hopeless position that virtually any policy goes when it comes to economic development. If a society is to grow richer in this day and age, there are economic and financial facts of life which must be respected whatever the social and political framework. To the extent that it is in our interest to help, we must insist on a respect for these facts of life. Otherwise, our desire to help will very probably be dissipated in frustration, if not actually turned to harm.

I am sure there would be less confusion and debate here and abroad over the American Government's efforts to promote economic growth abroad if as much emphasis was placed on the quality of help offered as on the quantity. As it is the two words "foreign aid" have become so elastic that they now embrace a host of special objectives—military, political, and commercial, as well as economic—so that it is often not at all clear just what is being attempted in a given instance. And to the extent that the United States is trying to promote economic development with foreign-aid funds, money is all too often loaned or given away without first insisting on thrashing out the difficult but inescapable conditions for making that aid effective.

By failing to emphasize quality as much as quantity, the really important idea behind foreign aid is losing its appeal not just here at home, but abroad too. When, far from reflecting the financial and economic facts of life, loans and grants are used, as they have been, to aid, abet, and perpetuate policies in other countries which make economic growth virtually impossible, then we are asking for trouble. The result, as we have seen in more than one country recently, is a deterioration of the other nation's economy and a reaction, sometimes violent, against the very programs which were supposed to help.

These are serious weaknesses. It would be a great tragedy if foreign aid became discredited here and abroad because the economic objective got lost or because we weren't ingenious enough to create with other countries a community of interest around the kind of sound economic and financial policies necessary for economic growth. It would be a tragedy because there is no more constructive idea in our whole foreign policy than the idea behind foreign aid to relieve poverty in those nations of the non-Communist world which are experiencing both a reformation and an industrial revolution in the face of such heavy odds.

My whole experience in the World Bank confirms me in my belief that when the objective is clear, a community of interest can be created around the right policies. And it doesn't require what one commentator called "a band of saints with degrees in economics." We have loaned more than $4 billion for development projects in 49 different countries and territories. All of these loans have carried conditions of one sort or another, conditions designed as much to protect our borrowers as ourselves. They have been accepted partly because our borrowers know we have no political axe to grind, but mostly because our borrowers have agreed that the conditions are necessary for the effective use of our money. Every loan has posed special problems of adapting knowledge and experience to a special environment, but all have reflected, I think, the facts of economic life which must be faced if a society is to escape poverty in these times.

And let me emphasize we would have had to do these things—to ask these conditions—even if we had been giving the money away rather than lending it. The difference between effective assistance and a giveaway is not the difference between a loan and a grant; it is the difference between an insistence on sound financial and economic policies and no such insistence.

I have tried to suggest in these few remarks that all is not chaos in our world, that there is hopeful and constructive work being done which offers something to build on by way of increasing the margin of order. Of course, no one can guarantee that if we follow the courses I have suggested, we will actually succeed in fostering both economic growth and nations in which free institutions will take root and grow. There is no certain connection between economic growth and freedom so it is impossible to argue that success is assured.

But the existence outside of the Communist empire of the world's richest nations, which are also the world's freest nations, exhibiting a great variety of political forms and economic institutions, should be fact enough to give all but the very timid among us reason to have courage in our convictions. We should, in view of the free world's great strength, scoff at those pessimists, among whom the Communists are numbered, who say that today no poor society can get rich which does not first reduce its members to the status of ants in a bureaucratic anthill.

If we want, we can bring to bear a very powerful and persuasive influence on the historic tide of change which is sweeping the globe today. Just as we gave rise to that tide through spreading our ideas and ma-

terial achievements into every corner of the world, so we can hope to turn that tide to promote political and economic progress consistent with our concepts of the dignity of man.

We can, that is, if we become as hardheaded as we are already big-hearted. We will never be loved for the quantity of our riches, but we can earn respect for the manner in which we employ them.

Poison in Your Water—No. 77

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Grand Rapids, Mich., Herald on June 28, 1958, entitled "Knowledge of Pollution Is Revealed."

KNOWLEDGE OF POLLUTION IS REVEALED—GRAND RAPIDS OFFICIALS AWARE RAW SEWAGE BEING DUMPED INTO RIVER

(By E. W. Murphy)

Raw sewage is being dumped into the Grand River at Comstock-Riverside Park in Grand Rapids with knowledge of Grand Rapids officials, the Herald learned Friday.

This pollution of the river has been going on for years despite an outlay of $5 million by Grand Rapids taxpayers for improved treatment of city sewage to keep the river clean, City Engineer Raymond Bruggink, Jr., admitted.

A 15-inch discharge pipe serves as an outlet for the Monroe NW trunk sewer when it becomes overloaded, Bruggink said.

The resulting pollution can be seen by anyone walking along the riverbank at the park.

Bruggink spoke of an inadequate sewage collection system in the north end, making it necessary, he said, to divert overflow sewage into the river.

"It is that or have basements flooded with sewage in that part of town," Bruggink explained.

Bruggink said he does not know whether the State water resources commission is aware of this situation.

Nothing could be done to correct it without a big outlay for sewer construction, Bruggink asserted.

The water resources commission in 1952 went to court to force Grand Rapids to build a secondary sewage disposal plant costing $5 million. This plant was placed in use last year but it is still under construction.

An incinerator building, last phase of the construction, is due for completion next fall.

Bruggink said he is going to call to the attention of the city commission the need for enlarging the sewage collection system.

A report, containing the first comprehensive survey of the city sewage system since the 1920's, will be ready for City Manager Donald M. Oakes and the commission soon, Bruggink stated. He has been working on the survey a year, Bruggink said.

Bruggink did not indicate what he will say in the forthcoming report but it is expected to amplify findings of Greater Grand Rapids Civic Study Committee which last year urged spending $5 million to recondition the existing sewage collection system.

Voters in the special election last June turned down a proposal for a $3 million bond issue for an immediate start on this program.

Some of the proceeds of a city sewage tax, in force since 1953, should also be used for the construction program, the committee advised.

The committee report, prepared by Willfred B. Williams, a civil engineer, said the Monroe NW trunk sewer is inadequate and there is need for relief sewer lines north and south of Knapp NE to serve new areas east of Plainfield NE.

A number of other sewer construction projects was also recommended by this group.

Williams said Friday trunk sewers in the north end must serve North Park and the Michigan Veterans' Facility as well as the large residential area there. These sewers were never designed for their present use, Williams declared.

City Manager Oakes could not be reached Friday night for comment on the river pollution.

Mayor Stanley J. Davis likewise could not be reached. He was in Mackinaw City for the Mackinac Bridge dedication.

President and Mrs. Leonard M. Elstad, of Gallaudet College, Cited by Alpha Sigma Pi

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. THORNBERRY. Mr. Speaker, President Leonard M. Elstad, of Gallaudet College, the only senior college for the deaf in the world, was recently named by the college's Alpha Sigma Pi Fraternity as its 10th annual Man of the Year. Dr. Elstad has rendered an outstanding record in his 36 years of distinguished service to the deaf.

The fraternity at the same time also named his wife, Mrs. Elstad, as Mother of the Year for the great personal interest she has taken in each student at Gallaudet.

Because I know that the Members of Congress take an unusual and keen interest in Gallaudet College, I ask consent that the description of the awards made to these two wonderful and unselfish people be placed in the RECORD.

It is as follows:

President and Mrs. Leonard M. Elstad, of Gallaudet College, have been named Man of the Year and Mother of the Year, respectively, by the college's Alpha Sigma Pi Fraternity.

The fraternity presented its 10th annual Man of the Year plaque to President Elstad this morning at the college's awards day ceremony held in Chapel Hall on the campus at Seventh Street and Florida Avenue NE. (May 13). Dr. Elstad was accorded this honor in recognition of his 36 years of distinguished service to the deaf, especially in higher education. The plaque is awarded on an international basis to a person who has made the most worthwhile contribution to the welfare of the deaf.

A devoted wife and mother, Mrs. Elstad was named Mother of the Year for her unusually friendly attitude toward and great interest in each student on the Gallaudet campus and for her fine qualities as hostess of the college. The fraternity presented her with a bouquet of red roses on Mother's Day, May 10.

Dr. Elstad is well known in the United States and abroad, as speaker, writer, educator, and administrator. Appointed to his present position in 1945, he began a vigorous campaign for a greater Gallaudet, and on May 1, 1957, the college, for the first time, achieved accreditation.

A member of a number of professional organizations relating to the deaf, he attended the International Congress on Modern Educational Treatment of Deafness, held at the University of Manchester, England, July 15–23, 1958. He served as chairman of the session on "Educational Treatment of Deafness in Different Cultural Backgrounds." He was also a member of the International Congress for the Education of the Deaf held in Groningen, the Netherlands, June 1950, and was one of only three in attendance from the United States.

Both Dr. and Mrs. Elstad are actively interested in civic, social, and religious affairs of the metropolitan area. They have two daughters: Mrs. Elizabeth Elstad Hegstrom, a lawyer in New York City; and Margaret Jean Elstad, a junior high school teacher in Freeport, Long Island, N.Y.

Support for Gettysburg

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. QUIGLEY. Mr. Speaker, once more I would call attention to the support which has been consistently coming from newspapers in "the second battle of Gettsburg." I have not seen, nor have I been told of, one single public voice that has been against the acquisition of lands needed to prevent further commercialization of Gettysburg Battlefield. From Baltimore to Bellingham there has been only praise and a call for action for the idea of preserving one of our most hallowed historical shrines in its original State. As further evidence, I submit the following editorial from the Reading, Pa., Times of May 6, 1959:

THE BATTLEFIELD AT GETTYSBURG NEEDS SAVING FROM TINHORNS

We haven't been in Gettysburg for a number of years, so we must take the word for it of somebody who has. He is Representative JAMES QUIGLEY, of the 19th Pennsylvania Congressional District, of which the town of Gettysburg and the historic battlefield are a part.

We have heard from Representative QUIGLEY that all is not as well as it should be on the environs of the famous battleground, the turning point of the Civil War. He said the influx of tourists, which becomes greater every year, has caused all sorts of eyesores to grow up on the perimeter of Bloody Angle, Little Round Top, Devil's Den, and the High Water Mark. These, he assures us, consist of standing selling cheap souvenirs, salons, ice cream and hot dog stands, all brilliantly lighted with blazing neon signs. He wants something done about it and suggests that the Federal Government buy most of the areas that are thus infested and, owning the

land, oust the offenders against taste and history.

Representative QUIGLEY made his request to President Eisenhower who, as a part-time resident of Gettysburg and an Adams county gentleman farmer, must have given an attentive ear to the representative's ideas.

We hope the President acts upon the Quigley plan. For the most important battlefield on American soil to become fringed, as it has, with honky-tonk establishments, for visitors to that great shrine to go away with as many memories of hot dog and beer stands as they have of Cemetery Ridge and Seminary Ridge, of the brave men who fell there, of the place Mr. Lincoln stood to deliver his memorable address is a horrible idea.

Let the Government buy the land, a lot of it, without delay.

Congratulatory Messages to Brooklyn School on 100th Anniversary

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. ANFUSO. Mr. Speaker, on March 16 of this year I inserted in the RECORD the text of a congratulatory letter to the Heffley & Browne Secretarial School, of Brooklyn, which is celebrating the 100th anniversary of its existence. Many letters and messages of congratulations have since reached the school, which is the oldest of its kind in the East.

Among those who sent such messages are Mayor Robert F. Wagner, of New York City; John Cashmore, borough president of Brooklyn; Edward S. Silver, district attorney of Kings County; John J. Theobald, superintendent of schools of New York City; Rt. Rev. Henry M. Hald, superintendent of Catholic schools in the diocese of Brooklyn; Justice M. Henry Martuscello, of the supreme court of New York State; and Justice Fred G. Moritt, of the municipal court of New York. Their messages are as follows:

CITY OF NEW YORK,
OFFICE OF THE MAYOR,
New York, N.Y., March 16, 1959.

Mr. GEORGE A. KLAUM,
Principal, Heffley & Browne Secretarial School, Brooklyn, N.Y.

DEAR MR. KLAUM: New Yorkers join with me in saluting the Heffley & Browne Secretarial School on its 100th anniversary. This institute has pioneered in commercial education and rightly ranks among the outstanding business schools in the East. Among its distinguished alumni are men and women who have made great contributions to government, industry, and the professions.

As mayor, I express the appreciation of New Yorkers of the invaluable work achieved by the Heffley & Browne School whose activities are in reality adjuncts to the educational facilities in our city and which are the best in the way of educational activities in the commercial field.

May I extend the felicitations of the people of this city to the faculty, the students, and the members of this distinguished Brooklyn institute.

Sincerely yours,

ROBERT F. WAGNER,
Mayor.

BROOKLYN, *N.Y., March 16, 1959.*

Mr. GEORGE A. KLAUM,
Principal, Heffley & Browne Secretarial School, Brooklyn, N.Y.

DEAR MR. KLAUM: The Heffley & Browne Secretarial School is as revered a landmark in our great Borough as is any one of the many historical monuments and structures which now serve to memoralize our forebears.

No resident of Brooklyn is without a knowledge of your institution, whether that knowledge be obtained through actual attendance, or through contact with one of your distinguished graduates.

Your pioneering in the field of commercial education has served to raise the professional standards of secretaries and business associates; and you are to be congratulated on the splendid work you have done along those lines.

Every field of our community activities has benefited from your many contributions in the educational field, and as the president of the Borough of Brooklyn, I am proud to felicitate you on attaining this milestone in your history.

Truly, you have served for a century with honor and distinction.

Cordially yours,

JOHN CASHMORE,
President of Borough of Brooklyn.

OFFICE OF THE
DISTRICT ATTORNEY OF KINGS COUNTY,
Brooklyn, N.Y., March 13, 1959.

Mr. GEORGE A. KLAUM,
Principal, Heffley & Browne Secretarial School, Brooklyn, N.Y.

DEAR MR. KLAUM: I am pleased to write you on the occasion of the centennial of the Heffley & Browne Secretarial School.

To be in business for a century with a good record is an achievement in itself. I know there must be many, many men and women in the professional and business world who feel a deep sense of gratitude for your instruction. In addition, as a Brooklynite, it is good to have your institution in this great borough.

I wish you and your colleagues every good fortune. Carry on with your good work. I won't be around at the end of your next centennial, but I am sure those who are will appreciate even more what you have done.

Very sincerely,

EDWARD S. SILVER,
District Attorney of Kings County.

BOARD OF EDUCATION
OF THE CITY OF NEW YORK,
Brooklyn, N.Y., March 30, 1959.

Mr. GEORGE A. KLAUM,
Principal, Heffley & Browne Secretarial School, Brooklyn, N.Y.

DEAR MR. KLAUM: My heartfelt congratulations on the excellent record the Heffley & Browne Secretarial School has made during the past 100 years. Your longevity alone is proof of the value of your services which, I suspect, continue to become more valuable in a society that continues to grow more and more industrialized.

It's a theory of mine that an executive is just about as good as his secretary permits him to be, and a truly good secretary will free the executive to the extent that he can make his most important decisions while fishing.

Seriously, I know how rightfully proud you must be on this significant anniversary. I know that all education has profited from your pioneering in the field of commercial education. Your more than 100,000 graduates, many of whom received their basic training in our public schools, have made a record which reflects only credit upon your institution.

May you continue to serve this large community successfully for another 100 years.

Sincerely yours,

JOHN J. THEOBALD,
Superintendent of Schools.

CATHOLIC SCHOOLS,
DIOCESE OF BROOKLYN,
Brooklyn, N.Y.

The catholic schools of the diocese of Brooklyn are happy to salute the Heffley & Browne Secretarial School on the completion of 100 years of notable achievement in the field of business education.

Many thousands have received their professional training in this, the oldest school of its kind in the State of New York, and they have filled prominent positions in the business world with distinction.

As the Heffley & Browne Secretarial School enters its second century of service, it has our best wishes for continuing success in training our youth for their role in the life of Greater New York—the world center of business.

Rt. Rev. HENRY M. HALD,
Superintendent.

SUPREME COURT OF THE
STATE OF NEW YORK,
Brooklyn, N.Y., March 11, 1959.

Mr. GEORGE A. KLAUM,
Principal, Heffley & Browne Secretarial School, Brooklyn, N.Y.

DEAR MR. KLAUM: It has come to my attention that Heffley & Browne Secretarial School is celebrating its 100th anniversary. I want to take this opportunity to congratulate the faculty, students, and alumni of your school which has serviced Brooklyn so long and so well.

Hoping you continue your good work for at least another hundred years, I am

Sincerely yours,

M. HENRY MARTUSCELLO.

MUNICIPAL COURT,
OF THE CITY OF NEW YORK,
Brooklyn, N.Y., April 2, 1959.

Mr. GEORGE A. KLAUM,
Principal, Heffley & Browne Secretarial School, Brooklyn, N.Y.

DEAR MR. KLAUM: I understand that this year marks the centennial of the Heffley & Browne Secretarial School, founded 100 years ago and is the oldest school of its kind in the East.

Ever since I could remember, the name "Heffley & Browne" has been an honored name in the great Borough of Brooklyn as an accredited secretarial school giving young men and women of our community the opportunity to emerge from the classroom into the business world.

May I extend my felicitations and best wishes for continued success to your student body, alumni and faculty.

Cordially yours,

FRED G. MORITT,
Justice.

Hellmit Week

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 27, 1959

Mr. GUBSER. Mr. Speaker, one of my constituents, Mr. H. N. Morse, of 123 Pryce Street, Santa Cruz, recently sent me the following resolution with the request that it be inserted in the CONGRESSIONAL RECORD. Though the resolution is amusing at first reading, I feel that a very important thought underlies its wordage. I commend it to my colleagues:

Whereas owing to the fact that every week in the year is designated as a special week

for promoting interest in some particular project; and

Whereas there exists a grave need for the citizens to have ample opportunity to rid themselves of anxieties and negation: Therefore be it

Resolved, That Congress be petitioned to designate a 53d week to be observed as Hellmit Week, said week to be constituted from the unused portions of other special weeks not being fully observed; and be it further

Resolved, That all citizens—and especially newsmen—Members of Congress, and all people in the service of our country be urged diligently to use said Hellmit Week to rid their minds of fears and frustrations, to permit their using the other 52 weeks of the year in constructive thought and action.

World Federation: A Must

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Miss Tracy D. Mygatt, which first appeared in Motive for October 1957, and which was reprinted by the Campaign for World Government, Inc., of which organization Miss Mygatt is New York secretary:

WORLD FEDERATION: A MUST

(By Tracy D. Mygatt)

To begin with a platitude, the desirability of a fine goal in life is something no one will gainsay. For the rudderless person is a pitiable, sometimes even a tragic, sight. How much more pitiable and tragic, then, is our torn, anarchic world of today. For still it stumbles on in the old illusions as to the dependability for peace of leagues, alliances, power blocs and arms, largely unaware of the political goal toward which Federalists believe statesmen and people should strive, democratic world federation.

"But why," promptly demands someone as concerned as I for lasting peace, "why is the United Nations not enough?"

Well, I can only beg you to bear with me as I try to persuade you that for all its countless lifesaving achievements, as notably in the field of its specialized agencies, WHO, FAO, and the rest, and in UNICEF, the United Nations is still, under its critically outdated Charter, only a league of sovereign states. Constantly, under the league system, there is the temptation in our recurrent crises, to embark on unilateral or joint military action. Only so recently as November, 1956, we saw such action on the part of Britain, France and Israel. And though shortly Britain and France yielded to the U.N. mandate, it was not before a terrified world had again glimpsed the specter of world war III.

Though the United Nations Emergency Force (UNEF) performed outstanding service in the Suez area, there was, of course, no world law behind it. And even as I write, a new crisis has developed. True, this may presently be resolved. Conceivably a reconstituted UNEF may again go to the rescue. But even if a so-called police force under the U.N. should be made permanent, as many federalists hope, it will be powerless to maintain, still less effect, lasting peace. For the Middle East (as too many other regions) is a tinderbox, beset by the very forces which ever threaten to tear the United Nations apart for good and all. And we should realize that no police force can be at once law, constable, and court.

Instead of setting sights on such a remedy, all nations, alerted at long last to the peril of annihilation, should demand universal, democratic, nonmilitary world law operative at least upon those areas in which wars explode. Granted such a mighty awareness on their part, this could be achieved by a U.N. review conference, with subsequent agreement by governments.

Late in 1955, such a conference was voted by the General Assembly and Security Council. But on June 3, 1957, the review conference was further postponed. To federalists this was nothing less than tragic. For the world cannot afford to let unbridled national sovereignty continue as foundation of the Charter. U.N. rethinking on this is desperately urgent.

For a league, however noble in purpose, is shifting sand upon which to build enduring peace. All too clearly we of today should be seeing in the ancient league pattern the hopelessness of attaining permanent peace. It is an old, futile structure.

Blood-soaked centuries warn us that voluntary compliance with league mandates has bitterly failed. To gain a warless earth, this must become a governed earth, equipped with the usual branches of government—legislative, executive, judicial. As already on lower levels of city, county, State, and Nation, we are blessed with appropriate law, so also on the top or international level, we must secure law. Our Founding Fathers' brilliant Federal system of a divided sovereignty must be extended to the world.

Now as never before, when men have split the atom, and East and West alike have added the horror of guided missiles and hydrogen bombs, our threatened world cries out for world federation as, under God, the supreme political goal for the rescue of mankind.

Indeed, had enough implementation among rank and file followed the fine utterance in the Methodist Discipline of 1951, it would not be necessary to urge world government among Methodists. They would already be in the forefront of the struggle. Now I would urge upon them the fact that the general conference at Minneapolis, in April 1955, voted that the United Nations "* * * must be given sufficient authority to enact, interpret, and enforce world law against aggression and war." Need I add a verbum sap?

Before briefly dealing with some of the main organs of the U.N. in which we advocate changes, I would stress three points of special urgency: Universality of membership, federalism of structure; and law enforcement upon the individual instead of punitive action against the member state. Happily the U.N. has recently made great progress upon the first point.

Specifically we hold that the General Assembly should be made a legislative body, its lawmaking powers strictly limited, as previously noted, to issues dealing with international relations. Also, since the "one nation, one vote" present method of representation would obviously be grossly unfair in the reconstituted Assembly, a different system of representation must be worked out at the review conference to secure just representation for all, one assuredly not forgetting urgent human claims of the upsurging peoples of Asia and Africa. Colonialism, with its glaring injustices and cruelties, must go.

Admittedly, representation is an intricate question. Various plans have been drafted, probably the best by that eminent jurist, Grenville Clark who, with Louis Sohn, has devised a scheme seemingly just to all concerned. Final decision, of course, will rest—as upon all proposals—with the review conference, and the necessary subsequent national ratifications.

Further, we must note that in the Assembly, as throughout the envisaged world government, the representatives would be, so far as possible, popularly elected, rather than as now in the U.N. appointees of the nation states. For federalists deeply cherish the concept of our Founding Fathers that sovereignty is vested in the people.

The Security Council, now incessantly blocked by veto, would become a world executive, charged with carrying out the laws of the Assembly. The International Court of Justice, always seriously restricted in its judicial competence, would become a world court with compulsory jurisdiction, and empowered to deal with individuals guilty of violating world law. Appellate and other lower courts would be formed. And the judicial decisions of all would be carried out by a genuine, civilian police force.

As for the immensely valuable work of the various councils and commissions, the specialized agencies and UNICEF, substantially they would continue as before, except for a greatly and happily enhanced field of duties, as presently indicated in my discussion of armament.

Perhaps those are correct who insist that at its inception, shortly before the atomic explosion on Hiroshima, the United Nations could not have achieved this encompassing stature, that neither the U.S. Senate nor the U.S.S.R. would have agreed to so vast a change. Yet for us who had seen the debacle of the League of Nations, it was bitterly disappointing that our petitions that the new organizations be not again a league, but a World Federal Union, were presented in vain. The men at the top failed to see the goal.

In any case—and always granting the swiftly growing problems posed by the Soviet Union and by the whole East-West deadlock—federalists deplore the lack of vision toward the objective of world federation. For if in 1945 and succeeding years, sights had been set on this goal deeply, even prayerfully, by the world's statesmen, our present situation could not have been half so desperate.

Indeed I am far from forgetting the long intransigence, infamies, and brutalities of Russia. Communism is every whit as detestable to me as to any other Christian who profoundly treasures the civil liberties Russia so flagrantly denies. Her numberless vetoes, which for years have blocked progress in the U.N. are so obnoxious that some would heartily oust her from the organization she has flouted, and refuse her entrance in the basically revised United Nations federalists envisage.

But the Soviet Union is in the world. Unless East and West are to go down in the mutual doom of nuclear war, dragging the world with them, it is imperative that we strive on, tarough far more insistent negotiation, compromise and persuasion. Disappointing as it is to those of us who yearn desperately for good concrete results, even the long-drawn-out U.N. Disarmament Conference itself is proof that such persistent, patient negotiation is possible.

Further, while such a conference is in session, may I plead guilty to some cynicism of my own toward those portions of church and laity themselves too cynical—or too absent-minded—to offer passionate prayers for its success. Indeed if prayers are answered according to our faith, it sometimes seems to me we deserve little of God. Is it "realism"—or plain sin—to doubt divine power to change Russia and the other totalitarian states?

At any rate, and as aid to such faith, we must note that first among the changes envisaged under the new order, is the universal abandonment of all national armament

above the level of domestic requirement. Thus no longer would the Soviet Union be a menace to us, nor we to her. The radioactive poisons, fast accruing in soil, water, food, and air, even from the testing of fission and fusion weapons, which now, according to mounting scientific testimony, are producing leukemia and bone cancer with prime target little children, and which menace the very genes of unborn generations, would no longer be launched against a helpless humanity. All honor to that glorious apostle of loving kindness, Albert Schweitzer, for his impassioned appeal to us all.

We should be quit of armament's intolerable financial burden, its ever-increasing inflationary danger, its deep troubling of the Christian conscience, its peril in tempting men to try again the futile and unchristian solution of war.

So at last, freed of the drain upon national treasuries for weapons of destruction, we could in earnest set about the huge-scale feeding of the hungry, healing of the sick. We could at long last rally to the needs of the now bitterly poverty-stricken two-thirds of mankind—surely our primary obligation as professed followers of Christ. Thus, and only thus, could a basically revised United Nations carry on to the full its dedicated work for humanity.

Again, as to the possibility, or even desire to win Russia, Communist China, and the other totalitarian states whether of Left or Right, please note that domestic, internal sovereignty would remain intact. And while I share the hope of many that Fascist and Communist states, as they reap the political and economic advantages of the new order, will in time modify, or even abjure, their repressive systems, it should be enough, initially, that they agree to obey the prescribed world law.

Perhaps to some this whole goal for which I plead, may appear sheer fantasy, the ultimate in rationalization. Believe me, I am as poignantly aware as any of the blackness of present skies. Yet time and again, in periods of great darkness, energy, and faith have been reborn. The mountain climber, faced with imminent death on the desolate icy peak, has rallied himself for escape through new, untapped sources of strength and courage. Shall we do less for a whole world faced with death? Shall we quail before the supreme political adventure of substituting world law for world anarchy?

Or, shall we not rather, putting sloth and cynicism from us, take to ourselves the fine saying of a Federalist friend of mine who when beset by the doubter, answers, "What should be done, can be done"?

Effects of Heptachlor or Dieldrin on Wildlife

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 27, 1959

Mr. METCALF. Mr. Speaker, I call the attention of my colleagues to the following report by Dr. Maurice F. Baker, leader of the Cooperative Wildlife Research Unit, Alabama Polytechnic Institute, Auburn, Ala., as presented at the 12th annual conference of the Southeastern Association of Game and Fish Commissioners, held October 19 to 22, 1958, at Louisville, Ky. The wildlife kills reported by Dr. Baker were caused by granular forms of heptachlor and dieldrin. The report follows:

OBSERVATIONS OF EFFECTS OF AN APPLICATION OF HEPTACHLOR OR DIELDRIN ON WILDLIFE [1]

(By Maurice F. Baker)

Shortly after the inception of the imported fire ant eradication program, some concern developed among wildlife officials as to the possible effect of the program upon wildlife. An outgrowth of this concern was a cooperative study wherein the U.S. Department of Agriculture Plant Pest Control Division, the Alabama Department of Agriculture and Industry, and the Alabama Polytechnic Institute would work together. The Alabama Department of Conservation, the Bureau of Sport Fisheries and Wildlife (U.S.F. & W.S.) and the Wildlife Management Institute were brought into the study as partners in the Alabama Cooperative Research Unit at Alabama Polytechnic Institute. The primary purpose of the cooperative study was to determine the immediate and long-term effects upon bobwhite quail (Colinus virginianus, Linnaeus) of the fire ant eradication treatments in use in early 1958, but some observations were also made on other species.

The original plan was to treat 20,000 to 40,000 acres in one block in Wilcox County, Ala. This did not prove feasible, however, because landowners were reluctant to pay their one-third share of the cost of treatment, except on areas where the ant was a problem to them, and for other reasons. The study area finally agreed upon was located 4 miles northwest of Camden, Wilcox County, Ala. It included the lower Coastal Plain Substation of the A.P.I. Agricultural Experiment Station and two contiguous farms used as the test area, and a check area 2 mile away. A total of 4,700 acres in the area was divided as follows: 2,400 acres to be treated with heptachlor; 1,200 acres to be treated with dieldrin; 600 acres not to be treated and to be used as a check area; and 500 acres treated the year before by farmers and not a part of the experiment.

PROCEDURES

Description of study areas: About one-third of the treated area was Alabama River flood plain which was poorly drained. Approximately 90 percent of this bottomland was in good to excellent permanent pasture. The remainder was mostly in cultivation and temporary pasture. Bottomland soils were chiefly Ocklockonee Clay Loam and Leaf Clay Loam. The check area, which was river bottom, had similar soil, cover, and game conditions.

The upland part, approximately two-thirds of the treated area, was mostly in mixed pine-hardwood forest. Suitable ridge tops had been cleared and were in cultivation, pasture or in various states of old field succession. Upland soils were Guin Sandy Loam and Wickham Silt Loam, both with adequate to excellent surface drainage.

Game conditions on the areas were average for the vicinity. Bobwhite quail, cottontail rabbits, mourning doves, and wild turkeys were present in huntable numbers. Signs of predators and scavengers such as free-ranging dogs, foxes, raccoons, and opposums were common.

Application of the insecticide: Application of the poison was by air at the rate of 2 pounds of the technical material per acre. The granular formulation used resulted in a minimum amount of dust which, in effect, applied the poison to the ground—not to the vegetation. This rate of application and formulation was recommended in A.P.I. Extension Circular 516 (Revised) which also included the following precautions concerning chlordane, heptachlor, and dieldrin: "All of these insecticides are toxic to bees, birds, fish, game, and most other species of animals including man. However, these insecticides cause no serious damage when applied to relatively small areas, such as open fields and pastures. To protect yourself, follow the manufacturer's instructions."

Application of the poison began on March 17 and was completed by April 1, 1953. Rains and wind were frequent during this period, and prolonged the period of treatment considerably. In 4 out of the 5 times when applications were made no rain fell from 5 p.m. the day before application until 5 p.m. the day of application, but rain occurred within 3 days afterward in each case. Soil moisture conditions varied from waterlogged bottomland soils to well-drained upland soils.

Two planes were used—one for dieldrin and one for heptachlor. Treatment started at both ends of the contiguous areas and proceded toward their common boundary.

The original agreement between the cooperating agencies called for a blanket treatment of the 3,600 acres. Immediately prior to treatment, this agreement was modified to exclude open water of a beaver swamp.

Methods of study: It had been hoped that detailed studies could be made on several species covering a wide variety of ecological type. Limitations of funds and personnel reduced the scope of the detailed study to that of the bobwhite quail and an ecological study of a beaver swamp. The study of the immediate effects of the treatment on quail included pre- and post-treatment census on the treated and check areas, search for dead, chemical analysis of dead recovered, and day by day observation of a declining covey.

Although no detailed studies of other wildlife were planned, observations incidental to the quail work shed some light on the broad effects of the insecticidal treatment. Some treated areas of favorable habitat were searched for dead specimens of all kinds before the entire area was treated. Later, in the post-treatment quail census, additional specimens were found. It was not possible to search systematically the entire area and generally, efforts were concentrated in the better habitat types. A sample of each species was saved for chemical analysis unless decomposition had progressed too far. Others were simply tagged to avoid duplication, and left for further observation. The process of application of the poison was observed carefully. Catch pans were used to sample the rate and uniformity of fall for comparison with the planned treatment and careful attention was given to the treatment of the beaver swamp.

RESULTS

Application of the poison: A more detailed consideration is given elsewhere to the rate of application and distribution of the poison as indicated by our samples. Briefly, the samples were so variable that no conclusions could be drawn as to the overall application. The average sample was somewhat below the 2 pounds per acre rate for both insecticides.

Observation of the treatment of the beaver swamp revealed that the flow of granules ceased on each pass over the swamp, but that some poison fell in the water. Also, due to a shift in wind from one day to the next, a strip about 200 yards wide was missed—at least no poison was caught in pans placed in this strip.

Effects on quail: Thirteen coveys completely disappeared after treatment. Two surviving coveys were on the edge of the treated area and were found on the treated area only once in seven sightings. Coveys that disappeared included some ranging partly on untreated land.

Post-treatment census did not begin on any of the area until after the entire area was treated. Consequently, some of the area was not censused until 16 days after it was treated. The only evidence of the quail

Footnote at end of speech.

formerly present in these places was the remains of several dead.

In ranges poisoned near the end of the treatment, covey remnants were found and one of these was followed from day to day until all were gone and 5 of the original 10 birds were recovered dead. Analysis at Patuxent Research Refuge of these quail and others from both treated areas revealed amounts of poison in sufficient quantity to be the assumed cause of death in all but one specimen. These facts, combined with the excellent survival of quail and their presence as coveys after April 1 on the check area, indicated beyond reasonable doubt that the disappearance of quail on the treated area was due to the lethal effects of the poison. Contributing causes, if any, were insignificant.

Effects on other wildlife: Altogether, records were kept of 53 different kinds of vertebrates represented by over 187 specimens found dead on the treated areas prior to May 17, 1958 (see table I). The first 100 recovered specimens were analyzed at Patuxent and lethal amounts of poison were found in all but 6 specimens. The specimens found probably represented a fair sample of those more easily found dead. The small number of mammals found as compared to birds is probably due to their secretive habits. The two snakes represent all the reptiles found early in the investigation, but amphibians and fish represent hardly more than a minimum sample of each kind. The fish in temporary waters and small tributary streams appeared to have been completely eradicated, although some amphibians survived. No abnormal mortality was noted on the check area.

Of considerable interest is the relative nuber of different classes of vertebrates found in different broad habitat types. Table II presents such an analysis for the specimens sent to Patuxent. In general it seems that the dead were found in habitats most suitable for each kind. The high percentage of the total number of birds found dead in pastures and woods borders is related to the large amount of time spent searching in these two types. Other pertinent factors were the bright colored species, such as meadow larks and cardinals, found in these habitats and the open cover.

By listing the species found in each habitat it was found that only three species were found in more than one habitat type. This minor overlap indicated clearly that the distribution of the dead was correlated with habitat.

In summary, heptachlor or dieldrin applied by air at the rate of 2 pounds per acre, or less, appeared to result in a total kill of quail in 13 coveys that ranged all or most of the time on treated land. Two other coveys, ranging mostly off the treated land, survived. A wide range of other vertebrate animals was killed. Distribution of the observed kill was correlated with habitat and perhaps also with time spent searching in a given habitat.

TABLE I.—*Summary of dead found to May 17, 1958, on treated areas*

Mammals:	
Swamp rabbit	1
Cottontail	17
Red fox	5
House cat	1
Cotton rat	6
White-footed mouse	1
Unidentified mouse	5
Skunk	1

It's Time We Look Into the Cost and Extravagance of the Capehart Housing Program

EXTENSION OF REMARKS

OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 5, 1959

Mr. COLLIER. Mr. Speaker, there is soon to be brought to the attention of this House for debate a housing bill for passage or rejection, the terms of which are in many respects extremely technical and involve the expenditure of great sums of money and the pledging of the credit of the United States of America in such proportions as to demand of all of us our closest scrutiny.

While I respect the knowledge and judgment of the great Committee on Banking and Currency which handled the bill just voted out of the Rules Committee, I am not in accord with certain of its provisions which involve expendi-

tures totally out of line with our ability to meet their cost.

We are all familiar with the fact that the administration proposal, tailored to fit the current budget, would involve an expenditure of $2,100 million over an exacted 4-year period.

The bill just voted out of the Rules Committee would substantially commit the American taxpayers to more than $5½ billion over a 3-year period.

On the other hand, there is a specific provision in this proposed legislation apt to be overlooked by all of us which I feel important enough to discuss at this time.

I direct my remarks to those phases of it which deal with an area that is in essence deceitful because it does not directly reflect itself as it honestly should upon our national debt nor the effect it will have upon the taxpayer's pocketbook.

It encourages extravagant waste and expenditures which certainly are hidden from view of the average citizen.

I refer to sections on military housing and to the general program in this vitally important area of housing. In doing so I am mindful that both the House Banking Committee and that Committee in the other body, and the Armed Services Committee have concerned themselves with this legislation and I know, in good conscience, worked their will upon it.

The program of which I complain is known as Capehart housing.

Technically, under this program the military determines what housing is required for the several establishments or bases across the Nation, and certifies the existence of a continuing need for this housing, designed under the control of the Department of Defense. The plans and specifications, when completed, are distributed to construction firms generally for bidding.

At this point, it is my belief that common sense is abandoned. Instead of treating the contract as a regular military construction contract, subterfuge is employed, whether by design or otherwise, the overwhelming effect of this scheme upon our national debt and the waste that follows the departure from usual military construction procedures.

At any rate, under the Capehart housing program the successful bidder at this stage forms a private corporation or corporations and is compelled to obtain from private sources the financing required to erect the housing certified as necessary for our national defense. The mortgage or security transaction is then entered into by the successful bidder and the ultimate lender, it being provided that the repayment of the loan shall be insured by the Commisisoner of the Federal Housing Administration, ignoring the United States of America as the real debtor in the transaction.

These mortgages are legally permitted to bear an apparent interest rate as high as 4½ percent, which under the discount practices prevailing in the mortgage market today actually in most instances becomes a real or true interest rate in excess of 5 percent. Utilizing these funds, secured by the successful bidder and loaned to the private corporation with the loan insured by the Federal Housing Administration, the construction of the project is undertaken and completed and the housing is made available for the military personnel situated at the installation.

Now let me point out at this stage that the repayment of these funds advanced for the construction of this military housing is unqualified and absolutely guaranteed by the U.S. Government; notwithstanding this and notwithstanding that there exists no way by which the ultimate repayment of these funds could be escaped by the U.S. Treasury, the obligation is never treated as a debt of the United States nor reflected in our national debt.

This I conceive to be, in essence, deceitful, yet the deceitfulness of this conduct, in my opinion, is not the greatest evil that attends a program of this character. That evil which I cannot accept without protest is this:

On an obligation unqualifiedly and absolutely the burden of the United States and its taxpayers, we find ourselves paying a fixed interest rate as great as 4½ percent which, as I have indicated, becomes as much as 5½ percent when consideration is given to the discount which must be suffered in order to sell the loan.

And I contend that these exorbitant charges need not be paid by this Government today to procure needed financing. If our credit status has become so impaired that I am wrong in this assertion, we are indeed embarked on a sea of financial ruin.

This, then, the specter of the United States paying as great as 5½ percent on a truly direct obligation, I submit, is the first evil of this process of obtaining military housing. Yet it is not, perhaps, the greatest extravagance that attends this method of procuring housing.

It has been suggested to me—and I think authoritatively—that those persons who bid for the privilege of building the housing under this program—faced with the risk of an ever-changing mortgage market and the demand that they supply their own funds for construction—are bidding at price levels so unreasonably high as to be ludicrous.

My attention has been drawn to a single project constructed under the Capehart program involving the creation of 1,000 units of military housing where the successful bidder informally stated that had the negotiations for and the award of the contract been handled as is the great bulk of our military construction through the Corps of Engineers and paid for by a direct military appropriation, his bid may well have been as much as $2,000 less per unit than was the bid accepted under the Capehart program.

Already 109,437 units of Capehart housing have been authorized. This includes 23,067 completed; 49,646 now under construction; 5,481 upon which bids have been accepted, and 8,929 currently being advertised for bids.

In addition, we find a provision for an additional 22,405 units in a bill pending in the other body that will bring the amassed figure to 131,842 units.

If this figure, and I assure you that it is accurate, is to be taken as the yardstick by which to measure the waste suggested to me as typical of all such projects, we are authorizing the continuance of a program and placing our stamp of approval on extravagant spending approaching a half billion dollars.

This is an extravagance we cannot afford. It is a waste we have no right to thrust upon the taxpayers of the United States, who through the appropriations for quarters allowance for military personnel, ultimately pay the bill.

Thus it would appear to be a financial manipulation shrouded with deceit, for certainly it conceals the true size of our national debt. The American people, and particularly those interested in the future financial stability of this Nation, are entitled to the facts in this regard.

It is suggested by many that Congress spends too much time investigating and not enough time legislating in the direction of its findings. Yet is it not true that before we approve a continuance of a program of this character, that we should be furnished with more precise, detailed, and carefully obtained evidence touching upon whether this is the only solution to the specific and positive needs for military housing.

I cannot accept as justification for this situation any statement that bidding is costing us little, because we are simply recouping the allowance granted military personnel for quarters and that we are using such allowances to pay these debts, when the sources of all of these funds, no matter how they be characterized, is the pocketbook of the taxpayer. I believe we owe those who are footing these bills, under great burden in most instances, a greater fidelity than could be found to exist in a circumstance where we blindly, by a "yes" vote, approve that which is, in my restricted ability to examine into the matter, an inconceivably wasteful program.

With this thought in mind, I urge that a comprehensive study be made of it with a view toward more conservative programing of housing required and the creation of that housing in an economically sound and honest manner.

We cannot guarantee the American people that great portions of this construction will not at some time in the future be a massive white elephant upon the hands of the taxpayers, but we can at least find a means, I am sure, by which the investment can be kept to an absolute minimum. Instead, under the FHA loan section of the bill we will be considering, there will be a provision to increase the loan limit up to $2,900 per unit and there further will be a proposal to increase the maturity limit of the loans from 25 to 30 years.

It is not at all unreasonable to assume that these increases will be reflected in greater burdens upon the Federal Government and will substantially increase the extravagance within the program itself.

If, after a study of the present program and the means by which it might be treated as a regular military construction contract, Congress in all its wisdom, decides that this system cannot

be improved to eliminate the excessive cost factors I have pointed out here, then we should at least appraise the American people of the mortgage obligation of the Federal Government in this program and let it be known that this obligation is as much a part of our national debt as any other single dollar in it.

It is only fair and proper that we do this.

Committee Is Alert Watchdog

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. BOGGS. Mr. Speaker, my good friend and able colleague from New Orleans continues to distinguish himself in the Congress as chairman of the Armed Services Subcommittee on Special Investigations.

During these days when the entire country is so economy conscious in the operation of our Government it is heartening to note the disclosures of this subcommittee which have resulted in the savings of millions of dollars to our taxpayers.

We here in the Congress are well aware of the outstanding service Mr. HÉBERT is rendering, and I am pleased to vote that recognition is also being given him by the press at home. It gives me great pleasure to include an editorial from the New Orleans States and New Orleans Item lauding Representative HÉBERT and the work of his subcommittee:

COMMITTEE IS ALERT WATCHDOG

Additional success by Representative F. EDWARD HÉBERT's House Armed Services Subcommittee should occasion grins of satisfaction among taxpayers in general.

The panel, whose function is to serve as a watchdog over defense spending, disclosed it is investigating overpricing amounting to $4 million by Lockheed Aircraft Co. on two Air Force contracts.

According to the Congressman, the firm negotiated contracts totaling $84 million in 1954 to build 80 C–130A transport planes.

A $36.5 million estimate on the cost of parts made by subcontractors, HÉBERT said, was $2,844,000 more than the subcontractors were asking.

Neither was a subsequent reduction of $1,266,600 by the subcontractors revealed during negotiations between Lockheed and the Government, the Congressman added.

It was reported that Lockheed is currently discussing a revision of the contract.

Previous successes by Representative HÉBERT's subcommittee have constituted one of the bright spots on the Washington scene.

It was only last January that work by the probers was instrumental in obtaining an agreement by General Motors Corp. to refund another $4,908,000 on a Government jet-plane contract. That was in addition to $5 million repaid by the firm in 1956.

HÉBERT's panel had established overpayment to GM amounting to some $17 million on a $375 million contract for F–84F jet fighters in 1952.

Not only has the subcommittee been effective in throwing light on instances in which the Government came out on the short end of a deal, but it has also consistently prodded the Justice Department toward obtaining settlements in such cases.

Representative HÉBERT's subcommittee has been an alert watchdog.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Tribute to John Anthony Burns, Delegate From Hawaii

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a superb story that appeared in the May issue of the Lion magazine about Hawaii's distinguished Delegate, JOHN BURNS. I hope that each Member of the Congress will read this enlightening article about a great American.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LION FROM HAWAII
(By Larston D. Farrar)

When the Congress of the United States voted, on March 12, to admit the Territory of Hawaii as a State, and President Eisenhower signed the legislation a few days later, official Washington was practically in unanimous agreement on two things:

First, that much of the credit for Hawaiian statehood belongs to JOHN ANTHONY BURNS, the wiry, white-haired, 50-year-old Delegate from Hawaii.

Second, that Delegate BURNS will become one of the first United States Senators from the new State of Hawaii.

JOHN BURNS is a slimly built, medium-sized man with piercing blue eyes that crinkle at the corners and the strong hands and good shoulders of a detective (an occupation he followed for many years). "They say that he is the Delegate from Hawaii," Representative ROBERT W. LEVERING, of Ohio, commented recently. "They ought to call him 'JOHN BURNS for Hawaii.' That fellow has buttonholed everybody on Capitol Hill who will speak to him, and everybody speaks to JOHN BURNS."

Delegate BURNS has had another interest for many, many years—the cause of Lionism. Since March 1941, when he helped to form the Koolaupoko Lions Club in Hawaii, he has had a perfect attendance record. He served as president of the club and has been a district governor, traveling thousands of miles with the message of goodwill to Lions Clubs and other groups. He is now an international counselor.

Perhaps the interest of Lions in underprivileged children is what has drawn him to be such an apostle for Lionism. His fellow-members who have heard him speak—and others who do not know him—may be surprised to learn of his own bitter childhood and young manhood. It is possible that he never has addressed a Lions club in which any member ever held more different jobs, in getting to a place of prominence, than John A. Burns.

Before he was elected as Delegate to Congress from Hawaii as a Democrat on November 6, 1956, breaking the hold the Republicans had held on this post for 24 years, JOHN BURNS had been a messenger boy, a soda jerk, a warehouse worker for the Hawaiian Pineapple Co., a wheat harvester in Kansas, a freight crew worker, a soldier, a newspaperman, a ranch worker in California, a fruit grower, a packing house foreman, a policeman, a plain-clothes detective, liquor store operator, real estate man, civil defense administrator, and a business executive (owner of Burns & Co., Ltd.).

JOHN A. BURNS, born on March 30, 1909, at Fort Assinneboine, Mont., was taken by his parents to Hawaii in 1913. Several years after the Burns family moved to Honolulu, his father, who was in the Army, disappeared. The mother was left with the care and keeping of four children. Young JOHN, as resourceful as his Irish blood could make him, went to work as soon as he was old enough for his legs to carry him on errands.

By the time he was a sophomore in high school, he felt the urge to go to the U.S. mainland. He took a job on a freighter bound for the U.S. west coast, and then beat his way to Fort Leavenworth, Kans., where he had an uncle in the Army. That was when he worked in the wheat fields and attended high school. He joined the Army for 1 year, but wasn't interested in making a career of it, and went back to Honolulu in 1929.

Although he was 20 years old, he attended St. Louis High School in Honolulu, being graduated in 1930. As part-time work he helped train athletes at Fort Shafter. He went to work at the Star-Bulletin at night and during the day attended the University of Honolulu.

In June 1931 he married Beatrice Majors Van Vleet, and had to take a full-time job as a pineapple factory worker. Several years after their marriage, when Mrs. Burns was carrying their third child (the infant died at birth), she was stricken with polio, which, in those days, was practically a death sentence. She was paralyzed from her neck down. With the help of a Japanese masseur, Professor Okazaki, who took a personal interest in the courageous young mother, she was restored to partial health by the then controversial massage treatments. She has been in a wheelchair ever since, but she gave birth to her third child, James Seishero, the latter name the Japanese professor's own first name, 6 years later.

After placing first in a Honolulu Police Department examination in 1934, John Burns progressed through the ranks from patrolman to captain by 1941.

World War II was a time of great challenge for Hawaii itself, and for Mr. Burns. He was named lieutenant in command of the espionage bureau of the Honolulu Police Department in the days following Pearl Harbor, when, it was feared, the tens of thousands of Japanese on Hawaii might prove to be disloyal.

"I am happy to say today that not a single case of disloyalty to the U.S. cause ever was uncovered by either the Federal Bureau of Investigation or the various law-enforcement bodies on Oahu," he says today. "The Japanese-Americans were Americans in deed and in thought. It is a great tribute to American ideas that, when the chips were down, every single person stuck with us in Hawaii. I had always believed that when freedom was an issue, the people would never falter. The outbreak of the war, and subsequent impressive record in Army service of many, many thousands of Hawaiian Japanese, proved to all of us that the Japanese had learned well the lessons of democracy and were grateful for the blessings of free government."

Delegate Burns had said publicly, in the middle of November 1941, that in case of war the people of Hawaii would remain loyal. He is proud that his prophecy came true.

In September 19, 1945 he resigned from the police department and became owner and operator of a beverage store. In this period, he became active in the Democratic Party, which, at the time, was at such a low ebb in the islands that no more than two or three persons would attend any meeting of a Democratic group. There was a county committee meeting—representing 73 precincts—which he remembers well, because there were only six persons present. His brother, Edward J. Burns, at the time was vice chairman of the Republican Party in Honolulu. Edward arranged a meeting between John and the then "big wheel" of the Republicans in Hawaii.

"You'll never see the day when there will be a Democratic Party worth mentioning on these islands," the Republican leader said.

"We'll see," was all JOHN A. BURNS said, and went out to get busy.

By May 1956 he had been named second vice president of the Democratic County Committee. He ran for the nomination for the board of supervisors and failed. In 1948, he was named chairman of the Oahu County committee. In that year, he ran for Delegate for the first time. He was snowed under by the Republican, Joseph Farrington, who polled three out of every four votes cast.

In 1954 Delegate Farrington died and his widow ran. She won by 890 votes, out of 150,000 votes cast. The die was cast that BURNS would run in 1956, and he did, winning by some 15,000 votes. He was reelected in 1958 by about the same majority.

A master key member of the Lions, having brought in 12 new members during his years of service, JOHN BURNS credits the Lions for a lot of his political success.

"The Lions club gave me a new vision of public service," he says simply today. "If I had not become a Lion, and learned the meaning of service to my fellow man, I doubt that I would be in Congress today, and able to be of as great service to Hawaii as I am striving to be. Being a Lion has meant much to me in my life and in my thinking.

"I started a contact group with the Japanese because of Lions influence. I learned to make speeches because of this same influence. We were able, through speeches and contacts, to help our Japanese citizens understand the situation and do their share in the war effort."

Congressional colleagues who have been working side by side with Delegate BURNS have been particularly high in their praise of him and his work for the islands.

"His list of solid gains for Hawaii demonstrated by the number and importance of his bills passed by Congress, is most remarkable for a man who is denied a vote in Congress," Representative LEO O'BRIEN of New York, said recently. "In fact, his record would be remarkable for a voting Member of the House, supported by two Senators. JOHN BURNS has won countless votes in both Houses. He has served his people well. The Delegate, in my considered opinion, ad-

vanced the cause of statehood by at least a decade."

Senator LYNDON JOHNSON of Texas, Democratic majority leader in the Senate, had this to say about Hawaii's Delegate:

"It has been many years since any Territory, or State for that matter, has had a Representative as persuasive as JOHN A. BURNS. He has displayed vision and wisdom and a willingness to meet the other fellow more than halfway—and there are fewer qualities in this world of greater value. Nothing aided the Hawaiian cause more than the presence in Washington of an able Delegate who has earned the respect and affection of his colleagues."

House Majority Leader JOHN W. MCCORMACK, of Massachusetts, asserted:

"JOHN A. BURNS' ability as well as his devotion to Hawaii and its people is outstanding. He is highly respected by his colleagues and enjoys the confidence, the respect, and the friendship of the Democratic leadership."

John A. Burns, Jr., his eldest son, an attaché in his father's office in Washington, is a graduate of Notre Dame and a noted scholar, having won several awards for his scholastic achievements. His daughter, Mary Beth Burns, a graduate of Mount Saint Scholastica College in Kansas, is now working for Hawaiian Airlines, while James Seishiro Burns, the youngest son, is a student at St. Benedict's College in Kansas. His wife, despite confinement to her wheelchair, is otherwise in radiant good health and spirits.

JOHN BURNS, a Lion from and for Hawaii, has seen his dreams come true.

Our Inheritance: An Indestructible Union of Indestructible States

EXTENSION OF REMARKS
OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an extremely fine address delivered by the senior Senator from North Carolina [Mr. ERVIN], on the occasion of the dedication of the Visitor Center and Headquarters for the Richmond National Battlefield Park at Richmond, Va., on May 16, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR INHERITANCE: AN INDESTRUCTIBLE UNION OF INDESTRUCTIBLE STATES

(Remarks of Senator SAM J. ERVIN, JR., of North Carolina, at the dedication of the visitor center and headquarters for the Richmond National Battlefield Park at Richmond, Va., May 16, 1959)

Ladies and gentlemen, we meet today on the site of the famous Chimborazo Confederate Hospital in the erstwhile capital of the Confederacy to dedicate the generous gift of the people of Richmond to the United States for use as a visitor center and headquarters for the Richmond national battlefield park.

I am grateful for the invitation to participate in this dedication because of the opportunity it offers me to commend the National Park Service, and because of the part my own State, North Carolina, played in the great conflict which Collier Cobb, one of my beloved teachers at Chapel Hill, was accustomed to call the Uncivil War.

The National Park Service merits the highest praise for its unceasing devotion to its patriotic task of preserving and making available to all the people the Nation's historic shrines. As one who has been privileged during recent months to visit the battlefields at Gettysburg, Antietam, Fredericksburg, Chancellorsville, the Wilderness, and Spotsylvania, I bear witness that the National Park Service emphasizes "with a touch impartially tender" that the unconquerable spirit of those who wore the blue and the undying valor of those who wore the gray constitute the common heritage of all Americans, regardless of whether they dwell above or below the Mason and Dixon line.

I trust you will pardon at this point an allusion rather personal in nature. I cannot come to the Old Dominion without experiencing emotions similar to those which prompted Moses to remove his sandals from his feet because he stood on holy ground. Kindred of mine fought for the Confederacy in virtually every engagement on Virginia soil from Bethel to Appomattox. One of my great-uncles was killed in action at Seven Pines. Another fell in combat on the Darbytown Road.

In the words of Britain's heroic poet, Rupert Brooke:

"These laid the world away; poured out the red
Sweet wine of youth; gave up the years to be
Of work and joy, and that unhoped serene,
That men call age; and those who would have been,
Their sons, they gave, their immortality."

Since their dust is commingled forever with Virginia's good earth, Virginia to me is hallowed ground.

These dedicatory services call to mind words quoted by Father Abraham J. Ryan, the poet laureate of the Confederacy, in the headnote to his poem entitled "A Land Without Ruins."

"A land without ruins is a land without memories—a land without memories is a land without history. Crowns of roses fade—crows of thorns endure."

The Richmond National Battlefield Park, which was established in 1944 and now contains 691 acres, is located in a land storied in memories and history. This is true because it is located in a land which has suffered ruins and worn a crown of thorns.

As the capital of the Confederacy, Richmond was the chief military prize of a fratricidal war, which lasted 4 long years and sent about 530,000 Americans to untimely graves. Of those so dying, thousands were killed or mortally wounded in battles and skirmishes fought in areas lying within or near the Richmond National Battlefield Park.

Let me enumerate a few of the major engagements occurring within these areas:

1. The Battle of Seven Pines, which was fought at Fair Oaks, 6 miles east of Richmond, on May 31 and June 1, 1862, when the retreating Confederate Army under Gen. Joseph E. Johnston turned and fought to a standstill the Union forces commanded by Gen. George B. McClellan.

2. The Seven Days' Battle, which was fought at Mechanicsville, Gaines' Mill, Savage Station, Fraziers' Farm, White Oak Swamp, and Malvern Hill in the neighborhood of Richmond from June 26 to July 2, 1862, when the Confederate forces under Gen. Robert E. Lee made a series of counterattacks upon General McClellan's army and removed its threat to Richmond.

3. The Battle of Yellow Tavern, which was fought at the Yellow Tavern, 6 miles north of Richmond on May 11, 1864, when the gallant Confederate cavalier, Gen. J. E. B. Stuart, overtook Gen. Philip H. Sheridan, and sacrificed his own life in a desperate but successful effort to save Richmond from capture by General Sheridan's forces.

4. The Battle of Cold Harbor, which was fought at Cold Harbor, 10 miles northeast of Richmond, from May 31 to June 12, 1864, when Gen. U. S. Grant continued the campaign of attrition begun by him at the Wilderness and Spotsylvania by throwing massive Union forces against the Confederates under General Lee, who held a strongly entrenched line.

5. The Petersburg Campaign, which began about June 15, 1864, when General Grant laid siege to Richmond and Petersburg, and continued until April 2, 1865, when General Lee abandoned Richmond and Petersburg and started the retreat, which ended in his surrender at Appomattox on April 9, 1865.

We are prompted to attend this ceremony by two motives. One, which is external and objective, is our desire to witness the dedication of a visitor center and headquarters marking the beginning of an expanded service by the National Park Service to those who visit the Richmond National Battlefield Park. The other, which is internal and subjective, is our wish to do reverence to those brave men of the North and those brave men of the South, who fought near Richmond for causes they believed right and whose silent tents are now spread "on Fame's eternal camping ground."

It is well for us to call to mind the valor and sacrifice of those who wore the blue and those who wore the gray. This is so because:

"If their memories part
From our land and heart
'Twould be a wrong to them,
And a shame for us."

The men of the North fought to preserve the Union, and the men of the South fought to preserve the States. As a consequence, all Americans have inherited a country whose Constitution contemplates "an indestructible Union composed of indestructible States."

If we are to do full reverence to those who wore the blue and those who wore the gray, we must do more than call to remembrance their valor and their sacrifices. We must dedicate ourselves to the preservation of the America they bequeathed to us.

This America is threatened by foes within and foes without.

The foes without are the Communist nations which strive to erase all human dignity and all human freedom from earth's surface.

A Confederate officer from North Carolina was mortally wounded during the advance on the second day at Gettysburg. After being knocked to the ground by the impact of the bullet which wounded him, he took from his pocket a pencil and a piece of paper, and wrote these words with his dying hand: "Tell my father I fell with my face to the enemy."

America will be able to defend herself against the Communists and all other external foes as long as her sons are ready to die with their faces to her enemies.

Sometimes it seems that the foes within pose a more serious threat to America than the foes without. It is certainly easier to devise a defense against external foes.

The foes within are those who seek to destroy our "indestructible Union of indestructible States" by reducing the States to meaningless zeros on the Nation's map and concentrating all governmental powers in the Federal Government. If they should succeed in their objective, their success would sound the death knell of liberty in America. This is true because "the States are the only breakwater against the ever-pounding surf which threatens to submerge the individual and destroy the only kind of society in which personality can survive."

America's protection against the foes within is to be found in the answer to this prayer:

"God give us men. A time like this demands
Strong minds, great hearts, true faith, and ready hands;
Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honor—men who will not lie.
Men who can stand before a demagog
And damn his treacherous flatteries without winking;
Tall men, sun-crowned, who live above the fog
In public duty and in private thinking."

Address by Hon. Alexander Wiley, of Wisconsin, Before the Norwegian Society of Washington

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. WILEY. Mr. President, several years ago, when I happened to be chairman of the Foreign Relations Committee, I was privileged to fly to Dublin. There I became acquainted with Prime Minister Costello. In the course of our conversation, he asked, "Where did your forebears come from?"

"Oh," I said, "they were Vikings; they came from Norway."

He said, "Senator, you are 1,200 years late."

I replied, "What do you mean?"

He said, "The Vikings settled Dublin in 750."

I said, "Put it here, brother."

Mr. President, the other evening it was my privilege to address the Norwegian Society in this city, and I related that incident. I ask unanimous consent that the address which I delivered on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WILEY HAILS NORWAY'S CONTRIBUTION TO WORLD PEACE—ENDORSES WEST'S 32-POINT PEACE PACKAGE; URGES PATIENT VIGILANCE IN DEALING WITH SOVIET OBSTRUCTIONIST TACTICS AT GENEVA CONFERENCE

(Address by Senator WILEY before the Norwegian Society of Washington, D.C., at the Broadmoor Hotel, May 16, 1959)

I am delighted to be with you tonight.

Particularly, I welcome the opportunity to participate in this celebration honoring Norway's Independence Day—the Syttende Mai.

Over the years, our own beloved United States has been enriched by the migrations of nearly 900,000 Norwegian sons and daughters to our shores.

The transfusion into the lifeblood of our country by these stanch loyal citizens brings all the virile spirit of the traditions of Norway.

In communities throughout the country, our American culture has been enhanced, our spirit of enterprise strengthened, and loyalties and devotion to duty have been enriched. Indeed, the whole fabric of our Nation has been greatly bolstered by the infusion of the spirit, ideas, determination, and fortitude of Americans of Norwegian heritage.

As does our own "Star Spangled Banner," the stirring national anthem of Norway, also, embodies the spirit, loyalty, and deep devotion imbued in her offspring by this rugged land. To illustrate, I quote the last verse of the anthem:

"Yes, we love with fond devotion
This, the land that looms
Rugged, storm-scarred
O'er the ocean
With her thousand homes.

"And as warrior sires have made her
Wealth and fame increase
At the call we too will aid her
Armed to guard, to guard her peace."

Fortunately, this strong individual dedication—borne in mind and flesh and spirit—has blessed us—as well as Norway—with outstanding leaders in political, economic, military and almost every other field of endeavor.

As we pay tribute to Norway's Independence Day, let us look to this land across the sea, to which—in these brief moments—we pay homage.

UNITED STATES-NORWAY FRIENDSHIP

Throughout history, Norway and the United States have maintained warm bonds of respect and friendship. Although both countries have a proud history of independence, the exigencies of today's world have fostered another spirit: that of interdependence, particularly among the nations of the free world.

Today, among the few nations with a common border with the Soviet Union—an ever-present threat to security—Norway has stood firmly and resolutely in the shadow of these threats to her life.

To us, who are thousands of miles away, this sometimes may not seem so significant. In reality, however, the act has required stanch courage with a willingness to sacrifice to live up to the high ideals so indelibly imprinted in the history of Norway.

Too, displaying a proud spirit, Norway has joined the North Atlantic Treaty Alliance to cooperate with other freedom-loving peoples for the preservation of the liberty of peoples and nations against the encroachment of ever-expanding communism.

The United States and the free world can indeed be proud that we have as our ally this land. Norway, too, has admirably supported the Western efforts to create and carry out an effective program for lessening the dangers to freedom posed by communism; for easing East-West tensions; for standing up to the Kremlin as it strives by threats, intimidation, blackmail, deception to extend its influence over more people and more lands.

SPIRIT OF UNITY

At the East-West conference now in progress in Geneva, we need this kind of stanch support, not only morally, but economically, militarily and strategically.

During the early meetings, unfortunately, the Soviets have displayed the irresponsible, self-serving — not peace-serving — tactics which have characterized previous conferences.

Throughout the discussions, we can expect the Soviet representatives to muddy the waters periodically.

If we are to obtain any real results, however, it may be necessary for the West to patiently tolerate these obstructionist tactics—while at the same time remaining alert to assure that these do not serve as a facade behind which the Soviets gain concessions.

For the most part, these actually serve as ruses by which the Soviets hope eventually—through overtaxing the patience of the free world—to obtain their objectives of more and more concessions from the Western nations.

We realize, of course, that not only the United States and Norway, but all the countries in the Western alliance, as well as the other nations of the world, have a stake in the outcome of the Geneva Conference.

Among other things, it may well prove how effective we are—or are not—in stopping Soviet aggression through agreement-breaking and trumped-up crises.

MAJOR ISSUES AT GENEVA

Briefly, let's look at the issues of the conference.

The principles and goals of the Western Allies include:

Resolving the Berlin crisis, while maintaining respect for the rights of access by the West to Berlin; as well as protecting the free world's interests in West Berlin;

Easing East-West tensions;

Making progress toward German reunification and an eventual peace treaty with Germany to lessen the possibility of future trouble;

Establishment of a foundation upon which to promote greater security—and lessen the possibility of an outbreak of war on the European continent.

WEST'S PEACE PACKAGE

To attain these goals, the West has proposed a 4-stage, 32-point plan aimed at establishing a series of progressive steps to bring about German reunification and promotion of security on the European continent.

The West's peace package, I believe, is a constructive, comprehensive, realistic plan which, if adopted, would lay the foundation for solving the problems relating to Germany, as well as reduce East-West tensions and promote security on the continent of Europe.

As we know, the West's 32-step plan generally aims at:

1. Uniting Berlin by free elections;

2. Establishment of a 35-member German committee made up of 25 representatives from the Federal Republic of Germany and 10 from the so-called German Democratic Republic, charged with the responsibility of working out problems between these two areas of that country, subject to certain four-power supervision;

3. Reduction of armed forces and armaments, safeguarded by an inspection and control system.

4. Establishment of procedures for ultimate free elections to allow the German people to adopt a government by self-determination;

5. Provision for writing a final peace treaty with an all-German Government; and

6. Establishment of certain security safeguards aimed at eliminating threats to security in the future on the European Continent.

The West's peace package, I believe, is a good one.

CONSTRASTING EAST-WEST POSITIONS

Now, let's review the contrasting positions of the West and the Soviet Union, upon the major issues of the conference.

As regards the peace treaty:

The West feels that a peace treaty can be signed only after the reunification of Germany. By contrast, the Soviets insist that it be signed now, with the two German states, and that reunification be left up to the two Germanys. In this, the Soviet position definitely violates the postwar agreements which it signed—but chooses now to break.

To agree to these unjustified demands would be to violate our own postwar commitments. If agreed to, it might well set the stage by which the German people—imbued with a deep nationalistic spirit—would one day seek reunification—by force, if necessary.

PROMOTING EUROPEAN SECURITY

Secondly, increasing security on the European continent.

The West feels that any security plan should be linked to progress on reunification of Germany and that such plans should contain systems of inspection and control—to prevent the Soviets from (a) again violating the agreements; and (b) carrying on subversive or other activities that would threaten the areas for which we are now seeking safeguarded security.

By contrast, the Soviets say that no link eixsts between unification of Germany and European security. In addition, they seek the establishment of a zone in central Europe where arms and troops would be limited or withdrawn entirely.

To accept such a proposal would, I believe, be extremely dangerous. Again and again, the Soviets have demonstrated they have no intention of adhering to agreements or treaties—unless it serves the cause of communism.

A so-called demilitarized zone—a power vacuum—would be an open invitation to the Soviets to embark—as they have in the case of East Germany—at first clandestinely, and then openly—on a program of clamping an iron grip by the Kremlin on the area.

PROTECTING WEST BERLIN

Third, as for protection of West Berlin, the allies recognize that to maintain the integrity and security of West Berlin there can be no weakening of our military position in Europe and West Germany—until it is assured that the interest and welfare of the people would be fully protected.

To me, this is only realism.

The Soviets' position, by contrast, aims toward exposing West Berlin for a possible Communist takeover gaining recognition of East Germany—and thus, in effect, a recognition of an extended sphere of Soviet influence in Eastern Europe.

GERMANY: PART OF WORLD PICTURE

Although the current topics of East-West meetings focus around the problems of Germany and European security, the negotiations are, in reality, only part of the larger global struggle.

The worldwide Communist conspiracy reaches greedily toward all lands and all people. Witness not only Europe, but also Tibet and Iraq.

Tomorrow, the Communist plotting may ripen in another country.

The free nations of the world must be constantly and vigilantly alert to the ever-present dangers of this global encircling network of intermingled military power, ideological operations and subversive activities, coupled with economic pressures and threats.

As we face the future, the free world can be proud that it counts among its members Norway—to whose independence day we pay homage.

The spirit which marked the unending fight of her proud people against nazism in World War II, now strengthens, by deeds of the past and dedication to the future—the free world alliance against today's threat of tyrannical communism.

CONCLUSION

Friends, I have welcomed the opportunity to join you in this celebration and tribute to Norway's Independence Day.

Thank you.

Responsibilities in Government

EXTENSION OF REMARKS

OF

HON. HOWARD W. CANNON

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. CANNON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from Utah [Mr. Moss] before the Student Bar Association of the George Washington University Law School, at the Law Day banquet, May 1, 1959. Senator Moss presented a thought-provoking challenge to the law students on their responsibilities in government. His encouragement to take the plunge into politics for the betterment of mankind through a government of law deserves the widest possible dissemination among the legal profession and to the Nation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH OF SENATOR FRANK E. MOSS, DEMOCRAT OF UTAH, BEFORE THE STUDENT BAR ASSOCIATION OF THE GEORGE WASHINGTON UNIVERSITY LAW SCHOOL, LAW DAY BANQUET, MAY 1, 1959

Mr. Toastmaster, and ladies and gentlemen, thank you for asking me to speak here tonight. It is always a pleasure for a student to return to his alma mater, and I have the further pleasant duty to talk to you on this occasion on a very challenging subject. My own student days at George Washington University Law School are still fresh in my memory, and I know how many late and lengthy discussions are centered around what you are learning here, and what you can do with it today, as well as what you will do with it later on when you become a member of one of the world's most distinguished professions.

We who are alumni and students of George Washington University, and particularly of the law school, have a right, I believe, to be proud of the fact that our school has become not only a training ground for the professions, but for political and public service. I am confident that no other school in the Nation has sent as many former students and graduates to the U.S. House of Representatives and to the U.S. Senate as has George Washington University. At the risk of treading on the toes of any Virginians who are here, I might suggest that GW could properly be called the mother of Congressmen.

In England, Law Day, the subject of our discussion tonight, is a term used to designate the day in court on which a mortgage debtor is called to account for his indebtedness. In a sense Law Day, United States of America, is somewhat analogous. On this day, solemnly dedicated by Presidential proclamation, American lawyers are called to the bar of national and world opinion to account for the opportunities for service granted them as members of an ancient and truly honorable, if not always honored, profession.

This is, therefore, the ideal occasion to speak of the law student's responsibilities in a Government under laws such as we have enjoyed for more than 180 years.

The student of law in our day must take on responsibilities possibly graver than any ever borne heretofore by members of the profession. He must hold himself twice accountable for his acts to a skeptical, distrustful and often unfriendly public. He must answer as an individual and as a member of a profession. For his character and his conduct as an individual lawyer will determine the reputation and standing of his profession.

In the beginning of a career, the absorption of the student or the young lawyer in his daily professional tasks is not easily penetrated by a sense of responsibility for things less immediate than earning a livelihood.

I would like to repeat, however, the warning sounded by one of the very eminent members of our profession, Chief Justice Arthur T. Vanderbilt:

"There is nothing more pathetic than the successful professional man who wants to serve his community but who has never schooled himself in the world of political realities. A day of public service and of real interest in the world of politics at the age of 25, is worth infinitely more to the community than a month of any old man's leisure."

Upon some of you this warning will never register. For some of you will never be more than technicians. A great many it is true will become extremely skilled technicians and be the craftsmen of the law. As a legal craftsman, you will develop a sure fast skill at drawing a note and deed of trust which squeezes the turnip dry, a skill in filing a divorce suit accompanied by injunctions and other remedies which right from the start ties the opposite spouse hand and foot, a skill in taking a release in a personal injury settlement from which there can be no escape, and at drawing and executing a will no one can break.

But some of you, I hope, will take to heart Judge Vanderbilt's admonition, and while you are still young, go out into the world of practical politics and make yourself of service to your community, your State, and your Nation. You have the training—you have the tools to do the job.

I hope you will do more than join community organizations and participate in get-out-the-vote drives. I hope you will actually go into the organization of the political party of your choice, and become an active member of it. Join at the precinct level, and work up in party councils to a position of trust and responsibility. And then when you are seasoned, and have won the confidence of your community or your area, run for public office. One way a lawyer can most fully carry out his responsibilities in a government under law is to go where the laws are made, and use his background and experience to enact those new laws made necessary by a changing world, and to improve the statutes already on the books.

There is no current compilation of the number of lawyers who are members of State legislatures throughout the country, but I am sure I am safe in saying that in most legislatures, the law is more widely represented than any other profession or calling.

In the National Congress, that is indisputably true. In this 86th Congress, 228 out

of 437 Members of the U.S. House of Representatives are members of the legal profession. Seventy are Republicans and 158 are Democrats.

In the U.S. Senate, 61 of the 98 Members serving at the present time have law backgrounds. Eighteen are Republicans and 43 are Democrats. The chairmen of 13 of the 16 standing committees of the Senate have had legal training. Both Senators from 19 States were trained in the profession which you are now aspiring to join.

Those of you who followed closely the debate on the floor of the Senate last week on the labor-reform bill, and the compromises which were effected and which prepared the way for passage of the embattled bill, know that many members of the bar were in the thick of the fight. Senator McCLELLAN is a lawyer, as are Senator ERVIN, the cosponsor of the bill, and Senator KUCHEL the leader of the group whose compromise proposal on the bill of rights finally cleared the way for passage of the bill itself. Senators MORSE, BRIDGES, JAVITS, DIRKSEN, DODD, COOPER, CASE, CLARK, and CHURCH—to name only a few—are some of the other lawyers whose names figured in debate or as the sponsor of amendments. Senator KENNEDY, the brilliant young man whose name the bill bears, and Senator GOLDWATER, who was its most vociferous critic, both somehow escaped special training in the law, so we cannot claim them in the legal fraternity. But the labor-reform bill as it was sent to the House last week has the handiwork of many lawyers in it.

The point I hope I have made is this. An attorney—or an embryo attorney has a greater responsibility than other citizens, because he is better equipped and trained to be of service to his country in the legislative field. Every citizen of this country is in politics—whether he likes it or not—because that is the way of a democracy. It is a government for and by the people. But, in my opinion, it is not enough for a law student, or for a member of the bar, simply to inform himself on the issues and vote. That is like stopping at the water's edge. I sincerely hope that many of you will take the plunge into politics, and will be of service to your community, your county, your State, and your Nation.

Some of you, and I hope there are many, will remember down through the years ahead of you that the law is a profession, an exacting profession; that a profession is a group of men pursuing a learned art as a common calling in the spirit of a public service—no less a public service because it may incidentally be a means of livelihood. Pursuit of the learned art in the spirit of public service is the primary purpose. Gaining a livelihood is incidental, whereas in a business or a trade it is the entire purpose.

Underlying the structure and fabric of our law is a Bill of Rights designed to protect the life of every citizen, his liberty and his property. At the time they framed this charter of liberties, the lawyers who in an earlier day set the first of the Revolution were mentally smarting from the personal abuses heaped upon them by King and government and the violation of personal and property rights that had been secured to freemen by the Magna Carta. Officers of the King had broken into shops and homes of friends and neighbors, searched and seized anything and everything at pleasure. Respected and honored citizens had not been free of arrest upon a hint or a sly suggestion of a petty official. Often they were imprisoned on suspicion with no opportunity to be heard and without a fair trial.

Out of their bitter memories they wrote into the Constitution basic and fundamental principles to restrain any excesses of government and check any arbitrary power that might invade the rights of personal liberty and private property.

Today the principles of freedom and fair play are being challenged and opposed around the world by totalitarian ideology that denies the existence of God and subjects the individual to arbitrary naked power of the state.

The danger of our present crisis cannot be overestimated. The very advances in science and technology that you and I and every citizen, not alone of this country, but of all the remaining free nations, rely upon to protect us may well contribute the factors to destroy freedom forever.

The advancements made in public education, the tremendous strides in mass communication—the radio, the television, the news services, the shattering of time barriers in transportation—all these have given more citizens a voice in making decisions.

The greatest threat to the rule of law in any of the nations of our free world is the danger that the people will become dissatisfied with the functioning of their system of justice and do irreparable injury to it without realizing that by so doing they are destroying the very foundation of the rule of law in their society.

It is our professional responsibility to keep the pulse of life beating strongly in the law. We cannot do this by treating our fundamental freedoms as abstract theoretical concepts of a legal system. The people of the free world must learn to believe those freedoms to be what we believe them to be, the practical dynamic concepts for living, unalienable in every human being.

In earlier days the status of law in other nations was not a vital concern to us. But we are living in an era where it is no longer possible to ignore the attitudes of other peoples. This state of society is the result of two factors. Under the impact of science and technology our world is shrinking. And old empires are dissolving into new nations, filled with aspiration not unlike our own.

The tremendous success of scientists and technicians has left a gap between our scientific discoveries and their beneficial and peaceful utilization within the framework of the institutions devised to insure freedom and rights of the individual. The bridging of this gap may well prove to be the legal framework of free societies in the making. Most certainly it will be impossible unless you understand your fellow lawyers of other nations.

If we reflect on the issues at stake in the cold war, if we analyze its deepest meaning, we come to the inevitable conclusion that among the most essential values at stake are legal ones: the relation between citizen and State, the liberty and liberties of individuals.

Now it seems to me it is with reference to this most important value—that is the relation between citizen and State—that the responsibility of the young lawyer is of greatest importance. Let me explain. The very cornerstone of this great experiment in democratic government is the theory that the average citizen himself is best qualified to govern. Thus, all citizens must be informed and acquainted with the workings of the government which they control. They must be free to consult with each other, to discuss, consider, debate and deliberate upon any ideas, and through such deliberation, to arrive at the ultimate truth. Indeed, it is this search for truth in the area of human relations that makes our form of government so noble and so satisfying.

We must not permit any man or group of men to impede or destroy the right of our citizens to grapple with any and all ideas that are presented, since we believe that through such consideration and discussion of ideas, doubt is resolved, the wheat is sifted from the chaff, the spurious and erroneous are rejected. Truth is the result.

Justice Holmes once said in a very famous dissent:

"But when men have realized that time has upset many fighting faiths, they may come to believe even more than they believe the very foundations of their own conduct that the ultimate good desired is better reached by free trade in ideas—that the best test of truth is the power of the thought to get itself accepted in the competition of the market, and that truth is the only ground upon which their wishes safely can be carried out. That, at any rate, is the theory of our Constitution."

You are all very well aware of the grave concern in this country over the threat of communism. At times this concern is irrational and hysterical. Capable men of good intentions have become so frightened by the specter of communism that they seem to forget that the cornerstone of our Government is the right to discuss ideas in the search for truth. They would build a wall around Communist thought and ideas. They would be unwilling to consider, discuss and debate its implications, whether they be good or bad, false or true. They would prohibit the rest of us from coming to grips with such ideas. In effect, they doubt the ability of our citizens to entertain such thoughts and ideas and to recognize and reject the false while gleaning what little truth there may be. In so doing, they seem to doubt the very validity of our form of government.

I submit that if we accept such a philosophy, we are rejecting the very thing which has made this country and its form of government great. If we have become afraid of ideas, afraid to face them, to discuss them, to accept the truth in them as readily as we reject the false, then we are on the road to despotism.

If we permit our Government to remove any subject from the area of thought, investigation, and discussion, we have then provided a tool by which men may be kept in ignorance, and ignorance is the tool by which our form of government may be destroyed and replaced by a despot or a dictator.

The framers of our Constitution recognized the problem and made provision for it in the first amendment. The Supreme Court on many occasions has asserted its allegiance to this doctrine and yet in these days of hysteria, responsible people, including lawyers of great skill and understanding, are criticizing the Supreme Court for its allegiance to this most basic concept of our Government. We as lawyers should be gravely concerned with this matter. We as lawyers with our background and training in the problems of government should be the first to realize the danger caused to our democracy by declaring certain thoughts and ideas off limits.

You as students of the law and leaders in your community have the responsibility for safeguarding the right most basic to our democracy—the right of our citizens to hear and to discuss; to debate and to choose; to accept or reject any and all ideas wherever their birthplace. This is the most basic right in the search for truth.

The search for truth and for what is good is man's most noble endeavor. Those men who conceived our democratic government recognized the inherent value of such an objective and believed that through free and unlimited examination and discussion of all ideas by all people, that such an objective becomes possible. It is this very philosophy which permits all of the people to participate in the search for the truth. It is through this participation of our people that we have

built a strong, healthy, and happy United States where men and women still enjoy their self respect and our great liberties.

We must not through fear, greed, hatred, or suspicion, tamper with the one great cherished and practical ideal upon which our democratic government is based.

Your ability, your background and your training have fitted you well for the responsibility of taking part in government. I urge you to lead in the democratic process—to devote your talents and energy to the betterment of mankind through a government of law. I entreat you to study well the great ideal of our government—the free expression and exchange of thought.

Your responsibility is a serious one. If you meet it with dispatch, honor and energy, men will continue to enjoy the freedoms which permit them to choose their own destiny.

Needed: Greater Maturity for Mankind

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. WILEY. Mr. President, today I was delighted and inspired to read a thoughtful editorial, published in the Oconto County Times-Herald, propounding the philosophical question—namely, whether man, while creating a world of ever-bigger, more complex things, is himself growing proportionately, so as to be able to adequately handle these new powers.

Today, the products of man's ingenuity—through technological, scientific, and other developments—are becoming bigger, more complex, more powerful. In the face of developments of such magnitude, there is a very real need for development—not of a mass-produced, mechanical individual—but, rather, of the kind of unique individualism—mature in thought, capable of mountaintop perspective, sensitive to human values, as well as physical power, and able to handle, to regulate, and to control the implements, the machinery, and the physical forces which now are subservient to man.

As the editorial stresses, "it took centuries of turmoil, war, and revolution to establish the rights of man—the rights of the individual." However, the editorial also points out that this whole era of freedom can be lost by sins of omission—that is, failure to recognize the need for human maturity and development to properly handle the power, the weapons, the scientific, and other devices that now are the servants of men.

Because I believe that the editorial reflects a deep philosophy which we, in our rush for mechanical progress, sometimes overlook, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Oconto County Times-Herald, May 14, 1959]

THE QUESTION

Just about everything in this country has been getting bigger.

This trend, the economists confidently tell us with hardly a dissenting voice, is not only sure to continue but to accelerate. They blueprint a future of ever-increasing incomes, ever-improving living standards, the mass enjoyment of luxuries which would have been beyond the imagination of man not long ago.

We are on the verge of explosive breakthroughs in physical sciences. The age-old mysteries of space are being fathomed, and soon will be mysteries no more. The miracles of nuclear physics are at hand. Longer, healthier, happier lives for all are promised. And we are not alone. All over the world, peoples and nations are swept along to varying degrees, in the same tide.

This is fine. Almost everyone wants more money, more of the things that money can buy, more of what we know by the word "progress."

Yet a nagging question arises—the biggest unanswered question that confronts the changing world. While just about everything is getting bigger, is the greatest resource of all getting smaller? That resource is the individual. Not just people in the mass, but individual people—each different, each unique, each a spirit as well as an appetite. Is the individual in very real danger of being dwarfed by the bigness around him, and of being reduced to a statistic?

It's easy enough to say that it can't happen here, even though we have all seen it happen in vast reaches of the earth. Easy enough, but untrue. This Nation was founded on certain concepts—the fullest freedom for all, an unflagging sense of the spiritual nature of man, a passionate regard for the worth of every individual human being. But these, like all other concepts and philosophies, will wither away to nothingness unless they are eternally prized beyond all else and faithfully protected. They must be supported in absolutely specific ways. They demand the highest degree of individual independence and responsibility. If, for instance, we give to Government the initiative and the power to regulate and dominate our lives in the name of security, the ultimate end will be the security of the penitentiary. Power once granted to government must always be balanced against a greater power in the hands of the people.

We pride ourselves on our material accomplishments. But pride can result in a deadly blindness. Other nations, whose concepts are utterly opposed to ours, are producing their own wonders. Communist Russia and Communist China are, so to speak, moving mountains. The whip and the chain, used with dedicated ruthlessness, can also get out the goods, while the soul of man dies.

It took centuries of turmoil, war, and revolution to establish the rights of man—the rights of the individual. They can be lost overnight by sins of omission no less than sins of commission. A people whose eyes and minds are fixed on material ends alone will not long remain a free people. They will become merely instruments of power.

There is no foreseeable limits to what we, through our economic, social and political organizations, can achieve. It will be the ultimate irony if, in the light of this, we surrender the individual to material bigness—whether in Government or anywhere else. We never had a more urgent need to uphold age-old principles and convictions that make for the only worthwhile kind of progress—confidence in something, faith in ideals, fairness, the determination to defend what one believes to be right.

Walt Whitman wrote, a century ago: "The whole theory of the universe is directed unerringly to one single individual—namely to you." Man in the mass must never hide the face of the individual man.

Twenty-five-year Record of Federal Housing Administration

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. McDONOUGH. Mr. Speaker, I am very much interested in the financial statement recently issued by Commissioner Julian H. Zimmerman of the Federal Housing Administration—particularly in view of the fact that FHA is celebrating its 25th anniversary this year. This statement is indicative of the splendid work record the FHA has maintained from its inception in 1934.

I think it highly fitting to stop a moment to pay tribute to the FHA—an outstanding Government agency that is certainly accomplishing the objectives for which it was created.

Let me call your attention to just a few of the highlights in FHA's progress through the years:

First. FHA has made homeownership possible for millions of American families because of the favorable terms of the mortgages it insures.

Second. FHA has helped to provide homes in rental and cooperative housing projects for innumerable other Americans.

Third. FHA has enabled millions of people to repair or improve their properties.

Fourth. FHA has helped to raise housing standards and better living conditions throughout the Nation.

Fifth. FHA has carried on technical studies that have been instrumental in improving the quality of materials and methods used in construction.

Sixth. FHA has operated on a completely self-supporting basis—no tax money goes into its coffers. Fees and premiums paid by the people who use its services are the source of FHA's income.

Seventh. FHA in 1954, as one of its first acts under the Eisenhower administration, repaid the full amount originally advanced to it by the U.S. Treasury—a total of $85.9 million, including $65.5 million principal and $20.4 million interest.

Eighth. FHA has worked closely with private enterprise, indeed all its programs are designed to encourage private enterprise, never to compete with it, in providing good housing for Americans in different income levels.

The financial statement I mentioned shows FHA's dollar-and-cent rating as of December 31, 1958. Here is how the agency stood then:

	Insurance written	Insurance outstanding	Losses to funds	Percent of losses to $100 of insurance written
Property improvement loans, sec. 2	[1] $11,500,629,588	$1,307,130,939	[1] $102,457,652	89
Home mortgages	35,234,047,258	19,717,469,248	24,213,928	7
Project mortgages	6,594,089,280	5,031,627,974	36,885,362	56
Manufactured housing	5,316,041		788,147	14.83
Total	53,334,082,167	26,056,228,161	164,345,089	31

[1] Includes $778,860,621 insurance written and $14,708,557 losses relating to insurance operations prior to the June 3, 1939, amendment which authorized FHA to collect an insurance charge.

NOTE.—Since July 1, 1940, the FHA has been self-supporting and has paid all expenses out of earnings. In the early years of operation, the Treasury Department advanced funds totaling $65,497,433 to pay expenses and to establish certain of the insurance funds. In the fiscal year 1954 all of the funds advanced were repaid to the U.S. Treasury together with interest thereon in the amount of $20,385,529.

But no statement, financial or otherwise, can adequately show the full value of the Federal Housing Administration to America as a whole. I am sure that all of my colleagues here in the House of Representatives join me in extending our best wishes to the Federal Housing Administration, Commissioner Julian H. Zimmerman, and all FHA personnel as it enters its 25th year of service.

Aid by Republic of Israel to Underdeveloped Nations

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. NEUBERGER. Mr. President, as the Republic of Israel commemorates its 11th anniversary, it is well to look to the future rather than the past. The distinguished columnist, Mr. Roscoe Drummond, has called attention to the significant fact that pioneer-spirited Israel is helping to finance enterprises necessary to the development of the still newer nation of Ghana. He also has stressed the fact that this aid by Israel extends as far geographically as Burma and is becoming a major factor in the advance of underdeveloped countries.

Mr. Drummond's column, as published in the May 17, 1959, issue of the Washington Post and Times Herald is so pertinent, that I ask unanimous consent to have it printed in the Appendix of the RECORD, where it will help to herald the many enlightened gains made by Israel since its founding under the encouragement of the United Nations and President Harry S. Truman back in 1948. Mr. Drummond's column is entitled "Israel Lending a Welcome Hand."

We ourselves in the United States were a new and pioneer-spirited nation less than two centuries ago, so we have every reason to be sympathetic with fledgling Israel as Israel helps struggling lands like Ghana and Burma. After all, the new United States would have had great difficulty in attaining freedom and wealth had it not been for brave and generous friends like General Lafayette and others. Israel is being such a friend to Ghana, and Israel, in turn, needs such friends in other lands.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HELP WHERE IT COUNTS—ISRAEL LENDING A WELCOME HAND

(By Roscoe Drummond)

Numerous Asian and African nations are today turning to a new-found ally and benefactor. This is a development of the greatest significance which is just beginning to gather momentum. It is a development which the free world can view with satisfaction.

The new Afro-Asian ally is western in outlook, middle eastern in geography. It is democratic, anti-Communist, and, since it is neither a large nor powerful country, it is basically a neutral source of assistance which gives its recipients no appearance of choosing up sides in the cold war.

I am referring to the young but mature State of Israel, which was reborn only 11 years ago and which is now embarking upon a wide-ranging, diverse program of economic aid and technical assistance, where it is most needed.

A nation which has been greatly helped by its own friends, Israel is now helping others, to the advantage of everybody.

Israel's expanding investment assistance and technical aid ranges from Ghana to Burma. Its scope is illustrated by the fact that trainees from Afro-Asian countries and territories are now studying Israeli agricultural settlements and cooperative enterprises.

The best example of the burgeoning economic relationship between Israel and the Afro-Asian nations is what Israel and Ghana are doing together. To begin to finance an expanding two-way trade, Israel has provided Ghana with a $20 million credit over a 4-year period.

Israel is substantially financing—but taking only 40 percent of the stock—of Ghana's newly organized Black Star Shipping Line and is providing the technical training for Ghanian personnel to man its merchant marine. It is also helping Ghana develop its building industry by providing the necessary beginning capital and by training Ghanians in construction techniques.

In other fields of technical skills, Israel is providing training in agriculture, city planning, irrigation, water resources and in consumer and producer cooperatives.

A group of Burmese farmers is now living and working on Israeli cooperative farms and it is not to be overlooked that a Burmese army contingent is learning how the Israelis defend their frontiers with citizen volunteers who simultaneously till the fields and guard the nation.

There is no spirit of pacifism in Israel and Israel is teaching none to its Asian and African friends. Israeli universities and institutes are taking exchange students from many countries, including some trainees from Thailand, India, and Japan.

Obviously, Isreal is not doing all this out of sheer goodness of heart.

For Israel, it has large political as well as economic advantages. The biggest boon from this growing relationship of trust and good will is that it enables Israel to free itself from the physical and psychological isolation of Arab encirclement. Israel's expanding trade and her enlarged horizon of friends mean that she cannot be surrounded either politically or economically by a Nasser blockade.

Israel's new found allies are also blunting Egypt's efforts to recruit Afro-Asian support in its own cold war against Israel. At the Accra conference of Independent African States a year ago, Ghana almost single handed turned back Egypt's effort to aline all Africa against Israel.

Egypt could get nothing but a harmless resolution calling for a "just" settlement of Arab-Israeli disputes.

Because Israel is a small, pioneer spirited new country, deficient in many physical resources and rich in nearly all human resources, it is in an ideal position to help others. It seems to me that the friends of Israel in the United States might well look for ways to nourish and enlarge what Israel is doing so well in this field.

The Responsibilities of Our Teachers

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. KEATING. Mr. President, earlier this year, Dr. Howard Seymour, head of the board of education in Rochester, N.Y., delivered an address in which he underscored some of the major problems facing the teaching profession today.

Inasmuch as today is being celebrated as Teacher Recognition Day in New York State, Dr. Seymour's remarks deserve special study. I ask unanimous consent to have a fine editorial from the Rochester (N.Y.) Democrat and Chronicle concerning Dr. Seymour's speech printed in the the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Rochester Democrat and Chronicle, Mar. 30, 1959]

WANTED: THINKERS, NOT CONFORMISTS

In his recent talk at State Universty Teachers College at Brockport, Dr. Howard Seymour put into focus two of the biggest deterrents in education and citizenship.

One is familiar—willingness to conform—but it can scarcely be overemphasized. Never was the need to think critically in greater demand. The superintendent of Rochester public schools reminds us that progress in any form of endeavor comes from dissatisfaction and a disinclination to conform.

A second related deterrent is the fear of failure. Students say they do not want to fail, which is understandable but it should

not deter the student from reaching his maximal ability. Living dangerously has a point, even in education. A crop of "pipe course" graduates, in such a time of challenge, would be a dreary prospect.

Dr. Seymour's message should be hammered home on a still broader front, particularly when he says we are in no danger at all of too much thinking. The danger comes the moment the peanut sized brain and fog-horn-sized voice comes to positions of power.

Education will have failed unless it moves the citizen to back his generalizations with facts; evaluates critically the statements of those who claim to be authorities; recognizes prejudice and bias; separates the important from the unimportant.

Dr. Seymour, it seems to us, is asking for practical idealists as teachers, and for understanding and help from parents; understanding that ideas from the classroom are to be welcomed, not mistrusted; understanding that all good progress has been based upon new ideas and concepts, not upon conformity and faint-heartedness.

Meeting the Soviet Challenge

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. WILEY. Mr. President, today, as we face the challenge of international communism, I am always delighted to find groups which, by private initiative, are attempting to analyze the problems and make constructive recommendations for dealing with the situation.

Recently, for example, the international relations study group of the Wausau branch of the American Association of University Women undertook a review of the life and development of Russia, including its history, land, nationalities, government, the Communist Party, the economics of the Soviet Union, education, religion, literature, art, and the so-called satellite countries within the Communist orbit.

At the end of the study, the group's conclusion included five major fields in which Russia challenges the United States—namely, education, military psychology, politics, and economics.

The conclusions of the group represent, I believe, a thoughtful approach to coping with these international problems. Naturally, there are differences of opinion as to how best to meet the challenges posed by the Soviet Union to our security. Because I believe that the ideas of the study group represent a constructive contribution in this field, I ask unanimous consent to have printed in the Appendix of the RECORD the letter from Mrs. W. J. Freund, chairman of the international relations study group, of the Wausau branch, AAUW. In her letter she outlines the group's conclusions.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WAUSAU, WIS., *May 14, 1959.*

The Honorable ALEXANDER WILEY,
U.S. Senate,
Washington, D.C.

MY DEAR SENATOR: Daily, Russia becomes more and more of a challenge to the United States. It is evident that more long-range planning, a more enlightened citizenry, and a much greater understanding of Russia is badly needed if we are going to maintain our democratic way of life.

Aware of our own ignorance on this complex subject, the International Relations Study Group of the Wausau branch of the American Association of University Women last fall undertook a study of Russia. We sought the help of Professor Petrovich of the University of Wisconsin in setting up our outline of study, securing a bibliography, etc. During the year we have learned a great deal, but I think most important, have realized how vast the subject is and that we have just scratched the surface. We are eager to continue with reading and research. Fields of Russian life we delved into were the history of Russia, land and nationalities, government and the Communist Party, economics of the Soviet Union, education, religion, literature and art, and satellite states.

At the end of this study we concluded that Russia challenges the United States in five fields, namely: educational, military, psychological, political, and economic. I shall enumerate below our conclusion in each field and several ideas (on which, with one exception, we were in unanimous agreement) on how the United States might go about meeting these challenges.

1. Educational: Intense studies of both the Russian and American systems of education have been made, but the majority opinion seems to be that we should not scrap ours in favor of the Soviet or European types. These appraisals of our system have been invaluable, and I am confident that when the American people are presented with the facts, such as in James Conant's "The American High School Today," they will take steps to strengthen our system and correct the weaknesses.

2. Military: Although it is difficult to determine who is ahead in the field of weapons, we realize we are being threatened with the Soviet's rapid advance in the field. We all agree that we must maintain the strength necessary to support our diplomatic negotiations, but feel the nuclear arms race is suicidal madness. We have to learn that our only alternative is the slow, and sometimes painful, process of negotiation.

3. Psychological: Communism does not attract people only because of its military strength or ideology. It is because these dictatorships are lifting masses of backward people into the 20th century in a single generation. We must do all we can to help hasten their progress, in our democratic way, with our aid, capital, and technical assistance.

4. Political: The long-term aim of the Communists is to seek a Communist world order, and they pursue it with missionary zeal. Would that we could instill in our people the same sense of purpose and enthusiasm in spreading the gospel of democracy. Some of our goals in this political field could be:

(a) Present positive suggestions for solving the Berlin and German crises.

(b) Offer concrete ideas to stop the arms race and work toward disarmament.

(c) Always be ready to talk at all levels. Realize Russia does have legitimate fears and try to understand her actions.

(d) Keep NATO and our alliances strong. One suggestion for strengthening NATO is to transform it from a strictly military alliance to a fountainhead of free world economic, political, and social strength.

(e) Use the United Nations to a much greater extent in solving our differences.

(f) Improve and expand our propaganda. Since propaganda is not an independent force by itself but is both a result of and extension of policy, it follows that we must first have an affirmative policy and then successfully propagandize it.

5. Economic: We believe this to be the most serious. Their economic-political penetration is formidable and succeeding. Here are a few possible ways of meeting this challenge:

(a) Enact new domestic measures to accelerate U.S. economic growth. Our rate of production should be stepped up from the static rate of 3 percent if we expect to compete with the Russians' rate of 8 to 10 percent.

(b) Increase economic aid to underdeveloped countries and help them achieve a higher standard of living. Foreign aid should be planned on a long-term basis.

(c) Improve development financing schemes. Increase funds available through the Development Loan Fund and give serious consideration to the International Development Association. It might also be wise to channel more of our aid through international agencies. Direct aid is apt to arouse suspicions, so more use could be made of the World Bank, U.N. program of technical assistance, and the special projects fund.

(d) Stimulate private investment abroad. Broaden the scope of our U.S. investment guarantee program and enact minor changes in the U.S. taxation of American foreign investment.

(e) Increase international trade.

(f) Help underdeveloped nations expand their technical skills. We could expand our technical assistance programs through the ICA and also the work of the United Nations.

We are concerned not only about these threats from the Soviet Union but also about the extreme complacency of the American people. We feel they must be warned of the danger to our American way of life, and be kept constantly and accurately informed of the realities of the world situation. We must be confident of our strengths but also aware of our weaknesses.

We believe that you, our Wisconsin Senators, are in a strategic position to assist in this warning as well, of course, as to support measures in the Senate which will further the above aims.

Yours very truly,

Mrs. W. J. FREUND,
Chairman, International Relations Study Group, Wassau Branch, AAUW.

Foreign Aid Appropriations

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. FULBRIGHT. Mr. President, in this morning's issue of the Washington Post there appears an excellent article entitled "Shock Treatment," written by Walter Lippmann. In the article Mr. Lippmann discusses primarily the proposals made on last Friday by the distinguished assistant majority leader of the Senate, the junior Senator from Montana [Mr. MANSFIELD].

I believe the article emphasizes and points out the arguments made by the Senator from Montana, and will be very interesting to my colleagues. Therefore, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHOCK TREATMENT

(By Walter Lippmann)

There is building up in this country a resistance to the foreign aid appropriations which must be taken very seriously by the friends of foreign aid. The resistance has become especially formidable in recent times. This is not only because it is unpopular to provide money for foreigners at a time when at home it is necessary to retrench on all sorts of desirable projects. The great new fact is that the supporters of foreign aid are so disenchanted with the existing program that they cannot advocate it wholeheartedly.

Senator MANSFIELD, like Senator FULBRIGHT before him, has read the signs of the tmes. He sees that if foreign aid is to remain part of our foreign policy, the program will have to be reformed.

The question is how to bring about the reform, given the fact that the mutual aid programs are involved in a vast military and civilian bureaucracy, and that this bureaucracy has acquired a vested interest which causes it to oppose serious reform. Experience shows that Congress has thus far been unable to overcome the inertia of the bureaucracy, and in its frustration it is becoming increasingly exasperated with the whole business.

It is to this state of affairs that Senator MANSFIELD addressed himself last week. He came forward with what seems to me an essentially moderate but, nevertheless, a searching and effective proposal. Its object is to compel a thoroughgoing reexamination in the administration of that part of the foreign-aid program which causes the greatest doubt and discontent. This is the part providing grants and gifts as distinguished from loans. It amounts to about 75 percent of the total appropriation. Here are subsidies to enable weak countries to maintain larger military establishments than their economic life, and their capacity to raise revenue would justify.

Senator MANSFIELD's proposal is that an amendment should be attached to the current foreign aid bill which "will require, in the case of nations receiving grants of defense support or economic assistance, that the executive branch work out in detail with the recipient nation, and submit in connection with next year's aid bill, a detailed plan for the progressive reduction of these grants" so as to terminate them within 3 years.

The amendment does not say that direct military aid is to be terminated in 3 years. What it says is that by next year there must be plans for each country for reducing the economic aid which enables it to maintain an oversized military establishment. The plan would show how the armaments can be reduced to a size which the country can digest. We can still supply arms beyond those which the country can pay for. We can still supply arms but only in the amount which the country can take without inflation and disorder.

The cutting edge of the Mansfield amendment is that it would compel the administration to reappraise, to reexamine, and to justify from the beginning and all over again, each military aid program. The amendment does not say that all military aid must terminate in 3 years. It says that the administration must provide a plan for terminating it. It is implied, and should probably be made clear, in the amendment that if no plan to terminate it in 3 years can be worked out without sacrificing the national interest, then the burden of proving that this is the case will be on the administration. It will not be able to take the line that we must go on doing what we have always done just because we have always done it.

In all probability, we shall find that in certain countries it is necessary to continue, not to reduce or to terminate, the grants or gifts. But in other countries we may expect to find that there are oversized military establishments which, far from being a defense against communism, serve only to arouse popular discontent, and that far from being defenses of liberty are the support of despots.

The Mansfield proposal, I should add, does not touch the point 4 program or the Development Loan Fund. These, we may confidently believe, are destined to play an even bigger part in the future than they have in the past. The Mansfield proposal is, however, aimed directly at reducing the emphasis on military aid and of increasing the emphasis on civilian development.

It can be argued that there are many in Congress who will vote for foreign aid only if they are persuaded that it buys guns aimed directly at Russia or China. They do not think that the development of backward countries is any interest of ours. Presumably then, this isolationist opposition will be less willing to vote for foreign aid which emphasizes civilian development.

As against them, however, there will be, so I believe, an ardor and enthusiasm for a new foreign aid program which is sadly lacking today for the old one. The American people are the heirs of generations of men and women who conquered a wilderness, and they will listen to good leaders when they explain to them how they are invited to participate in plans to conquer the wilderness of poverty and subjection in Asia and in Africa and in South America.

The Miracle of Oklahoma

EXTENSION OF REMARKS

OF

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. KERR. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article which appeared in yesterday's Washington Daily News entitled "The Miracle of Oklahoma," written by a great Oklahoman, Mr. Lyle C. Wilson.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News, May 18, 1959]

THE MIRACLE OF OKLAHOMA

(By Lyle C. Wilson)

This essay relates to the miracle of Oklahoma which is a glittering facet of the miracle of the United States.

A miracle is an event or an effect in the physical world beyond or out of the ordinary course of things, brought about by a superhuman agency as a manifestation of its power, a wonderful thing.

A wonderful thing. That is Oklahoma, a superhuman agency. That agency must be the good God. Oklahomans can and do truly say: "Someone likes us up there."

I have just returned from a brief week in Oklahoma, too few days spent mostly in the eastern part of the State, the old Indian Territory. If there is a lovelier land in the month of May, I do not know where it might be.

Massive dams have impounded in half a dozen places vast bodies of water, their shorelines running into scores and hundreds of miles. Oklahoma's acres of gorgeous redbud trees are counted by the thousands—not the trees by the thousands but the acres.

Fifty years ago when your correspondent arrived in Oklahoma as a young sprout there was not a spare cup of water in the brand-new State. Today, floodways and dams are creating a vast lakeland on Oklahoma's high prairies and thirsty Texas cities as distant as Dallas and Fort Worth may benefit.

Great industries in Oklahoma will be tapping those same waters and this rich and happy State will be richer and even happier before long. The substrata sands continue to flow with Oklahoma's national trademark, oil, black gold. Oklahoma's greatest wealth, however, is in its agriculture, its herds, and its people.

It is a fact well known that the most beautiful women in all the world are born and reared in Oklahoma. Many of them have a touch of Indian blood, usually of the proud Five Civilized Tribes. These part Indian girls and women, all princesses and queens, are very lovely, indeed, as lovely as the land in which they live.

Corn and cotton, broomcorn and wheat thrive in Oklahoma. In the counties in the valley of the Cimmaron in the north-central part of the State the wheat stands today high and green and already heavy headed—so much of it that a visitor from Washington wonders if the taxpayers can afford such a bumper crop.

Pity the poor easterner who never has cast eyes over and beyond 1,000 acres of bluestem grass. Stranger, bluestem is the prettiest ground cover in all the world and the best pasture. Eleven months a year bluestem grows and flourishes and the fat-backed black Angus cattle muzzle its richness.

An Angus steer will gain 3 pounds a day on blue-stem pasture which is as well as he would do in a feed lot munching corn. And that steer sells in Oklahoma City to the packers at premium prices. His steaks are as rich and tender as chocolate fudge.

Small wonder the cowpokes sometimes ride the range in fancy cars and publishers such as Tams Bixby of the Muskogee Phoenix stable a Cadillac and a Thunderbird to fit their mount to their daily mood.

"Oh, what a beautiful morning."

Homemade Bread and Surplus Wheat

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I received. It deals with the surplus of wheat and homemade bread.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WOODWORTH, N. DAK.

Mr. LANGER.

SIR: The answer to the surplus of wheat is this: Get your wife, my wife, his wife, every housewife of this good old United States of

America to bake the good old-fashioned homemade bread which everyone loves to eat.

Your friend,

S. N. HIEB.

Protection and Development of National Forests Vital for Filling Wood Products, Recreation, and Watershed Needs

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. NEUBERGER. Mr. President, conservation of our natural resources is necessarily a process as well as a product. Continual reevaluation of the nature and extent of demand, periodic scrutiny designed to solve new problems which threaten to encourage depletion or inadequate utilization, and frequent examination of interrelating programs are all matters on which a wise conservation policy depends.

Recently the U.S. Forest Service completed an important assessment of our national forests. This process has provided us with a better understanding of the type of conservation product we shall require by the year 2000.

Entitled "A Program for the National Forests," the study supplies a valuable picture of the resources of our national forests, the programs needed to insure their protection and enhance their use, and the demands which will be placed upon them by succeeding generations.

As a representative of the State of Oregon in the Senate, I have read with great interest the Forest Service's findings. I was pleased to have the opportunity, earlier this week, to attend a special hearing at which Forest Service personnel discussed in some detail the conclusions stated in the report.

My State contains 11,435,000 acres of national forest land. Because of the vast extent of these lands, much of Oregon's economic and recreational life is directly related to their management. This is why during my service in the Senate I have continually worked to secure funds adequate for the maximum development and protection of the tremendous resource which our national forests represent.

Mr. President, in the May 12 1959, issue of the Medford (Oreg.) Mail Tribune, there appears a cogent discussion, by Managing Editor Eric Allen, of the report "Program for the National Forests." I ask unanimous consent that Mr. Allen's perceptive comments be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Mail Tribune, May 12, 1959]

THE NEEDS OF THE FORESTS

One of the news services to which the Mail Tribune subscribes, Congressional Quarterly, reports that the national forests are becoming involved in the budget battle between President Eisenhower and the Democratic leaders in Congress.

At issue is a 26-page report entitled "Program for the National Forests." It was prepared by the Forest Service, endorsed by Ezra T. Benson, Secretary of Agriculture, and adopted as part of the administration's planning.

The document, an excellent one, outlines the procedures to be followed to protect and enhance the value of the 181 million acres of national forests in this country.

CQ reports that the Eisenhower administration plans to use the report as evidence that it is not, as has been alleged, ignoring the natural resources of the Nation.

But it adds, in effect, that the Democrats want to steal the administration's thunder, accusing it of not calling for effective action soon enough, and in sufficient quantity, to do the needed job.

We are pleased that the argument is over when the proposal is to be done—not if. For the national forests constiute one of the outstanding resources of the Nation; much needs to be done, and soon, to bring them to their full potentiality, and if both parties in Congress are arguing from the premise that no less than the Forest Service's proposal can be afforded, then something is going to get done.

CQ reports that the principal bone of contention is over access roads. Secretary Benson says the roads are necessary, and are called for in the program, but adds that he doesn't need any additional money for such roads now, and might request some later.

Democrats, on the other hand, say they should be built as soon as possible. Senator MIKE MANSFIELD (Democrat, Montana), the assistant majority leader, is quoted as saying, "We cannot delay putting this program into effect," adding that increased appropriations should be made right away, a position with which other Democrats agree.

In this argument, the Democrats have the best of it, for access roads are vitally important. So are other proposals in the program.

The program outlined by the Forest Service is in two phases, the first covering the next 10 to 15 years; the second contemplating development of the forests by the year 2000.

The second phase is based on the former. The Forest Service believes that progress must be made in the next 15 years to permit a tripling of the lumber yield 41 years from now, stabilization of soil for conservation or improvement of water and other resources, improvement of the grazing use of the forests, keeping recreational facilities up to the ever-growing demand, increasing disease and fire protection, improving roads and trails, stepping up research, and improvement of physical facilities needed for good forest management.

All these steps, as we see it, are urgent—some more so than others—if the forests are to fulfill their potential.

Oregon, of all the States has the most at stake.

It has the largest acreage of commercial timber of any in the Nation. Four States—Alaska, California, Idaho and Montana—have larger total national forest acreages, but much of these is not classed as "commercial."

In this immediate area, the Rouge River National Forest's 880,000-odd acres (of which about three-quarters are in commercial forest lands) constitutes a tremendously important part of the local economy.

Anything that can be done to improve and extend access roads and trails (for fire and pest control, recreational use, and timber-harvesting) will bring immense long-range benefits to this area.

Forest management in the United States is just now coming of age.

In years past, the American forests loomed so huge and so unlimited, little thought was given to their management and conservation. Within the last 50 years this started to change, with a big boost from President Theodore Roosevelt and Gifford Pinchot. Since World War II the big increase in the value of stumpage has created added impetus to the change.

These days there is pressure to save each potentially valuable tree, not only from fire but also from disease and insects. (And, by the same token, there is growing pressure to overcut the forests—a pressure which must be resisted. But that is another story.)

Today the Forest Service is seeking to bring balance to the field of forest management.

It operates under the wise philosophy that its objective is the greatest good for the greatest number in the long run. This means multiple use overall, and, where necessary or desirable, dedication of certain areas to their primary uses, whether they be to preserve watersheds, or wilderness areas, or provide recreation.

It is a complicated job, and one which demands the best that the dedicated men of the Forest Service can bring to it.

Anything which Congress can do to make their job easier will be of long-range benefit to the Nation. For in the forests lie our vast but limited sources of wood and fiber, food for our livestock, water for our rivers and our cities, and the benefits, huge but without a price tag, of an unspoiled outdoor playground for the Nation.—E.A.

How Do the Banks for Cooperatives Loans Fit Into Growth and Expansion Programs for Farmer Cooperatives?

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. CARLSON. Mr. President, Mr. Fred R. Merrifield, president of the Wichita Bank for Cooperatives, Wichita, Kans., delivered an outstanding address entitled "How Do the Banks for Cooperatives Loans Fit into Growth and Expansion Programs for Farmer Cooperatives?" at the annual convention of the National Council of Farmer Cooperatives, held in New Orleans last January.

This factual and very constructive address explains fully the many benefits that accrue to those who participate in the program of the Farm Credit Administration.

I ask unanimous consent that this address be made a part of these remarks and printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HOW DO THE BANKS FOR COOPERATIVES LOANS FIT INTO GROWTH AND EXPANSION PROGRAMS FOR FARMER COOPERATIVES?

(By Fred R. Merrifield, president, Wichita Bank for Cooperatives, Wichita, Kans.)

Possibly in presenting a discussion on the subject assigned me, I should give a little background of my experience with cooperatives and our cooperative credit agencies. I should point out that at my age and years of experience with these organizations, I am

not bragging, since of course many others have done even more than I in the achievements outlined, and as with anyone else, my various activities in working with the farmers in our Midwest area, though I hope mostly successful, have not at all times attained the goals which those with whom I worked, desired.

As has been the case with many other workers in our farm credit system and cooperatives, I served a period with the Agricultural Extension Service, starting as a county agent, then district agent and Assistant Director of Extension in Oklahoma. I also served as a national farm loan association secretary-treasurer for almost 4 years. While district agent, I was public director of Oklahoma Wheat Growers Association, the State marketing organization affiliated with the Farmers National Grain Corporation. With my fellow Extension workers, we called the meetings in Oklahoma for the organization of the production credit associations in that State, working with the county agents in selecting the incorporators of these organizations. At the time of the establishment of the Wichita Bank for Cooperatives, we were active in recommending to cooperatives of Oklahoma that they make contact with the Wichita bank for the purpose of obtaining loans.

As pointed out in the congressional committee report relative to the legislation establishing the banks for cooperatives, these banks were for the purpose of extending credit on a business basis to farmers' cooperative associations. As all of us know, the banks started to operate during the depression of the thirties and the majority of our farmers' cooperatives were in a difficult financial situation at that time. In other words, the banks not only loaned money to cooperative organizations to strengthen their immediate financial position, but were in the position of assisting in planning the rebuilding of the associations.

The real reason, of course, for the existence of the banks for cooperatives, along with the other banks of the farm credit system, is to assist individual farmers to better their position financially on their farms, this being done by the banks for cooperatives indirectly through the marketing, supply, and service cooperatives owned by these farmers. In other words, our business is to keep the farmers' off-the-farm business with their cooperatives sound in order that said cooperatives will assist these individual farmers to succeed in their own individual farm business. We believe it is the duty of the officers and business analysts of the bank for cooperatives to study, not only the operations of the most successful cooperatives, but also those who are having their trials, in order that we may assist all of our stockholder organizations in a constructive way to continue to improve their operations.

This service must be rendered in a constructive and tactful manner in order that management of our cooperatives would not consider that bank officials are trying to dictate to them the manner of running their business. In other words, we must keep before our stockholders the fact that the banks for cooperatives are merely partners of the individual farmers in the local cooperatives, or of the local cooperatives in their regionals, from the standpoint of furnishing capital and working with their boards and officers in promoting their growth and expansion plans. We believe that throughout the Nation, stockholders of the banks for cooperatives are appreciative of this service. We have tried to keep before the farmer-members of our cooperative stockholders the importance of ownership by them through investment in common stock or other permanent capital.

The Wichita Bank for Cooperatives carries on a continuous educational program, working with the State land-grant colleges and particularly with the State cooperative councils.

We in the Ninth Farm Credit District have, as have the banks for cooperatives in other districts, worked with many individual cooperatives from the standpoint of loan commitments to strengthen their organizations and assist them to better serve their communities. Following are a few examples of such local cooperatives:

The grain marketing organization at Alva, Okla., which also handles farm supplies, including petroleum products and fertilizer, has grown since the early 1930's from gross assets of $100,000 to $1,300,000.

A similar organization at Andale, Kans., has grown in a lesser period from total assets of $40,000 to $1,600,000.

Incidentally, this later organization had all loans completely paid to the Wichita Bank for Cooperatives at the time we were putting the provisions of the 1955 Farm Credit Act into effect, but despite that fact, due to their board's kindly feeling toward the bank, they invested $10,000 in cash in B stock in the bank. There are, of course, many other examples similar to those mentioned, a few larger, many smaller, that have had similar experiences. The other banks for cooperatives have, of course, had like experiences.

From the standpoint of our regional organizations, Union Equity Cooperative Exchange at Enid, Okla., was the first regional marketing organization to receive assistance from the Wichita Bank for Cooperatives. In that instance, a few of the cooperative elevators of the Panhandle of Texas had determined to set up a regional at Enid, considering that the best location for the marketing of the assembled wheat of their members. They started at that point with a small frame elevator of approximately 100,000 bushels capacity, and now, through continued loyalty of their membership and the assistance of the Wichita Bank for Coops, have the finest single grain storage plant (capacity, 60 million bushels) and office building in the Nation with the best equipped laboratory possible to establish. The old Oklahoma Wheat Growers Association, of which I had been public director, during the early days of Union Equity voluntarily liquidated and recommended to their local member cooperatives that they become members of Union Equity.

The Farmers Cooperative Commission Co., of Hutchinson, Kans., of which Jimmie Dean—a member of our central bank board—is manager, had a similar history though they served a longer period of time as a strictly commission firm, but in recent years have greatly increased their storage facilities and have been merchandising wheat on a quality basis, based on protein and baking tests.

In the case of both Union Equity and Farmers Co-op Commission, after the local farmers elevators had financed the original elevator construction, appraised valuation of properties of the organization and the repayment program was sufficient in practically every case, that new additions were financed almost 100 percent by the bank for cooperatives, and in each case have been paid off long before final maturity dates. Another rapidly expanding grain regional being served by the Wichita bank is Farmers Union Jobbing Association of Kansas City. Other banks for cooperatives serve one or more grain marketing regional cooperatives.

The Wichita Bank with the Central Bank for Cooperatives has furnished the loan finance for the Consumers Cooperative Association in Kansas City, the one regional wholesale organization in our district. As you also know, this organization had a very small beginning, and some definite problems at times, but under the leadership of its capable management and board of directors, with the rendering of real service to their local cooperative members, and with these members' loyalty and support, CCA has grown to its present volume of $129 million for 1958. With the help of the Bank for Cooperatives, CCA was the first cooperative wholesale to construct a petroleum refinery and to invest in oil wells in order that they might produce a high percent of the needed crude petroleum for their refineries. Though we give full credit to CCA management and board of directors for the success of this organization, we of the Bank for Cooperatives believe that due to the fact that we were able to lend money on a sound basis to this organization when needed through the years, and on occasion work with them very closely, that the banks for cooperatives have contributed considerably toward their success. Other wholesale supply cooperatives in other districts have had similar success.

The banks for cooperatives assisted CCA, who was joined by Central Farmers Fertilizer Co. of Chicago in the construction of the fertilizer plant at Lawrence, Kans. Certainly, this plant has been a boon to the farmers of the Middle West, not only from the standpoint of furnishing additional supplies of nitrogen fertilizer, but in reducing the price of such fertilizer in this area.

As outlined above, there is no doubt that our Wichita bank has, as have the other banks for cooperatives of the Nation, rendered a real service to date in the growth and expansion of our farmers cooperative organizations. The question now is, How will the banks serve the cooperatives in the future?

First, may I point out that we emphasize in our stockholder meetings and in other meetings where we are called upon to discuss the services of the banks for cooperatives, that we serve the local cooperatives as their own finance regional in which under the 1955 act they are investing in capital stock, and which they will soon own; that in relation to their financing operations, we are their overall regional organization serving them in a similar way as they are served by their regional marketing and wholesale cooperatives.

As we see it, with agricultural integration in the picture, in which the producing farmer is tied definitely with his marketing and supply systems, the banks can be of even greater service than they have been in the past. In the first place, we will continue on a horizontal integration basis to finance expansion of our present cooperatives from the standpoint of territory, increased services, and greater volume of business. There is certainly room in the great majority of areas for expansion of our present cooperatives. We are attempting in the ninth district to encourage folk in new communities that are not far distant from present cooperative organizations, to join in with the present cooperatives in order to obtain facilities and services for their own communities.

The other field of horizontal expansion is by mergers of presently organized cooperatives. There is a growing interest in such mergers. This type of horizontal integration is paying off. It is definitely to the advantage of the cooperatives themselves, not only from the standpoint of broadening their service, but in greater savings to the membership. The larger cooperatives, as a rule, also have a better credit rating with the banks for cooperatives.

It is in the field of vertical integration, however, that we may see the greatest expansion of the services of the banks for cooperatives in the not too distant future.

Our dairy cooperatives, including both the bargaining associations and the operational

organizations, are expanding by merging, by increasing their overall capital and physical assets in order to not only serve their farmers better, but to serve the consumers of dairy products to a better advantage. There is no question but that there must be a better working relationship and some mergers between these organizations, and that they must be prepared to handle their own surplus products and to have a certain number of pilot distribution plants serving the larger metropolitan areas. Banks for cooperatives can be of increased importance in assisting in the working out of these problems by making loans on a sound basis to assist in the aforementioned program.

From the standpoint of livestock and livestock marketing, the surface has been merely scratched by the cooperative groups serving farmers in this field. The producers marketing organizations on the central markets have rendered a real service for a considerable number of years. I, personally, assisted in calling the meetings in Oklahoma when the first producers livestock marketing organization was formed in that State. In the past few years, however, the central livestock markets have gradually diminished in volume of sales in comparison with their former importance. In my view for the cooperative livestock marketing organizations to continue to exist, they must spread the area of their activities into the country with sales yards, feed pens, testing laboratories, possibly packing plants in some areas, and other means of better serving the livestock farmers themselves. In a few areas in the Nation, some progress has been made along these lines. If the livestock marketing cooperatives do not step out in some of these lines some of our large regional supply organizations will do so in order to protect themselves. Certainly, the banks for cooperatives can assist in the broadening of the activities of the livestock raisers in the marketing of their own products.

Possibly our wheat farmers have gone further in marketing through cooperative channels than any other group, in the marketing of the grains produced on their farms. In the winter Wheat Belt, close to 70 percent of the grain produced is handled through cooperative organizations from the farm up through the regional to the mills, and recently, as you know, our regional organizations have established the Producers Export Co. for the purpose of exporting the grain through an organization owned by the farmers themselves. The banks for cooperatives, as pointed out in the individual instances mentioned before, have been very instrumental in the growth of the grain regionals, and can, and I am sure will assist in the financing of the new Producers Export Co. The regional grain cooperatives will in the near future be forced to either several jointly or through the Export Co. build port facilities for export grain. I believe that in the not too distant future these grain regionals will establish a pilot flour mill, possibly by buying out one of the established firms. There is no reason why the farmers should not, as the years go by, own a portion of their own milling business.

As I see it, grain farmers through their cooperatives should be the ones to ultimately handle their grain surplus problem, starting with the individual farmer, up through his organizations, and with Federal sponsorship, in turn prorating through some type of domestic allotment the production to be accepted from each farmer.

In the lifetime of many of our younger men there will be a complete revamping of our grain market procedure.

From the standpoint of cotton, we have throughout the South, presently, very successful cotton gins and cooperative oil mills owned by these gins. This phase of the cotton cooperative movement has become quite successful. Cooperative cotton marketing, itself, in recent years has not been quite so successful from the standpoint of the number of farms served, and we believe also from the standpoint of the service rendered, due to the lack of volume of business. It is our opinion that there must be some changes in the method of organization of our cotton cooperatives if they are to render the service they should to cotton farmers; possibly the ownership of some of the cotton marketing organizations should be centered in the local cotton cooperative groups of the gin associations or combined with other regional cooperative services, such as the oil mills and cooperative compresses.

In recent months a number of our local gins are having problems from the standpoint of volume due to competition from gins where the individual farmers are being financed by a large privately owned cotton and cottonseed marketing organization, and each farmer is definitely bound to market his cotton through gins and oil mills owned by the same cotton marketing corporation. We believe that the banks of the cooperative farm credit system can and will be able to assist the farmers in these localities with their local financing in order that they may still market through their own cooperative marketing channels.

The cotton marketing cooperatives will no doubt also join more closely for the purpose of exporting their farmer-members' cotton, and take a more active interest in the milling of their product. Banks for cooperatives will cooperate in any program to assist the cotton farmer to market his products more efficiently.

Since poultry production is a minor agricultural activity in our ninth farm credit district, and since this group has had presented to it the results of integration in the broiler and egg business, we will not take your time to discuss the place of the banks for cooperatives in financing further expansion in these lines.

One of the greatest opportunities for expansion by cooperatives is in the fruit and vegetable field, where the banks for cooperatives can be of real assistance on a sound basis.

Possibly the greatest field for increasing the service of farmers' cooperatives in the near future is in the expansion of farm supply cooperatives, both local retail and regional wholesale, and in a closer coordination of those organizations with the marketing organizations in the move toward vertical integration. In order to properly serve farmers, supply organizations must have available in the future some sort of supplementary credit to finance sales of feed and fertilizer and other supplies directly to farmers. This may be done with a closer relationship with production credit associations, or through subsidiary credit organizations affiliated with the regional wholesale supply organizations; or by the regional wholesales themselves.

In the case of affiliation with PCA's, which we normally recommend of course, funds will be furnished through the Federal Intermediate Credit Bank, while in the case of subsidiary credit corporations or regional wholesale organizations, funds may be obtained through the banks for cooperatives. In the case of integrated programs of furnishing feed for poultry or livestock, arrangements should, if possible, be made by the regional wholesale organizations with local or regional livestock, dairy products, or poultry marketing organizations for the marketing of the products so produced. Some of our large regional supply organizations are faced with serious problems in meeting competition in their feed program.

Certainly there should be a closer relationship between our cooperative marketing and wholesale supply organizations, as well as a closer cooperation between the cooperative wholesale supply associations themselves in the various territories served by them. We look forward to a greatly accelerated constructive expansion of the cooperative wholesale and retail supply business. The banks for cooperatives can well assist in the expansion in this field. Along with the increased use by farmers of their marketing and supply cooperatives, they will turn to their own short-term and long-term cooperative credit facilities through the production credit associations who rediscount with the Federal intermediate credit bank, and the national farm loan associations who make Federal land bank loans.

We believe that all cooperatives will more fully realize the fact that the interest charged by a bank for cooperatives is not the actual cost of money from these banks, but that they should take into account their receipt of stock from the bank representing net earnings of their bank which is in effect a direct reduction in the interest cost. This stock will be redeemed in cash on a revolving basis as soon as Government capital in the bank for cooperatives is repaid. When this is fully realized by all cooperative organizations it should increase the loan demand from the banks for cooperatives, both in the districts and from the central bank.

All in all, it is our belief that the field by which farmers can use their cooperative organizations for better service to themselves, is very broad indeed and that the volume of business of cooperative marketing and supply associations should triple in the next decade. The banks for cooperatives can, and will, be of real assistance in the realization of the possibilities for such growth and expansion of cooperatives to the benefit of their individual farmer member-owners. In fact, as their services are utilized, the banks for cooperatives will expand in proportion to the expansion of the farmer cooperatives which they serve.

Tribute to the Secretary of Agriculture

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent article prepared by Mr. Albert B. Southwick and printed in the Evening Gazette in Worcester, Mass. It is certainly an outstanding editorial summary of one of the most difficult problems facing the Congress, and it is an excellent tribute to a man who has fought hard to improve our farm economy—Secretary of Agriculture Ezra Taft Benson.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AS THE FARM PROGRAM TOTTERS TOWARD COLLAPSE

(By Albert B. Southwick)

Until recent months, most observers thought that we could live with the farm problem, bad as it is. Now some are not so sure.

A note of tension—almost panic—has crept into the political discussions of crop surpluses. At Cornell University last week, Secretary of Agriculture Benson lashed out at his critics and the current agricultural

laws, which he called "the most irrational, hodge-podge program ever patched together."

Columnist Roscoe Drummond wrote recently that if Congress doesn't soon rescue the America people from an irrational, unworkable, extravagant and deteriorating mess of a farm program * * * there will be a massive political revolt by the voting consumer.

STEADILY WORSE

Democrats and Republicans alike—at least when they are speaking off the record—agree that something has to give. Despite Benson's heroic efforts to straighten out the fantastic situation, things have gotten steadily worse for the past 5 years.

In his Cornell speech, Benson disclosed that the farm crop purchase program is costing the Government over $1 billion a year for storage, transportation, and interest alone. A billion dollars is one thousand million dollars—down the drain every year.

That is only part of the story. Uncle Sam also has $9 billion tied up in the surpluses themselves. Nobody knows whether he will get back 90 percent, 75 percent or 50 percent of that enormous sum. At best the prospects are dim. The Government has $3½ billion tied up in wheat alone. By July, 1960, the wheat carryover will be around 1½ billion bushels—enough to supply the country for almost 3 years. Wheat stocks cannot be kept forever.

What is this farm program that has led to such monstrous surpluses?

DEPRESSION-SPAWNED

Basically, it is a program spawned by the depression 25 years ago. It was nurtured on the war years of 1940–45, when the free world was straining to produce as much food and fiber as was humanly possible. It was designed for a time of depression and scarcity.

Its chief feature is the provision that the Government must support the price of cotton, corn, wheat, rice, tobacco and peanuts at a certain parity level. Without going into the complicated parity business, we can readily see that the support prices are far too high. Every year sees farmers producing more efficiently and cheaply, and every year sees the Government surplus stocks grow more swollen.

A secondary feature of the farm program is the maze of rules and regulations that permit and sometimes require the Secretary of Agriculture to support the price of many other commodities, such as dried milk, barley, oats, grain sorghum, soybeans, and butter. Benson has, in the main, administered that part of the law wisely, and has actually reduced the butter, milk and cheese surpluses in the past few years.

Benson for years has asked Congress to free him from the requirement that he support the price of the five basic crops listed two paragraphs above. Congress has persistently refused. Much as the farmers dislike Government meddling and regulations, they dread even more the thought of plummeting market prices.

However, the longer corrective measures are postponed, the worse the upheaval will be, according to most farm economists.

Benson believes that it would be possible to let the farmers down fairly easily, over a period of years, if Congress would give him permission to gradually drop support prices. But farm State politicians in Congress will not hear of it. They are politically committed to farm supports.

But the evidence is mounting that even the farmers ar getting sick of the mess. A recent poll by the Farm Journal found 55 percent of the participating farmers voting to get the Government clean out of agriculture. Another 15 percent favored emergency supports only "to prevent disaster from a huge crop or sudden loss of markets; floors set at, say 50 percent of parity (instead of 90 percent), or 75 percent of the average 3-year market price and no production controls."

ACREAGE CONTROLS

Production controls are very galling to farmers. These regulations let the Government tell the farmers just how many acres they can plant to certain crops. Since 1949, over 20 million acres have been thus withdrawn from wheat alone—yet the wheat surpluses are far bigger than ever.

This paradox springs from the phenomenal increases in production that the American farmer is achieving. In 1958, for instance, the average yield per acre for all crops was 43 percent larger than it was in 1948. This means that 57 acres of land now do the work that 100 acres did only a decade ago.

Of all the possible solutions to his dilemma, Benson is most hostile to the one being pushed by some powerful Democrats, including Senate Majority Leader LYNDON JOHNSON. This is the proposal for a production-payments plan, better known as the Brannan plan, after the former Secretary of Agriculture, who first proposed the idea.

BRANNAN PLAN

The Brannan plan would end the present price support program. In its stead it would set up a system for paying farmers directly from the Federal Treasury in order to maintain their income. That is, if a wheat farmer whose reasonable income was estimated at $10,000 per year should sell only $8,000 worth of wheat, the Federal Government would pay him $2,000.

With more than 4 million farmers in the country, this would prove colossally complicated. Benson says it would lead to direct socialization of agriculture, and would cost the taxpayers between $5 and $10 billion a year, depending on how extensively it was applied to crops.

Benson will fight the Brannan plan, and anything like it, right down to the wire. But if any reasonable approach is suggested to get the Government out from under its monstrous pile of farm surpluses, the first man to applaud will be Ezra Taft Benson, who is sick of being the fall guy.

The Board of Commissioners of the District of Columbia

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. BEALL. Mr. President, on Monday, May 18, 1959, the Washington Post and Times Herald carried an editorial paying tribute to Commissioners McLaughlin and Karrick. The Board of Commissioners of the District of Columbia has benefited greatly from the devoted service of these two men.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, May 18, 1959]

PRESIDENT OF THE BOARD

Washington is indeed fortunate to have two men of outstanding ability and broad experience in its affairs contending for the presidency of the Board of Commissioners. Either Commissioner McLaughlin, the present president, or Commissioner Karrick, who has just been reappointed to the Board (in consequence of which it must reorganize and elect a president) could serve ably in that position. We were among those who urged Mr. Karrick to accept reappointment, and his speedy confirmation by the Senate is testimony to the high regard in which his city holds him.

Mr. Karrick's acceptance of another 3-year term on the condition that he may resign after 1 year does raise some questions, however, about the wisdom of reshuffling the city government for this relatively short period to make him president of the Board. If he leaves a year hence, presumably Mr. McLaughlin will again be in line for the presidency, causing yet another shifting of duties.

The presidency of the Board is not just ceremonial. In addition to carrying with it direct responsibility for the police and fire departments (a secondary consideration), it also entails many other important duties in the planning, housing and regional government fields. Mr. McLaughlin has provided vital leadership and displayed much useful initiative in these areas, inaugurating the Metropolitan Regional Conference, steering the interagency mass transportation study, helping to promote and organize the new District stadium as a member of the Armory Board and providing important guidance in many other official and semiofficial activities. Some of these matters are at a crucial stage in which a change of leadership could be disruptive.

Commissioner Karrick's willingness to serve connotes, we assume, a desire to serve where he would be most useful. This opportunity seems to us to lie in continuing the outstanding work he has done in the health, welfare, and other fields and in lending his considerable expertise in civic affairs and city administration to the policy sessions of the Board of Commissioners. It does not seem to us to lie in upsetting the present duties of Board members with all the consequent loss of momentum that this could mean to so many important projects—particularly since Mr. Karrick intends to serve only for another year.

There is honor enough for all who willingly and devotedly serve this city, as Commissioners McLaughlin and Karrick have done. The city will honor Mr. Karrick even more, we think, if he elects to round out his service in the present framework of the city administration.

Astoria, Oreg., Budget Analyzes Problem of Congressional Nepotism

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. NEUBERGER. Mr. President, a most excellent and thoughtful editorial entitled "Nepotism Problems" discussing the whole question of congressional nepotism, was published in the Astorian Budget of Astoria, Oreg., on May 12, 1959. In particular, I agree with the editors of the Budget that nepotism is not wrong per se, but only when it is abused or exploited. For example, the editors of the Budget point out that the

employment of wives at the Oregon State Legislature is a widely accepted practice which meets with no challenge on the part of the public.

I also am pleased that the editors of the Budget concur in my proposal to establish uniform classification and administrative wage scales for all those employed on the staffs of members of the U.S. Senate.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Astorian Budget, May 12, 1959]

NEPOTISM PROBLEM

There has been quite a furore recently about nepotism in the official staffs of Members of Congress, primarily due to the recent disclosure that a Member of the House of Representatives had a teenage nephew on the payroll at some $11,000 a year, to do clerical work. There was a good deal of public doubt whether a youth of 19 was worth $11,000 a year to the people of the United States who pay the bill.

Nepotism isn't wrong unless it's abused. This is particularly true as regards the personal staffs of legislators. Members of the Oregon Legislature habitually employ wives or other relatives as secretaries and no one objects.

The pay scale for Oregon legislators is so woefully small that the hiring of wives to eke out their pittances is an accepted and generally approved practice.

Also, there are other advantages to a lawmaker in having a wife or someone else closely associated by blood or marriage as a member of his personal staff.

But when one begins hiring youngsters at ridiculously large pay, then the public as a right to squawk.

Oregon's Senator RICHARD NEUBERGER has just introduced legislation to set up uniform classification and published wage scales for the staffs of Senate Members. This wouldn't abolish nepotism, but would regulate it and discourage abuses. Something like this is needed for both Senate and House.

Excise Tax on Special Fuels

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution adopted by the North Dakota Association of County Engineers with reference to the 2-percent special excise tax on the sale of special fuels sold to agriculture and railroads, adopted by the North Dakota State Assembly.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION

Whereas the 36th Legislative Assembly of North Dakota passed a 2-percent special excise tax on the sale of special fuels sold to agriculture and railroads for use on farm-to-market roads eligible for Federal aid matching funds (H.B. 740); and

Whereas the construction of the Interstate Highway and the improvement of the primary highway system in the State will bring about a demand from the people of the State to improve the State and county Federal-aid secondary road systems: Now, therefore, be it

Resolved by the North Dakota Association of County Engineers, That we request our Senators and Representatives in Congress to take action so that more Federal-aid secondary funds can be appropriated to the State and the counties.

New Hampshire's Seacoast: A Growing Industrial Area

EXTENSION OF REMARKS

OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. COTTON. Mr. President, New Hampshire's seacoast area has long been famed as a resort area. Its wide, sandy beaches and delightful climate have attracted vacationers from all parts of the Nation for generations. But the recreation fame of our seacoast has sometimes obscured the industrial, commercial, and maritime aspects of the area, which have been growing in recognition and importance.

An article published in the Wall Street Journal of Thursday, May 14, illustrates the expanding industrial importance of New Hampshire's seacoast area, especially Portsmouth Harbor and the Piscataqua River. The article discusses the contribution of Newington, N.H. and the Simplex Wire & Cable Co. of that city, to the new transatlantic telephone cable.

I ask unanimous consent that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMPLETION OF FIRST NORTH AMERICA-EUROPE TELEPHONE CABLE NEAR AS SHIP IS RESUPPLIED

(By Paul Lancaster)

NEWINGTON, N.H.—Twenty-four hours a day, 7 days a week, seemingly endless strands of black cable coil into huge cylindrical tanks in the hold of a weather gray ship lying alongside a wharf here.

The ship is the H.M.T.S. (Her Majesty's telegraph ship) *Monarch*, a cable-laying vessel owned by the British post office and now under charter to American Telephone & Telegraph Co. The cable being loaded is destined to become part of the first transatlantic telephone cable to link North America directly to the mainland of Europe.

The new cable, scheduled for service next fall, will add upward of 36 circuits to the 42 now joining North America to France, Germany, Italy, Spain, Switzerland, the Netherlands, and Belgium. Present telephone communication with the European Continent is provided largely by radio-telephone circuits, with a few cable circuits supplied by connections with a transatlantic telephone cable laid between North America and England in 1956. Cable circuits are much more reliable than radio-telephone links on which service is frequently interrupted by magnetic storms.

Climbing overseas business following the laying of the 1956 cable—the first transatlantic voice cable—prompted the decision to go ahead with the cable to the Continent, an A.T. & T. spokesman indicated to newsmen visiting the *Monarch*. It is berthed here, just up the Piscataqua River from Portsmouth, and close by the Simplex Wire & Cable Co. plant at which some of the cable for the project is being produced.

In 1955, before the cable was installed, 101,500 calls were placed between the United States and Great Britain, the spokesman said. Last year the number rose to 261,000 "when people find it is so easy and fast to make these calls, it encourages use," he noted.

The new cable will run between Clarenville, Newfoundland, and Penmarch, France. The $40 million cable, which actually consists of two cables, one for transmission of voices in each direction, will be jointly owned by A.T. & T. and French and German Government communication agencies.

Starting in March, the *Monarch* laid cable from France to a point 200 miles off the coast of Newfoundland. Hazardous icefields forced the ship to halt operations at this point late in April. After marking the cable end with a buoy, the *Monarch*, one of the largest cable layers in the world, steamed to this port to pick up a new stock of cable at the Simplex plant.

Loading will be completed some time next week, and the ship will again head for waters off Newfoundland. It will start laying out the Newfoundland-to-France cable, pausing when it reaches the point where the earlier France-to-Newfoundland effort was abandoned to retrieve this cable and finish laying it to Newfoundland. The ship will then resume laying cable in the direction of France until it runs out of cable, when it will rendevous with another vessel which will take over and complete the laying of this west-to-east cable.

Simplex Wire which, along with English, French, and German firms, is supplying the cable needed for the 2,400-mile communications link, has its submarine cable plant right on the waterfront here. In the plant, a gleaming copper core is covered with nine assorted layers of plastic, jute, fabric tape, steel armor wire and tar-like coating. Cable for deep-sea use is 1¼ inches thick; cable for use in shallow water, where damage from anchors or fishermens' trawling lines is more likely, is considerably thicker.

The completed cable spins out from the plant in two continuous strands and is conveyed over large grooved wheels like big pulleys to the *Monarch* a couple of hundred yards away.

The *Monarch*, a 480-foot vessel, stores the cable in four round tanks, each 42 feet in diameter and 26 feet deep. The ship can carry as much as 1,840 miles of cable. Cable is fed into the water over "sheaves"—giant pulley-like devices at the stern and bow. Cable is usually laid over the stern, a British officer aboard the ship explains, but in shallow water or when fancy maneuvering must be undertaken, the bow sheave is used to prevent the cable from becoming fouled in the ship's propellers.

Though cable laying isn't quite as formidable a task as it was a hundred years ago, when the first attempts to lay transatlantic telegraph cables were frustrated by frequent breaks, it's still a tricky business.

The ship must proceed at a leisurely pace of about 7 knots an hour as it pays out cable, but it tries to avoid ever coming to a complete stop because the tremendous weight of the cable will then pull the ship back as much as 5 miles, according to a ship's officer.

It's possible to control the ship from three places—the bridge and the points at the bow and stern from which cable is lowered into the sea. This permits precise maneuvering,

which is especially important when bulges in the cable housing, delicate electronic devices called "repeaters," are fed out. The repeaters, spaced out every 44 miles to amplify signals, must not be bent, and care must be taken that the stern does not swing from side to side as they are moving through the sheave.

Answer to Criticisms of Supreme Court of the United States

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. O'MAHONEY. Mr. President, there have come to my hand some illuminating comments by Judge Walter L. Pope, chief judge of the court of appeals for the ninth circuit, on the American Bar Association pamphlet criticizing the Supreme Court.

Judge Pope was made a doctor of laws by the University of Montana. He practiced law in Lincoln, Nebr., and at Missoula, Mont.; was an assistant professor of law at the University of Nebraska, and was professor of law in the University of Montana Law School.

He was a special assistant to the Attorney General of the United States from 1937 to 1941, in connection with Northern Pacific land-grant litigation. He has served on the second court of appeals of the ninth circuit since March 1, 1949. His judicial career and his professional career both entitle him to careful attention.

The extracts I desire to insert in the Appendix of the RECORD come from a letter which he wrote on April 24, 1959, to Mr. Ross L. Malone, president of the American Bar Association. I ask unanimous consent to have these comments printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

SAN FRANCISCO, CALIF.,
April 24, 1959.

Mr. ROSS L. MALONE,
President, American Bar Association,
Roswell Petroleum Building,
Roswell, N. Mex.

DEAR MR. MALONE: Since I heard your talk at the San Francisco Lawyers' Club some of the delegates from California have called my attention to the American Bar Association pamphlet marked "Resolutions and Report of the Special Committee on Communist Tactics, Strategy, and Objectives." I have read this and also your article in the current journal.

I think you were certainly right when you said: "I must confess that to an outsider the distinction between resolutions adopted by the House * * * and the report of a committee which accompanies proposed resolutions to the House which reflects only the views of the committee members who sign it, is quite finely drawn and likely to result in confusion."

I had thought the bar association had an educational function—a duty to enlighten outsiders, not confuse them. But apart from that, a reading of the report strongly suggests that the confusion was a calculated one—that it was a prime purpose of those who managed this whole affair.

I cannot understand how the Board of governors permitted this situation to get so out of hand; or how they authorized the circulation of this report under the American Bar Association name; or how they allowed a long and vital report, not submitted to delegates until Monday and then in the midst of a crowded agenda, to be forced to a vote on Tuesday. A number of the California delegates tell me (they voted 2 to 1 against it), there was not time for them even to read the report, much less debate it.

I think you are mistaken when you say: "The second area of controversy with which the resolutions dealt is that of civil rights." I cannot find a single place in either the resolutions or the report where such things are dealt with. I cannot find anywhere one kind word on behalf of individual liberty or human freedom, or one word suggesting that balancing security and liberty presents a serious problem.

The bar association should have insisted on acting only on a report that was lawyerlike and temperate. This was neither. Compare it with the carefully studied report on "The Federal Loyalty Security Program" made to the Association of the Bar of the City of New York by a group of distinguished leaders of the bar which included Monte Lemann, John O'Melveny, Whitney North Seymour and six others of similar stature. Their sound and careful approach is indicated by the warning in their opening summary: "In planning personnel security attention must not be directed to security alone. There is another value which must be preserved and guarded. It is individual liberty. Liberty is a quality to which this Nation since its foundation has been devoted and which it has cherished. To ignore or even to slight liberty would be to destroy our character as a people and as a Nation."

I have no knowledge, and of course would not assume, that, as asserted in numerous quarters, the present report was written by Lou Nichols. But it certainly sounds like the work of a nonlawyer—a layman's plea for a bill of no rights. * * *

I am curious as to whether the board was ignorant of such things as those Judge Walsh related in discussing the Nelson case before the college of trial lawyers or as Arthur Krock noted of the report's recommendations based on the Flaxer case. Or, had the board even thought of the possibility that the Civil Liberties Union might be right in its suggestion that some of the recommendations ask Congress to cross over the boundary into unconstitutionality? I would think matters like these were at least worth debating.

In my view the board's disclaimer is a ineffective to avoid just criticism as the remark of the small boy who said "I did not hit you—my hand did it." I think you will find it out.

I do not recall how long I have been a member of the association. I would guess about 40 years. Often during that period the association has been superb as in 1939 and 1943 when its committee on the bill of rights argued for freedom of assembly and for freedom of worship in *Hague* v. *CIO* and *Board of Education* v. *Barnette*. Sometimes it has been a bit silly, as in 1952 when it wasted its efforts on the Bricker amendment and on repeal of the 16th amendment. Its standing was not aided when, in 1916, six of its former presidents united in a protest that Louis D. Brandeis was not a fit person to be a member of the Supreme Court. Though it seems to me it has now hit bottom I shall stay by the ship, trying to help you and the others who I know feel badly about this, to attempt to redeem the association's good name.

It seems too bad that this had to happen in your administration; that it is you who have to spend your time going about the country in an effort to explain away this report. Would not this be a good time to start a movement in support of the bill of rights. Why should there not be a committee charged with advocating the enforcement of the Bill of Rights? I could suggest the names of many men who are both (1) real lawyers of the highest standing; and (2) dedicated to the principles of constitutional liberty, who would be eager to help. Why not try?

Sincerely,

WALTER L. POPE.

Millions To Reclaim Land for Cotton We Do Not Need

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. PROXMIRE. Mr. President, in its lead editorial on Sunday, the Milwaukee Journal expressed vigorous indignation at the action the Senate took last week in passing the San Luis Federal reclamation project bill that authorized the appropriation of $290 million to bring into production hundreds of thousands of additional fertile acres of farmland. The project will do this at the very time when we are authorizing hundreds of millions of dollars of other appropriations to take other fertile land out of production.

I ask unanimous consent that this excellent editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MILLIONS TO RECLAIM LAND FOR COTTON WE DO NOT NEED

In 1957 the Federal Government paid $2,750,000 to 143 farmers in California to take 28,900 acres out of cotton production.

Tuesday the Senate passed a bill authorizing spending of $290 million for a Federal reclamation project in Central Valley in California. It would bring 300,000 acres of land into production—paving the way for 80,000 more acres of cotton.

To Senator WILLIAMS, Republican, Delaware, Senator PROXMIRE, Democrat, Wisconsin, and others this makes no sense. Nor should it to anyone. As Williams told the Senate, the Federal Government "is spending millions of dollars to take acreage out of production." Simultaneously to spend further millions to make new land available for the very crops we already have in surplus is the height of foolishness and wastefulness.

One agency of Government works at direct odds with another agency of Government. It isn't a new thing. It's done in many phases of the agricultural program. But it is one of the things that makes that program increasingly incomprehensive, illogical and economically suicidal.

Minnesota Has "Braceros" Too

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an article entitled "Minnesota Has 'Braceros' Too," written by the Reverend Edward S. Grzeskowiak, which appeared in the Catholic Bulletin of St. Paul, Minn., on April 24, 1959, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MIGRATING FAMILIES—MINNESOTA HAS "BRACEROS" TOO

(By Father Edward S. Grzeskowiak)

(EDITOR'S NOTE.—The Reverend Edward S. Grzeskowiak, author of the following article, is a teacher at Nazareth Hall prepartory seminary, Arden Hills, and a member of Governor Freeman's human rights commission and chairman of its subcommittee on migratory farmworkers.)

When most people hear the word "migrate" they probably think of the seasonal migration of birds. However, families also migrate with the seasons. They are the thousands of Mexican migrant farmworkers.

But there is tragedy in their migration, because it is stark economic necessity that makes them migrate. There is further tragedy in the fact that all too often they and their problems are looked upon as hardly more than a set of impersonal and cold statistics.

These migrant families, for the most part, come from Texas, where there are not enough jobs to go around. Though of Mexican ancestry, they are citizens of the United States like the rest of us.

Last spring and summer, close to 7,900 Mexican migrants came to Minnesota. They consisted of 5,260 workers, 1,340 children between 6 and 14, and 1,330 children under 6. The number expected this year is about the same, probably a little less.

They work in a surprisingly large number of field crops in our State. By far the majority thin and weed the sugar beet fields in the Red River Valley, principally during the months of June and July.

A good number harvest the asparagus crop in southern Minnesota during the months of May and June. A small percentage work in such crops as potatoes, onions, cabbage, green beans, and soybeans.

Their contribution to our crops is often referred to as stoop labor. They do not have a special love or aptitude for this type of work. They simply are resigned to taking whatever job they can get.

Most migrant farmworkers remain in any one State for a relatively short period of time only. For this reason they often are not qualified to receive welfare aid during jobless months. Others feel compelled by a sense of independence not to seek aid.

They are excluded from coverage by unemployment compensation laws. So the urge to keep body and soul together makes them take to the roads in the spring and travel from job to job as long as they last.

Migrants in desperation have said to me, "Padre, we'll work even for 50 cents an hour, just so we get some work." Sometimes they work for less.

The Mexican migrants' need for work is matched by the growers' need for fieldworkers. The crops must be harvested when they are ready. Sometimes a delay of only 1 day could mean an economic loss to farmers.

Dependable workers must be available when they are needed. To be sure that the work is done on time, growers like to hire families. They are more stable than individuals and are less likely to walk off a job.

There is another advantage in hiring families. Usually there are several people in a family capable of doing field work. Sometimes the worker's age might be as low as 10 years. Several workers in a family makes possible a relatively high family hourly wage, even though the individual hourly wage might be very low.

It is very difficult to get facts on wages. Some growers allege that migrant families earn a lot of money. If this is true, their number is very small. I have talked to many migrants and have yet to meet a family or individual whose income could be considered high by any stretch of the imagination.

Beet workers, for example, get paid by the acre. It amounts to about $22 per acre. The work normally consist of one thinning and two weeding operations. When the fields are easy to work this pay could average to a fairly decent hourly wage, though not near as good as that enjoyed by factory workers.

When the fields are difficult to work, the hourly wage might average as low as 40 cents. It is estimated that about 60 cents of the cost of a 100-pound bag of sugar goes to pay the wages of migrant beet workers.

The average annual income of Mexican migrant families is approximately $1,000. This is not very much when one realizes that families of from 6 to 10 children are common. For some families the income is so inadequate that they do not send their children to school at all during the year because they cannot afford the necessary clothing.

Families are known to leave Minnesota with unpaid bills. When confronted with the question "Why?" they usually answer, "Well, Padre, our earnings are so small, and if we paid those bills we wouldn't have anything left. So, we just skipped." The complaint about inadequate wages is a frequent one.

It must be emphasized that wages paid migrants in Minnesota are no worse than those migrants receive in other States. Quite probably in some instances they are even better. The shocking truth is that their wages are disgracefully low throughout the entire Nation.

Migrant farmworkers are specificially excluded from coverage under minimum wage laws, both State and Federal.

Should an individual State extend this coverage to migrant farmworkers, it would well work to the economic hardship of growers within the State who would have to compete for markets with growers from other States where minimum wage laws would not apply. Effective wage improvements will have to be nationwide in scope.

Migrant farmworkers help produce consumer products that flow into interstate commerce. Unlike other workers who produce consumer goods for interstate commerce, they are excluded from coverage under the Federal minimum wage law—a stautory situation that defies both logic and justice.

The present Secretary of Labor has taken the firm stand that migrant farmworkers ought to be covered by the Federal minimum wage law. Most members of Minnesota's congressional delegation have taken the same stand. Perhaps the strongest organized opposition to this important progressive step comes from the Farm Bureau.

The problem of low wages is further aggravated by the fact that migrant farmworkers have no voice in negotiating working agreements with their employers. Working agreements, oral or written, are unilateral. They are drawn up by the growers and agreed to by the workers.

Actually the migrants are afraid to disagree for fear the would be sent home as troublemakers. They know what it means to be blackballed. There is no better argument for sound and strong unionism than the economic plight of migrant farmworkers.

Our Mexican migrant families get so little. They have a God-given right to enough. They certainly can and ought to get more.

Probably St. James had them in mind when he wrote, "Mark my words: the wages of which you have defrauded the workmen who mowed your fields cry aloud, and the cries of the reapers have reached the ears of the Lord of Hosts."

Conservation of America's Forest

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. MUNDT. Mr. President, conservation of our natural resources—our water, our soil, our trees—has long been the enviable goal of mankind as it attempts to prepare the great gifts of nature for future generations.

The contributions toward conservation are continually on the increase in this Nation as more and more people come to realize that these gifts of nature are valuable heritages which must be both protected and enhanced so that the Americans of tomorrow will live in a world immeasurably better.

Recognition of the need to preserve and protect one such resource—our vast forests—has been given in an essay written by one of our South Dakota Indian high school seniors, a young man attending the Oglala Community School on the Pine Ridge Indian Reservation. He is Harry Eagle Bull.

Harry Eagle Bull's essay was printed in a recent edition of the Shannon County News, one of our fine western South Dakota weekly newspapers.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD this particularly timely essay by Harry Eagle Bull on conservation of our forests.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

CONSERVATION OF AMERICA'S FOREST

(The following essay was written by Harry Eagle Bull, age 19, a senior at the Oglala Community School:)

Next to the earth itself the forest is man's most useful servant. The word "forest" comes from the Latin words "foris," meaning "out of doors."

Forest lands occupy nearly one-third of the United States, or about 630 million acres. About 462 million acres of this amount are suited to the production of commercial timber. The remaining 168 million acres are classed as noncommercial. More than 17 million tons of paper and cardboard are produced from the commercial forest each year. Besides the paper, wood is used in the production of plastics, for rayon, for alcohol, and countless other products.

Much of our present forest area has been culled, cut over, or mismanaged. About 73 million acres of the commercial timber have been wastefully lumbered, until now, they produce very little for industry. Another 174 million acres have been stripped of all trees of sawmill size, but still furnish pulpwood and other products. The remaining 215 million acres still contain more than 1,000 million board feet of sawmill-size timber, but we are at present using up or destroying our forests more rapidly than they are being replenished or replaced.

The forest has many enemies, but its worst enemy is fire. Each year, millions of acres of timber worth tens of millions of dollars are destroyed by fire. About nine-tenths of these fires are man-made; they are caused by carelessly dropped matches and burning cigarettes and neglected campfires. The other one-tenth is caused by lightning.

Insects are another deadly enemy of the forest. Some insects eat leaves, others bore into the tree trunks, some kill the shoots at the top of the trees, while others attack the roots. Millions of dollars are spent each year fighting these pests. Biologists and other research scientists work the year round searching for the cause of insect infestation and for ways to cure the infestation once it has reached a serious stage.

Since it takes from 50 to 100 years for a tree to grow to lumbering size, our forests must be carefully preserved. Therefore only selected trees should be cut and other trees should be systematically planted to take their places.

The conservation of forests in America had its birth in 1873 when the rapid destruction of the forest was first realized. As a result, Congress passed a law establishing the Bureau of Forestry under the Department of Agriculture in 1891. This act empowered the President the right to set aside forest areas as national forest reserves. In 1905, under the administration of Theodore Roosevelt, this agency was reorganized as the Forest Service with greatly enlarged powers.

The Government hires and trains forest rangers to guard and protect the forest from all hazards. It is their duty to watch for fires and report them as fast as they can. Recently, both airplanes and helicopters have proven very useful in locating and combating forest fires.

Besides furnishing lumber and many other products the forests help improve our water supply and reduce erosion. In their unending search for water, the roots pierce otherwise impenetrable clays and shales, thus making the clays and shales permeable to water and increasing the ground water reservoir of that particular area. The roots of the trees hold back valuable soil which otherwise may be washed away in excessive erosion. The forest also serves as a protection against floods. The leaves and needles that the trees shed each year decompose into a carpet of humus that greatly adds to the fertility of the soil. This carpet of humus also acts as a natural blotter and soaks up the heavy rains and melting snows. The forest is the home of many wild animals as well as a grazing area for domesticated animals. Trees serve as excellent windbreaks and they also add to the beauty of parks and other recreational area.

If we are to continue to waste our forests as we have done in the past, we will soon be in serious economic trouble. Our present-day standard of civilization might never have been attained without the aid of the forests and the services that they render.

Dr. Mason W. Gross

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. WILLIAMS of New Jersey. Mr. President, May 6, 1959, marked an auspicious occasion in New Jersey, the inauguration of Dr. Mason Welch Gross as the 16th president of Rutgers University.

A well-known, widely respected public figure, Dr. Gross brings to his task a wealth of experience and a variety of talents which gives promise that he will do his part to keep the university in the forefront of the educational world.

We are proud of this selection. We look forward with anticipation to the new areas of excitement he plans for the university. We know that a bright future is ahead for Rutgers under the guidance of its great new president.

I ask unanimous consent to have four articles printed in the Appendix of the RECORD—an article from the Paterson Evening News of Thursday, May 7, 1959, entitled "Rutgers New President Scholar-Teacher"; an editorial from the Newark Evening News of May 7 entitled "Areas of Excitement"; an editorial from the Asbury Park Evening Press of May 8 entitled "An Auspicious Start"; and an editorial from the Passaic Herald-News of May 9, 1959, entitled "Studying Non-Western Cultures."

There being no objection, the articles and editorials were ordered to be printed in the RECORD, as follows:

RUTGERS NEW PRESIDENT SCHOLAR-TEACHER

NEW BRUNSWICK.—The State university's new president—formally inaugurated in colorful ceremonies yesterday—doesn't fit anyone's stereotype of philosopher, professor or top executive of one of the Nation's major universities. Yet he is all of these.

Dr. Mason Welch Gross isn't the tweedy pipe-smoking type, nobody ever accuses him of being absentminded, and, despite the fact that he runs an institution with an annual budget of well over $20 million he's no maneating, button-pushing, high-pressure executive either.

Rutgers new president, 16th in a line that stretches back to 1766, is first a scholar and a teacher. But teaching, which he loves and which his students say he does so well, has been squeezed from his schedule as his administrative duties have grown, first as an assistant dean, then as provost. This year he teaches but a single couse—a philosophy section for upper classmen.

Dr. Gross has all the qualifications to make a first-class teacher. He studied at Aberdeen and Cambridge, and won his doctorate at Harvard. He has the gift of precise word and the enthusiasm for his subject that keeps his lectures swift paced and lively.

But these qualifications along with a keen mind and an inexhaustible capacity for work are also part of the specifications for the head of a complex university, and New Jersey's State University with its variety of colleges, schools, research units and extension divisions certainly fills that description.

While teaching and taking on an increasing load of administrative duties through the years, Dr. Gross has handled a good many other activities. An enthusiastic amateur oarsman, he has coached several crews, both at Rutgers and Cambridge. A favorite diversion on one of the rare afternoons when his schedule permits, is to follow the Scarlet crews in the coaching launch.

One of New Jersey's widely known public figures, Rutgers' new president has served a wide variety of organizations, from the State mediation board of which he is chairman, to the Middlesex General Hospital of which he is the immediate past president.

Dr. Gross was the chairman of the joint hospital fund drive in which St. Peter's and Middlesex Hospitals raised funds for expansion of New Brunswick area hospital facilities. Honorary cochairmen in that drive were Bishop George W. Ahr and Gen. Robert W. Johnson.

Over the past few years he has spoken on education and its current and future problems in almost every community in the State—not forgetting his present hometown of Rumson, where he was an active figure in a drive for a school bond issue.

The proposed $66,800,000 bond issue to provide funds for public college facilities is now a top priority with Rutgers' new president. So much so that he wryly asks "What on earth will I talk about after November 3?"

AREAS OF EXCITEMENT

Study of non-Western culture is proposed for Rutgers University by Dr. Mason W. Gross, its newly inaugurated president, the implication certainly not being that we know all we need to know about the one we have.

This will involve not only emphasis on languages such as Chinese, Hindustani, Arabic, and Russian, but also a resurgence of interest in Greek and Latin. It will involve ever so many other things, including, as Dr. Gross pointed out in his inaugural address, money.

Out of the "new areas of * * * excitement" he plans for Rutgers, the new president hopes to witness the emergence of limitless vistas of intellectual development, more understanding of the peoples and forces that affect our destiny, and a rekindling of the spirit of search and controversy. All to the accompaniment of substantial progress toward world freedom which Dr. Gross calls the profoundest aspiration of mankind.

Dr. Gross has not outlined all of his plans for Rutgers in the years immediately ahead. He has stirred academic imaginations, however, and has invited the conclusion that whatever he has in mind is going to be ambitious and challenging.

[From the Asbury Park Evening Press, May 8, 1959]

AN AUSPICIOUS START

When Mason Welch Gross became the 16th president of Rutgers University a day or so ago he made it clear that he will do his part to see that Rutgers keeps in the forefront of the educational world. Without derogating classical educational concepts he demonstrated very forcibly that only as their application is brought abreast of modern times can a university meet today's challenge.

The nations of the eastern world are awakening. Their resources of manpower and materials are stupendous. And they are learning the tricks of western organizational methods and applying them with incredible speed. We can no longer ignore them as backward countries looking longingly to us for leadership. As President Gross said so

succinctly, the white man's burden is no longer management; it involves cooperation. It involves a realization of the Far Eastern facts of life. And one of those facts tells us that no longer are oriental people uniformly ignorant and uniformly governed by medieval war lords who still consult astrologers and soothsayers. Far from it. The oriental leaders who are emerging today are trained in modern science and modern techniques of mass communication. It is not well to underrate them.

Dr. Gross well pointed to the study of language as an easily understood example of changing educational demands. There was a time when western civilization revolved about Latin and Greek. Without these ancient languages no man could hope to be called a scholar. A great change came about in university life when modern languages were given a place of importance and German, and French, and Italian came into their own. A new phase is at hand. The East demands consideration and the greatest barrier thrown against the West is the language barrier. An educational system that has for generations been centered on western civilization must now take account of stock and devote some time to eastern ways. This Dr. Gross promises Rutgers will do.

The accession of Dr. Gross to the presidency of Rutgers has met with acclaim from every friend of that institution of learning. Perhaps the applause from Monmouth County has seemed a bit louder than elsewhere because Dr. Gross' home is here. But regardless of region. Dr. Gross' inaugural address will meet with approval. His administration has begun most auspiciously.

STUDYING NON-WESTERN CULTURES

At his inauguration as the 16th president of Rutgers, Dr. Mason W. Gross suggested that the university introduce a program of studies in non-Western cultures. The ways of life in Africa and Asia puzzle us and the reactions of Asians and Africans baffle us, Dr. Gross said. Trying to interpret what is happening on the two continents in the light of our ideas and attitudes is often hopeless. A study of foreign systems of thought, expression and ideas would add intellectual vigor to any campus. It would also, Dr. Gross feels, prepare students for fascinating careers.

A large portion of the world's population speak Chinese, Russian, Japanese, Arabic and Hindustani. Rutgers now teaches only Russian. A curriculum expansion to include others would cost money, but it would pay enormous dividends in enriching students' education and opportunities.

The basic aim of education is freedom of many kinds. One of these Dr. Gross identified as "the power of the intellect which comes about when ignorance, superstition and fear yield to clear and adequate ideas." Dr. Gross has made an excellent suggestion. It is to be hoped that the State university can find a way to implement it.

Four Americans Decorated by Portuguese Government

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. BEALL. Mr. President, I should like to refer to the kind, gracious action of his Excellency, Ambassador Luis Esteves Fernandes, of Portugal, in investing with the insignia of the Military Order of Christ four U.S. leaders, namely, former Speaker of the U.S. House of Representatives Joseph W. Martin, Jr., who was made a Grand Officer in the Order; former Representative James T. Patterson, of Connecticut; Mr. Charles McKnight Parr, author of "So Noble a Captain," the biography of the Portuguese circumnavigator of the globe, Ferdinand Magellan; and Dr. Joseph F. Thorning, associate editor of "World Affairs," one of my Maryland friends. The last three mentioned were made commanders in the order. The ceremonies, presided over by Ambassador Esteves Fernandes, one of the ablest diplomats in Washington, took place in the Portuguese Embassy on May 8, 1959. The Baltimore News-Post, Baltimore, Md., published a dispatch from the Hearst Headline Service on Saturday, May 9, 1959.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Baltimore News-Post of May 9, 1959]

PORTUGUESE DECORATE FATHER THORNING

WASHINGTON.—The Rev. Dr. Joseph F. Thorning, pastor of historic St. Joseph's Church, Carrollton Manor, received Portugal's highest decoration here yesterday.

Ambassador Luis Esteves Fernandes bestowed the Military Order of Christ with the rank of commander, on the specialist on inter-American affairs.

Others awarded decorations at ceremonies in the Portuguese Embassy include former House Speaker Joseph W. Martin, Jr., Republican, Massachusetts, and former Representative James T. Patterson, Republican, Connecticut.

Father Thorning was praised for his splendid achievements in the promotion of friendship between Portugal and Brazil and for his contributions to the knowledge of Luso-Brazilian culture in the United States.

Speaking of Unions

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. McNAMARA. Mr. President, in a special section in Sunday's New York Times commemorating the International Ladies Garment Workers Union appeared an article by Harry Golden, author of the best-selling book, "Only in America."

Today, when it is popular in some circles to demean the entire labor movement for the sins of a few, Mr. Golden takes a refreshing view of labor unions and their beneficial impact on America.

I ask unanimous consent that the article by Mr. Golden be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, May 17, 1959.]

SPEAKING OF UNIONS

(By Harry Golden)

When I was a boy my older sister worked in a sewing shop on Green Street in New York City. She worked 9 hours a day, 6 days a week, and earned an average weekly wage of $14. I visited her shop often on errands such as bringing her an umbrella when a heavy rainstorm blew up late in the afternoon.

I saw the hundreds of her fellowworkers performing various operations in the manufacture of ladies' petticoats and other undergarments. It was a time when the employer had not yet learned that his best customers were sitting right there in his shop.

Today the girls in the organized sewing shops spend more on lipstick alone than my sister and her coworkers of 1915 were able to spend on their entire wardrobes.

In those days when the teacher asked a boy what his father did for a living, the boy answered without humor or guile: "My father is a striker." Everybody's father was a striker, which brings me down to the present time in the South. When I see the mill workers in my State of North Carolina driving to work in automobiles from homes with refrigerators, TV, and electric washing machines; when I see their wives going to garden clubs and beauty parlors, I always say to myself, "Little do you know how much of this you owe to those pioneer strikers of 45 years ago."

And the most amazing development of all is the fact that some of the important advantages of belonging to a union trickle down to the hundreds of thousands of unorganized workers who pay no dues.

The whole business of understanding unions is complicated by a whole mess of fixed ideas that twist reality into knots.

For instance, this perilous American decade attempts to measure patriotism by the degree of hatred a man could mount against the Communists or the extent to which the Communists claimed they hated him. But that this "test" involved the complete renunciation of logic is clearly evident by the fact that trade unionism was denied the advantages of this fascinating horror. For there is no established institution in our western culture which the Communists hate more than organized labor.

The Communists do not let generals or admirals or schoolteachers or novelists or millionaires excite them, but they cannot abide trade unionists. This hatred reaches as far back as Karl Marx who did not expect that trade unions would help at all in the revolution he wanted to sweep over Europe. Lenin actively worked against and inveighed against all unions in his pamphlets. He warned that they were the supreme danger and had to be opposed every inch of the way.

The Communists have always been kinder to the proprietors. If you want a revolution, you've got to have proprietors to revolt against; and organized labor fills the vacuum between them and their target.

When Roosevelt and Churchill visited Stalin during the war, accompanied by the State Department, Harvard, Yale, and Princeton diplomats and Oxford and Eton careerists, everybody joked and sang and Stalin only grumbled when Churchill asked him about the slaughter of several million kulaks. There was a lot of humor at the party. When the Russian agricultural experts came over here, they talked to prosperous Iowa farmers and to the manufacturers of farm implements and to granary operators. Anastas Mikoyan got along with millionaires and managers. The cocktail hour was highly civilized.

But no Communists ever want to talk to a shop deputy. When Communists go back-

stage the last person they want to talk to is the Equity representative. They don't want to banter and trade jokes with George Meany or David Dubinsky. The proprietors and the managers are toys in their hands, but the union men are cobras. The unionists will not talk to the Russians about coexistent foreign trade or mutual scientific advancement. The unionists want to talk about political freedom, and the right of workers to organize, strike, vote, change jobs as they see fit, and go where they please within their country; and this the Communists have not, will not, and dare not discuss.

Of course we hear things about unions today which would indicate that many people longed for the days when the Governor could call out the militia and chase strikers off into the hills. But even the most medieval manager doesn't want that day again. He's done too well since men and women organized themselves into unions. We forget too often the terribly precarious position of the employer himself in the brutal industrial jungle before the labor unions. We forget too often that organized labor increased the profits for free enterprise in the same proportion that they raised the wages of their workers. But unions could not do what mankind itself has not yet been able to achieve, to remove from the hearts of some men a misdirected drive for power for the sake of power itself, and for the sake of greed and a perverted need for comfort.

And what is obvious from the gossip is that we do not always understand mankind, and unions we usually understand least.

Is the Post Office Department To Be Lord High Censor?

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. PROXMIRE. Mr. President, the Capital Times, of Madison, is a fighting champion of freedom of speech and press. I ask unanimous consent that a hard-hitting editorial from this paper denouncing Post Office censorship of literary work be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IS THE POST OFFICE DEPARTMENT TO BE LORD HIGH CENSOR?

One would think from the clamor for a 5-cent stamp that the Post Office Department has its hands full with the job of delivering the mail without wasting time and money guarding the people's morals.

The Federal laws against obscenity, like other criminal laws, are supposed to be enforced by the Justice Department, but Postmaster General Summerfield has different ideas. The Post Office has impounded 24 cartons of the late D. H. Lawrence's "Lady Chatterly's Lover," a book that has become widely read because of the silly efforts to keep it from being read at all.

Although there are 30,000 copies of this edition of the book already on the stands for sale, the Post Office is now going to put the book—written more than a quarter of a century ago—on trial. The result of the publicity will be that the 30,000 will be immediately gobbled up by people who otherwise wouldn't be a bit interested.

Perhaps Congress should investigate to see if this isn't a plot to sell some copies of a book which has been forgotten since the last uproar about its sale.

It is of little importance to the Post Office how long a book has been around when its censors are looking for something to pounce on. Not long ago they swooped on Aristophane's "Lysistrata."

The censors in their enthusiasm have warned the New Yorker magazine that if it accepts book club advertising for the Lawrence book it will run the risk of not being accepted for mailing.

This comes dangerously near to threatening loss of mailing privileges for even mentioning the name of the book.

Censorship is always a dangerous business. It arbitrarily gives to the censoring authority the right to substitute his tastes, values and judgments for those of his fellow citizens. This is not in consonance with the principles of a free society.

And in an age when the mails are cluttered with trash, when you can't turn on a TV set without witnessing a display of sex, brutality, and blood-letting, it is sheer absurdity for the Post Office to be ferreting out for censorship literary contributions that will, at best, be read by only those few who can tear themselves away from TV thrillers.

Tribute by Listen Magazine to Ethical Standards of Christian Science Monitor

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. NEUBERGER. Mr. President, in an article written by Duane Valentry, the May–June issue of Listen magazine has paid tribute to the Christian Science Monitor under its present able editor, Erwin D. Canham.

The article particularly emphasizes the influential role of the Christian Science Monitor in promoting temperance and sobriety throughout the United States. The title of the article is "Crusading Newspaper," and it stresses the high ethical standards which have long symbolized and motivated the Christian Science Monitor.

Listen magazine itself has often been a force for national good in the whole effort to further temperance and alcohol education, and it is significant that Listen now salutes the efforts of the Christian Science Monitor in the same field.

In addition to its temperance leadership, the Christian Science Monitor also is known for many thoughtful and informative articles in such realms as economics, national elections, foreign affairs and international diplomacy. The fairness and objective reporting of the Monitor are heralded often by leading members of both great political parties in the United States.

I ask unanimous consent that the article about the Christian Science Monitor, published in Listen magazine for May–June 1959, be printed in the Appendix of the RECORD. I also ask consent to include an eloquent statement about Monitor policy in the field of temperance, written by the distinguished editor of the Christian Science Monitor, Erwin D. Canham.

There being no objection the statement and article were ordered to be printed in the RECORD, as follows:

CRUSADING NEWSPAPER

(By Duane Valentry)

(The Christian Science Monitor has regarded alcoholism as a profound social evil, and has fought it strenuously down through the half century.

(The phrase "Commitment to Freedom," which is the title of the book I have recently written about the Monitor, epitomizes our attitude. We believe man must preserve and live his birthright of freedom by refraining from addictions which enslave and corrode. This is the personal view of Christian Scientists as well as the deep editorial conviction of the Monitor. Total freedom is our goal.)—Erwin D. Canham, editor.

What has happened in the United States and the rest of the world in the past 5 decades? What progress has been made in the age-old struggle of man toward the good in life? What part has alcohol played in the human story over this eventful period?

Answering these questions and telling the story behind the news has been, and is, the chore of the Christian Science Monitor, the international daily newspaper founded by a woman, Mary Baker Eddy, in 1908.

Leading the field of those newspapers refusing to accept liquor advertising, the Monitor has long been recognized and frequently honored as an educational medium of great influence. It is a voluble sentinel in keeping the public informed on vital issues, not the least of which has been the liquor scene.

Few indeed are the aspects of this subject the paper hasn't covered with the thoroughness for which it is famous. For example, its "Men of Distinction" editorials appearing at intervals over a decade, commented on tragic results of drinking, as brought out in the news—results which liquor ads using the same phrase failed to mention. When liquor companies dropped their "Men of Distinction" advertising, the Monitor also dropped its much-quoted and provocative takeoffs.

"Report on Liquor—What Are We Doing?"—a series of 30 articles—ran in the paper's pages in 1955 and created much favorable comment, as did "Abstinence and Alcoholism," an earlier series on this pertinent subject.

One of the most widely read newspapers in the world, the Monitor has hammered home the importance of alcohol education to counteract increased liquor advertising and social pressures to drink.

Monitor reporters have gone behind the scenes in picturing juveniles in trouble to point out how frequently such troubles began with parental use of liquor in the home. "Teen Crimes Linked to Parent Drinking" pointed out that although court records amply showed the coincidence of youth crime and home drinking, the problem needs additional study to lay the basis for stricter law enforcement.

Need for action on the part of churches to combat drinking pressures was brought out in another feature, quoting leaders of various denominations on the subject.

"Some of us have labored long and hard across the years to rehabilitate alcoholics, the victims of acute alcoholism," said Methodist Bishop John Wesley Lord. "It seems rather stupid to spend hours mopping up the water and to be unconcerned about the open and running faucet."

Dr. Myron W. Powell, of the Congregational Church, warned, "One of the worst elements in the present situation in respect to social drinking is the practical loss of a per-

son's inherent right not to drink if he does not care to do so."

Many such articles have gained even wider circulation by being reprinted by groups unconnected with the Christian Science Church, as well as in other newspapers.

On its part, the Monitor quotes from many sources in its "Mirror of World Opinion," bringing to worldwide attention local thinking on important issues, including drinking. The Voice column reprinted the Chapel Hill (N.C.) Weekly's comment on the seeming inability of many newspapers because of liquor advertising to have "the independent attitude necessary in matters of controversy about Government policy in respect to liquor that they certainly ought to have. Since the press has shown itself determined to persist in this shameful alliance with the liquor business, then Congress ought to end it by a statute outlawing the passage of liquor advertising through the mails."

The liquor seller has often been the target for editorial blasts from the Monitor: "Many courts are more than lenient with drunken drivers even when they kill innocent people. They act as if the drink were the culprit. Of course, it pays no penalty—or damages. Justice requires that this gap be closed. It can be if more responsibility is placed from one side on the drinker and from the other on those who promote his drinking."

The use of women as liquor sales promoters brought this Monitor comment:

"This annoucement should arouse a public too long apathetic toward the devastating inroads alcohol is making on American society. Women's clubs invite representatives of the National Council on Alcoholism to speak to them and describe its projects for attempting to rescue alcoholics. Will they lend themselves to this campaign to make more alcoholics to be rescued? Will they also open their doors to women representing the distillers who are pouring millions of dollars into advertising to make drinking attractive to men, young people, and now to the mother of the family?"

Wide coverage has been given by the Monitor to the question of drinking on airplanes and its relation to public safety. In a special interview Rowland Quinn, Jr., president of the Air Line Stewards and Stewardesses Association, was asked whether he felt that the serving of liquor is a motive for passengers choosing particular airlines, thus justifying airline claims of its need in order to meet competition.

"People don't fly because they can drink," he replied. "They fly because of the convenience of getting from one place to another. If liquor were banned from the airways, I don't think there would be a single passenger who would choose another mode of transportation—just so he could drink."

In his book "Commitment to Freedom," Erwin Canham, longtime Monitor editor, tells its unique story. "Christian Scientists do not smoke, nor do they drink alcoholic stimulants," he explains. "These concepts are part of their religious conviction—which is to maintain man's freedom from enslavement to any false appetite. Addiction, especially to habits which also become social evils, is contrary to the basic teachings of Christian Science."

Mary Baker Eddy, founder of Christian Science, wrote in her book "Miscellaneous Writings":

"Strong drink is unquestionably an evil, and evil cannot be used temperately; its slightest use is abuse; hence the only temperance is total abstinence." Members of the Christian Science churches therefore are abstainers.

Christian Science Monitor Youth Forums, with a worldwide membership, play an important part in the movement's alcohol education work and offer opportunity for social and cultural activities as well as congenial companionship without recourse to smoking or drinking. These well-attended groups, organized to study the purpose and international scope of the newspaper for which they are named, are a vital counteracting influence to thousands of young people, helping them better to meet almost overwhelming pressures of modern society.

To the Christian Science Monitor, this phase of alcohol education is but another weapon in its unceasing battle against liquor, a warfare it plans to continue as long as the need exists.

Public Schools for Training Indian Youth

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. LANGER. Mr. President, the Honorable John Hart, who for a number of years has been the outstanding Indian commissioner of State Indian Commissions, has sent me an article printed in the Minot Daily News, May 6, 1959, which states "Bureau Aim: Public Schools for Training Indian Youth."

I ask unanimous consent that this very informative article on educating Indian children be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUREAU AIM—PUBLIC SCHOOLS FOR TRAINING INDIAN YOUTH

A release just issued by the Bureau of Indian Affairs in Washington states:

"One of the basic educational aims of the Bureau of Indian Affairs is to provide for the enrollment of Indian children in public schools rather than in Federal Indian schools wherever this can be accomplished."

The release states further that under provisions of a 1953 law, a total of 43 school properties in 12 States have so far been transferred to local school districts.

Eight of the transfers are in Oklahoma, seven in Minnesota, seven in Montana, five in Kansas, four each in New Mexico and Washington, two each in Arizona and Wisconsin, one each in Idaho, North Carolina, South Dakota, and Wyoming.

In addition, the release stated, "Legislation that would facilitate the transfer of surplus Federal Indian school properties to local public school districts, has been recommended to Congress" by the Department of the Interior.

The recommendation, it is indicated, is that limitations of the 1953 law be liberalized. A limitation which has seemingly served no useful purpose, it is stated, "is one which provides no property of more than 20 acres could be transferred in a single conveyance."

In North Dakota, the Bureau of Indian Affairs is building a new Federal Indian school at Fort Totten, and has taken steps toward construction of a large, new Federal Indian school at Belcourt.

Two public school districts in the vicinity of the Turtle Mountain Reservation (where Belcourt is the center) have asked the Bureau for commitments that construction of the new Federal school will not affect Indian pupil enrollments in their public schools adversely.

One of these districts, Dunseith, is seeking Federal construction assistance from the Bureau, to enlarge its plant so that more Indian pupils can be accommodated.

The public school at St. John has pointed out that it has room to accommodate more Indian pupils, and is concerned that a new Federal school might take away some of its present pupils.

Tribute to E. L. Wall, Texas Reporter

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. YARBOROUGH. Mr. President, E. L. Wall, a correspondent for the Houston (Tex.) Chronicle in the State capitol at Austin, has seen a great deal of State and national history evolve in his more than 40 years as a newspaperman.

As a reporter, editor, and political writer he has told of many of these events himself. His career is a colorful one which embraces all types of news work. For the past 12 years he has been a respected member of the press corps at the Texas State capitol, a position he has won by his fair and impartial reporting.

Mr. President, I request unanimous consent to have printed in the Appendix of the RECORD an article by Zarko Franks which appeared in a recent issue of the Chronicle under the heading, "Back of the By-Lines—He Saw Klan Defied, Maceo Empire Forged."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BACK OF THE BYLINES—HE SAW KLAN DEFIED, MACEO EMPIRE FORGED

(By Zarko Franks)

A freshman leigslator one day saw E. L. Wall for the first time on the capitol steps in Austin.

"Who is that man," asked the freshman of a colleague, "a career diplomat?"

Ethalmore L. (Dick) Wall, an Austin bureau correspondent for the Chronicle, would smile at this story.

The people who know him wouldn't. They'd accept it as an honest reaction of a stranger.

A confidante once said of him:

"Dick Wall is one of the few newsmen I know who'd feel at ease in tails and black tie at an ambassador's ball. He has that rare quality: built-in-poise."

THREE-PART CAREER

Wall's 40-odd-year newspaper career can be divided into three parts: reporter, editor, and political writer.

Each is a distinct skill. Few newsmen possess the raw materials—ability, imagination, judgment, and temperament—needed to make the switches successfully.

Wall, a blackland farmer's son from Ellis County, has been a Chronicle Austin bureau correspondent for 12 years.

COVERED ISLE

Prior to joining the Chronicle, he had been, in succession, city editor, editorial writer, and managing editor of the Galveston Daily News and Galveston Tribune.

Perhaps the most fascinating part of his newspaper background he owes to the island.

He was there when a fighting Catholic priest named James S. Kirwin defied the Ku Klux Klan.

He was there when two Sicilian-born brothers named Sam and Rose Maceo forged a multi-million-dollar gambling and night club empire.

SOUTHERN METHODIST UNIVERSITY EX-STUDENT

His news career, however, started in Dallas while he was attending Southern Methodist University.

"An oldtime reporter who decided to go to college would regale me with glamorous stories about the newspaper business," recalls Wall. "Most of his stories probably were lies. However, I took a job with the old Dallas Dispatch as campus correspondent."

Dallas was a four-paper town in those days. The afternoon papers were "very sensational," he says.

Every woman who killed a man was described as a "beautiful viricide." The prose was perhaps a hot purple, but the presses roared with extras and America was talking herself into going to war.

COURTROOM SHOOTING

Young Dick Wall, reporter, was in a Dallas district courtroom one day when a Negro, accused of killing his white landlord, was shot by the victim's son. The Negro lived to stand trial later and hear himself sentenced to hang.

His news career was interrupted by military service in World War I. He was discharged as a second lieutenant and returned to the Dallas Dispatch.

MOVED TO ISLE

In 1920 he asked to be transferred to the Galveston Daily News, then owned by the Belo interests. He got his wish.

It was in Galveston that he moved up the executive ladder to managing editor.

He resigned to join the Chronicle Austin bureau in 1947.

Today, at 65, Walls says:

"I've always enjoyed the writing end of news."

As for political reporting, he says:

"I've always been interested in the process of government."

POLITICAL STORIES

He's covered every State Democratic convention during the past 12 years except the one last year, "when I covered the Republicans for the first time."

His top political stories include the birth of the Dixiecrat movement in 1948 at the Southern Governors' conference in Asheville, N.C., and the National Governors' conference here in 1952, when the stage was set for Eisenhower's nomination.

He says he believes the "quality of our men in Government is a lot better than most citizens think it is."

He currently is president of the Austin Headliners Club.

He and his wife, Anne, live in Austin.

Private Colleges

EXTENSION OF REMARKS

OF

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. McCARTHY. Mr. President, the private colleges and universities make a great contribution to our Nation. In the past a majority of college graduates were educated in private institutions, and such colleges still train a large percentage of college students.

Like other institutions in this period of social and economic change, the private colleges face serious problems in the immediate future. Since they are supported principally by private means, they are not the direct concern of government; but indirectly their welfare is important to government. They contribute a distinct quality to the cultural and moral life of the Nation. The tax-load on citizens would be much greater if all college education had to be supported from tax funds.

Macalester College, located in St. Paul, is typical of the private liberal arts colleges of Minnesota. Recently the members of the board of trustees and the faculty held a little summit conference to discuss the future of the college. The realistic way they analyzed their problems and the questions they raised will be of interest, I believe, to all Members of Congress.

I ask unanimous consent to have an article dealing with their conference printed in the Appendix of the RECORD. It was written by Wilbur Elston of the Minneapolis Tribune staff and appeared in the May 13, 1959, issue of the Tribune.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FACULTIES, FINANCES, AND GROWTH POSE PRIVATE COLLEGE PROBLEMS

(By Wilbur Elston)

What is the future of the privately supported liberal arts college?

Administrative officers, trustees, faculty members, alumni, students, and others interested are pondering this question in all parts of the Nation today. It is a question of importance to the general public as well.

Many liberal arts colleges face a crisis: They are squeezed between limited financial resources and the necessity for substantial increases in faculty salaries, as Clarence H. Faust, president of the Fund for the Advancement of Education, points out.

But they face many other problems, too. It was to acquaint themselves with the problems—and to start their search for answers—that 31 members of the Macalester College board of trustees, plus representatives of the college administration and faculty, held their own "little summit" conference last week at Stillwater.

Their first discussions centered around the educational programs, the financial structure, and the peripheral activities—such as Red Cross, community chest, and other civic campaigns—that now characterize the St. Paul college.

Then the group plunged into a discussion of the alternatives for a college such as Macalester.

Should it try to become more of a residential college—such as Amherst, Hamilton, Haverford, Williams, and Wooster—and put greater stress on a liberal arts program?

Should it seek to become a liberal arts college with professional sectors such as Colgate, Dartmouth, Denison, Lafayette, and Swarthmore?

Or should it emphasize its development as a practical liberal arts college with a strong emphasis on community service?

On one point the conference quickly agreed. It was that regardless of what kind of a college Macalester is to become in the future, it must continue its "pursuit of excellence."

Yet even this pursuit raises new questions. One way for a college to improve itself is to increase the percentages of faculty members possessing doctorates. Yet the shortage of college teachers is working against this trend on a national basis.

Throughout the Nation, 40 percent of the college teachers were Ph.D.s in 1953–54. But this dropped to 28 percent in 1954–55; to 26 percent in 1955–56, and to 23 percent in 1956–57.

Macalester rates well above the national averages, with 34 percent of its full-time faculty members having Ph.D.s, but the national figures show difficulties any college will face in improving the ratio of doctorates in its faculty.

What about size? What is happening to liberal arts college enrollment? What will happen in the future?

College enrollment in the United States rose from 214,000 in 1900 to 3,200,000 in 1958. It is estimated that it will reach six million by 1970. Some estimates run as high as 12 million students by that year.

In the past, private colleges and universities have educated a majority of the college-trained people in the United States. But now the State institutions enroll more than half of all students going to college.

It has been estimated that if present rates of growth are maintained, within two decades not more than 20 percent of all college students will be enrolled in private colleges and private large-scale universities.

In Minnesota, college enrollment went up 48 percent between the peak prewar year of 1939 and 1947—from 33,840 in 1939 to 50,000 in 1947. After a brief drop-off because of the slowing down of GI training, enrollment began bouncing back up again. It reached 51,239 at the beginning of the fall term of 1956. The increase has continued since.

Seventy percent of the college students in the State are now attending public institutions. According to the report of the Governor's committee on higher education issued in 1956, "it is likely that at least this large if not a slightly larger proportion will attend public colleges and universities in the years ahead."

The same commission reported that Minnesota liberal arts colleges enrolled 8,356 students in 1940 and 14,546 in 1956. It estimated that liberal arts college enrollment in the State would increase to 25,025 in 1970 with total college enrollment in Minnesota reaching at least 95,000 by that time.

If those estimated increases occur, the private liberal arts colleges will probably have to accept considerably more students than they now enroll. Macalester, according to the commission report, would accept 2,000 in 1970 as contrasted with its current enrollment of just over 1,500. Other more recent estimates indicate that the same college would have to accept as many as 2,500.

Yet how can private colleges with limited facilities and limited resources accept more students?

One way would be to raise tuition. Yet tuition can hardly be raised sufficiently to cover all costs. Another way would be to obtain a larger endowment and more gifts. Yet more income already is required to improve salaries of faculty members, build new facilities, and meet other current needs.

But if liberal arts colleges do not expand, they probably will be unable to meet their responsibility to provide for the educational need of their church constituencies—which is, as the 1956 Governor's commission report said—"a responsibility not unlike that which exists between the public college or university and the public at large."

But expansion costs money. It requires more faculty, more buildings, more facilities, more land. Macalester now has a campus of only 44 acres, as contrasted with 405 acres for Amherst, and even more for other residential colleges.

If a small liberal arts college expands, does it lose some of its appeal and some of its reason for being?

Students choose their colleges for many reasons, but among the reasons given for selecting one of Minnesota's liberal arts colleges are its relation to the church (Presbyterian in the case of Macalester); its small size provides opportunities for more intimate relationships between student and faculty, often in an informal atmosphere; teachers have a better opportunity to guide reading and research than at a larger school with larger classes; there is a greater respect for culture than at a large university, etc.

In general, liberal arts colleges provide competition for State institutions. They often are subject to less public and political pressure, they can offer more experimental and controversial courses, experiment with new teaching techniques, and engage in other educational activities not open to public colleges.

What are the implications for colleges which limit their enrollment?

Liberal arts colleges which limit their enrollment ought to be able to become more selective. With more and more youngsters wishing to go to college, they can raise their standards and still attract as many applicants as they do now—and probably more—depending on the level to which their standards are raised.

As their standards and excellence increase, they also can attract students from a wider geographical area and those from more diverse social backgrounds—if this is what the colleges wish to do.

If they follow this course, such colleges also can reduce their purely vocational courses, their community service programs, and their "peripheral" activities, and lay greater stress on purely liberal arts courses. They also may be able to broaden the base of their financial support if they attain greater excellence.

These questions and problems are illustrative of those faced and discussed by the Macalester "little summit" conference. Final decisions still remain to be made on the future course the college will take. But one fact remains above all:

More and more high school graduates in Minnesota and elsewhere will be going to college in the years ahead and the colleges best prepared will be those which face up to and try to find answers to the kinds of questions that the Macalester group debated in its 2-day session at Stillwater.

Dulles Library

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. WILLIAMS of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the attached Associated Press story, which appeared in the Newark Evening News of May 17, giving the details of a new library to be established at Princeton University in New Jersey.

I believe that the founding of the John Foster Dulles library of diplomatic history is an important event for New Jersey and for scholars everywhere. We, of the Garden State, are honored to have the papers of so important a statesman as the very great university which has already given so much to the Nation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DULLES LIBRARY—DIPLOMAT GIVES PAPERS TO PRINCETON

PRINCETON.—The John Foster Dulles library of diplomatic history will be established at Princeton University as a tribute to the former Secretary of State.

The two-story wing to the university's Firestone Library * * * will house his personal diplomatic papers as well as microfilm copies of official State Department documents.

The State Department and Princeton University, in announcing the project yesterday, hailed it as a significant landmark in historical research. Never before has the Government cooperated in collecting and bringing together in one place such documents while the Cabinet officer involved was alive.

NINETEEN HUNDRED AND EIGHT GRADUATE

Dulles, a 1908 graduate of Princeton, is now seriously ill at Walter Reed Army Hospital suffering from cancer. He already has turned thousands of his personal papers over to Princeton to start the project, and plans to release 10 more filing cases full of them. These papers date back to his views of the 1907 Hague Peace Conference.

Robert F. Goheen, president of Princeton, said the Dulles papers are one of the most meaningful gifts the Princeton Library has ever received.

APPROVAL NEEDED

In turning them over, Dulles stipulated that scholars seeking access to them must receive either his written approval or that of his representatives. He said:

"Access to my personal papers, for the purpose of bona fide research in the fields of history, political science, international relations, or related subjects, shall be granted as widely as possible. The presumption shall be that access should be granted in any particular instance unless compelling reasons exist * * * to withhold such access."

The State Department, in making available selected documents covering Dulles' 6 years as Secretary, imposed tougher security restrictions.

Persons wanting access to them must qualify as legitimate historians. They must obtain Department clearance on all material dealing with classified data.

Military Electronic Procurement

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. MULTER. Mr. Speaker, a private report on military electronic procurement has come to my attention. The contents and statistics in this report on the total dollar value of negotiated procurement versus advertised procurement should be of interest to our colleagues. It is time that the congressional intent that small business receive a fair share and equitable opportunity to compete be put into realistic practice by the procurement agencies. Under this type of negotiation small business cannot survive.

The following report appeared in the May 11, 1959, issue of Bishop's report:

A PRIVATE REPORT ON MILITARY ELECTRONIC PROCUREMENT

Wartime Washington was wild. Hotels, restaurants, and saloons did a land-office business serving lovers who met that very morning for the first time and who parted the following morning for the last time.

Military contracting was conducted with that same urgency. A requirement which was generated in the morning was relayed to the manufacturer by phone and contracts were concluded that very afternoon. Price was only a consideration. Delivery was the object.

American industry won World War II by producing the implements of war for those who had to wage it. There was no time for formal bidding and crash programs were placed under crash contracts. All negotiated. There simply was no other way to do it.

Proper planning now for national defense should allow the procurement of equipment under more even-tempered schedules. There is little excuse for the huge disproportion between the advertised and negotiated dollars and jobs. Missiles or minesweepers, each procurement counts as one action. From last July to February past, the Navy alone negotiated 1,132,645 jobs. They only advertised 47,727 jobs. For electronics and communications alone, the dollars awarded totalled $285.5 million negotiated versus $10.5 million advertised. And all the numbers for fiscal 1959 are not in yet.

Peacetime buying under wartime practices results in the most unfair, unequal, and dangerous situation possible. Government contracting is ostensibly in the interests of national defense but it is obviously conducted without maximum competition which is detrimental to the interests of most of the manufacturers and against the interests of all the taxpayers.

So, if it isn't going to change, why not take advantage of the ground rules which allow a single engineer to hand out a $5 million contract for radio receivers without obtaining any competition whatsoever. This is the real way to do business.

Military contracts are not being given away indiscriminately either. They have to be the target of a romantic campaign, and the engineer is the one to woo.

STANLEY L. BISHOP.

Inflation

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a bulletin issued by the American Farm Bureau, with respect to the dangers of inflation.

There being no objection, the bulletin was ordered to be printed in the RECORD, as follows:

INFLATION IS EATING US UP

Many people have more than they ever had before in their lives. But money doesn't go as far as it used to.

It takes more than $2 to do the job that $1 would do before World War II. These are the signs of inflation—it's a combination in which the value of our money is eroded away by a continuing rise in the general price level.

Now you can have a rise in auto prices or a pair of shoes and that won't necessarily

spell inflation. The rise may be due—among other things—to a greater demand for cars or shoes, or for the raw materials used in their production, or an upgrading in the quality of the product, or a short supply in either raw materials or finished products. In other words, a price rise in an individual commodity may be due to a number of factors.

Price is sort of like an automatic pilot in our economy. It keeps supply and demand balanced in the marketplace. Price helps to tell us how much to use and how much to produce. Price helps consumers decide how to spend their money. Price tells producers what to produce for the most profit.

It's normal to find some prices rising because of increased demand or reduced supply while at the same time other prices will be dropping because of reduced demand or increased supplies. In a stable economy, these ups and downs in individual commodity prices tend to cancel out. So the average purchasing power of the dollar stays about the same year in and year out.

But you can look for real trouble when the vast majority of individual prices move upward in the same period. This reduces the purchasing power of the dollar and we have inflation.

The dollar has lost 58 percent of the purchasing power it had in 1939. This is inflation. It's eating steadily away at your dollar every day, every week, and every month of the year. It's taking a bite out of every dollar you earn, every dollar you manage to save. It's a thief that steals while you are asleep and awake.

Then too, there are even some people who benefit during a time of rising prices and inflation. Take the speculator who is able to buy ahead of the rise. Or the debtor who is able to pay off his debts with cheap dollars. There are also some folks who are able to increase their own dollar incomes fatser than inflation is cutting the purchasing power of the dollar.

But inflation is a destroyer. Any gains that individuals or groups may get from inflation are at the expense of other individuals or groups.

Inflation eats away the value of cash, Government bonds, insurance policies, pension plans and all obligations which have a fixed dollar value.

In 1940 for example, the $750 it took to buy a $1,000 savings bond, plus another $62 would buy a low-priced car. When the bond owner cashed it for $1,000 in 1950, he found that he had to add $600 to it to buy a comparable car. Today's prices are even higher.

Of course, cars changed between 1940 and 1950, but the big change was in the value of the dollar. The dollar has continued to lose purchasing power since 1950. It is still going dowhill and threatening to pick up speed.

Inflation also is like a tax—one of the cruelest taxes you can find. The people it hits the hardest are those on fixed incomes.

Inflation taxes the thrifty. Under inflation, taxes intended to apply only to income or gains become a levy on past savings. The man who paid $750 for a bond in 1940 and cashed it for $1,000 in 1950, had to pay taxes on the difference of $250, even though the $1,000 was worth much less in 1950 than $750 in 1940.

Or take the case of the farmer who buys a new machine for $1,000. He depreciates it on his books at its cost, but when the machine wears out in a few years he may find that it takes $2,000 to buy a new one.

There was a time when farmers favored inflationary policies because they helped them to pay off farm mortgages with cheap money. This was because farm land once was the most important factor in agricultural production.

Today, farm production is more and more dependent on what economists call "purchased inputs." They include such things as tractors and equipment, fuel, repairs, tires, commercial fertilizers, antibiotics and other supplements in animal feeds, etc.

Increased dependence on "purchased inputs" puts the farmer on the spot when prices are going up on these things. Inflation increases the cost squeeze on farmers by causing farm costs to rise more rapidly than farm prices. This is epecially true at the present time when agriculture is plagued with surpluses and excess productive capacity.

Inflation also destroys because it is likely to bring on tight Government controls. Since high prices and rising wages are the symptoms of inflation that are easily seen, many people think that the disease of inflation can be cured by price and wage controls. This is about like trying to cure a fever by putting ice on the theromometer instead of treating the patient.

Inflation also destroys because it prices us out of world markets. We used to export a lot of cars abroad. Now these exports have dropped and the auto industry is having a hard time meeting the competition of imported cars from Germany, Italy, France, Sweden, and England—not only abroad, but here at home.

Inflation also is a destroyer because it creates serious imbalances which can set the stage for economic disaster. For example, our worst depressions have followed serious inflations.

Inflation results when the supply of money and credit increases faster than the supply of goods and services. It's too much money chasing too few goods. This leads to higher prices—which is another way of saying that it leads to cheaper dollars.

Who is to blame for inflation?

The Government shares the most blame when it spends more than its income and borrows the difference by selling bonds to the commercial banks.

New money is created when a commercial bank purchases a new Government bond and thereby increases the Treasury's deposits without decreasing the deposits of other depositors. This money is put into circulation when the Treasury writes checks to pay for Government spending. The new money created by Government borrowing competes with private earnings and savings to bid up the price of available goods, services, and resources.

It's easy to see why we have inflation when you take a look at Federal Government budgets for the last 25 fiscal years.

In those 25 years, including the fiscal year ending June 30, 1959, our Federal Government has had 20 deficits—a nice way of saying it spent more than it took in—and only 5 surpluses.

Now during the war, there was some excuse for the Government overspending its income. But why has our Government been spending like public relations men on expense accounts for the last 13 years? Most of the recent increases in our budget have been for nondefense items. Theres' nothing like a Congressman spending somebody else's money to bring favors to his district.

The way we have been boosting the Federal debt is nothing short of fantastic, but too few seem to worry about it. "We owe it to ourselves," they say or "It's part of our expanding economy."

But to anyone who has any sort of respect for money it's shocking to know that since 1935 our Federal debt has gone from $28.7 billion to around $285 billion.

It's hard for an average man who pays his bills on time to visualize a debt like this, but let's look at the increase in our money supply that has accompanied our rising debt load. The total supply of money and credit outstanding (currency in circulation plus demand deposits) is now more than five times as large as 25 years ago. This is an increase of $111.5 billion.

And we are set to pile up some new records in debt. Our Government will spend some $13 to $14 billion over its income for the fiscal year ending June 30, 1959. If you are in hock for $285 billion, what's a few billion dollars more? We owe it to ourselves, you know.

And despite a proposed balanced budget of $77 billion, for fiscal year 1960 as proposed by the President, it appears that unless we can stop our free-spending Congressmen, we will go in the hole from $1 billion to $4 billion in 1960.

A large national debt is, in itself, a powerful force for inflation. This is because Government bonds can be used as a basis for expanding the available supply of money and credit.

This happens, for example, when commercial bank reserves are increased by Federal Reserve purchases of Government bonds. For each dollar that reserves are increased the banks can add about $6 to the money supply by extending additional credit.

Sometimes it appears as though policies followed by labor and industry are important causes of inflation. This is a natural conclusion from the fact that periodic wage increases are followed by price increases and further wage increases. But it is an oversimplification. It is quite true that an inflationary situation contributes both to union demands for wage increases and employer willingness to grant such increases. But rising wages and rising prices are basically symptoms, rather than causes of inflation.

Maybe we will have to wait until the dollar is worth 25 cents or less before people generally will be willing to do anything about it. Or we may have to wait until it takes a wheelbarrow to haul enough money to town to buy a pair of shoes.

This could happen, it has in other countries.

But if we really want to do something about protecting our dollars for our children we can:

1. Balance the Federal budget and keep it balanced.

2. Make sure that all Federal policies that affect the supply of money and credit are geared to the objective of preventing the money supply from increasing more rapidly than the supply of goods and services.

The Federal budget can be balanced only if a majority of the people insist on strict economy and the elimination of all unnecessary spending.

Every Government project, program, or employee must be paid for by the taxpayers either through direct taxes or through inflation which cheapens the dollar.

Those who push increased Government spending at the expense of the Government going further in debt are really promoting inflation—regardless of their objectives.

If citizens want to be effective in getting Congress to reduce spending, they must be ready to accept some reduction in expenditures in the areas of their own special interests.

In other words, it won't do any good for you to tell your Congressman to vote for a bill that builds a dam or road in your district, but to vote against the other fellow's project because it will cause inflation.

To prevent inflation we must either cut Government spending or increase taxes. In view of the gigantic size of Government expenditures, reducing spending probably would do far more than increased taxes to stop further inflation.

The Federal Reserve System is one of our major tools for preventing inflation. It can help to stabilize the value of money by re-

lating its policies to the objective of maintaining a stable price level rather than to other considerations.

For example, the Federal Reserve can restrain the growth of the money supply by (1) refusing to support the Government bond market, (2) increasing the reserves which banks are required to maintain against their deposits, and (3) increasing the discount or interest rate that banks must pay when they borrow from the Federal Reserve.

All of these policies contribute to higher interest rates. This leads to opposition from people who believe that the Federal Reserve System should use its powers to keep interest rates low and credit freely available at all times.

Those who advocate inflationary policies—in the form of increased Federal spending, or pegged interest rates—speak of their desire to meet the needs of the people.

It is said that those who advocate a balanced budget are putting pocketbook before people. But, as Chairman Martin, of the Federal Reserve Board, has said, "If you want to pauperize people, the most effective method is to promote inflation."

Inflation is likewise the most effective method of destroying individual freedom and the private competitive enterprise system.

Sound money is the foundation of a free enterprise system. When inflation destroys the value of money, it destroys the basis for private operation of the economy and forces the substitution of Government controls.

What does this all mean to you. It means that if inflation destroys the private competitive enterprise system, you could lose your freedom and eventually your property through the process of political controls replacing economic law.

You may say that this can't happen in America. It can't happen overnight, but it could in your lifetime or in your children's span of life. Who ever thought they would see the day when they had to work a month out of every year to pay their Federal income taxes?

In 1929, considered a boom year, a married man with two children and a taxable income of $5,000 paid about $3 in Federal income tax. Today, that same man pays one-tenth of his income in taxes and the buying power of the dollar that he has left is much less than in 1929.

Inflation can be stopped, but only when it is understood that dollar depreciation hurts everyone. Inflation can be stopped and the time is now.

A Farm Program

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 19, 1959

Mr. ADAIR. Mr. Speaker, the Indianapolis Times on May 13 had an editorial on the farm program proposed by Senator HOMER E. CAPEHART. I think it it a good, brief exposition of the matter and, therefore, include it herewith:

A FARM PROGRAM

HOMER CAPEHART, Hoosier farmer and U.S. Senator, is promoting a solution for the farm problem that at least deserves high marks for effort.

He would:

"Freeze" the surplus now in storage by prohibiting commercial sale except in case of emergency shortage. The surpluses could be used for school lunch and other charitable purposes, here and abroad.

Take out of production, for 5 years, 40 million acres now being used to grow specific surplus crops. This would cost $1 billion a year, but the farm program now is costing $5.4 billion.

Start a "real crash job" on research to discover new industrial uses for farm products.

Then let the farmer grow what he likes and sell it for what it will bring, the objective being to get the Government eventually "completely out of the farm business."

The freeze would end all but a faint hope of getting back any of the $9 billion now invested in stored surpluses, but who actually hopes to recover this money anyhow?

Certainly more emphasis should be placed on research. At present the Government is in the untenable position of spending more money to increase production, which already is surplus, than it spends to find new uses.

A fundamental weakness of Senator CAPEHART's bill is that it deals with agriculture as a whole whereas the problem differs from crop to crop. Cotton and wheat, for instance, are two separate cases, probably requiring separate treatment.

Senator CAPEHART, himself, doesn't argue he has all the answers but terms his proposal a "starting point," asking further investigation and proposals from his fellow legislators.

But his bill at least suggests that there is an alternative to the present daffy arrangement which piles up billion-dollar deficits without doing the farmer any particular good. It should get serious consideration.

Summit Mysticism

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which was published in today's issue of the Wall Street Journal, entitled "Summit Mysticism."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUMMIT MYSTICISM

One of the weirdest suggestions coming from Geneva these days is that a summit conference may be called not because of any progress made at the Foreign Ministers' meeting, but on the basis of a nuclear test ban agreement if such can be reached at the talks on that subject which have also been going on in Geneva.

This seems to us to be making something close to a joke of the whole business of negotiating with the Communists. A test ban agreement may or may not be a good idea, depending on exactly what is in it. But certainly it is not an agreement that either requires or justifies a meeting at the summit. What are the heads of state supposed to discuss?

The purpose of the summit conference would be, in effect, to complete agreements prepared at the current Foreign Ministers' meeting—a meeting which was convened not to discuss the prohibition of nuclear tests but the problems of Berlin, German unification, and European security.

The West has put forth a comprehensive package plan as its solution to those problems, and if the plan is negotiable in whole or in part then it is negotiable at the Foreign Ministers' meeting now taking place. If it is not negotiable there, it is not going to be negotiable at the summit either.

Those who advocate a summit conference regardless of the outcome of the Foreign Ministers' meeting argue that the only man who has the power to commit the Soviet Union is Khrushchev. This, though, is not a very meaningful contention, for if Khrushchev really wanted to make agreements with the West, all he would have to do is get on the phone to Gromyko in Geneva.

In the minds of a good many people in the West a kind of mysticism seems to have developed about a meeting at the summit, as though this is the magic event that will make all our troubles with the Communists disappear. The plain fact is that the Soviets are most unlikely to buy anything resembling the West's package, either now in Geneva or later at a summit meeting.

In any case, when people get the idea that there just has to be a summit no matter what, they are thinking with their emotions raher than with their heads. And that is not a healthy attitude with which to try to bargain with cold and cunning agents of the Kremlin.

Nonresident Taxation Ferment

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, May 19, 1959

Mr. WILLIAMS of New Jersey. Mr. President, because of the unhappy situation which exists in my State having to do with the payment of nonresident taxes, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Camden Courier Post of May 7, entitled "Nonresident Taxation Ferment."

The article mentions the progress which has been made in the interest of upstate New Jersey residents where signs point to some relief in the future. However, this is far from true in south Jersey where our residents pay a wage tax to the city of Philadelphia and no imminent relief appears to be in sight.

The article points out—and correctly so—that despite the many efforts being made on the local and State level, eventual relief will come only from the national level. Constitutional amendments and retaliatory measures are just two of the proposals advanced to deal with the problem. Neither of these, to my way of thinking, holds the answer.

But the gross unfairness of such a situation can be easily recognized; and I point out to you here as a ready example that New Jersey citizens, for instance, are paying 45 percent more in taxes than the instate residents of New York. I submit that a State or city which levies such a tax will not easily give up such a lucrative source of revenue.

The great hue-and-cry for equal justice cannot be ignored by those of us on

the national level. We here must provide the answer for our outraged citizenry.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NONRESIDENT TAXATION FERMENT

Governor Rockefeller of New York has given assurance of fairer tax treatment by that State to nonresidents working there.

"I expect to recommend some form of adjustment in my next annual message to the legislature, which will constitute an equitable solution," Rockefeller said after an hour's conference with members of the New Jersey Commission on Out-of-State Taxation of New Jersey Residents this week.

The theme of the conference was the inequity of New York's present income tax, which does not allow nonresidents working within the State the same deductions allowed residents. As a result, residents of New Jersey, Connecticut, and other States who earn their living in New York pay as much as 45 percent higher income taxes to the State. There are from 140,000 to 150,000 Jerseyites affected.

Promises have been given before by New York for fairer tax treatment but the New Jersey delegation thinks this one means more than those of the past. In a joint statement issued after the meeting with Rockefeller, members expressed themselves as "more confident that there can be removal at New York's 1960 legislative session of this source of irritation between our neighboring States." Rockefeller asked the New Jersey commission or a copy of a report it is drafting, so he can use it in preparing his recommendations for the legislature next year.

Residents of south Jersey will be glad to see our fellow citizens upstate get relief from what unquestionably is an unfair situation now existing. But whatever New York does to give them fairer treatment will in no way affect south Jerseyites working in Philadelphia and unfairly being forced to pay that city's wage tax. Relief for them is farther away.

Yet there are signs that it is coming. Next Tuesday the New Jersey commission will meet with Mayor Dilworth and "attempt to work out some kind of a compromise" on the wage tax issue. The attempt will involve a special, lower tax rate on nonresidents to compensate for the fact that they receive fewer municipal services from Philadelphia than residents.

This is an unusual approach to the problem and there is no use being too optimistic about its chances of success. Yet Dilworth and other Philadelphia city officials surely will have to agree that it is basically fair, and some good may come of it.

But the wage tax and similar conflicts may eventually be ironed out at Washington, and on a national basis. More and more signs are pointing that way.

Congress is becoming aroused over these nonresident taxes. Any number of bills and proposals for constitutional amendments have been introduced at this session to end what is becoming a national problem. Many States are involved in this overlapping and duplicating of jurisdictions, and it is no longer confined to two or three in the East.

Interstate compacts to permit States to agree among themselves on not taxing citizens twice are one frequently suggested remedy. Constitutional amendments forbidding the practice are usually ruled out by realistic observers, since more than 30 States now tax nonresidents.

The Nonresident Income Taxation Committee of the National Association of Attorneys General has just made a rather disappointing report on the subject. Headed by our own Attorney General Furman, the committee endorses the principle of nonresident taxation on the theory that workers use the services of the States in which they work.

However, the committee does say that "as a matter of abstract justice * * * individuals should not be forced to contribute to the major revenue-producing tax in two States because of their residence in one State and employment in another."

The report urges that States imposing an income tax grant the same dedeductions to nonresidents as to their own citizens. It strongly advises against retaliatory legislation, but asks States to act in good faith and in a mutual willingess to eliminate the worst features of double taxation.

States are told they should forego squeezing out all technically allowable tax gains from residents of other States. Otherwise, serious conflicts will arise which will threaten a breakdown of the Federal system, and the Federal Government will be forced to intervene and possibly to preempt the field of income taxation.

This is a very real possibility and judging by the present ferment in Congress it may be close at hand. The income tax States will be wise to recognize it.

Inflation

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Can We Escape a Ruinous Inflation," prepared by me, and published in the Reader's Digest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAN WE ESCAPE A RUINOUS INFLATION?

(By HARRY F. BYRD, U.S. Senator from Virginia since 1933)

Everybody knows now that America is menaced in the years ahead with an inflation that could wipe out savings and impoverish millions who are living on fixed incomes. Is there any way we can keep this from happening? Let us study this question from the bottom up:

A country is suffering from inflation when a unit of currency buys less and less. Our money supply consists of two elements—the Government-engraved dollars we carry in our billfolds (our actual hand-to-hand currency), and the dollars we carry in our checking accounts—our demand bank deposits. It is in the latter that nine-tenths of the country's business is transacted.

Our total money supply increased from $36 billion at the end of 1939 to 135 billion in April 1958—a jump of 275 percent. In the same period the rate of production of industrial goods increased only 119 percent. The cost of living went up 108 percent.

In other words, though we have more than doubled our rate of producing goods in the last two decades, we have almost quadrupled the supply of money. As we have increased the supply of money faster than the supply of goods, money has become cheaper in terms of goods, and goods have become dearer in terms of money: Prices have risen.

Obviously the way to stop inflation is to stop increasing the supply of money faster than the supply of goods. We must stop manufacturing money. There are several ways in which we have been manufacturing it, but I wish to concentrate on just one, which seems to me the most important.

When the Government spends more than it collects in taxes, the difference constitutes a deficit. How does the Government pay for this deficit spending? It sells its I O U's—notes, certificates, bills, etc.—to the banks. The banks pay for them by putting a deposit credit on their books for the amount of the Government I O U's, and the Government can then draw checks against this deposit to make its own payments. In this way bank-deposit money is created. More dollars are, in effect, manufactured. This is what I meant by deficit financing.

From my experience in the Senate, dealing with annual budgets for 25 years, I long ago came to this conclusion: Federal deficit spending has been the greatest single factor in the cheapening of the value of our money.

It follows that the most important single step that we must take, if we wish to halt inflation, is to balance the Federal budget and assure our people that it will stay balanced except in extreme emergency. We will never halt inflation until we do this.

President Eisenhower made a fine start in 1953 in seeking to balance the budget. He was confronted with President Truman's Korean war budget, prepared for the fiscal year 1954, of $78.6 billion. Eisenhower reduced it to $67.8 billion. He did an even better job in fiscal year 1955, when he reduced expenditure to $64.6 billion, approaching his announced goal of a $60 billion budget.

And then the record changed. In fiscal 1956, there was an increase of $2 billion; in fiscal 1957, another $3.8 billion; in fiscal 1958, there was proposed still another increase of $3.6 billion. It will be noticed that, even before the concern caused by the launching of the first Russian satellite, this was an increase of $9.4 billion over the budget of 1955. Then, this January, a budget for fiscal 1959 was submitted which came to $76.6 billion, including roads, or $12 billion more than for 1955.

The President acknowledged in 1953 the importance of reducing planned deficits. George M. Humphrey, then Secretary of the Treasury, testified with satisfaction before the Senate Finance Committee on June 18, 1957: "Planned deficits have been eliminated." He added:

"Federal deficits necessitate increased Federal borrowing. More Federal borrowing, to the extent it comes from the banks, means the creation of additional bank credit. This tends to create more spendable dollars than there are goods to buy. * * * In ending deficits, we have eliminated this very inflationary pressure."

Unfortunately, this claim cannot now be made. On June 30 last, the deficit for the fiscal year 1958 was almost $3 billion. The prospective deficit for 1959 is estimated at $12 billion.

This a grave outlook. In the last 27 years we have had 22 deficits, with 2 more deficits in prospect. Those who favor a deficit as an alleged antirecessionary measure tell us that it will be temporary. But there is no such thing as temporary large-scale deficit financing. We know from 28 years' experience that deficit spending is not turned on and off as if controlled by a spigot. If the 1959 deficit is as large as is now clearly indicated, Federal deficits will continue as long as anyone can foresee.

Deficits pile up debt. We are now approaching a $300 billion debt. This would be the greatest the world has ever known. But this official or visible debt figure does not cover the total. In addition, the Federal Government has accumulated contingent liabilities of at least $250 billion. These are obligations that the Federal Government has

guaranteed and insured, such as $40 billion in Federal housing programs.

Liabilities of this magnitude exert enormous pressure for inflation. Such inflation is a kind of invisible tax. It is a tax, moreover, without exemptions; a tax on the incomes of the poor in the same percentage as on the incomes of the rich. It is also, in effect, a capital levy on the savings of the thrifty.

As no one needs to be told, the inflation we have already had is grave enough. As measured by the 1939 index of the cost of living, the dollar has fallen to a comparative purchasing power of only 48 cents. In the year ending last May the dollar lost more than 3 percent of its purchasing power.

Taxes already inordinately high. They already place, on business and on the people, burdens that smother incentives and reduce our potential volume of production and our potential living standards. To avoid deficits now of a magnitude which would produce a disastrous inflation, the people of this country must demand that Federal expenditures be limited to absolute essentials.

If we are sincerely looking for places to economize there is no lack of them. Let us look at a few:

1. The first thing we should eliminate (and should never have undertaken in the first place) is mere pump-priming public works. Such works are not undertaken for their own sake, but principally because of the belief that they create employment. But they never work as their proponents promise. They nearly always fail to get underway until after recovery has already started. They are always continued long after recovery has taken place. We are lucky when they are not continued indefinitely.

2. Stop launching new spending programs. This includes such projects today as Federal aid to school building, and the recent crash highway-building appropriations. And it applies to new State-aid programs generally. Sad experience shows that a new activity of the Federal Government, once started, is practically never stopped. The 18 State-aid programs of 1934 had grown to 57 State-aid programs in 1957. Where the 18 programs of 1934 cost a total of $126 million, the 57 programs of 1957 cost more than $4 billion.

3. We must also try to halt the constant expansion of established spending programs. The history of our road and housing programs, of farm subsidies, and veterans' aid, should be a sufficient warning. For example, budget experts have forecast that the farm program may cost a record $6 billion in the current fiscal year, against $4.6 billion in the budget submitted in January.

4. An outstanding example not only of the permanence but of the expansive tendency of so-called emergency programs is foreign aid. When the Marshall plan was adopted, President Truman gave solemn assurance to the American people that it was an emergency plan limited to 4 years at a cost of $15 billion. Aid has already run for 11 years. Gross expenditures have totaled more than $75 billion, including loans, grants, and use of foreign currencies. Of this, only $22.5 billion has been spent in direct military assistance, while $52.5 billion has been spent for economic aid.

I do not suggest that we can totally cut off foreign aid now. But I do suggest that we can eliminate so-called economic aid, and should develop a definite tapering-off program for much of our military aid. All this will have to be done carefully and diplomatically. But it is precisely the careless and lavish extension of military aid in the past that creates now the diplomatic problem of gradual extrication.

5. Defense spending should not be considered sacrosanct. Our security must, of course, at all times take first place. But defense spending must be constantly reviewed for efficiency to make sure that every dollar counts, and that the American people are getting the security for which they are paying. We must constantly eliminate outmoded programs and obsolete weapons to make available more funds for research and new weapons.

6. Finally, I believe there is hardly an agency of the Government that cannot reduce its administrative or so-called overhead expenditures by 5 or 10 percent and still function effectively. This is a broad and fertile field for reduction. We still have 2.4 million regular Federal employees.

In sum, the first requirement for economy is to return to a philosophy of economy. We must have the will to economize. If we had this, we would certainly revise our budgetary procedures. Three main reforms are possible here:

Many Federal agencies each year carry over huge unexpended balances in previous appropriations which continue available for expenditure in future years, usually without further consideration or action by Congress. Federal agencies started the fiscal year 1959 on July 1 with more than $70 billion in unexpended balances from prior year appropriations. This means that there can be a vast difference between annual expenditures and the appropriations for the same year. In August Congress enacted an overdue reform in this respect.

We should enact appropriations in a single bill capable of being calculated on an expenditure basis and measured against revenue.

We should amend the Constitution to permit the President to veto or reduce individual items in appropriation bills, instead of being forced to accept or reject the entire appropriation bill.

If these economies and these budgetary reforms were made, there would be real room for debt reduction and for urgently needed tax cuts. Nothing would do more to restore confidence in the stability of the dollar than to inaugurate a program of debt reduction and to show our determination to adhere to it except in periods of the gravest emergency. If we get our overall expenditures back, say, to the level of those in the fiscal year 1955, this would leave room for substantial tax reduction.

But the most important step we must take, if we wish to halt inflation, is, I repeat, to balance the Federal budget and assure our people that it will stay balanced. The menace of a disastrous inflation is real. All the pressure groups and special interests that campaign for more and more Federal spending are helping to bring it on and are thereby doing a grave disservice in the long run to their own people.

Will the leaders of these organizations ultimately realize the peril, and join in a crusade for the economies and reforms above suggested?

Text of a Presentation by Mr. and Mrs. John Regan McCrary

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 19, 1959

Mr. HALPERN. Mr. Speaker, one of the most impressive presentations I ever witnessed was given by Mr. and Mrs. John Regan McCrary—popularly known as Tex and Jinx—at the brotherhood award dinner of the National Conference of Christians and Jews at New York on May 6.

One associates this husband and wife team in connection with many good causes, and they are widely recognized for their fine radio, television, and other programs. But to listen to them at the brotherhood dinner, in a short, simple, and deeply perceptive performance, not only gave meaning and breadth to the theme of the conference, but gave new testimony of their combined efforts to help their brother man. Their heartfelt sincere dramatization of the objectives of the conference was a stirring spectacle.

The occasion was the presentation of the conference's brotherhood award to Mr. Louis Stein, Philadelphia businessman and nationally known humanitarian and philanthropist. The subject of their presentation was the story of how one city met the threat of organized bigotry with a reasonable and persuasive program of tolerance and compassion.

It was so appealing that I strongly feel that it should receive recognition in the important annals of the records of Congress, and for that reason, Mr. Speaker, I, under unanimous consent, offer the text of their performance at the conclusion of my remarks:

(Tex stands up first and walks to microphone alone. Jinx to come up when introduced.)

TEX. Good evening. My name is Tex McCrary, and I have been given an assignment, probably because I've been in radio and television a few years. I have been asked to do the commercial. Of course, the request was not phrased exactly like that, but I believe in being completely candid about these things.

However, luckily for you, and for me, commercials are brief. Now when you do a commercial you need a couple of props, something dramatic, to attract attention, and then a very pretty girl with a very pleasant voice to do the selling.

Item 1, to attract attention: Know what this is? It's a tear-gas shell. This particular one blinded a woman in a mob in Buenos Aires, Argentina.

Parenthetically, it's plainly marked "Made in the U. S. A." which is the sort of thing that makes no friends for America having made-in-America tear-gas shells used around the world to break up passionate mobs boiling with hatred against somebody.

However, that's a problem for the State Department. All I want to use this tear-gas shell for is to make a point:

An ounce of prevention is better than a ton of tear gas.

And that's what I want to talk about, prevention, prevention of bigotry.

Item 2: The pretty girl with the pleasant voice. May I present Jinx Falkenburg McCrary to help me bring you a message from the sponsor of this dinner, the National Conference of Christians and Jews.

(Jinx enters on applause.)

JINX. Tex, I don't think we should call this a commercial. Commercials are for selling pills and lipsticks and beer and gasoline.

TEX. And for selling insurance companies, too. And to me, the National Conference of Christians and Jews is like an insurance company, insurance of a way of life based upon communityism—not communism—but communityism.

JINX. OK, I accept the comparison. Let's tell the story.

TEX. It's a good story.

JINX. The kind of a story that does not make headlines, but should.

TEX. Yes. You know the old rule, only bad news is big news.

JINX. But this is good news and it is big news, too. You handle the headlines, Tex.

TEX. Headline: "Quad Cities Leaders Smother Bigot's Blitz."

JINX. That was the headline, the dateline, the place it happened, was called the Quad Cities, Davenport, Iowa, Moline, East Moline, and Rock Island, Ill., in the heart of America.

TEX. That was the headline and the dateline and this was the story:

On opening day of Brotherhood Week, Quad City bigots dramatically blitzed the community by plastering great screaming signs and posters on the store windows of 35 Jewish merchants in the area: "This place owned by Jews. Remember this is anti-Jew Week, February 21–28."

That was the poison theme. There were uglier variations on the same theme. But these bigots' blitz was aimed at a community that was ready for the attack. From police to press, from preachers to teachers, this community was ready.

JINX. Almost before early risers so much as saw the signs, police had ripped them down, washed them off.

But leaflets spread the poison. And so to fight it, a smoothly working, almost instinctive campaign of "ventilation" swept through the Quad Cities * * * editorials in the local papers denounced the bigots; telephone operators worked overtime dialing out a network of community calls by Protestant and Catholic business leaders; speakers on radio and TV decried the work of the bigots.

TEX. And thus in a few hours, before bigotry had a chance to blaze into passionate demonstrations, the whole community was effectively "fireproofed," "decontaminated."

Maybe America's civil defense against an H-bomb is laggard, but against a hate-bomb, the Quad Cities community leaders moved with the precision of the U.S. Marines.

How did this miracle of preparation happen? Listen:

JINX. It all began a long time ago when a wave of vicious anti-Catholic feeling swept across America behind the masks and hoods of the Ku-Klux Klan in the year that happy warrior from the sidewalks of New York ran for President. Al Smith was the target, but the very soul of America was the victim.

To inoculate this Nation against such bigotry, great Americans like Charles Evans Hughes and Newton D. Baker and Roger Straus met and formed the National Conference of Christians and Jews some 30 years ago.

TEX. It all began in a one-man office with a budget of $10,000 a year. Today, the conference is a network, I might almost describe it as a radar network that anticipates attack, in 62 regional offices and 300 local chapters operating in more than 10,000 individual and individualistic communities throughout America and Canada, with an annual budget of $2½ million.

JINX. This summer, the national conference will conduct workshop conferences for more than 1,500 teachers and community leaders, workshop conferences in human relations. These workshops will last for 2 to 6 weeks each, operated by 47 different colleges and universities.

TEX. Right now, at Michigan State University, more than 150 police officers from 43 States are attending a special session of the national conference seminar on police-community relations.

JINX. And this summer, some 300 young leaders from Los Angeles, Chicago, St. Louis, and Detroit will attend an intercultural study camp under sponsorship of the National Conference of Christians and Jews.

TEX. To counteract the tensions that boiled up in the wake of the Supreme Court's historic ruling against segregation in public schools, the national conference sponsored 2-day institutes for community leaders in 32 key southern cities.

In Louisville, Ky., a horserace called the Derby makes headlines every year. But the superintendent of public schools in Louisville, Ky., gives the NCCJ full credit for preventing headlines in a very important chapter of the human race.

JINX. Integration came to the public schools of Louisville in Kentucky without the violence of Little Rock, Ark.

TEX. Thanks to the community-conditioning national conference.

JINX. And so you see, brotherhood is more than a slogan to the conference. And Brotherhood Week lasts 365 workdays of the year.

TEX. And that's the sort of work that made it possible for the community leaders of the Quad Cities to beat the bigots during Brotherhood Week.

You know, Abraham Lincoln took less than 300 words to explain the meaning of America in his Gettysburg Address. It's taken us a little long to explain what the National Conference of Christians and Jews means to America. But let me try to put the summary into 50 words:

There are three great forces in a free society—legislation, regulation, and emulation—and the most precious of the three to democracy is emulation, the force of example for others to emulate. And that is the vital task of the NCCJ: To set the example for brotherhood.

JINX. And now we would like to present to you your chairman for the evening, a business-statesman in the American food industry, and on the very sound theory that the way to a man's heart is through his stomach. Your chairman is a man who knows the secrets of all our appetites, president of Continental Baking, R. Newton Laughlin.

Monopoly in the Milkshed

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. PROXMIRE. Mr. President, the American dairy farmer and the American consumer are becoming more and more victimized by the rapidly growing concentration of economic power in the hands of the big four dairy corporations.

In the current issue of the Progressive magazine, Sherwood Ross reports how the mergers and acquisitions by the dairy giants have enabled them to enjoy an unparalleled period of soaring profits during the very period when dairy farmer income has dropped disastrously and housewives have had to pay ever more for milk and dairy products. Mr. Ross concisely summarizes the most pertinent evidence from the current House hearings and from Federal Trade Commission complaints against the monopoly-bound giants. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MONOPOLY IN THE MILKSHED
(By Sherwood Ross)

(If, as is sometimes said, the past is prologue, this record, to those who believe that traditional American liberty even yet holds a place in its competitive structure for the individual enterpriser, forewarns of the annihilation of the small-business man in a field of competitive endeavor historically local in nature. The rise of the giant, Foremost Dairies, Inc., characterized by acquisition * * * seemingly without end, is one of the prime examples of the revision of the competitive structure of the dairy products industry in the last quarter century.)

The eloquent plea of the public counsel before the hearing examiner of the Federal Trade Commission in the still undecided case against the Foremost Dairies Corp. supplies, in capsule, the reason behind the FTC's bid to prove that Foremost, along with three other corporate giants, has come to dominate the dairy industry. This domination has been achieved by methods allegedly in violation of the Clayton Act, which prohibits corporation mergers that lessen competition, or tend to create a monopoly, and the Federal Trade Commission Act, which prohibits unfair competitive practices. The result of these FTC complaints, in addition to the probe by an aggressive House Committee on Small Business, has been to keep the Big Four of Dairyland—National Dairy Products (Sealtest), the Borden Co., Foremost, and Beatrice Foods (Meadow-gold)—almost constantly on the witness stand.

Much more is at stake than appears on the surface in this legal battle between the Government and the dairy corporations over who controls the American milkshed, and how it is controlled. The congressional investigation and the decisions of the hearing examiner will affect the welfare of our 1,500,000 dairy farmers, the future of hundreds of small, independent milk producers, thousands of small grocers, and the pocketbooks of 170 million Americans.

As a result of the acquisition of small milk producers, virtually in wholesale lots, the Big Four now control 20 percent of all fluid milk sales in the United States. Accordingly, since 1954 the FTC has cited the four for merger practices which "tend to create a monopoly" or "lessen competition." Some idea of the wealth, power, and resources at the disposal of these giant organizations may be gained from examining their corporate records:

National Dairy operates more than 400 concerns, many of which, like Kraft Foods, control subsidiaries of their own. In a pending complaint the FTC charges that National's sales have increased 39 percent, from $906 million in 1950 to $1,260 million in 1955, as a result of its 40 acquisitions.

Borden's, with hundreds of satellites producing in 48 States and numerous markets overseas, has increased its sales from $613 million in 1950 to $810 million in 1955 because of its pattern, the FTC claims, of "steady encroachment" in eliminating competitors.

Foremost, which holds the distinction of having led all U.S. corporations in total mergers for the years 1948 through 1954, increased its sales sevenfold during the 1950–54 period because of them, the FTC contends. Foremost sales rose from $52 million to $375 million in that time. The growth of its corporate assets—like those of the other dairy leaders—directly paralleled the rise of its sales. Foremost's assets soared 797 percent between 1950 and 1954.

Beatrice Foods, which operates some 300 enterprises in 29 States, increased its net sales by 58 percent—from $205 million to $325 million—in the 1950–55 period, a consequence of mergers that violate the Clayton Act, the FTC has charged.

As these huge dairy corporations, in their apparently ceaseless cycle of merger, growth, and merger, have enjoyed record sales and profits while farm prices have declined and consumer prices have advanced, it is little short of amazing that so little public outcry has been heard. Editors seem indifferent to the fact that one-third of all American families are deficient in calcium; 2 families in 10 will not purchase a quart of milk this month, and the world's wealthiest Nation languishes in 15th place on the list of world dairy-product consumers.

Some of the reasons for this poor showing are not hard to find. Florida provides a fairly typical example of why dairy products pile up. There, three of the big four—foremost, Borden's, and National—control 36 percent of milk sales in Miami, 59 percent in Jacksonville, and 60 percent in Tampa, according to figures supplied by the FTC. The housewife has to pay the milkman 28 cents a quart in Miami and Tampa, and 30 cents a quart in Jacksonville. The result has been a surplus of milk on the farms while people in the cities who need it have to go without milk. "Now what could have caused a surplus of milk in Florida?" chided the Dairy Record magazine last summer. "Could it possibly have been prices which, month after month and year after year, with only an occasional exception, are the highest in the Nation?"

But if the breadwinner's wife has been paying gold rush prices for milk, the dairy farmer has seen only the dust and not the nuggets. Representative Department of Agriculture figures for the sale of half-gallon containers (February 1958) prove this rather conclusively:

[Cents]

	Housewife pays	Middleman takes	Farmer gets
New York	49	23	26
Oklahoma City	49	27	22
Louisville	41	22	19
Chicago	41	23	18
Dayton	40	21	19

New York World-Telegram and Sun reporter Joseph Alvarez, viewing "The Milk Muddle," in September 1957, observed, "Right now, the farmer gets about 9 cents a quart. It retails for 25½ cents. Some economists maintain that the higher prices the farmer needs and the cheaper milk the housewife wants must come out of the 16½ cents in the middle." This is a point of view enthusiastically supported by dairy farmers, many of whom have been driven to desperation by sliding receipts and skyrocketing costs. A few months earlier, 9,000 mid-Atlantic region farmers resorted to milk dumping, dynamiting, and gunplay in an effort to wring 3 cents more from the middlemen. One spokesman for 3,000 insurgent dairy farmers in that area complained bitterly, "We're losing money on every drop of milk we sell. We can't meet production costs. We'd rather ruin ourselves than have somebody else do it for us." On the highways, milk schooners were flagged down, their tires slashed, headlights broken, cargoes dumped, and the supply of milk to New York City jeopardized.

National farm spokesmen mince no words in pinning the blame for low milk receipts on the middleman. William Waldorf, president of the Dairy Farmers of America, has declared, "We will be orderly but our needs are great. We are an action group. We are in revolt against the domination of the big milk trusts. They must pay more for our milk." It can hardly be maintained that "the big milk trusts" are incapable of paying more. The net profits of the big four—spurred by sales which the FTC says have been the result of mergers—have grown like this:

Net profits

[In millions of dollars]

	1952	1956	1957	1958
National	27.8	41.7	44.1	45.5
Borden's	17.7	23.6	24.0	24.6
Foremost	1.9	10.1	10.5	------
Beatrice	3.9	6.3	7.5	8.6

It should be noted that the most recent recession, which depleted the ranks of dairy farmers, put no great dent in big four profits margins. There are several reasons for this. The business magazine Barron's pointed out one of them last year in an article titled "National Dairy—It Manages to Thrive in Good and Bad Times Alike." Explaining why National's profits rose during three recessions, it observed, "Since raw materials are much more senstive to business conditions than the prices of finished goods, dairy firms such as National usually are able to widen profit margins in times of general economic slackness." Or, to take it out of Wall Street parlance, consumer prices remained high even though farm prices fell and millions of workers were laid off.

A second reason for the sizable profit margins of the big four has been the invaluable assistance tendered them by Secretary of Agriculture Ezra Taft Benson. In February, 1958, in the darkest hours of the farmers' "general economic slackness," Benson cut dairy supports the full legal limit, to 75 percent. But as one Michigan dairyman told a Farm Journal reporter, "Lowering price supports won't help use up milk. The consumer will never see any of the cut. The processor will just fatten up." It took no Cassandra to make such a prediction. When the Government depressed the market price for the farmer, the dairy giants saw no reason to make any such commensurate reduction of their price at retail. The consumer—wholly unorganized, unprotected, and uninformed—made no protest.

According to the National Milk Producers Federation, the voice of some 30,000 U.S. dairy farmers, consumer prices rose 9.3 percent between April 1954, and January 1958, although the administration cut price supports 31.1 percent. The unkindest cut of all was dealt not by Benson but by President Eisenhower, the campaigner who promised 100 percent parity in 1952. He vetoed a bill sparked by midwest Democrats which would have frozen dairy supports at 1957 levels—and hundreds of dairy farmers began auctioning their herds. Hugh Moore, professor of agricultural economics at the University of Wisconsin, told the New York Times, "The veto will cost Wisconsin dairy farmers $35 million, and that reduced purchasing power will be reflected in lower income for the people who do business with them."

The plight of the dairy farmer is perhaps equalled only by the death agonies of the small milk manufacturer. Twenty years ago, he knew each farmer who trucked his milk cans to his Main Street door in the early morning hours, and he generally gave him the best price he could and still make a profit. Now—"systematically," according to the FTC—this small milk manufacturer is being bought out, sometimes forced to sell his business. The new proprietors are absentee landlords, operating the dairy in Ashtabula or Gainesville from corporate towers in New York and Chicago.

How the small dairy dealer has been driven from the field first came to the attention of Congress several years ago with a flood of protests over "price wars" and "discriminatory practices." The investigation headed by Representative WRIGHT PATMAN, chairman of the House Committee on Small Business, produced a fairly comprehensive picture of some of the methods used by the Big Four in pocketing $3.1 billion of the total $8.9 billion spent annually by U.S. housewives on all dairy products.

In Dallas, where a price war had been crushing independent distributors, a Foremost dairy chain official testified that his company was going into the red some "three or four thousand dollars" each day by selling below cost. Foremost, like the other members of the Big Four, could easily subsidize such operations. It could write off its losses in its battle against the Texas independents with the help of profits siphoned off from its Florida operations.

Another device used by the national chains to undersell the independents is to purchase milk in an area where the price paid to farmers is especially low and then to resell it in an area where the independents buy their milk at higher prices.

The Dairy Record has lashed out at the national dairy chain sales of products below cost as "loss leaders" to draw crowds in the big supermarts. Said the Record: "If permitted to exist, this canker will result in the liquidation of many of our independent dairy concerns. National dairy chains are far from being guiltless and too often are active participants, probably with the idea of weakening or eliminating competition." Of course, while a price war lasts, the housewife is content, but experience shows—and again Florida provides the classic example—that once the independents are bought or knocked out, the dairy captains will raise their prices to whatever the traffic will bear.

The Patman committee also heard evidence which indicated that the dairy chains and the supermarket chains have opened a double-barreled attack against the independent dairyman and the independent grocer. While investigating an unusual price war in Kansas City, where the price of home-delivered milk remained high, committee probers heard a cogent explanation for this phenomenon from Fred Lambert, of the Independent Processors of Missouri: "I believe the large dairies are forcing the price of home-delivered milk up in order that housewives buy all their milk needs at chainstores where the milk of the large dairies is sold. I believe that grocery chainstores do not permit small local dairies to compete with the large dairies on an equal basis. I believe there is a conspiracy between the large grocery chainstores to monopolize the distribution of milk, and that the so-called milk price wars are financed by the large dairies and the large chainstores for this purpose."

Evidently the Government agrees. A recent FTC complaint cites National Dairies for "paying promotional allowances to selected customers, principally to large chains" in violation of the Clayton Act. Practices such as those said to exist by the FTC can only hasten the mercurial disappearance of the small independent grocers, as well as the dairy independents. The number of independents has already shrunk from 2,427 in 1920 to fewer than 1,500 today; according to Alabama Senator JOHN SPARKMAN, "They are the last of the Mohicans"—the last outpost of free enterprise among small industrialists in this country.

Whether the FTC has made haste to spare our "Mohicans" from an economic massacre is the subject of some controversy. As PATMAN charged, "The great wave of corporate mergers taking place during the past 3 years, and continuing now, has elicited from the Department of Justice and the FTC not even a wholehearted pretense at enforcing the law.

Even if the FTC—which has put only nine lawyers to work on the dairy cases—should overcome the battery of legal talent the Big Four have assembled against it, there is little likelihood that, after years of delay in the merger hearings, the Big Four can now be divested of the hundreds of concerns they have bought out. To divest them of these

assets, long since woven into their corporate cloth, would be like unscrambling eggs. Thus, even if the Federal case is upheld, the value of the merger hearings—short of giving the public a breather from further corporate pressure in this field—is rather dubious. If past is prologue, as the FTC thinks, the public may expect more Federal "consent decrees," more settlements, more status quo.

Perhaps the most conspicuous administration failure has been on the part of Agriculture Secretary Benson. In addition to his ill-timed slash of price supports, in the throes of recession, he has only once used the althority granted him under the Packers and Stockyards Act to prosecute corporations involved in "unfair, unjustly discriminatory practice in commerce." (It has long been established that dairy manufacturers, in the language of this law, are construed to be "packers.")

Obviously, the great crusade has bogged down in the milkshed. It now appears that any relief for farmers, housewives, small dairy entrepreneurs, and grocer independents will have to wait for a change of administration in 1960. A vigilant Secretary of Agriculture could make the Packers and Stockyards Act a potent weapon for safeguarding the rights of small businessmen. By the same token, an administration with effective leadership could get action from the Attorney General and results from the FTC.

The ground for such an administration can be broken now. This session of Congress should enact new legislation calculated to bring economic justice to the dairy industry. High on the "must" list is the Page proposal—a suggestion which gets its name from Walter Page, manager of an organization of small dairy processors in Syracuse, N.Y., and a Patman committee witness. His proposal would compel the FTC, if it found substantial cause to issue a discriminatory price complaint after a preliminary hearing, to order the suspected offender to cease and desist from the discriminatory practice pending the final judgment of the hearing examiner.

Congress, if it hopes to reduce growing farm surpluses, should require the big milk trusts to pay farmers a fair price for their milk and keep retail consumption up by ordering retail prices down. America would not lag in 15th place on the list of dairy product consuming nations today if the housewife were not the victim of prices that remained high both in good times and bad. Toward this end, a Department of Consumers—such as the one proposed by Senator ESTES KEFAUVER in the January Progressive—might prove of inestimable value. Unless Congress acts now to restore economic justice, farmers will continue to go broke; farm surpluses will continue to pile up; the "Mohicans" will continue to vanish; the Big Four will continue to extend their domination and influence over the dairy industry; and the housewife may, one day, look back wistfully to the time when the price of milk was only 30 cents a quart.

Preservation of the Gettysburg Battlefield

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tucsday, May 19, 1959

Mr. YARBOROUGH. Mr. President, a great deal has been said on the need to preserve the Gettysburg Battlefield.

Jess Gorkin, the editor of Parade magazine, has summed this up extremely well in what he terms an open letter to the U.S. Senate. The Senate should act.

Mr. President, I request unanimous consent to have printed in the Appendix of the RECORD the open letter by Jess Gorkin which was published in Parade magazine for May 17, 1959.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AN OPEN LETTER TO THE U.S. SENATE—IT'S NOT TOO LATE TO SAVE GETTYSBURG

The MEMBERS OF THE U.S. SENATE,
Senate Office Building, Washington, D.C.

GENTLEMEN: The Battle of Gettysburg and the mmory of the men who fell here moved Abraham Lincoln in 1863 to deliver a simple eloquent address that continues to stir men's souls. In it Lincoln spoke with feeling of the brave men who had consecrated the battleground with their blood. He described it as fitting and proper that the Nation dedicate a portion of the field to their memory.

Now that shrine is in danger. Last December 14, Parade described the march of commercialism across the slopes where 160,000 Confederate and Union troop fought the Civil War's bloodiest battle. Thus began a new battle of Gettysburg, which President Eisenhower, whose farm overlooks the battlefield, and his Congressman JAMES M. QUIGLEY, Democrat, of Pennsylvania, carried to the committees of Congress. They sought $750,000 to buy land within Gettysburg National Military Park before private owners could exploit it. But the House Appropriations Committee denied them the money.

Now it is up to you in the Senate. And for each day lost, a part of our heritage is lost. Next year, or the year after, may be too late to saxe Gettysburg.

I wish I could guide you over these historic acres. I would point out a rusting auto marks the spot where Gen. George Meade, the Union commander, set up his field headquarters. You would see a free museum and souvenir shop near the scene of the first fighting. Another souvenir stand and gas station stand near the place General Barksdale was killed at the head of his Mississippians. The left flank of Confederate artillery was dug in where the Sweet Kiss shop now stands.

Or you can follow the route of Pickett's historic charge: across an auto junkyard, past a new motel on the left flank, beyond plots for a housing subdivision. Finally, you should pause at the cemetery where Lincoln spoke his memorable words. Within 100 yards of this hallowed resting place may rise an industrial plant for the land is owned by a large steel corporation.

The memory that inspired Lincoln's stirring words must be worth more to America than the $750,000 needed to stop the advance of commercialism. How will you vote, gentlemen of the Senate?

Respectfully yours,

JESS GORKIN,
Editor, Parade.

Our Depressed Areas Need Action, Not Runaround

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 19, 1959

Mr. VAN ZANDT. Mr. Speaker, the May report of the U.S. Department of Labor shows that unemployment nationwide has dropped from 4,362,000 in March to 3,627,000 for the month of April, or a decrease of nearly three-quarters of a million. Percentagewise the unemployment in March was 5.8 percent of the Nation's labor force while the April figures represent 5.3 percent or a drop of one-half of 1 percent.

The improvement in the Nation's employment as reflected by the figures in the above paragraph should not hide the real unemployment problem that the Nation is faced with in the 74 major labor surplus areas which suffer from continuous and chronic unemployment that numbers in excess of 2 million. The Nation's unemployment problem can never be corrected until the chronic unemployment is erased in these 74 labor surplus areas, and every one of the some 2 million unemployed are provided job opportunities.

Mr. Speaker, over a period of years the Congress has helped those areas where the impact of defense activities has been felt by providing Federal funds for schools, and recreational activities. Every time there is a disaster such as a tornado or flood Congress renders assistance to stricken areas. The farmer over a period of years has felt the bite of inflation, and so forth, an he has been assisted to the tune of billions of dollars. Areas with slums have been aided with housing development programs. Therefore, all that these chronic labor surplus areas are asking for is not relief but Federal assistance in their efforts to rehabilitate their economy for the purpose of erasing the stigma of unemployment.

The area redevelopment bill which is now tied up in the House Rules Committee while not the complete answer to the problem is a step in the right direction and therefore, the House has the responsibility of considering this legislation at the earliest possible date since the Senate has already approved it. Let us not put ourselves in the position where we can be accused of giving the chronic labor surplus areas the old runaround, by listening to some who advocate such treatment while they ignore the plight of the communities in the 74 labor surplus areas with over 2 million unemployed.

Mr. Speaker, on Wednesday, May 13, 1959, the Harrisburg (Pa.) Patriot carried the following editorial entitled "Our Depressed Areas Need Action Not Runaround." The editorial explains the unemployment problem in Pennsylvania and I call it to the attention of the membership of the House:

OUR DEPRESSED AREAS NEED ACTION, NOT RUNAROUND

Is Pennsylvania being set up for another runaround in Congress?

That's the way it is beginning to look. In both Senate and House, Republican leadership is pointing at the dramatic drop in unemployment as testimony that the bigger spending proposals of the Democrats aren't needed. And Democrats, especially the Dixie die-hards, are nodding agreement. Towering over all of them, President Eisenhower continues to wave the threat of vetoes.

Let's sort out this big spending versus balanced budget controversy:

The President is right on balancing the budget. This demands tax increases. The

President has proposed two—higher postal rates and a 1½-cent-a-gallon gasoline tax hike. There's a question whether this would be enough additional money to balance the President's budget but even these revenue-raisers are getting the cold shoulder from most Congressmen, including the Republicans. Balanced budget oratory now by congressional leaders has a phony ring. They're just talking.

Pennsylvania's biggest stake in the budget is not a lot more money for airports, or housing, or community facilities, or dams.

Pennsylvania's biggest stake and greatest need is Federal aid for the depressed areas. There continues to be more of these areas of chronic unemployment in our Commonwealth than in any other State in the Union.

Because of this, the dramatic jobs gain and jobless drop nationally has not been equally spectacular in Pennsylvania. Where 6 in every 100 workers still are idle nationally, 9 in every 100 are still out of work in our State. In the hardest hit of our coal areas, 20 of every 100 workers still can't find jobs.

Even if Secretary of Labor Mitchell doesn't have to eat his hat in October, with national unemployment falling below 3 million then, there will still be massive jobless totals in Pennsylvania's chronically depressed areas and our State's unemployment overall still will run 1½ times higher than the national average.

If Secretary Mitchell's forecast is right, there'll still be 5 percent unemployment nationally. But here in Pennsylvania, the jobless total will be 7½ to 8 percent.

There still are, as the Secretary just has emphasized again, far too many long-term unemployed in the depressed areas. For all the good jobs-jobless news of mid-April, this continues to be a cause for deep concern.

What is going to happen to the Federal aid program for depressed areas?

A stripped-down version of the Senate-passed bill now is stymied in the House Rules Committee where Dixie Democratic Neanderthals hold forth. Is this bill going to be held back again until the final days of the session and killed off in the closing rush?

The Democrats have a clear-cut majority in both the House and on the Rules Committee. But will they act in behalf of the depressed areas?

Let Benson Try

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 19, 1959

Mr. ADAIR. Mr. Speaker, the South Bend Tribune, South Bend, Ind., recently had an editorial suggesting that Secretary of Agriculture Benson be given an opportunity to try his plans to improve our agricultural situation. The article is persuasive and, under leave to extend my remarks, I include it herewith:

LET BENSON TRY

Looking at the huge agricultural surplus problem in the United States and its tremendous cost to the taxpayers, it would seem that Congress would wake up to the facts and give Secreary of Agriculture Ezra Taft Benson a chance to try his methods.

In principle, Benson advocates a free farm economy where the farmer can grow what he wants with little help from the Government. He is willing, however, to start with something less than that.

A variety of programs have been tried. All have been failures from the practical point of view. Agriculture problems have not been solved despite all the billions that have been spent.

The surpluses and the cost of subsidization have reached stupefying proportions. Surpluses owned or under Government control are worth $9 billion. It is costing $1 billion a year to keep them.

This cannot continue indefinitely. Therefore, Congress would be wise to let Secretary Benson have his way. Even if he isn't 100 percent successful, his plan should bring improvement.

Benson realizes that his free-enterprise ideas for the farmer are not politically possible. So what he is trying to persuade Congress to do is to let him lower the price props. This, he insists, will save the Federal Government $1 billion a year at the start while leading farmers to the marketplace instead of Government storage bins.

Price supports have encouraged over-production at the very time that agriculture has taken giant steps forward in productivity. And the biggest and most efficient farmers are the chief beneficiary of the programs that have been in vogue.

It has been said with a great deal of truth that no sensible person wants to see all Federal assistance to agriculture ended—at least not overnight.

But it is becoming increasingly clear that something akin to drastic reform is necessary to stop unworkable and extravagant programs that don't even remotely suggest that we are making headway in solving the basic problem of surpluses.

Homer Davidson, president of the American Meat Institute, made a significant statement recently with respect to the U.S. farm problem.

Suggesting that there is a sensible, nonpolitical way in which the farmer can help reduce surpluses, he said:

"An expanding animal agriculture is the best way to attack the so-called basic commodity overproduction." Continuing, he said: "The perishable nature of meat makes it a commodity which defies controlled production. The free market price is probably the only practical instrument that can be used successfully to balance production and consumption and be fair to both producer and consumer."

Benson clings to the idea of a free economy for agriculture, too, but thus far the politicians haven't seen anything in that philosophy calculated to win them votes. But the horrible mess isn't yielding to the subsidy treatment. Benson should be given a chance to try his ideas. It could be that he would be so successful an end to subsidies might heave into sight.

Fighter for Defense

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times, dated May 19, 1959:

FIGHTER FOR DEFENSE: THOMAS SOVEREIGN GATES, JR.

WASHINGTON, May 18.—To an aide who walked into his office in the Pentagon this morning, Thomas Sovereign Gates, Jr., made this comment: "I have decided to accept an invitation to be Deputy Secretary of Defense. It plays hob with my personal plans, but I guess it is my duty." The comment tells much about the character of the man who is moving up from Secretary of the Navy to step into the No. 2 position in the Defense Department and who may very well become the next Secretary of Defense.

Mr. Gates' sense of duty led him to remain in the Pentagon to replace the late Donald A. Quarles.

ABRUPT SHIFT OF PLANS

The new call to duty resulted in an abrupt shift of personal plans for the Philadelphia Main Liner. Much of his mature life has been spent in public service—first as a decorated naval intelligence officer in World War II and then for the last 6 years as Under Secretary and then Secretary of the Navy.

Until today, he had been planning to retire from public life next month and return to private business in Philadelphia. As he told friends, he felt he had done his stint of service to the Nation.

In remaining in the Pentagon, the 53-year-old official realizes that he is stepping into a far more demanding job than ever confronted him during the last 6 years. Instead of the advocate, he now becomes the arbitrator in the intense interservice competition for roles and dollars.

His own appraisal of the magnitude of the job was spelled out in two recent speeches that he had thought were more in the form of farewell addresses to public service.

DIVIDED SERVICE OPINIONS

In one speech, he noted that the Joint Chiefs of Staff continue to struggle with divided opinions and the Secretary of Defense continues to struggle handicapped by traditionally divided service opinions. In another speech, he pointed to the strain of official life in the Pentagon and observed that the great tensions of this public service have resulted in some sad events just recently—a reference to the sudden death of Mr. Quarles.

In the last 6 years—a period in which the Navy has undergone an atomic-missile age revolution—Mr. Gates has gained a reputation as a man who can deal with such controversies and pressures in an incisive, yet kindly manner. He also has proved to be an individual who cannot be steered around at will by the admirals, as was often the case with some other Secretaries of the Navy.

Recently, for instance, the admirals came up with a proposal for doing away with many of the specialist branches in the Navy, thus giving the preference to the traditional line officers.

In his determined manner, Mr. Gates balked at the proposal. He told the admirals to go out and get the views of the specialists. The admirals went out and came back with their original proposal.

Mr. Gates finally overrode the admirals with the observation that there was a greater need than ever for specialists in the Navy.

Mr. Gates has proven to be a fighting advocate for the Navy at a time when most of the money and interest seemed to be directed toward airpower. He has not always been successful in these fights, as indicated by his aside one day after leaving a losing briefing before the Secretary of Defense.

"We seem to get a Good Conduct Medal for our presentation but we don't get the additional funds."

FUNDS FOR LIMITED WARS

Much of his time in the Navy has been spent in advocating and arguing for more funds for limited wars and less stress on weapons of massive nuclear destruction. He also has attempted to stir the admirals away from a fixation with the carriers to a

dependence on missile-launching submarines as the capital ships of the future.

In his new job, Mr. Gates will sit in a decisive position in determining the running debate over limited war, all-out warfare and on whether the missile-launching submarines should be placed on a joint command.

The betting of his colleagues is that in his new role as arbitrator he will not display a partial Navy viewpoint. As one admiral said, "I am just a little fearful that he will drop too much of his Navy background."

Mr. Gates was born in Germantown, Pa., the son of the president of the University of Pennsylvania. In line with family tradition, he attended Chestnut Hill Academy and the University of Pennsylvania. He then joined the investment banking firm of Drexel & Co.

Upon his graduation from the university in 1928, he married Millicent Anne Brengle. They have three daughters. A son, Thomas S., 3d, was killed in a fire in a Canadian ski lodge in 1956.

Tribute to James V. Allred: A Dedicated Public Servant, a Wise Jurist, a Valued Friend

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. YARBOROUGH. Mr. President, U.S. District Judge James V. Allred of Corpus Christi, Tex., is lovingly respected by all who know him both in Texas and throughout the Nation—and with good reason.

This man's honesty, integrity, commonsense, kindness, and dedication have marked him as one of the finest and most outstanding men of his generation.

A biography of Judge Allred would tell how he was appointed, then elected district attorney of a three-county north Texas district and fearlessly fought the Ku Klux Klan's terrorists; how he was then elected attorney general of the State and later served two terms as Governor. He was then appointed a U.S. district judge, but resigned that post in 1942 to run for the U.S. Senate. He was defeated and returned to private law practice. Later, however, he was appointed a Federal district judge for the southern district of Texas and he holds that position with honor and distinction today.

A biography would also show how his leadership brought social security, old-age pensions, and unemployment assistance to Texas. Under his administration, a volunteer parole system for State prisoners was established, the fee system for county officials was abolished, a department of public safety was established and drivers license law passed. Under his guidance the interstate oil compact was formed which brought order to the choatic oil industry, a sales tax was defeated, enforcement of liquor and gambling laws was tightened, millions of dollars were added to our appropriation for school aid.

These things would be listed in an official biography and they are wonderful accomplishments. However, the people who know and love Jimmie Allred see more than that.

These people see Jimmie Allred as the public servant so determined to keep himself free to pursue the course which he felt best for his State and Nation that he refused many offers of financial assistance and came out of office with debts it took him years to pay. They see James V. Allred through the eyes of those whose careers he has boosted and of the people who have apeared before him in his courtroom: Such as the man who was an alcoholic with his promising career tumbling down about him when he appeared before Judge Allred, and who is now a sober, hard-working Corpus Christi businessman thanks to the judge, his staff, and cooperative citizens—or the young college student in what might have become the first of many brushes with the law had not the man on the bench taken a personal interest in him, and many others.

The people who love James V. Allred know he took law cases as an attorney which gave no promise of a fee and that as a jurist he looks out for the rights of the people who appear before him. They know he has quietly but actively supported with both time and money a number of worthwhile charities.

I know firsthand of James V. Allred's wisdom, courage, and generosity. We are proud to call him our friend. I had the privilege of serving under James V. Allred as assistant attorney general of Texas while he was attorney general, as served, by appointment of Governor Allred, successively as a director of the Lower Colorado River Authority of Texas, district judge, and presiding judge of the third administrative judicial district.

Mr. President, I request unanimous consent to have printed in the Appendix of the RECORD an article by Jim Mousner from the Houston Post for Sunday, May 17, 1959, under the heading, "Titled Texan—Judge Allred Has No Regrets Over Political Career."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TITLED TEXAN—JUDGE ALLRED HAS NO REGRETS OVER POLITICAL CAREER

(By Jim Mousner)

CORPUS CHRISTI.—The boy listened with rapt attention as the prosecutor and the defense attorney argued the case. He had been scared when an officer came to his school and took him out of class to serve as a witness at the trial. But now, as he watched the two attorneys, the fear was crowded out by a fierce ambition.

From that day in justice court at his home town of Bowie in Montague County, Jimmy Allred, then 15, knew he wanted to be a lawyer. The seed of a career was germinated—a dual career that led from a shoeshine stand to the Governor's mansion and a Federal court bench.

Federal District Judge James V. Allred recalled the trial the other day as he sat in his office on the second floor of the Federal building in Corpus Christi. Leaning back in the comfortable leather chair, his feet propped on the edge of his desk, the judge let his memory range back over the 45 intervening years.

An older boy, one of Allred's associates, had been charged with disturbing services at a little church near Bowie.

"I listened to the prosecutor and was convinced that the defendant was guilty. Then I heard the defense attorney and was just as sure that he wasn't. I remember being impressed by the lawyers' poise, their self-assurance. The prosecuting attorney was a young fellow. I suppose every boy has an idol. He was mine."

Alfred dreamed early his dream of becoming a prosecuting attorney. Some years were to elapse before he succumbed to the allure of politics, but while still a young man he was to see his dreams fulfilled.

THE PROSECUTOR, THE POLITICIAN

It's been 10 years since Allred accepted his second appointment as a Federal judge, but even though the veneer of reserve that one acquires in a position of grave responsibility it is easy to spot Jimmy Allred the prosecutor, Jimmy Allred the politician.

The infectious energy, the disarming grin, the voice with the bite of a whip-lash—all the facets of a personality that made James Allred one of the most dynamic figures of Texas politics—are still evident. The intensity of the voice as he rehashes a past political battle, the hand that suddenly balls into a fist, forefinger out-thrust, as he drives home a point.

Back in the west Texas town of Bowie where Allred was born on March 29, 1899, his chances of becoming a lawyer didn't seem too bright.

He was the sixth of nine children of Mr. and Mrs. Renne Allred. The elder Allred was a rural mail carrier. The size of the family and the father's modest income made it necessary for the six boys to go to work at a rather early age. Young Jimmy peddled newspapers and shined shoes as his contribution to the household.

He attended school at Bowie, played tackle on the Bowie High football team and graduated with honors in the class of 1917. Though he had scholarships from Texas A and M College and two or three other schools, he decided to attend Rice Institute.

"It was my first time away from home. I worked at a service station out on Preston and rode the trolley from school to work and back, an hour each way. I stayed 2 months, got overworked and homesick, and quit," he said.

WORE HIS OLD UNIFORM 2 MONTHS

After two more jobs, one with a Fort Worth peanut broker and another with the U.S. Immigration Service in El Paso, he joined the Navy near the end of World War I. The promise of a $125-a-month job after his discharge failed to materialize and he took a job as a stenographer in a Wichita Falls law office, where he wore his Navy uniform for 2 months before earning enough money to buy a suit of clothes.

He divided his time between his stenographic chores and combing the law books in the office. In 1920 he enrolled at Cumberland University in Lebanon, Tenn., and earned his LL.B. in a year. Returning to Texas, he went to Austin (his first trip to the State capital) and took the bar examination.

"On July 13, 1921, I received a wire telling me I had passed. I felt like I could have jumped a five-wire fence," he smiled.

When his first 40 days of private law practice netted him only $30, he took the prudent step of associating himself with an established Wichita Falls law firm. A short time later Gov. Pat Neff appointed one of the firm's partners district attorney of the three-

county district of Wichita, Archer and Young Counties, and Allred was named his assistant.

Within 6 months the elder lawyer tired of the job and persuaded the Governor to name young Allred in his place.

ONLY 24 UPON HIS APPOINTMENT

"I'm sure Governor Neff didn't know how old—or how young—I was," Allred grinned. He was only 24.

Allred's early ambition to become a prosecuting attorney had finally been realized and he poured all his zeal and energy into the job. The procecution of two men in connection with a series of floggings brought him into conflict with the Ku Klux Klan, which was experiencing a revival in the 1920's. The defendants were acquitted but the floggings ceased.

He was opposed by the Klan in his race for his first elective term but was returned to office by an overwhelming majority.

Judge Allred still looks back on his years as district attorney as the most enjoyable of his career. The old spectre of too little money again rose to haunt him, however, and he returned to private practice in the Wichita Falls law firm. One of his brothers, Ben Allred, was appointed in his place. (Five of the six Allred brothers studied law and passed their bar examinations.)

But the young ex-district attorney had tasted the fruits of political victory and it only took a minimum of encouragement to send him into the race for attorney general a few months after his resignation as district attorney.

"You've heard of a candidate being drafted to run—so many people asking him that he couldn't refuse. Well, I was drafted by three people," the judge laughed.

One of the three was a newspaper reporter who broke the news of Allred's candidacy in a front page story one Sunday morning. Lawyer Allred received a few letters from people around Wichita Falls "which I interpreted as a mandate to run."

ONLY WEST TEXAN CANDIDATE

There were six candidates in the race, including the incumbent, Attorney General Claude Pollard. Allred was the only one from west Texas.

"I had very little money to finance a campaign," he said. "I just started out meeting people and making speeches—on the streets, from the rear end of trucks. I did most of my campaigning in small towns. Always had trouble with the cities."

Much to his surprise, he found himself in a runoff with Pollard. But the 27-year-old political novice was dealing with a seasoned pro who leveled the charge that he was the former Gov. Jim Ferguson's candidate. Should he refute the charge or keep quiet? He followed the advice of friends who urged him to deny any affiliation with the impeached Ferguson.

Ferguson fired back a few days before the second primary, and this, Allred figures, turned almost certain victory into defeat, although it was only by 4,000 votes.

Smarting from his first political setback, Allred went back to private law practice and applied himself to the courting of a pretty Southern Methodist University coed, Miss Jo Betsy Miller. They were married on June 20, 1927.

Three years later, Allred was back in the Texas political arena, this time pitted against Attorney General R. L. Bobbitt, who had been appointed by Gov. Dan Moody to fill Pollard's unexpired term.

In what Allred calls "the most exciting race of my career" he defeated Bobbitt by 130,000 votes. His campaign was partially financed by $500 he borrowed against his life insurance policy. He still has the receipt for its repayment made 10 years later.

Reassured by his sweeping victory in the 1932 election, Attorney General Allred announced his candidacy for Governor in 1934. At 34, he was the youngest of seven candidates in the race. The first primary threw him into a runoff with Tom F. Hunter, a Wichita Falls oilman whom he defeated by 40,000 votes in the second primary.

When Gov. James V. Allred took the oath of office on January 15, 1935, he found himself the chief executive of a State floundering in the depths of a national depression. Thousands were jobless, hungry, desperate.

Governor Allred's administration moved to alleviate the crushing despondency of the depression through a broad rehabilitation program carried out in cooperation with the Federal Government. Legislation was passed providing for social security, old age pensions, and unemployment assistance.

These were a few of the major accomplishments of the Allred administration. Others included:

1. The establishment of the Department of Public Safety by combining the Texas Rangers and the Highway Patrol.

2. Abolition of the fee system for county officials.

3. Establishment of the volunteer parole system for State prisoners.

4. The passage of a driver's license law.

"One of the things I am proudest of is the interstate oil compact, which saved the oil industry from Federal control," said Allred. "The conservatives won't admit it, but I and Ernest Thompson (Col. Ernest O. Thompson, chairman of the Texas Railroad Commission), backed by half a dozen independents, were responsible for getting the compact adopted."

Allred forces also defeated a general State sales tax, waged a successful war against gambling, tightened State control of the liquor traffic, and obtained a $10 million appropriation for rural school aid.

The Governor ran for reelection in 1936 and received 553,219 of the 1,053,117 votes cast, more than his 4 opponents combined, in the largest vote recorded in the State up to that time.

Allred took time out from his gubernatorial duties to place the name of John Nance Garner before the Democratic National Convention in Philadelphia for renomination as Vice President. He then campaigned for the Roosevelt-Garner ticket in Oklahoma and New Mexico.

Could Allred have been elected to a third term as Governor?

"I doubt it," said the judge. "I think the people were ready for a change."

Allred announced his decision not to seek a third term on March 19, 1938, in the first broadcast ever made from the Governor's mansion.

In July of the same year President Franklin D. Roosevelt appointed the former Governor a Federal judge of the southern district of Texas.

The Allreds moved to Houston, where he took the oath of office on March 4, 1939.

But Judge Allred couldn't resist the allure of politics. In 1942 he resigned to run against O'Daniel for the U.S. Senate. He lost by 18,000 votes.

Looking back on the race and O'Daniel's previous political successes, Allred comments that "Pappy's strength wasn't in his hillbilly band but in religion. Those little sermons did the trick."

Senator O'Daniel blocked Allred's appointment as judge to the fifth circuit court of appeals in 1943 but, after 6 active years in Democratic politics concluding with a campaign for Senator LYNDON JOHNSON in 1948, he was again appointed Federal district judge by President Harry S. Truman. He took his place on the bench in 1949.

Judge Allred says he's through with politics. Does he miss it?

"Sure I miss it," the judge replies. "Anyone who was in it as long as I was would miss it. But I've had to slow down. I blacked out over at Silsbee during the 1942 race and I've had to take it easy since."

The Allreds make their home in Corpus Christi, a central location for a giant area covered by the southern district. He holds court here, and in Victoria, Brownsville, and Laredo. He handles approximately 400 cases a year, most of them immigration cases accompanied by pleas of guilty.

The Allreds have three children, James V. Allred, Jr., David Allred, and Sam Houston Allred.

Allred declines to comment on the contemporary political scene in Texas, but as for his own political philosophy, he says:

"I thought I was a moderate, but the history books have made me a liberal. But that's all right."

Allred says he probably has to work harder on his cases than the other judges in the district because of his lack of background on the bench and his limited legal education.

He says one of his guiding tenets is to try to see the many sides of a case and take them into account in rendering a judgment.

"We have all made mistakes," he says.

Allred admits his political career made him apprehensive about serving as a Federal judge.

"But now," he says, "I believe it's the best background I could have had. I don't think anyone should serve as a judge or prosecutor unless he's been knocked around some."

The Egg Business in the Northeast

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 19, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following letter from a constituent of mine, Mr. Arthur E. Prosser, gives the other side of the controversy on the egg business in the Northeast.

Mr. Prosser also writes me as follows:

I thought that you might be interested in hearing the other side of the egg support discussion. I believe this represents the thinking of most of the old established poultry farmers in your district. We are not happy but we know from experience that Government help (?) is not the answer. The ones making the most noise should not be in the business to start with. Unless Uncle Sam takes them under his wing and keeps them there, they would go broke in a good year. With Uncle Sam's help they make competition that will break us.

I think that he has come up with an interesting answer, namely that Government supports only increase the number of the inefficient, penalize, and finally force liquidation on the efficient and hard-working poultryman, and finally take away the farmer's freedom:

[From the Poultryman, May 8, 1959]

OFFERS SUGGESTIONS IN PRESENT DILEMMA

CHESTER, N.Y.

EDITOR, THE POULTRYMAN: The following letter was written to Prof. J. H. Bruckner, head of the poultry department at Cornell University. Since I could not attend a meeting held last week at the university, I wrote my ideas for consideration by the group. I think your readers will be interested in the following comments. They are the other side of the argument for supports:

"Our letterhead carries the statement 'Egg Producers Since 1925.' During these 34 years, in addition to accumulating a pouch and some gray hairs, I have made some observations by watching and listening to people brighter than I.

"It was very kind of you to invite me to attend the meeting of representatives from various segments of the poultry industry, but as I have 'shot off my mouth' at similar meetings during the past 34 years I am declining with thanks. However I should appreciate it if the secretary of the meeting would read the results of my study of the poultryman's problems.

"On January 1, 1959, we incorporated our farm business with Cornell's help. My two sons, who attended Cornell and served a hitch in the Army, have taken over the operation of our farm. They are operating the farm with the help of two good couples who have been in our employ more than 10 years. The help has to be paid even though there may be nothing left for my sons.

"We are not happy about present conditions but I have seen bad conditions before and expect to again. I don't like it but I am convinced that some of the solutions being offered are not the correct ones: hence this letter."

PUBLIC NOT INTERESTED

"1. I heard Dr. Cliff Carpenter say many years ago 'Always remember, the public is not interested in the cost of production'. So, crying through the press that we are producing eggs and selling them below cost proves nothing except that we are a little dumb.

"2. Support price, attractive as it looks, is another stinker. If Uncle Sam guarantees you a price (which by the way would help western eggs more than nearbys) he will also tell you how many hens you may keep. This would call for a police state to check on the number of hens in a flock. This would be practically impossible. I told a fellow poultryman who is for controls that what he means is: he is for controls for everybody except himself. He chiseled in the black market during World War II so I conclude that he would sneak in a few extra thousands hens over his quota.

"What possibly could be done with all the eggs that would be produced if poultrymen, good and bad, were guaranteed a profit? We had a similar experience a few years back with butter. That cost the American taxpayer plenty, just as the support price on grain is now doing—but the real honey in supports is the one on tobacco. (We have to subsidize a crop which some medical authorities assert causes lung cancer; then are asked to contribute to the Cancer Fund to try to cure it."

NO MIDDLE ROAD

"We are going to have to make up our minds soon if all business is going to stand on its own feet or else have the Government take over all business and give us what it thinks we should live on. There is no middle road between capitalism and communism.

"3. Government buying of eggs now on open market. Our capable Secretary Ezra Benson is being condemned for not doing this, which has been done before with no help to anyone. Here's what happened in our own case: We were selling eggs to a local State institution. The Government got into the act a few times to bolster the market. They supplied western eggs to this institution free—that is, at taxpayers' expense—with the result that we lost a customer and our eggs were dumped on the New York market to further depress it.

"I have just itemized three proposals which I am sure will not work. Now I'll try to throw in something that I believe will.

"1. Clean up unfair competition. In a recent check on grade A eggs in stores only 5 dozen out of 36 dozen tested were actually grade A. We should demand adequate inspection from the State (one place where government is needed). Next, and most important, we should be sure our eggs are grade A. Just because an egg is nearby doesn't mean it's good.

NEED BETTER MARKETING

"I have seen better eggs in the New York market that were produced in Minnesota than some produced within 100 miles from the city. You all know how to produce grade A eggs. In regard to the term 'nearby': Just what is its significance now in this age of superhighways, refrigerated trucks with sleeper cabs? Wisconsin is no farther away than Ithaca was when I started selling eggs in New York.

"2. If you have a one-man plant, are willing to work 7 days every week and retail all your eggs you can get by. The next step is at least 10,000 hens. (Some say 10,000 per man). This means a large investment but how else can you hire a man capable of getting union wages elsewhere?

"3. This is tied up closely with 2—get most of these 10,000 and larger flocks tied up with a large co-op. A small one does not have the bargaining power with the supermarkets with which you have to do business.

"4. Build a fire under G.L.F. and make them do a better marketing job. There is no use starting another organization. Eastern State Farmers' Exchange has just taken over most of the small co-ops in New England. This is the solution, I believe. We buy all our feed from G.L.F. but they are behind in marketing. We should not have to truck 300 cases to New York market and thus depress it further. I am offering this as a challenge to G.L.F. They are in a position to do something so 'let's get on the ball.' We can help them move eggs by supporting the Poultry and Egg National Board. My suggestion would be about 3 cents per ton on feed. We should spend more on advertising. All that Poultry and Egg National Board lacks is the money.

"5. Integration may be the answer for those who would rather work for wages (and who wouldn't now)? The only integrated deal, I believe, is the one Neppco described in the February News where you are paid 6 to 9 cents per dozen for producing the eggs for the feed companies. I certainly would stay away from some contracts I have seen where you have to buy a certain brand of feed and they market your eggs.

"As an oldtimer I should like to close with this parting shot: Don't panic if you operate this year at a loss. It isn't the first time it has happened nor will it be the last. Just make sure that you are a good enough poultryman to make money in a good year. A lot of the people in the business can't even do that—why keep them in buiness at the taxpayer's expense? Operating as you did just 5 years ago will break you. That's why I am glad to have youth take over Orange Poultry Farm, Inc.

"ARTHUR E. PROSSER, Sr.,
"Orange Poultry Farm."

A Call to Washington

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial which appeared in the Laconia Evening Citizen, Laconia, N.H., of May 16, 1959, with reference to the recent appointment of Chester W. Jenks, of Manchester, N.H., which is in my district. Mr. Jenks is an outstanding citizen and will contribute greatly to the White House Conference on the World Refugee Problem. He is the son of the late Congressman Arthur B. Jenks who represented the First District of New Hampshire for several years:

A CALL TO WASHINGTON

Chester W. Jenks of Manchester has accepted an invitation from President Eisenhower to participate in a White House conference May 21-22 on the world refugee problem.

The President has made an excellent selection in Mr. Jenks, who is widely traveled, and has a sympathetic understanding of the plight of the homeless in many lands. A further advantage is his close friendship with Secretary of State Herter, who was his classmate at Harvard. When Mr. Jenks and Rev. Mark Strickland visited Russia last year, Secretary Herter attended personally to their passport requirements.

In Defense of an Industry

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 19, 1959

Mr. IRWIN. Mr. Speaker, there has been much hullabaloo in recent weeks in the press regarding the controversial installation of $100,000 worth of rubber tile in the new Senate Office Building.

All of this unwarranted and certainly unfavorable publicity has been extremely unfair to the rubber tile industry of this country and particularly to the Danbury, Conn., Rubber Co., one of the largest manufacturers of rubber tile in the Nation.

In behalf of this constituent company, I would like to introduce into the RECORD the following letter sent me by Mr. John E. Ryan, president of the Danbury Rubber Co., in defense of his industry:

THE DANBURY RUBBER CO., INC.
Danbury, Conn., May 13, 1959.

Hon. DONALD IRWIN,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN: Referring to the controversial installation of $100,000 of rubber tile in the New Senate Office Building in Washington, D.C. by one of our competitors, we believe that you should be interested to know that our company in Danbury, Conn. is one of the largest rubber tile manufacturers in the country.

We specialize in the manufacturing of rubber tile for flooring and our 150 employees depend on rubber tile for a living.

We want to assure you that rubber tile is a fine product which is used extensively in offices, churches and all kinds of institutions besides being used extensively in homes. Many people buy it for self-installation.

The slippery condition that is being referred to in the press is due to the type of wax used and the rubber tile is not at fault. We ourselves recommend very little waxing

and mostly buffing. The noise condition, which is much less than in other types of resilient floors, can be reduced further by using acoustical ceilings and inexpensive drapes alongside the windows.

All publicity made around that floor is detrimental to our product and may hurt our company. We would appreciate any help you can give us in giving the public the truth about rubber tile.

We also hope that this letter will help save some taxpayers' money.

A copy of this letter is being sent to our Employees' Union AFL–CIO local 402.

Very respectfully yours,

THE DANBURY RUBBER CO., INC.
JOHN E. RYAN, *President.*

Garrison Diversion Unit

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 19, 1959

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the May 14, 1959, issue of the McLean County Independent, Garrison, N. Dak., which points out the great power of the Federal Budget Bureau:

WATER RESOURCES USE

The great concern that every North Dakotan should feel toward the Garrison diversion project and water resources in general in the State was reemphasized at a meeting held here last Friday evening attended by a small group of interested people.

The rapidly declining water level table and the greatly increased need for new sources of supply behooves every citizen—not just farmers and ranchers—to become more water conscious to help develop and retain sources of supply in our area.

Garrison diversion project is a part of the long-range Pick-Sloan plan for the Missouri Basin conceived in 1941. Alert men that dealt with Federal authorities at the beginning of plans for Garrison Dam released and saw to it that diversion and irrigation plans were a part of the plan accepted by Federal personnel as compensation to North Dakota for loss of a great many tax-revenue acres to be flooded by Garrison and Oahe Reservoirs.

Nearly 600,000 acres are stricken from the tax revenue roster by the waters of these reservoirs in the State. If the basin project is not completed as originally conceived and agreed upon the State will have suffered a great loss of revenue that can never be regained. To compensate for this loss the diversion project must be built.

A moral obligation rests upon the Federal Government to the people of North Dakota to fulfill original commitments and build Garrison diversion and irrigation project. We see no need of reauthorization by the Federal Budget Bureau nor Congress for Garrison diversion but point out that this is a part of the original basin plan and the dam and reservoir without the diversion is not the complete unit originally agreed to.

The Federal Bureau of the Budget has had the Garrison diversion report under study for a long time now. This Bureau was originally set up as an auditing and advisory group to the executive branch of the Government. Now it appears—and its long delay in releasing the Garrison diversion report to Congress seems to prove it—it has become almost a legislative body in nature with power to make decisions that belong only to the legislative, executive, and judicial branches of the Federal Government.

But getting back to the homefront—the North Dakota Water Users Association of which the newly organized McLean County branch is a part, is on the right track in combining and consolidating water interests in the State to help present a united front for this vital and valuable resource in the State.

The truth of the matter is that priority to water rights is established by prior use. If downstream interests can establish use of Missouri River water before upstream interests can; when the test comes as to who may get the water the prior user gets the nod and Johnny-come-latelys may get what is left over.

It appears to us that McLean County is not yet fully awake to the great resource we have in Garrison Reservoir and how our State interests are clamoring for and receiving greater benefits from Garrison Dam presently than we on the homefront are. Congratulations to the men that by their presence at the meeting Friday night showed their awareness and interest in one of North Dakota's greatest resources.

Citizen's Scholarship Foundation of Greater Fall River

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Tuesday, May 19, 1959

Mr. SALTONSTALL. Mr. President, Massachusetts has long been known as one of the great intellectual centers of the United States. One of the first moves made by our Pilgrim forefathers when they landed on this shore was to provide for the education of their younger generation. Today Massachusetts citizens still have that feeling. Our many great universities and colleges attest their interest.

In particular, however, the citizens of one city in Massachusetts are carrying their interest in education even further. The city of Fall River, recognizing that private education is a necessary adjunct to public education, and that the youth of today is faced with an even greater problem in achieving knowledge than the youth of any previous age, has instituted the Citizen's Scholarship Foundation of Greater Fall River. Beginning last year, they collected funds from the ordinary citizen to provide for the awarding of scholarships to qualified but needy local high school graduates. Truly this is a real advance in the interest of education. The United States can be proud that its citizens feel so strongly about the future generation's ability to meet the challenge of our expanding knowledge.

I congratulate the Scholarship City, Fall River.

Mr. President, I ask unanimous consent that several letters bearing on this subject be printed in the Appendix of the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

CITIZEN'S SCHOLARSHIP FOUNDATION,
OF GREATER FALL RIVER,
Fall River, Mass.

The recent announcement by the Citizens' Scholarship Foundation of Greater Fall River of the awarding of 24 scholarships to qualified but needy local high school graduates was a milestone. Never before has an organization composed of thousands of ordinary citizens attained such a goal.

Because this type of a grass-roots movement is unique to Fall River, considerable favorable national publicity has come to our city. We all benefit from such favorable comment eventually and we are proud to have had a part in it's inception.

Yours for a better community through education.

John M. Arruda, Mayor of Fall River; Albert H. Brosnihan, Chairman Merchants Division, Fall River Chamber of Commerce; Raymond J. Conners, M.D., Past President of Bristol County South Medical Society; Roland K. Desmarais, Attorney at Law; George W. Graham, President, Fall River Trust Co.; William S. Lynch, Superintendent of Schools; Daniel J. McCarthy, Business Agent, ILGWU; C. J. McCauley, President of Firestone and Latex Products; Thomas A. Rodgers, President of Globe Manufacturing Co.; Myer N. Sobiloff.

THOMASVILLE, GA.

DR. IRVING A. FRADKIN,
Chairman, Citizens Scholarship Fund of Greater Fall River, Fall River, Mass.:

It is good to learn of the scholarship project begun by the Citizens of Greater Fall River. This is a splendid example of the kind of increased local concern for education needed in communities throughout the Nation. In order to achieve the fruitful goals of democracy, everyone must help our talented young people develop their abilities to the full.

DWIGHT D. EISENHOWER.

MRS. FRANKLIN D. ROOSEVELT,
New York, N.Y.; January 28, 1958.

DEAR MR. MCCARTHY: I was interested to get your letter and to learn of the effort being made in your community to make your people more aware of the opportunities and advantages of a college education. I congratulate you and am happy to send a dollar toward this effort.

I would just like to add, however, that I hope all able young people will someday get their education at the taxpayer's expense.

Very sincerely yours,

ELEANOR ROOSEVELT.

APRIL 18, 1958.

Your letter of April 7 to Mr. Root has been turned over to me. I was very glad to see it and extremely interested in the material you had to present.

As you surmised, the story on your committee that we ran was rewritten from a New York Times dispatch. The story appeared in the Times just as we were going to press and I felt that it was interesting enough to try to get in immediately. Had we had more time we probably would have written to you for greater information.

I can understand your feeling against having this committee written up as a one-man plan, but even after reading the column that you enclosed, I gather that this is primarily your baby. This is certainly nothing to be ashamed of.

Unfortunately, at this moment, I don't think we could do anything more with your story. Having run the little item sort of kills it for us for at least a couple of months. It still, however, looms as a possible story

for us, say in the fall. At that time we could carry it on the basis of the number of high school graduates you were able to help go to college and the success of the first year's drive. I am going to mark my calendar for some time in September to get in touch with you again, and I wish you would do the same. Perhaps at that time we can get together on a longer story on your plan, one that would blueprint for other cities ways in which they could set up such a committee. In the meantime, I would be very happy to be kept informed about all of your activities.

I too feel that this is a wonderful idea and something that could be done in any community. We have carried many stories recently of citizen action to help their schools and the children of their schools, but none have done anything quite like this.

Thank you for writing to us. I hope to hear from you again in the near future.

Sincerely yours,

PAUL ABRAMSON,
Managing Editor.

OFFICE OF THE MINORITY LEADER,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 19, 1958.

GREATER FALL RIVER SCHOLARSHIP FOUNDATION,
Fall River, Mass.

DEAR DR. FRADKIN: I was delighted to learn that the house-to-house canvas in Somerset for the Greater Fall River Scholarship Foundation has been such a huge success. This has given great impetus to the scholarship fund drive and augurs well for a successful climax for a project of immense importance to the youth of the Greater Fall River area.

The spirit of the scholarship fund is that no talented youth in our area should be denied higher education because of the lack of financial means. The importance of higher education, in this age of intense international competition, is common knowledge. For this reason, the scholarship drive merits enthusiastic and generous support.

Sincerely yours,

JOSEPH W. MARTIN, Jr.

NEWSWEEK,
New York, N.Y., April 16, 1958.

CITIZEN'S SCHOLARSHIP FUND OF GREATER FALL RIVER,
Post Office Box 103,
Fall River, Mass.:

Thank you for your letter of April 8 including the material on the Fall River plan and its latest achievements. It certainly is an inspiring project.

I am sending it on to our education editor, and he will be in touch with you if it is decided to do an article.

Thank you for thinking of us.

Sincerely yours,

MALCOLM MUIR, Jr.

THE READER'S DIGEST,
Pleasantville, N.Y., April 24, 1958.

CITIZEN'S SCHOLARSHIP FUND OF GREATER FALL RIVER,
Fall River, Mass.:

You're certainly to be commended on the "Fall River Plan" and several of us here have read your material on the subject with keen interest.

We're all agreed that this is a fine and worthy project. We do think, however, that a Digest article now would be premature; that a story with greater impact and appeal could be developed after the plan has been in operation for a couple of years and there is some record of accomplishment on the part of the scholarship winners. We would welcome a progress report in another year or two.

Meantime, our best wishes for the continuing success of your "grass roots" campaign.

Sincerly yours,

KENNETH W. PAYNE.

DIOCESE OF FALL RIVER,
Fall River, Mass., February 6, 1958.

Mr. DANIEL J. MCCARTHY,
Corresponding Secretary, Citizen's Scholarship Fund of Greater Fall River, Fall River, Mass.

MY DEAR MR. MCCARTHY: Here enclosed find my contribution, small enough, for the establishment of a scholarship fund in Greater Fall River.

Since your demands are so modest, I feel quite confident that the community as a whole will respond generously and trust that many of our deserving young men and women will benefit by the scholarships through the medium of this fund.

Believe me, with every good wish.

Sincerely yours,

JAMES L. CONNALLY,
Bishop of Fall River.

DEPARTMENT OF
HEALTH, EDUCATION, AND WELFARE,
OFFICE OF EDUCATION
Washington, D.C., March 20, 1958.

Your letter of February 14 to President Eisenhower has been referred to this Office for reply.

It is certainly a real pleasure to learn of the spirit which the citizens of Fall River have entered into their drive for a fund for scholarships to help superior, needy youngsters to go on to college. In addition to contributing to a worthy cause the people of Fall River have set a fine example of democracy in action.

We are delighted that another city is already following your leadership and join with you in the hope that other communities will undertake similar action.

Sincerely yours,

J. HAROLD GOLDTHORPE,
Assistant Director
Student Assistance Project.

CITIZEN'S SCHOLARSHIP FOUNDATION
OF GREATER FALL RIVER,
Fall River, Mass.

DEAR SENATOR SALTONSTALL: In our form of democracy, one principle, the principle of self-help has done more to insure the success of our way of life than any other. Because we feel that education of our children is the basic necessity in the formula for keeping our country great, we of the Fall River plan are making every effort to keep alive the principle of self-help.

The Citizen's Scholarship Foundation of Greater Fall River is such an organization founded to raise moneys for the advanced education of gifted but needy high school graduates. This project has the unqualified support of President Eisenhower, Mrs. Roosevelt, and many other dignitaries.

Last year we awarded 24 scholarships—this year we expect to double that amount, ranging from $100 to $500. This money is obtained from the broad base of over $10,000—mainly from the $1 memberships.

We have found that a grassroots movement becomes more than merely giving out scholarships. It becomes a uniting factor in a community; it stimulates parents' interest in higher education; it gives students the incentive to do better work, finish high school, and consider college. It is a fine example of brotherhood in action.

The enclosed brochure is available to any interested party writing to Citizen's Scholarship Foundation, P.O. Box 103, Fall River, Mass.

Yours for a better America through education,

Dr. IRVING A. FRADKIN.

MARCH 17, 1959.

DEAR DR. FRADKIN: I was thrilled with the Fall River plan. Its cross-sectionnlism is exactly what this country needs, in education as in all other aspects of our communal life.

My personal problem concerning becoming president of this great grassroots movement is that I simply have so little time to devote to the duties which must arise from the association. I'm with you all the way and would be glad to lend my name to the idea with the understanding that I just can't get out to your town to help. If my name can help you've got it.

Sincerely yours,

SAM LEVENSON.

B. M. C. DURFEE HIGH SCHOOL,
Fall River, Mass., April 6, 1959.

Dr. IRVING A. FRADKIN,
President, Citizen's Scholarship Foundation of Greater Fall River, Fall River, Mass.

DEAR DR. FRADKIN: Although you are aware I am sure of my intense personal interest in the efforts of the Citizen's Scholarship Foundation of Greater Falls River since its inception, I feel compelled to put in writing some of my reactions to this splendid project.

In these days when the need for scholarship help is truly great and continuing, the foundation is doing a superior job in stimulating students of high school years to do better work, in encouraging them to feel that they have a real opportunity to go to college, and in urging their parents to regard a college education as truly desirable for them. All of these will result in direct benefit to our country.

The New York Times, issue of April 5, 1959, carried a front page story decrying the fact that little scholarship help reaches pupils of families in the lower income bracket. It is primarily this feature in the work of the Citizen's Scholarship Foundation of Greater Fall River which makes it unique and which calls, I believe, for universal support.

As principal of B. M. C. Durfee High School, I am particularly proud that our students, working with other young people, have participated actively in the work of the foundation, arranging their own programs and being so successful therein that they are able now to present a scholarship of their own. By their unselfish attitude these students are setting an example not only for others of their age group but for adults as well.

It is my sincere hope that the efforts of the Citizen's Scholarship Foundation of Greater Fall River will continue strong and that it may serve as a model for other communities.

Very sincerely yours,

AMBROSE F. KEELEY,
Principal.

FALL RIVER PUBLIC SCHOOLS,
ADMINISTRATION OFFICES,
Fall River, Mass., April 3, 1959.

Dr. IRVING A. FRADKIN,
Fall River, Mass.

DEAR DR. FRADKIN: May I express once again my enthusiasm for the Community Scholarship Fund and the work it is doing. There is no doubt in my mind that the good effects transcend and go away beyond the actual donation of scholarship moneys to the recipients.

I am convinced that the publicity attendant upon the raising and donating of these moneys prompts parents to think in terms of college education for their children where formerly there was no hope. Particularly, a parent who would like to see his child have the opportunity to attend college and cannot quite make it financially is given an added boost. At the same time a student who can get some financial aid and needs a little bit more is able to convince his parents that a college educatino is within reach. Here you are giving added incentive to the able student and at the same time stimulating him to a realization of his potentialities. I have no doubt that the number of students who

will elect a college curriculum in high school will increase and that students in general will avail themselves of additional opportunities.

A greater number of pupils going on to higher education should result in a more enlightened citizenry and a more progressive community.

Sincerely yours,

WILLIAM S. LYNCH,
Superintendent of Schools.

Great Oaks and Little Alcorns

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. BOLAND. Mr. Speaker, the Buffalo, N.Y., News columnist, Hubert Holloway, recently paid tribute to former Democratic National Committee chairman and Postmaster General James A. Farley in his "Notes and Quotes" column.

Said columnist Holloway:

One of Buffalo's best friends in New York City is James A. Farley. He always speaks of Buffalo in flattering terms and sends greetings to Buffalonians by way of his visitors. The Haverstraw boy who made good in politics takes the end of his senatorial ambitions in the spirit of some little-known words of Daniel Webster:

"The result has caused me no personal feeling whatever, nor any change in my conduct or purpose. What I have been, I am, in principle and in character; and what I am, I hope to continue to be. Circumstances or opponents may triumph over my temper and self-respect."

On April 9, 1959, the Salem, Ala., Times-Journal also paid tribute to Jim Farley in an editorial. Under leave to extend my remarks, I include the editorial in the Appendix:

GREAT OAKS AND LITTLE ALCORNS

Naturally the resignation of Meade Alcorn as Republican national chairman caught a little space in the prints. But the fact is that these days national chairmen don't seem to strike much fire.

Back in the heyday of Jim Farley, the late Franklin D. Roosevelt's party manager, the job seemed to have a lot of glamour. Farley ran the Democratic operation as if he were a kind of cross between Cecil B. DeMille of Hollywood and the president of General Motors.

The postwar crop of national chairmen hasn't been of the same order at all. Mostly they've made the whole thing appear about as exciting as if they were bossing a nationwide network of department store billing clerks.

Now and then they try to put a little life in the job by tossing off a strongly partisan statement, but generally the reaction to these is that, whichever party is involved they range from the foolish to the preposterous.

Party organization politics may be a good deal more ethical than it used to be. It's also a lot less fun.

Importance of the Mutual Security Program

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the remarks of Gen. William H. Draper, Jr., before the New Hampshire Weekly Newspaper Publishers' Association meeting held at the University of New Hampshire, Durham, N.H., on May 15, 1959. General Draper, Chairman of the President's Committee To Study the U.S. Military Assistance Program, is displaying outstanding leadership. This speech is an excellent presentation of the importance of the mutual security program. I am deeply impressed by General Draper's logic, clarity of expression, his conception of the future, and his vision of the part the United States must play in world affairs. He is making an outstanding contribution to the development of effective foreign policy in this crucial and trying period:

REMARKS OF WILLIAM H. DRAPER, JR., CHAIRMAN, THE PRESIDENT'S COMMITTEE TO STUDY THE U.S. MILITARY ASSISTANCE PROGRAM, BEFORE THE NEW HAMPSHIRE WEEKLY NEWSPAPER PUBLISHER'S ASSOCIATION, UNIVERSITY OF NEW HAMPSHIRE, DURHAM, N.H., MAY 15, 1959

Ladies and gentlemen, 2 weeks ago Dr. Henry M. Wriston made an informal talk to a small group not unlike yours—a quiet gathering of New York newspaper and magazine and news service editors and writers.

Dr. Wriston is president of the American Assembly. You know him better as the former president of Brown University.

He was talking in his gentle way and in his beautiful words.

He spoke of the cold war.

He told of changes not only dramatic but profoundly important.

He pictured with clarity the increases in Communist pressures and aggression against the free world.

Then he turned his attention to the phrase "cold war" itself.

"Cold war" was a brilliant and illuminating aphorism when it was conceived and uttered, but it has been worn smooth in the commerce of our conversation, Dr. Wriston said.

He found that the old phrase "cold war" conceals the broadened scope of the struggle, the new instruments which have been brought into play and the fresh intensity epitomized in the single phrase of Mr. Khrushchev, "We will bury you."

Right here and then Dr. Wriston conceived and uttered a new aphorism, just as brilliant and just as illuminating. He said simply: "We are in a second 100 years' war."

I am with you tonight to talk about the second 100 years' war.

Those of you who are of my generation saw it start, as early as 1918.

The question of how many of us of any living generation will see it end, how many of us uneasy under the poised horror weapons even will know when it ends and which side is the victor.

This uneasiness is in all Americans. Those of us who are honest with ourselves admit it, as the best of actors admit to stage fright and the bravest of soldiers admit to battle fright. It is human of all of us to have this emotion.

President Eisenhower in an address in late April explained why in nine words. He said: "We live in a climate of tension and challenge."

The President put the tension into these few words: "We confront world communism in a protracted struggle in which we are menaced by political, economic, and military resources."

And the challenge into these: "As long as the Communists pursue their basic goal along broad and diverse fronts, we have no choice but to meet the challenge wherever or however it may be presented."

All of us face many menaces in private life. Illness, accident, old age.

All of us buy insurance.

Mutually we face this menace in national life.

We can't buy insurance. No company is big enough to underwrite the risk.

So we are furnishing our own, insuring ourselves.

And our insurance policy is a broad one, and comprehensive. We call it mutual security.

We want insurance against the political form of this national menace.

That insurance is in our foreign policy, directed by the President, carried out by the State Department, supported without partisanship by the Congress.

We want insurance against the military form of this national menace.

That insurance is in our military assistance program.

We want insurance against the economic form of this national menace.

That insurance is in our economic assistance program.

And it is the military assistance and economic assistance that concern me.

They are the major parts of our mutual assistance program.

I speak tonight as the chairman of the nonpartisan committee appointed by President Eisenhower to study the military and economic assistance programs.

Thus I speak in the light of the committee's unanimous findings and conclusions sent to the White House a few weeks ago.

We believe that the plain issue is whether our country intends to seek survival in isolation—a state of siege in fortress America—or whether we intend to combine our military and economic resources with those of other nations and together build a common defense against the common threat.

Khrushchev in Leipzig the month before last repeated Lenin's prediction that communism would rule the world.

Then he said: "War is not longer inevitable. This is so not because the imperialists have become better, but because they have become weaker. The forces of peace are stronger than ever before."

By "forces of peace," Khrushchev means the forces of communism. Unfortunately, his statement is correct: that they are stronger than ever before.

Russia's conventional forces of 175 active divisions and more than 20,000 combat planes are being strengthened impressively with nuclear weapons and with ballistic missiles.

The manpower of Communist China has been joined with that of the Russians to face the free world with the greatest military threat in history.

Russia's industrial production forges ahead at a pace faster than our own.

Red China's industrial surge is defined in Chinese claims of greatly increased agricultural production and a steel production that surpasses Great Britain's.

The Kremlin has put this increased production to work in the second 100 years' war.

It has stepped up the distribution of arms to nations it has or wants.

It has stepped up the dispatch of technicians to nations it would corrupt or envelop.

It has shipped out in the past several years economic and military assistance—money and machinery, goods, raw materials, and weapons, all stamped "U.S.S.R." or even "Red China."

But this is more than a shipment. It is the Kremlin's imitation of our own economic and military assistance programs, a move to meet us and to beat us on our own terms.

It is more than that. It is a new weapon for the Kremlin. It is an economic and military offensive of a new kind. And Russia's foreign aid alone was greater by $1 billion last year than it was the year before.

It is with this background that we must view the approaching crisis in Berlin in the context of the growing political, economic, and military menace to the free world.

It is in this same context of open threats of war and open threats of nuclear destruction over Berlin that we must consider the necessity and the scope of our mutual security program.

Last November the President appointed our committee to consider the necessity for the proper scope of this program.

The committee has 10 members, 3 of them retired professional military men: Admiral Radford, former Chairman of the Joint Chiefs of Staff; General Gruenther, former Commander of NATO; and General McNarney, former commander of the European theater.

It includes seven civilians, two of them former budget directors: Joseph Dodge, a Republican who under General MacArthur balanced postwar Japan's budget and started Japan on the road to recovery; and James Webb, a Democrat who served also as Undersecretary of State.

The others are: John McCloy, Assistant Secretary of War during World War II and later U.S. High Commissioner of Germany; George McGhee, former Assistant Secretary of State and Ambassador to Turkey under President Truman; Dillion Anderson, former Special Assistant of the President for National Security, and Marx Leva, former Assistant Secretary of Defense.

The President asked our Committee to evaluate the military assistance program on an independent, objective and nonpartisan basis.

He asked us to study the relative emphasis which should be given to the military and economic programs, particularly in the less-developed nations.

And he asked us to recommend to him the most suitable means whereby the free world's defenses may be insured.

We discussed all of these problems with responsible and informed officials in Washington, including the Joint Chiefs of Staff and Members of the Congress. I might say that my good friend Congressman MERROW, who is largely responsible for my being here tonight, was one of the influential Congressmen with whom we talked.

We studied the national security policies of our Government and the secret reports and policy papers of the Department of State and the Department of Defense.

We then formed into subcommittees.

Then with small staffs and senior retired four star military officers—all serving without pay—we visited all of the areas and most of the nations where important military and economic assistance has been strengthening our allies and friends.

We consulted our unified commanders in Europe and the Pacific.

We consulted our ambassadors and the economic and military officers overseas.

And we consulted officials and private citizens of the nations concerned.

Several university groups and others expert on mutual assistance made special studies for the Committee's use.

After all this, we delivered interim findings and recommendations to the President in March.

Those findings and recommendations were unanimous. I can summarize them for you this way:

The Communist military, economic, and political threat is greater than ever.

Deliveries of weapons and military equipment to our friends and allies have been averaging $2.4 billion annually but in recent years have been maintained at this necessary rate only by drawing heavily upon the unexpended appropriations built up during the Korean war until at one time they were more than $8 billion.

The pipeline represented by these unexpended appropriations has been emptied to the point where it will be down from over $8 billion to $2½ billion next month.

This is barely enough for necessary contract and production lead time.

No longer can it be counted upon to supplement substantially the current lower appropriations for military assistance.

This means that unless we start now appropriating funds each year about equal to the value of annual deliveries required, within a year or 2 the weapons we furnish our friends and allies will be reduced by about one-third.

Our committee found that the requested level of economic assistance for the coming fiscal year (fiscal year 1960) is the minimum required, and that increased economic development assistance probably will be needed in the years ahead.

The committee found that to be so because of the precarious economies in many of the less-developed and newly independent countries and because of the need for economic strength in those countries for our own security.

The free world's defense perimeter is manned jointly by allied and U.S. forces.

Here are the frontiers of freedom:

They extend through the NATO area in central Europe, through the Middle East, and around the rim of Asia to the northern Pacific.

The weapons for the allied forces defending this perimeter have been furnished very largely by our military assistance program.

The economic support needed by many of the countries concerned has been supplied through the economic assistance program.

This whole wide area is important to our security. Our allies and our friends cannot defend it without our help. Together we do have the strength.

Within these frontiers are the homelands of the free world where together we can maintain mutual bases, room for mutual maneuver, mutual defense in depth, and mutual use of unrestricted oceans.

If strong and well-armed forces hold these frontiers, then in the event of local aggression our friends and allies and we ourselves gain time for reinforcement. We gain time for political action.

These forces-in-being give the free world advantages should war come.

They represent a major deterrent to aggression and an opportunity through negotiation to avoid war itself.

The capacity of these forward allied forces to meet limited attack is strengthened greatly by our weapons in their hands. Providing those weapons is a much more acceptable alternative than surrender or resort to atomic warfare. This was demonstrated at Quemoy.

I was impressed by Ambassador Tran Van Chung, of Vietnam, in a recent speech which I quoted before. Consider this:

"We have lulled ourselves into half-consciousness and half-action by calling it the cold war, but during these last 14 years this cold war has almost always been hot for some people or other of the free world.

"It was hot for the Chinese mainland for 4 years, from 1945 to 1949 during the Chinese civil war.

"It was hot for the Vietnamese and the French for 8 years, during the Indochinese War.

"It was hot for Korea, for the United Nations, and the United States itself for 3 years, during the Korean war.

"It was hot for Hungary in 1956.

"It was hot for Quemoy, Matsu, and Nationalist China only yesterday.

"It is hot for Tibet now.

"It may be hot for all of us tomorrow."

He added: "Most of the time, all the Communists had to do was to divide and conquer, and the cold war has been cold only when the Reds were digesting their victims."

All of us realize that the military and economic assistance programs have been subject to criticisms.

We on the Committee found that some of these criticisms were justified.

We propose in further reports to propose corrective measures and organizational improvements.

Our Committee concluded, however, that the mutual security program is and will continue to be an effective and essential tool to carry out our national security interests and to promote free world defense.

To abandon mutual security for errors in execution or for any other reason would be to abandon the free world and to lose the second 100 years' war.

Our Committee commented: "In our fascination with our own mistakes, and the constant use of foreign aid as a whipping boy, gradually we may be choking this vital feature of our national security to death."

Any fair-minded appraisal of the mutual security program cannot fail to conclude that the results have contributed immeasurably to our strength and security and that of the free world.

Had it not been for the Marshall plan, there is little doubt that the dramatic recovery of Western Europe would have been impossible.

Had it not been for the NATO alliance, there is little doubt that some of the free countries of Europe long since would have been dragged behind the Iron Curtain, as Czechoslovakia was.

Think about that for a moment, of even more of Western Europe blotted off the map of the free world.

I went to the Far East on the work of our Committee. I was in Taiwan shortly after the free China forces repulsed the Red Chinese attempts to engulf Quemoy and Matsu. This victory by our free Chinese allies would have been impossible without our military and economic assistance.

We furnished the artillery and the ammunition that the Chinese gunners used. We furnished the F-86's and we trained the free Chinese pilots who knocked 31 Communist MIG-17's out of the air with a loss of only 2 or 3 of their own planes.

I saw the motion pictures of dogfights taken from the hot gun positions of the F-86's. They were inspiring. They illustrated graphically how our military assistance is the difference between victory and defeat for our allies—and thus for ourselves.

The victory itself illustrated how our military assistance helps to keep local conflicts from spreading, possibly to catastrophic world war.

Remember that this Communist thrust against the free world was thrown back by those directly attacked.

Remember that it was thrown back without involving America's own forces in battle, an involvement that would have brought the dangerous threat of war between ourselves and Red China, perhaps even war with Russia.

A sidelight is interesting here. The free Chinese under their own standard of living and their own pay scale fielded 20 soldiers for what it would have cost us to have sent a single American boy.

Now who in America supports and approves and indorses mutual security?

President Eisenhower just 10 days ago appealed again to the Congress to vote the full program he has asked for fiscal 1960 as a "tool in our battle for lessening of tension. * * *"

Former President Truman on the same day told a congressional committee that it would be "playing with dynamite" to cut the President's request.

Mr. Truman was emphatic that the amounts requested by the President for both military and economic assistance were of "absolute, vital importance."

He said, that rather than skimp on assistance to our allies, Congressmen should vote a reduction in their own salaries.

You remember that the Truman doctrine saved Greece and Turkey from communism. Thus it was Mr. Truman who initiated the concept of mutual security.

The Congress consistently has approved the principle of mutual security and has voted the necessary funds, whether Congress was controlled by Democrats or Republicans.

The Joint Chiefs of Staff have given it unwavering support.

The National Security Council sits in the White House and repeatedly has endorsed mutual security as vital to the United States.

Spokesmen for some 70 national private organizations have testified regularly before congressional committees in support of some or all of our military and economic assistance. They represent labor and business and industry and agriculture.

Two weeks ago the Chamber of Commerce of the United States at its annual meeting reindorsed mutual security as a part of its own policy.

The American people themselves favor it.

A Gallup poll about a year ago showed 33 percent opposed and 51 percent for it.

An interesting thing to you gentlemen is that the poll revealed that the more the people knew of mutual security the more they were in favor of it. For instance, the better-informed were 56 percent in favor. And the well-informed were 63 percent in favor. Even so, these who were listed as well-informed would not have the understanding of mutual security that your members have.

Mutual security is not a sectional program. It is not a partisan program. It is a program on which all Americans can unite in the interest of our own security and the security of the free world.

Our Committee is convinced that mutual security is necessary. Our Committee is convinced that America can afford it. What America cannot afford are the costs and the risks involved in abandoning mutual security or cutting it to ineffectualness.

Here on the slopes of New England you have had a basic mutual security for many years.

When most of us were boys mutual security against fire was invoked by a farmer banging an iron bar on a wagon wheel's iron rim hanging from an apple tree.

Today there's mutual security in the volunteer fire departments. The man who fights his own fire alone will have no place to live in except the embers of his home.

So, too, would the free world people who fight the fire of Communist aggression alone be left to live—if they live at all—in the embers of their nations.

Our Committee is convinced that mutual security should be recognized by the American people and the Congress alike as a long-range program that must continue so long as the Communist threat in a "climate of tension and challenge" endangers our survival.

Mutual security is our insurance against the Communist political menace.

Mutual security is our insurance against the Communist economic menace.

Mutual security is our insurance against the Communist military menace.

Mutual security is a long-range project, just as an insurance policy is.

You do not buy your insurance in a year. You plan ahead for 20 years, or for your whole lifetime.

Mutual security needs that planning, that looking ahead.

We cannot win the second 100 years' war a year at a time.

Thank you.

River Barges

EXTENSION OF REMARKS
OF
HON. ANCHER NELSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 19, 1959

Mr. NELSEN. Mr. Speaker, Minnesota is very much interested in all forms of transportation, and river barges are no exception. Some time ago the St. Cloud Times carried an editorial which I believe is of enough consequence to warrant attention, and therefore I ask consent to place in the RECORD this editorial:

[From the St. Cloud (Minn.) Times, April 4, 1959]

RIVER BARGES

While their share of the public transportation market is but 8 percent, river carriers occupy a strategic place in the scheme of freight movement in this country. One of the oldest methods of goods transportation, river traffic has come a long way since the romantic time chronicled by Mark Twain.

These days, giant motor vessels developing as much as 8,500 horsepower course the rivers with 30,000 tons of freight in tow. Nor does the pilot need to squint for landsights. During pea-soup fogs, radar keeps barges safely in the channel.

All is not well on the rivers, however. Though barge lines have used technical developments to improve service and though traffic volume and revenue are up, there are problems of competition.

River men fear a clash with the railroads over the traffic which parallels the inland waterways. Railroads, under their interpretation of the transportation act of 1958, are filing notice of rate reductions in an attempt to capture some of this traffic. Barge line owners respond that this traffic would have to be carried by the railroads at a loss; they properly note that other inland shippers would, in effect, be forced to subsidize this rate-cutting.

Experience has demonstrated that freight can be moved over water more cheaply than over land. This is an economic fact of life. Any tampering with rates that might force barge lines out of business would be detrimental to the entire economy. Barge lines have a legitimate place in our transportation system.

Bright New Slums

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 20, 1959

Mr. ALGER. Mr. Speaker, in Congress, in our idealistic concept of the Federal Government eliminating slums with Federal money, we lose our way in solving the problem, much like the saying, "We don't see the forest for the trees." Perhaps the recent editorial of Tuesday, April 15, 1959, from the Wall Street Journal expresses the dangers of blindly going on spending more Federal money as though Federal money will solve this problem, when, as a matter of fact, it may, and frequently does, create more problems than it solves.

BRIGHT NEW SLUMS

One of the cures being proposed for the recession is more spending on public housing. "There is every justification for low-rent public housing to represent 10 percent of annual housing unit production on a continuing program basis," says the National Association of Housing and Redevelopment Officials.

That would mean upward of 2½ times the 35,000 federally aided units now planned this year. It would seem, however, that even the most dedicated advocate of Federal pump priming would eschew the creation of new slums as a recession panacea.

Unfortunately, that is what many public housing developments have become. Several staff reporters of this newspaper have been reporting on these new slums. Launched in 1937 as a make-work project, federally aided public housing became the darling of many a social planner who saw in it a way for problem and low-income families to lift themselves to some level the social planners thought desirable.

It mattered not that what was an old tenement to a planner might be home to a family; that in the old neighborhood there existed at least some community feeling. Level the slum, anyway, decreed the theorists; move the family into the shiny new low-income project, where it often felt completely rootless and cut off from its old friends and community.

In their new surroundings some poor but hard-working families began to go downgrade. And what of families transplanted from old slums to new projects with the label problem pinned on them? "Problem families merely create their old environment at the new site," our Mr. Vicker quotes one midwestern housing man as saying.

And as the shiny new property deteriorates, the families with the most ambition and self-respect move elsewhere, speeding the deterioration in the housing project. Problems that are widespread at all levels of society become bizarre in these surroundings which have become as blighted as the old slums they replaced.

There are juvenile gangs in the new slums as virulent as in the old. There is rampant illegitimatism, alcoholism, vandalism, and filth.

For, as Mr. Vicker's housing man notes, "It isn't buildings that make slums. It's people. Move those people from a slum to a new housing project, and they'll create a new slum."

That is the crux of the matter. The whole idea that slum clearance would automatically improve all human beings rests on an erroneous concept of man's nature, the notion of perfectibility through external trappings. It is a welfare-state notion—not, be it noted, a religious one. Christianity and other religions teach that moral and spiritual progress is an inward matter.

The welfare-state concept, in contrast, assumes that whatever man's faults may be they are the result of society; just fix up society and man will cease all the activities that are adjudged troublesome, immoral or illegal. Thus this idea not only defies all human experience but also removes from the individual all responsibility for his actions.

This is not to say that local communities do not recognize their obligations to help those who would otherwise be helpless. What we are saying is that the state cannot possibly make man perfect, as, the welfare state's advocates believe.

It has been growing more and more evident that after 20 years and hundreds of millions of federally invested dollars for public housing there is a social mess at least as bad as when the program was launched.

So before plumping for more and more public housing units the planners would be well advised to take a realistic look at what has been the result so far. They can't possibly help the slum dweller or anyone else by creating more of their bright new slums.

The Economics and Morals of Our Freedom

EXTENSION OF REMARKS
OF
HON. SAMUEL L. DEVINE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. DEVINE. Mr. Speaker, early this year L. R. Boulware, vice president of the General Electric Co., made an address at the Ohio Pastors Convention in Columbus, Ohio. I have been requested to insert excerpts of this address in the Appendix of the RECORD, as follows:

EXCERPTS FROM THE ECONOMICS AND MORALS OF OUR FREEDOM

(By L. R. Boulware, vice president, General Electric Co.)

As you direct your interest this afternoon to the relationship of your ministry to the economic culture in which we live, I am assuming your real interest is in trying to find still more ways to help those within the area of your influence to do ever better their individual parts in causing our economy to yield an ever higher return while operating in the balanced best interests of all concerned.

Nothing in my long and reasonably varied experience has caused me to be other than enthusiastic about the good things we businessmen do, and admittedly just as disgusted about both the bad things we do and the good things we neglect to do or have not yet learned to do. I personally am more convinced every day that history is going to deal very harshly with me and most of my contemporaries—and with great justice—for our neglecting for so long our obvious responsibilities over and beyond the things we have been doing. We have gone along for half a century still fancying we were doing our full duty at our work when there was compelling evidence all around us that we were neglecting these additional kinds of work that we needed to do; we were blindly following our predecessors in doing what I impolitely call the "metal cutting and paper shuffling" part of our job as though it were our whole job; we didn't even sense that the content of the managerial job of each of us was changing and expanding in new directions in a way that imposed urgent new requirements on us.

This is not to overlook the very obvious fact that the objectives, diligence, manners, and results of business in the public interest have all shown great progress. But in a country as wonderful as this, our obligations are every bit as great as our opportunities. And my complaint about myself and my fellow participants in business is that our opportunities to serve the common good are so vast that what we are achieving is just not an acceptable percentage of what we should be finding ways to accomplish.

I personally think the mission of business is to please people * * * to help them have more of what they want or of what they will want when they know enough of the facts.

Business is not buildings, or machinery, or inventory, or money. Business is people. Business is people dealing only with each other * * * with the willingness of each, on a something-for-something basis, to give an equal value in return for what he wants. Business thus concerns itself with things only through people * * * and then only as the result of people indicating they need or want those particular things. A business is simply a gathering of people who have volunteered to do things for each other.

Thus, I believe the human considerations must be kept up front in every thought, act, and relationship in business even where it might appear, at first glance, that only material considerations are involved.

I think one of the top marvels of all the world's history is the way we interdependent citizens have come together in business voluntarily, have so largely done for each other what each wants done in return for what he gives, and have in the process maintained our education and morals at a level that has permitted almost everybody to go around doing practically as he pleases without intruding unduly on the free choice and other rights, dignity, usefulness, economic progress, and spiritual well-being of his individual fellow citizen.

Yet the majority of the public is not satisfied with the performance of business. You are not. I am not. And I am sure managers in general are not.

Part of our failure is certainly due to our not satisfactorily explaining to enough people how what we are doing is good for the many and not just for some few. Part must be due to our not yet having fully exhausted the possibilities of gearing our intentions, practices, manners, and results as intimately as we should and can to the other fellow's viewpoint.

But our most damaging failure has been in not doing the very considerable part, which I thing was required of us, in helping people adjust their expectations to what was reasonably possible or feasible at the moment. Most college people have a preposterously false expectation not only about what government can "give" the individual citizen by some magic that results in little or not expense to him but also about what business can deliver on that same something-for-nothing basis. This results in too many people assuming that there is "more in the wood" than there currently is, that somebody is getting enormously more than his share, that management could deliver vastly more benefits if it only tried or even cared.

People typically fill one or more of five roles in business—and as both contributors and corresponding claimants in each role—as investors, i.e., riskers, of prior savings; as customers; as suppliers, distributors, or other participating businessmen; as employees; as citizens.

The only reason for a business—as well as the requirement for its survival—is its ability to act as a highly creative clearinghouse where people can voluntarily come together and, aided by the superior ideas and facilities made available there, can do more for each other than if working separately as individuals utilizing only their own inner resources.

Owners are the citizens who have saved rather than spent some money. In response to an incentive they have risked savings in the investment that makes the very existence of the business possible in the first place. They are the contributor-claimants who make service to customers possible, make jobs possible, make sales (and jobs) by other businesses to that business possible, and make location in and services to a given community and the Nation by that business possible.

Direct investors in business are not some few—but the great majority—of citizens.

There are further millions of cases where savers are at least indirect investors through their funds being risked in business securities.

There are relatively few rich people among these owners—fewer all the time—in comparison with the rapidly growing number of owners in lesser circumstances. Farmers, professional people, widows, business proprietors, and others who make up our work force of almost 70 million—including hourly workers—have some or most of their savings invested in business and working for them there.

I personally think owners are the most misunderstood of all citizens. There has been a tendency to think of them as bad people way off somewhere else, whereas they are the same good folks we find all around us.

We certainly find our General Electric share owners to be natural and normal folks in every best honorable and human sense of the word. In return for the use and risk of their savings, owners typically want, in essence, exactly the same things people want in the other four roles and, do function also as customers, suppliers, distributors, employees, and other affected citizens. The things owners typically want, as pay for what they contribute, are:

1. The basic material rewards in dividends and in the protection and enhancement of the value of the savings they have risked on the facilities and plans of the business.

2. The extra human satisfactions in full information, in opportunity for significant participation and recognition in matters of common interest, and in a gratifying two-way association in an enterprise whose economic and social objectives and results they are proud to be approving and supporting. They want to be fully useful. They don't want to be thought bad people—because they are trying to be good people who do good, not just for themselves but for the many.

3. The political satisfactions from the assurance that the good dividends, the attractive growth in the value of their risked savings, and the outside reputation of the business for accomplishments in human betterment have all been the result of competence and diligence applied equally to the interests of all concerned and have in no instance come from any such thing as robbing Peter to pay Paul.

Customers are citizens in the role of giving or withholding work—of giving or not giving us our daily jobs to do. While owners make jobs potentially possible, only customers actually supply and maintain our jobs.

Customers are free to buy those products or services that are offered at values they find attractive and in circumstances they approve. In return for such buying as contributor-claimants, they in turn seek:

1. The basic material values desired in performance and competitive price.

2. The extra human satisfactions in such factors as form, taste, aroma, color, convenience, distinction and other emotional or esthetic satisfactions.

3. The political assurance that the attractive material and human values for them as customers are not at the expense of equally fair and attractive arrangements with employees, suppliers, distribution folks, and people as citizens of the near or larger community.

Again, the customer gives business its daily work to do, and provides that work only where he feels he is offered an attractive value in return. He has many alternatives to buying from any given company or industry.

There are two ways in which other businesses are, or feel they are, affected by what the participants in a given business do.

The first is in the direct arrangements with other businesses such as suppliers, distributors, or dealers. In General Electric, for instance, we buy from 45,000 suppliers of materials, components and services. They get around 47 cents of each dollar we receive from customers for our finished product. Thus we are somewhat in the position of selling—and taking the responsibility for—the products of these 45,000 other smaller or more specialized businesses. In return for what they do for us, they want:

1. The basic material rewards in a profitable opportunity and the steadiest feasible use of their facilities.

2. The extra human satisfactions in full information, in respect for dignity and human values, in significant two-way participation and resulting deserved recognition, and in that interested, two-way, cooperative association which can yield mutual rewards in business competency and in a kindredness of human spirit as well, and

3. The political assurance that the rewarding profit opportunity and equally rewarding personal association are the product of able and faithful work in the balanced best interests of all concerned and not the result of any robbing Peter to pay Paul in either the material or nonmaterial sense.

The second kind of relationship of a given business with other businesses is the direct or indirect competition for customers, employees, suppliers, distributors, dealers, share owners, lenders and even for dignity and recognition.

The essence of our American enterprise system is the freedom and incentive of the individual to save, risk and compete. Our progress is based on the freedom and incentive to excel—to do better than we thought was our best and then be properly rewarded from the standpoint of what is in the balanced best interests of all concerned.

In recent years, there has been a growing tendency to try to lessen competition between individuals, businesses, industries and communities—to the end of protecting or subsidizing the inefficient, of giving "security" against the progress in values forced by competition. I submit that, however well-intentioned, these measures put us on dangerous ground, and we as citizens need to scrutinize these trends and proposals in a whole fresh determination to be sure we know what is and what is not in the immediate and future best interests of the many.

Employees are the citizens who do the work peculiar to a given business. Employees then are citizens who do needed work within a given business. That work must be done better than competitors can get it done either within or outside their plants, or there will be no jobs in the given business.

A manager is the particular employee whose job it is to take the responsibility for the adoption and execution of what he judges—on the basis of the best information available—will best please the claimants as an equitable return for their contributions.

Wise and conscientious employees thus contribute their full skill, care and effort to the common end of pleasing people with the aims, procedures and accomplishments of the business.

We find our General Electric employees want their contributions rewarded on a two-way, something-for-something basis. In return for their skill, care and effort, they make the same characteristic claims for:

1. The basic material rewards in the right pay, benefits, physical working conditions and other financial or material aspects of their jobs.

2. The extra human satisfactions in such things as important work, respect for dignity, full information as to what's going on and what's ahead, participation and recognition, and gratifying two-way, man-to-man association with his supervisor and fellow employees in the significant common effort; and

3. The "political" assurance that the good jobs with good pay and other attractions and rewards are the result of diligent efficiency and not of any short-changing of customers, suppliers, distribution folks, owners or citizens.

A business is constantly faced with the necessity and desire to exhaust the possibilities of providing good jobs and satisfying associations—while equitably meeting its other obligations—out of the money that comes from pleasing customers with products and services.

A business has contributor-claimants in the role of citizens even though all or some of them may at the same or another time be also customers, owners, employees, suppliers, distributors, dealers, etc.

The usefulness of a business affects people as citizens in such things, for instance, as the value of their homes, the amount of taxes that must be collected, and even how much people feel like contributing to churches and charities. At General Electric, we try to do our part through putting forth our best efforts to be a good employer, a good buyer of goods and services, a good tax collection agency with no favors asked, a good source of products and services for customers, a good source of business opportunities for distributors and dealers, a contributor to and worker in charities and other worthwhile causes, a law-abiding and otherwise good corporate citizen—with plenty of good individual citizens—and a forthright public and private witness as to where we think, for what's it's worth, the common interest lies.

Citizens—as such and beyond their other roles—have a great effect in turn on the ability of a business to be useful.

Meanwhile, the pay we give citizens for what their Government does for us is currently about 8 cents out of each dollar we take in from customers. There is probably another 8 cents of taxes in the prices paid our suppliers for the components included in our products. The tax of inflation is still another ingredient in our prices.

In the face of what I have represented as the opportunity, desirability, and obligation of pleasing people in three separate respects in each of their five kinds of relationships in business, what is the resulting present situation and future problem of business with all these people—that is, with people individually and with the public overall?

1. I think business has long done its best job in the material area. But even here the job is not good enough on two counts. First, the wonderful accomplishments should, can, must, and, I think, will be improved. Second, these accomplishments for the common good have so far failed to produce the satisfactions they should have, due to a communication failure that we all need to work at overcoming.

2. As to the extra human satisfactions, I believe business has obviously been doing well for a long time in consumer products and services. Rapid strides have been made in recent years in the employee relations area, and these are continuing to accelerate. But there has not been enough progress or effort toward extra human satisfactions for investors, for other participating businessmen and for people as citizens through supplying them the facts as the common problems, as to where the common interest lies, and as to how each may help others as a duty to them and himself.

3. It is in what I call the political satisfaction or assurance area that I believe the failure of business to satisfy people has been most marked—as well as most damaging to the usefulness of business. Too many people in their various contributor-claimant roles are—on the basis of mountainous misinformation about business and what's in the wood—damaging their own interests by withholding rather that giving cooperation in what is a common effort toward common goals.

This overall failure results in business falling short of the material accomplishments and the other desired satisfactions it could be producing to enrich our lives.

Whose job, whose duty, whose privileged mission is it to do something to correct this needless waste? I think it's everybody's—because everybody is affected for good or bad when busines is or is not as useful to people as it should be in all their relationships in business. I think it's everybody's duty also because everybody has an opportunity to do something, and I sincerely believe the obligation of any one of us is just as great as his opportunity to do good.

I think the first contribution to a proper sense of proportion about business can be made by keeping constantly before ourselves just how much there is "in the wood" and how it goes to satisfy the competing claims of the contributors.

I think the next facts we want to keep before ourselves is where values and jobs come from, what will make them stay and improve, what will kill them or force them to go away.

Then I think there are some more findings from practical experience we need keep before us such as—

That we lead a something-for-something life on this earth, and all efforts to turn it into a something-for-nothing existence have ended in disaster.

That Government has no magic resources and can furnish people only what it has first taken away from people; that free government is damaged and endangered when localities or individuals try to have their representatives bring home from government more than those localities or individuals paid to government.

That a business can furnish people only what people have first furnished the busiess; that business represents and is the many and not the few; that it has no magic resources or anything to give away; that business cannot, voluntarily or under force, reward any one or more groups of its contributor-claimants with more or less than

is coming to them, and still long survive to supply the values, jobs, and satisfactions.

That so-called taxes on business are almost entirely taxes on consumers, because they are costs like materials and wages, and because they either reduce progress and jobs or raise prices and the cost of living.

That a Government deficit is still a tax, will show up as the tax inflation included in consumer prices, and should be recognized as not part of the price business is charging for the goods but as the price of Government activities which the politicians didn't dare collect from people directly and visibly.

We also come face to face with the fact that, in our business relationships as elsewhere, the protection and enhancement of our freedom and well-being presents us with problems in morals just as much as with problems in economics. We cannot be free citizens, making free choices in buying and selling goods and services, and we cannot otherwise go around as free people doing so largely as we please unless we not only know what is the right thing to do economically but are also willing to do that right thing voluntarily without having any policeman standing over us or even anybody looking.

We ought not to want something for nothing—even if it were possible to get it. Also—as a matter of morals beyond obvious expediency—we citizens must resist the insidious appeal of robbing a few theoretically bad Peters to pay a vast number of theoretically good Pauls.

There is a great need for us to become wise and sophisticated to the point where we are proof not only against the false ideas and intended misrepresentations of the wily demagog but also against the equally false and even more damaging fallacies put forward by our well-meaning but misguided fellow citizens.

But over and beyond this, we citizens have to discipline ourselves to make the necessary investment in the moral intentions and conduct required.

To sum up, I believe the first job to be done is for us managers to progress faster in the proper application of mind, muscle and morals in deserving—and then achieving—the understanding, approval, and resulting cooperative support of the business process by all who participate and are affected.

But we managers have proved we are not all knowing and all powerful, and we fully recognize that fact. We need help—both in our own guidance and in the guidance we offer others.

So our other job is to seek continuously the help of all other citizens in the guidance of ourselves and our fellow contributor-claimants in our joint pursuit of the common interest.

It would be an unconscionable understatement for me to say that you, of all people, are in a merely preferred position to help us managers and all others understand—as well as to help stimulate us all to do voluntarily—what is in the balanced best interests of all concerned in the pursuit of what we want here and hereafter.

Why I Love This Country, America

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 19, 1959

Mr. CONTE. Mr. Speaker, we Americans talk much of how proud we are of our country, and how very much it means us to be citizens of this great land.

But I feel that few of us really appreicate how fortunate we have been in America. Perhaps freedom is only appreciated in the fullest extent by those who have been deprived of it.

Under leave to extend my remarks, I wish to include a letter written by a recently naturalized citizen who really knows what freedom means. His letter, sent to the editor of the Holyoke, Mass., Transcript-Telegram, was placed at the head of the editorial column by that newspaper. To me, this letter embodies the finest in the American spirit. I sincerely commend it to the attention of all my colleagues in the Congress:

WHY I LOVE THIS COUNTRY, AMERICA

Here I was living in Poland for 20 years, living very well, too, for even though Poland was not a wealthy country, it was a happy land. Then the year 1939 rolled around and all hell broke loose. The Germans and the Russians once more divided my poor country. At first we thought our circumstances weren't much different but after 6 months the oppressors began showing us their true colors and their might.

They began by deporting landlords of large estates and forests but soon they were even taking office workers. They were all deported to Siberia, but Russian propaganda told us they were not being punished but rather they were going to Russia to make a better living for themselves. Before the year was over we were all living under the oppressors thumb. Soon we were living like the proverbial rabbit, always packed and ready to flee at a moment's notice.

Then it hit my family; my two sisters and three brothers and their families were sent to Siberia. Siberia, the very word struck terror in our hearts, but even in our wildest dreams we couldn't imagine how really bad it was. Every letter I received from my family contained pleas for food.

In the year of 1941, war broke out between Russia and Germany and then we were under German rule. The Germans were too busy with the Russians so our circumstances improved for a few weeks, but soon the Ukrainians formed a partisan party. They (the partisans) made a deal with the Germans—they would join the German army if they were given their freedom.

Soon the newly formed German Ukrainian Partisan Army began plundering our part of Poland. They announced they would have a resurrection in Poland. They were true to their word. In the dead of winter they burned and plundered nine villages. We never slept in our own beds that winter of 1943. Every night after dark we slept in the nearby woods, in bags filled with straw.

Can you imagine what it is to sleep in the dead of winter with your wife and three small children in the woods? Then one day the Ukrainian partisans attacked our little village. My wife and I were preparing for our nightly visit to the forest when all of a sudden we heard a terrific uproar. They were burning our village, murdering our women and children in the most horrible fashion. The Ukrainian partisan women were torturing our women and the men our children and our men.

According to the partisans it was too easy for the Poles to die by machinegun fire. They tortured everyone they caught. My wife, my children, and I were fortunate in that we escaped to the forest and, although it was bright from the fires burning in our village, a band of partisans passing by near us did not see us. There is an old Polish saying which says that even a spider's web makes an excellent curtain; so it was with us that night.

After a week, the German Army came and they kept sending us from village to village until the Russians started pushing back the German Army. Then they sent us to Germany to a concentration camp and it was there that my first little boy died from starvation. This was no great calamity to the Germans. They claimed they brought us to Germany to work and if we couldn't work then we deserved to die and they would bury us.

Finally came the day when our liberators, the American Army, came. When I saw my first American I felt as if I saw the good Lord Himself. I was then 33 years old and it was the year 1951 and we made an application to come to this wonderful country, America. I and what was left of my family finally arrived in New York where we stayed 10 days. Now we have been living in this country for 8 years. My wife, my son, and I are American citizens and proud as we can be. We are living, working, eating, breathing free air. How can I ever repay everyone who helped me and mine in even the smallest way whatsoever to come to this wonderful country, and to live in freedom. Long live America. Long live the United States. God bless you all."

ANTONI TELICKI.

Minimum Wage Legislation

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. ADDONIZIO. Mr. Speaker, an excellent statement in support of the pending legislation to increase the minimum wage to $1.25 an hour and extend Federal Labor Standards Act coverage was made by Mrs. Marion C. Reed, the president of the Consumers' League of New Jersey, before the Senate Committee on Labor and Public Welfare on May 14. It is a pleasure to bring it to the attention of my distinguished colleagues in the House:

STATEMENT FOR CONSUMER'S LEAGUE OF NEW JERSEY FOR THE SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE, MAY 14, 1959

My name is Mrs. Marion C. Reed, 918 Boulevard, Westfield, N.J. This statement is made for the Consumers' League of New Jersey, an affiliate of the National Consumers' League for Fair Labor Standards. I am president of the Consumers' League of New Jersey.

The Consumers' League of New Jersey appreciates the opportunity to go on record as favoring S. 1046 and H.R. 4488 to extend Federal Labor Standards Act coverage and to increase the minimum wage to $1.25 an hour. We also strongly support S. 1085 and H.R. 4948 which would provide Federal Labor Standards Act protection for agricultural workers on corporate farms.

Twenty million workers are not given the protection of Federal Labor Standards Act that has been promised to them as rapidly as practicable. The promise can be kept to 7½ million of these workers if S. 1046 and H.R. 4488 are enacted.

The stated intent of Congress is to provide a fair wage floor for all workers within its jurisdiction as rapidly as practicable. The first effort to do this was about 20 years ago when the Federal Labor Standards Act was

enacted to protect a segment of these workers. Since then the Congress has continued to revise upward the wage rate of the original Act.

The principle of minimum wage legislation, both Federal and State, is a practical and proven means of assuring at least the minimum standard of living necessary for the maintenance of health and decency for family living. This objective cannot be achieved satisfactorily until the protection is extended to all workers. There should be no favored classes of occupations in the United States. We believe all the workers who can be covered by an act of Congress should have this equal protection. It is the American philosophy to provide equal protection to all.

The vast majority of excluded workers are not members of unions and are not protected by either State or Federal legislation. Large numbers of these employees earn less than $1 an hour, less than $2,000 a year. The plight of these workers is becoming even more desperate as the gap between their pay and the average weekly wage widens. Their income is not enough for even a meager standard of living, so they must look to public relief funds or depend upon relatives or friends for help. They deserve a fair wage.

In New Jersey a minimum-cost-of-living budget for a woman living alone would require $1.41 an hour according to statistics released from the Women's Bureau, U.S. Department of Labor, February 8, 1955. The cost of living for a male worker is not available but would require well above $1.25.

We are also in favor of the companion bills by Senator McNAMARA and Representative ROOSEVELT extending coverage to agricultural workers. This would provide, for the first time, some protection to agricultural workers. The migratory farm workers have been excluded from most protective legislation. Many of the problems concerning migrant labor could be solved by placing a floor under their wages. These workers are an essential part of our economy and should not be neglected.

New Jersey is both an industrial and agricultural State. Our economy is directly affected by the wages paid in other States. Employers opposed to inclusion in Federal Labor Standards Act coverage have declared that the conditions under which they operate are determined on the State level therefore they should be controlled under State minimum wage legislation. They then oppose State coverage because their interests would be served best by being under the Federal act. This reminds one of the old shell game.

It has often been stated that many workers, particularly in the retail trade and service industries, properly receive their protection from State minimum wage laws. There are no minimum wage laws in 19 States. Twenty-one of the States having minimum wage laws do not cover men. Thus all intrastate workers (men, women, and minors) are covered in only eight States. Only 3½ million of the 20 million not covered by Federal Labor Standards Act are subject to current State minimum wage laws and orders. We believe that both State and Federal coverage is necessary, but it is obvious that the combined present coverage of Federal Labor Standards Act and that State minimum wage laws do not protect all workers. If the proposed legislation is passed regulating important areas on the Federal level, it would facilitate the coverage of workers on the State level. The average citizen believes himself covered by the Federal Labor Standards Act and that State minimum wage laws do not protect all workers. If the proposed legislation is passed regulating important areas on the Federal level, it would facilitate the coverage of workers on the State level. The average citizen believes himself covered by the Federal Labor Standards Act until unfortunate circumstances show him otherwise.

The proposal of some opponents of the bill to exempt some industries from maximum hour regulation would be detrimental to the minimum wage orders of New Jersey. It has been established by an opinion of the Supreme Court of the State of New Jersey that overtime is an essential part of establishing a minimum fair wage rate.

This opinion confirms our own findings based on long experience that overtime provisions are essential to accomplish the purpose of any minimum wage law. We believe that any extended coverage under this act should contain both wage and premium overtime provision of 1½ times the regular hourly rate after 40 hours a week.

Extension of coverage in the retail trade is proposed. Nearly 7 million workers (6,928,000) are in this category. About 3 percent are protected, leaving 97 percent to be included. The retail trade industry has developed from the single isolated store to an industry that is largely dominated by corporations operating multistate chain stores. "From 50 to 70 percent of our retail volume in all categories except autos, gas and oil, lumber and building materials is done by no more than 400 retail organizations" (Fortune, Nov. 1952, p. 131). This has placed tremendous power in the hands of those corporations in determining the rate of wages to be paid and the number of hours to be worked. The intimate interrelationship between the development and the structure of retailing and basic patterns of the economy is generally recognized. Since the amount of goods that is moved from the shelves of the employer is determined by the amount of disposable income of all workers, the retail industry should be the last one to advocate less than a living wage. Sales people in the retail trade need a minimum wage comparable to that set for those employed in manufacturing in order to compete for the goods produced in this country's expanding economy. Retail employees are put in an unfavorable position by one of the industries whose very life depends upon workers in all industries receiving a fair wage.

Now I would like to confine my remarks to how the passage of these bills will affect New Jersey. There are an estimated 180,000 workers in New Jersey that are not receiving the $1.25 per hour. This rate would increase the total wage and salary payrolls by less than one-half of 1 percent. The purchasing power of the State's low income families would be increased by an estimated $49 million a year. These people can scarcely exist on less than the proposed $1.25 rate. The proposed minimum would help to relieve the burden now placed on relatives, charitable organizations, and tax-supported relief agencies. Higher wages lead to self-support and decrease public relief expenditures.

RETAIL STORE EMPLOYEES

We do not have the figures as to the number of chains operating in New Jersey and the size of their labor force, but the percentages are similar to the national picture estimated by the U.S. Department of Labor. Department store chains account for 3 percent of department store employment; limited price variety stores (commonly known as dime stores) employ 71 percent of the workers in their class; and food store chains employ 35 percent of the total food store workers. Time and again representatives of retail stores that operate across State lines have opposed Federal coverage and have contended that if they are to be subject to coverage it should be on the State level. (Hearings before the Senate Subcommittee on Labor, U.S. Senate, pt. 2, pp. 835, 836 and 909.) And yet, they strongly opposed State wage orders in New Jersey.

When the New Jersey wage order for $1 an hour was promulgated, a suit was brought to invalidate the wage order. It is interesting to note that out of the approximately 11,000 retail firms in New Jersey, only 132 were petitioners in the suit (*J. Abbott & Son* v. *Holderman*). Among these petitioners were 23 chains incorporated outside the State with their main business offices in other States; at least 7 more were firms which operated more than one store. The wage order was upheld by the court.

HOTEL WORKERS

The Consumers' League of New Jersey is particularly interested in hotel coverage on the Federal level. It is estimated that 11 percent of hotel workers in the United States are employed by interstate firms. At least 7 large hotel syndicates operate in the State of New Jersey.

Hotel workers are a low-paid group, even in those States having wage orders for the workers. A 1955 survey in 17 cities by the Bureau of Labor Statistics revealed that the average pay for women dishwashers was 35 cents and hour, New Orleans, and 82 cents an hour in Philadelphia. Elevator operators in Birmingham, Ala. received as little as 31 cents an hour.

In New Jersey, the 1954 Wage Survey showed that 86.1 percent of the full-time women hotel workers and 66 percent of the men received less than $1 an hour. In fact, 26 percent of the women worked full time for less than 50 cents an hour. New Jersey has the doubtful distinction of being the only State with minimum wage laws to specifically exempt hotel employment. This exemption was put into our law at the final moments of its passage in 1933. Bills to remove this exemption have been introduced at every session since that date, but have failed to pass due to the entrenched opposition.

We believe that if the employees of the hotel chains were covered by FLSA a precedent would be established which would make it much easier to amend our State Minimum Wage Act to include employment in hotels.

CANNERY WORKERS

The section of Federal Labor Standards Act concerning cannery exemptions affects large processing interests in this State. At present they are wholly or largely exempt for more than half the year from the requirements of paying time and one-half for overtime. For 14 weeks they are entirely exempt, no matter how long the hours may be, and they can be cruelly long in the busy season in canneries. Then for a second 14 weeks, food processors are required to pay time and one-half, for overtime only for hours worked beyond 12 a day or 56 hours a week. To strike out the cannery exemptions from the standard overtime provisions would be a major improvement. Workers in food processing should get the same minimum rates including time and one-half for overtime as required by law in other industries. The usual argument is that the hours must be long in the busy season because the food processed is perishable. But human health is likewise perishable.

AGRICULTURE

The farmers in New Jersey, last summer expressed a preference for Federal minimum wage coverage for agricultural workers. The newspapers reported a conference between the farmers and Governor Meyner to discuss a minimum wage for agricultural workers which he had advocated. The farmers expressed the need for Federal protection because of the interstate competition for prices of farm products. They said they did not want a State minimum wage. So at present there is no minimum wage, no overtime pay

for working as many as 50 or 60 hours a week. Poverty and suffering have not disappeared from America.

Many migrant families depend upon the income from their children to eke out a meager existence. The family is seldom financially able to met any emergency. If they arrive a few days before the crop is ready to harvest, many have no money for food. A uniform Federal minimum wage and hour regulation would reduce some of these hardships.

The United States enjoys great wealth. We are proud of the high standard of living of our citizens. We do not like to face the fact that not all of our workers have the same minimum wage protection. However, only a little over half of those who could be covered by Federal Labor Standards Act are covered. Over 20 years ago protection was promised as rapidly as practicable.

Studies have been made to determine the effect of the $1 minimum wage on the low-paying industries. There were no more business failures than normal in spite of predictions to the contrary. A small amount of unemployment resulted because of the increased wage rate. This was small in comparison to the number who benefited. The most common result was the replacing of obsolete machinery, realinement of work and other methods to increase efficiency and productivity.

The increase of the minimum rate to $1.25 now would be absorbed as easily as was the earlier $1 rate. This would not contribute to inflation because most of the money would be spent for necessities, such as food which is a surplus item.

In conclusion we urge the extension of coverage to as many workers as possible. No society can permit any group within it to be deprived of the opportunity of a decent living standard on a share in the abundance that society provides, without gravely impairing its strength and cohesiveness.

Thank you for the opportunity of submitting this statement.

Department of Agriculture Appropriations

SPEECH
OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 7175) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1960, and for other purposes.

Mr. SCHWENGEL. Mr. Chairman, in our discussion of the Department of Agriculture and Farm Credit Administration appropriation bill for 1960, I join with several of my distinguished colleagues who ask that the costs of this program be considered in their proper perspective and that we be fair in the assessing these benefits which accrue directly to the farmer and his family.

Farmers are not to be blamed for the high cost of surpluses and outmoded agricultural programs. Farmers are harassed by a cost-price squeeze resulting from the sharp costs which occurred in the 1939–52 period and which has hardened the economy.

The big majority of the farmers are not asking for tax handouts from the Government. They want more freedom less Government interference, and more commonsense in farm programs. Our farmers and ranchers are not wallowing in Government handouts. Only about 56 percent of the agriculture appropriations can be called direct aids to farmers. The other 44 percent benefits many people.

Programs that make up the 44 percent have multiple benefits and should not be charged exclusively to the farmer. In this category are such programs as long-range programs for the improvement of agricultural resources—including research, meat inspection, disease and pest control, education, market development and services, protection of soil and water resources, and forest and land management.

Our investment in REA and FHA loans is subject to repayment and should not be considered as part of the Agriculture program cost.

In addition, there are those phases of the program which are related to foreign aid and which create good will abroad. In 1958 alone we donated $272,500,000 worth of food to needy persons overseas.

Then, there are our food distribution programs: surplus foods donated through Department of Agriculture auspices which have benefited more than 14 million schoolchildren through the school lunch program and other foods which have been distributed to about 1.4 million persons in charitable institutions. In March of this year alone, surplus foods were distributed to 5,741,298 needy persons in the United States.

It is unfair to blame farmers for the price of food at retail. The farmer's share of the food dollar today is 40 cents, a descent from a peak of 53 cents in 1945.

The other 60 percent of the food dollar goes to pay for increased labor and transportation costs; it goes to the food packer and processor and to pay for those attractive, sanitary food packages which look so good in the supermarket and store so well in the deep freezer, the refrigerator, and the cupboards.

Now, let us look at the conservation reserve program—the long term and only remaining part of the soil bank. This program has considerable merit as a tool for getting at overproduction and overcapacity—the roots of our present farm problem.

Maintaining fertility falls properly to the farmer himself. Conserving the physical integrity of the soil resource falls to the Nation as well as to the farmer and landowner in order to save the people's heritage and safeguard the national welfare. If the soil is destroyed, then our liberty of choice and action is gone, condemning this and future generations to needless privations and dangers. The farmer must be responsible for crop rotation and fertilization in order for his farm to get at least normal yield per acre.

Land, after all, is not an economical commodity. It is an integral part of the Nation, even as its people are, and requires protection by the individual owner and by the Nation as well. This is a natural resource which benefits all the people.

The conservation reserve plans for future generations as a reservoir for potential food production. It will be a reserve for more food and better food. For present generations, the improvement of water resources, increase in recreational and wildlife resources and improvement of forest resources for utilization within 15 years as pulp and paper products, bring immediate benefits.

The soil bank payments average $13.50 per acre with a limitation of $5,000 to each farm. These payments do not compensate the farmer for what he would have received for normal farming operations. Rather, he receives an annual payment in lieu of the rent he might otherwise receive from another farmer for the use of his land. Furthermore, the farmer has to do something to earn this payment. He must put the land into grass or trees or other permanent cover, and take care of it.

This program will conserve and build our vital land, water, and forest resources, and alleviate the problems of surplus production during peacetime periods of normal consumption requirements. Within a few years we can dispose of our surplus stocks and save storage and interest costs. Acreage allotments, marketing quotas, and support prices will not be necessary. American farmers will be able to get decent prices in the market place.

This type of program will, through Government action, seek to compensate for the disadvantages now applicable to farmers caused by tariffs, labor, and social legislation which increase their costs.

Our farmers and ranchers have been victimized during the past 10 years through the failure of the Congress to make needed changes in old, outmoded legislation, some of which was needed to meet the wartime emergency.

Many of our farm families and the taxpayers will continue to reap the sad economic consequences of obsolete rigid programs unless recommended changes governing our price support laws are made without delay.

Congress must move in the direction of greater freedom for our farmers and less Government in agriculture.

U.S. Department of Agriculture budget expenditures of fiscal year 1959 (midyear review estimates)

	Millions
Programs having multiple benefits and not directly chargeable to the farmer:	
Programs relating to foreign aid, including Public Law 480 (International Relations) and International Wheat Agreement	$1,383
Food distribution programs, including commodity purchases under the program for removal of surplus agricultural commodities, school lunch and milk	391
Investment in REA and FHA loans, which are subject to repayment	603
Long-range programs for the improvement of agricultural resources, including research, meat inspection, disease and pest control, education, market development and services, protection of soil and water resources, and forest and public land management	645
Total (44 percent)	3,022

U.S. Department of Agriculture budget expenditures of fiscal year 1959 (midyear review estimates)—Continued

	Millions
Programs predominantly for benefit of the farmer:	
Agricultural conservation program	$257
Soil bank programs	880
CCC price support, supply, and related programs, including National Wool Act and acreage allotments and marketing quotas	2,638
Sugar Act program	75
Total (56 percent)	3,850
Grand total	6,872

Crop Surplus Is Costing United States Billions

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. BROOMFIELD. Mr. Speaker, the scope and waste of our Federal agriculture subsidy program has become a disgrace to our Nation and a tremendous burden upon the pocketbooks of our taxpayers. Recently, the Detroit Free Press printed a series of articles on this subject which I believe is worthy of the attention of all the people of the United States. These articles—the first of which follows—give a good picture of the waste and the folly of our present farm programs:

CROP SURPLUS IS COSTING UNITED STATES BILLIONS

(By Ray Cave)

America's farm price support program is developing into a national crisis, and unless there is drastic congressional action things will get worse before they get better.

By June the Government will have paid for $9 billion worth of surplus farm commodities—primarily wheat, corn, and cotton.

Nine billion dollars is enough to run the city of New York government for more than 4 years under the present budget.

The Federal Government will own more wheat than the Nation consumes and exports in a year. There is enough wheat available in the country to supply domestic needs for nearly 4 years.

The Government will own more corn and cotton than the Nation uses and exports in half a year.

By June it will cost $1,750,000 every day just to store these surpluses. It will cost more than $500,000 a day to move the commodities, and a million dollars a day in interest on the money involved.

Alarmed by the cost of the price support program, President Eisenhower said early this year:

"The price support and production control program has not worked.

"The existing price support program channels most of the dollars to those who store the surpluses and to relatively few producers of a few crops."

Speaking of the billion-dollar storage and interest cost, Agriculture Secretary Ezra Taft Benson recently said:

"This is fantastic and indefensible."

The spending of fortunes to keep farm prices high has led to situations where:

1. The Government is letting private storage companies do a job which it can do for half as much money.

2. Government storage fees insure such profits in cheap storage facilities that warehouse operators have offered to pay farmers not to sell their crops but to let the Government take them over. That way, the Government pays for the crop and foots the storage bill.

3. One storage company could make a $3 million net profit on the Government business it handled in 1 year.

4. A fleet of old freighters had to be used by the Government to store surplus wheat.

Typical of the farm surplus dilemma which besets the country is the story of Bondurant, Iowa.

The 328 people who live in that tiny farming community near where the South Skunk River tumbles past Des Moines wouldn't know a million dollars in gold if they saw it—and they can see it by looking out their windows.

It's stored in 230 squat steel bins, built in successive years as the Government bought millions upon millions of bushels of the surplus commodity they contain, hard, yellow corn.

It isn't unusual to have a million dollars in your backyard in Iowa these days. You can see the same thing at Pocahantas, or Swea City, or Clare, or Dickens, or Lake Park, or Winterset.

Stand on any Iowa hill and chances are you would see some of the 70,000 structures containing part of the 391 million bushels of Government-owned corn stored in the State today.

It cost the Government $606 million to buy the corn in Iowa, at an average cost of $1.55 a bushel. But nobody wants to buy the corn from the Government.

Of the 215 million bushels stored in Government bins in 1958, only 13,800,000 could be sold.

These sales were largely possible only because the corn was starting to deteriorate. The law allows the sale of a commodity which might spoil to the highest bidder above the going market price.

Some of the corn in Government bins is 8 years old, but each year huge new surpluses are added.

The reason is simple.

Under the farm support law, the Department of Agriculture must acquire all corn which a farmer doesn't choose to sell on the open market.

Congress has seen to it that Uncle Sam's price often is higher than the market price. As a result, much of the grain is bought by the Government.

The Government is able to sell or give away only a fraction of what it buys. The rest it must store. The storage problem alone is a fiscal chamber of horrors.

According to the Grain Storage Division of the Department of Agriculture in Iowa, the Government can store corn in its own bins for 4 cents a bushel a year.

If deterioration losses and depreciation are considered, the cost to the Government to handle its own storage becomes 6 cents a bushel a year.

But the Government is paying 16½ cents a bushel a year to private concerns which store corn, plus 4 cents a bushel for loading and handling.

In spite of this apparent tremendous difference in cost, the national farm policy demands that private storage facilities be used whenever they are available.

In Iowa in the last year, Agriculture Department statistics show, the Government:

Paid $8 million to store grain in its own bins;

Paid an estimated $30 million to store less grain in private facilities.

The records indicate that the Government could have saved a minimum of $15 million by setting up its own storage facilities for all of the grain it owns in Iowa.

But even Government-owned storage is expensive. It takes 505 Federal employees to look after the Government's storage of farm surpluses in Iowa.

Harold Brightwell, in charge of Government grain storage in Iowa, says each bin must be checked twice a month for spoilage.

Moisture is the deadly enemy. Fans are now being used to ventilate the large bins.

Last year, Brightwell says, about 4 million bushels of the 215 million bushels of corn stored in Government bins was deteriorating and had to be sold.

Another 11,569 bushels was damaged beyond any value. This, in terms of the corn stored by the Government in Iowa, is an insignificant amount to lose, says Brightwell.

One form of storage is that operated by farmers on their own land. The farmers keep the corn, after getting their money for the crop from the Government, and store it themselves.

For keeping a watchful eye on their crop they receive the full storage rate of 16½ cents a bushel a year. There were 63 million bushels of this "reseal" corn on Iowa farms last year.

For going into the storage business (often using Government loans to build the facilities—and at considerable urging by the Government) Iowa farmers grossed $10 million last year.

Though the storage industry avoids efforts to pin it down on the exact cost of building and operating bin-type storage for corn, it is generally conceded that such storage often can be constructed for 30 to 40 cents a bushel.

Does this mean the 16½-cent storage rate paid by the Government is making a "surplus profit" deal out of the storage industry in Iowa?

"Emphatically not," says Fred Maywald, official of the Iowa Farmers Grain Dealers Association, which has 300 storage firm members.

"The Government keeps encouraging us to build storage facilities," he says. (Washington is indeed making exery effort to encourage private storage construction.)

"If the Government wants the warehouse trade to continue expanding its facilities to handle surplus crops, it will have to keep the 16½-cent storage rate," Maywald says. "Everybody in Iowa would be glad if we didn't have to build another bushel of storage space.

"We're afraid if we build as fast as the Government wants us to and the farm program changes we'll have empty warehouses across the State."

Yet, if the farm surplus situation is a scandal from one point of view, it is no gravy train for the farmer from the other.

A man who knows both is Joseph F. Carber, a Clinton County farmer and head of the Agriculture Stabilization Committee in Iowa.

"The farmer is living well, that's true," says this ruddy-faced operator of 220 acres.

"I never thought I would make as much as I am, and I never thought it would cost me so much to make it. Like everybody else, our standard of living is up, but don't think the average farmer is getting rich.

"My net income last year was $4,000 (compared with an average of $4,667 for the State). Considering the time I put in on that farm, that doesn't make my hourly wage very high." (It also is noteworthy that this is the income on a farm worth an estimated $100,000, including equipment).

But if farmer Carber seems unconcerned about the surplus crisis, Government representative Carber is a much more worried man.

Overseeing the millions of dollars which the Government pays Iowa farmers for their crops, he has arrived at this easily summarized point of view:

"We must have some form of production control to stop this excess of supply over demand.

"As long as farmers grow more corn than there's a market for, we'll never get rid of it.

The 328 citizens of Bondurant are right after all. That isn't a million dollars in gold in their backyard. It couldn't be. Nobody wants it.

Secretary of State Herter

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Mr. Robert Ingalls in the Corvallis, Oreg., Gazette Times:

SECRETARY OF STATE HERTER

Like his predecessor, Christian A. Herter trained for the highest post in the Foreign Service of the Nation, the Secretary of State. Though they approached the apex through different paths, John Foster Dulles as a brilliant international lawyer, Herter as a Congressman and Governor of Massachusetts, each consistently maintained his preoccupation with foreign affairs throughout his career.

Herter was born in Paris of American parents and began his education in France. He began his foreign service as an attaché of the American Embassy in Berlin, at a trying time as it was just before the United States entered the first World War. During the following peace negotiations, he was on the Secretariat. He was an aid of Herbert Hoover's in the relief work which brought Hoover into prominence and eventually led to his election as President. In the House of Representatives, Herter was credited with helping to put through the Marshall plan for the recovery of Europe.

President Eisenhower has followed military practice and advanced the next in command to the top post in the Foreign Service. He held back the appointment to let nothing take away from the gratitude he wished to express to the retiring Secretary Dulles and to get a doctor's report of Herter's physical condition. Herter's appointment means for the most part the Dulles policies will continue to dominate the foreign relations of the United States. Before his illness there was criticism of Dulles by many Democrats, and the phrase "brinkmanship" was coined to describe his firm attitude and willingness to use force against the Communists if necessary. Since his illness however, the criticisms have disappeared and while, to some extent, this is in respect to the man and sympathy for his illness, the great majority of writers and politicians have conceded the great things he accomplished and the manner in which they were done. This leaves much of the former censure to the limbo of politics and members of both parties are equally guilty of the same injustice at various times and under various circumstances.

This is unfortunate because foreign policy is much too serious a matter for petty politics and needs bipartisan cooperation and effort.

Stop, Look, and Listen

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 19, 1959

Mr. McCORMACK. Mr. Speaker, there is no more dedicated American than Hon. Thomas E. Murray, former member of the Atomic Energy Commission and at present consultant to the Joint Committee on Atomic Energy.

His ability, his wisdom, and his experience in the field of atomic and nuclear and thermonuclear energy is broadly recognized and appreciated.

He recently made a report to the Chairman of the Joint Committee on Atomic Energy, "The Present United States Ban on Nuclear Testing," which report has been made public.

The importance of the report and the views of Dr. Murray is evidenced by an editorial on same, "Stop, Look, and Listen," appearing in the Washington Star of May 18, 1959, which editorial I herewith include in my remarks:

STOP, LOOK, AND LISTEN

It is not necessarily a good sign that Premier Khrushchev now has indicated that he may be receptive to the recently modified Anglo-American plan for policing a total ban on military nuclear tests. Actually, in the opinion of more than a few experts—including Thomas E. Murray, the distinguished former member of the Atomic Energy Commission—that plan is highly risky, and Soviet acceptance of it would be a bad thing for the free world.

Mr. Murray, for example, feels so deeply about this that he has written a special memorandum on the subject for the joint congressional atomic committee. In effect, the memorandum, which is full of challenging questions and sobering admonitions, adds up to a stop-look-and-listen warning against what he regards as our country's too-trustful and easy-going attitude toward a ban.

Thus Mr. Murray's most essential points may be outlined as follows: (1) Politically, morally and militarily, the administration has made a potentially grave mistake in declaring a moratorium on all types of tests and in recently indicating that it may be willing to agree to a ban without insisting at the same time on the strictest kind of inspection system—a system embracing, among other things, the great land mass of Red China. (2) The United States had better wake up to the fact that the men of the Kremlin have long been trying to maneuver it into a trap—a trap in which we might find ourselves incapable of developing and maintaining nuclear defenses (including the antimissile) vital to survival. And (3) Mr. Eisenhower should revert to the policy, as set forth in his letter to Premier Khrushchev on April 13, of advocating an end to easily detectable atmosphere atomic-hydrogen detonations (the ones that cause health-endangering fallout), but of continuing with noncontaminating detonations underground and in outer space until there is real disarmament or genuinely trustworthy and vetoless policing methods.

As matters stand, according to Mr. Murray, our country faces the peril of drifting into the worst kind of agreement regarding a ban on such detonations. Actually, in his opinion, "No military man in possession of the facts would have recommended the test moratorium, or consented to it except under heavy pressure. The military judgment today must still be the judgment made by the President in December 1957, that a total shutdown on all tests, small as well as large, underground as well as overground, is imprudent, dangerous to the national security, an unwarranted sacrifice of defensive strength." And it is for that reason, above all, that he has warned as sharply as he has against what he regards as a too-soft official approach to the problem.

Mr. Murray's warning seems to us to be sound. In any case, now that the talks on the proposed ban are temporarily suspended, our Government would be well advised to undertake a sweeping review of the whole problem, and of American policy in regard to it. Certainly, as far as national security is concerned, the United States ought to make haste slowly before it ties itself to serious and probably hazardous commitments in the matter.

Poison in Your Water—No. 78

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Ann Arbor (Mich.) News of October 3, 1957, entitled "Thirty-Eight Percent of Ann Arbor Hills' Sewage Systems Said Failing."

[From the Ann Arbor (Mich.) News, Oct. 3, 1957]

THIRTY-EIGHT PERCENT OF ANN ARBOR HILLS' SEWAGE SYSTEMS SAID FAILING—ENGELKE CALLS SITUATION HEALTH MENACE

A report on a thorough inspection of sewage disposal systems in Ann Arbor Hills subdivision, adjacent to Ann Arbor, shows 38 percent of the systems are failing or have recently failed, the county health department said today.

Dr. Otto K. Engelke, county health department director, terms the situation "a public health menace that requires immediate community action to prevent the outbreak of disaster in that area."

"The conditions existing now cannot and will not be tolerated indefinitely," Dr. Engelke declared.

He said that officers of the Ann Arbor Hills Association and the city of Ann Arbor are negotiating for a satisfactory solution to the problem.

SEEKS COMMUNITY ACTION

But Dr. Engelke said "the health department feels that the most satisfactory method of resolving this problem is through community action, and it is for this reason that the department is withholding action against individuals during these negotiations."

Health department sanitarians found in their survey that 29 percent of the sewage disposal systems were failing at the time of their inspections and another 9 percent had recent difficulties.

"There was sewage in open roadside ditches, and swampy places were filled with sewage," the inspectors reported.

Children were playing in the swamps, and one of the bogs was near a well supplying the

subdivision's drinking water, a sanitarian said.

"Before failure was ascribed to any of the sewage disposal systems, the sanitarians had to find evidence of wet sewage on the surface of the ground," the report states.

EVIDENCE PRESENT

Evidence of this was present on 34 premises—29.4 percent of the cases—in the 116-home subdivision, it adds.

Premises with dried sewage as evidence of recent repairs to the sewage disposal systems were termed recent failures. The report found 11 homes in this condition.

Septic tanks are "a reasonably acceptable method of individual sewage disposal if three conditions are met," according to Joseph W. Price, director of the sanitation division of the health department.

"There should be suitable soil composition, sufficient land area for the tile field, and rural setting," Price said. The rural setting is necessary because the best of conditions sometimes cannot prevent septic tank system failure.

"The type of soil found in Ann Arbor Hills is not ideal for individual home sewage disposal, and sewage disposal on an individual home basis is never satisfactory in a built-up community with houses relatively close together. The only solution for such a problem is a community sewerage system," he said.

Let the Dairymen Decide

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, the dairy farmers of this country have never had a chance to vote on the type of dairy program they prefer. Under the provisions of the dairy marketing bill which Senator HUBERT HUMPHREY and I have introduced in Congress, the dairymen would be given that opportunity via a nationwide referendum on the program outlined in that bill.

Ed Christianson, president of the Minnesota Farmers Union, comments on this and other features of the Humphrey-Johnson bill in his column in the current Minnesota Farmers Union Herald. Under leave to extend my remarks, I would like to include Mr. Christianson's column in the RECORD:

A DAIRYMEN'S DAIRY PROGRAM

Dairy farmers have never had an opportunity to vote in a referendum on the type of support program they would prefer.

We believe that they would overwhelmingly accept a program which included moderate quotas if it gave them the assurance of something better than the present disastrous price levels. The price of all milk, wholesale, in March in Minnesota dropped to 59 percent of parity, which is a situation which cannot be accepted with complacency by anyone who is sincerely concerned about the well-being of dairy producers and our locally owned dairy institutions.

Farmers will get a chance to vote on a 90 percent of parity support program, including marketing quotas and compliance deposits, if the Humphrey-Johnson dairy bill introduced in the Congress last week becomes law. A national referendum would be held for producers to choose between the new program and the old one.

An important feature of the Humphrey-Johnson bill is that the quota program would be made effective through incentives rather than penalties.

If dairy prices were weak, the dairy board could establish marketing bases and quotas.

The individual producer would have to stay within his marketing quota if he wished to be eligible both to receive a refund of his compliance deposit and to receive a deficiency payment to bring his return to 90 percent of parity. The compliance deposit of 25 to 30 cents per hundredweight would be deducted from the farmer's price of the milk and refunded at the end of the marketing year if he had not exceeded his quota.

Senator HUMPHREY made a very important point in his floor speech upon introducing the bill. He showed that a dairy support plan, such as contemplated in his bill, would greatly increase returns to the producer, yet it would cost the taxpayers much less than the present Benson programs.

International Association of Firefighters Position on Extension of Social Security for Firefighters

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following statement of the International Association of Firefighters on the extension of social security for firefighters:

THE IAFF POSITION ON EXTENSION OF SOCIAL SECURITY FOR FIREFIGHTERS

Our organization over the years has found that retirement plans were concurrently established with the adoption of paid fire departments in our communities. Historically, we find the provisions of retirement benefits by State and local governments in the United States are unique. Here is found the largest group of employees probably in the history of the world whose retirement has been provided for without the financial assistance of the Central Government. This movement was well established before the United States passed the Social Security Act.

We, as firemen, enjoy a very privileged position in our communities where retirement systems exist. It is universally known that, through the generosity of our States and city fathers, early retirement opportunities are provided for many of our firefighters, substantial disability benefits as well as provisions for adequate ordinary disability retirement allowances, benefit payments to our widows and orphans do not fall into the category of being subsistence allowances and most areas provide for an adequate income as the result of the loss of the breadwinner. Under the provisions of many of the retirement organizations that are presently in existence, firefighters also enjoy the benefit of special consideration being given for the hazardous nature of the firefighter job in his community by providing for additional creditable service in computing his actual retirement allowance.

It is the contention of our international organization that, by extending the old age survivor's insurance program to cover the firefighters, a substantial cost in the operation of local and State government is being unnecessarily foisted on the already heavy taxpaying public. It has been brought to our attention that a survey conducted in 1957 by the General Court of Massachusetts showed that:

"Under supplementation, the Commonwealth with an annual payroll of $120 million for State employees would be obliged to pay about $2 million annually[1] (2¼ percent on the first $4,200 of all salaries). By 1975 the State's share of cost would rise to nearly $5 million per year; all this in addition to the annual budget for State retirement purposes which already calls for payment of about $4¼ million annually.

"The other public employees in Massachusetts municipal, regional, and county government would have proportionate costs amounting to some $7 to $10 million immediately and from $15 to $25 million in 1975, all in addition to the cost of maintaining their normal retirement system."

The report further shows that, under integrated and/or coordinated methods of extending the OASI coverage for public employees, substantial costs are reflected immediately upon the adoption of such a program. And we, as firefighters, question whether or not the taxpaying public in the State of Massachusetts, or any other State, could or would assume such a burden.

We, as firefighters, know that, as public employees, we must look to the taxpayer for funds. There is no doubt that in difficult times the taxpayer may question the necessity of dual coverage for expense, and it is our position, as an international organization, that, where possible, we avoid dual coverage as well as avoid the hazards of attempting to ride two horses at the same time.

Since the Federal Social Security Act is primarily and basically designed as a social measure attempting to meet the basic needs of the entire working population and in contrast to State and local government retirement plans which are designed to meet the needs of superannuated employees where benefits are based upon contributions and are, therefore, geared to the amount of salaries and length of service, and since we, as firefighters, desire more than mere subsistence which is provided for under the OASI, we look to the future of our retirement systems when a strong foundation has been built through the means of savings, thrift, and the generosity of our local and State government officials.

In the event the existing retirement programs in our communities covering the firefighters indicate a deficiency in the benefits in the survivor's awards for employees who at an early age expire under conditions that cannot be attributed to the fire service, it is our feeling that the local retirement plans can effectively be amended providing for the coverage at less cost to the local taxpayer than by the extension of a Federal social security program.

As the result of the 1956–58 amendments to the Social Security Act, the prohibition in the Federal law with respect to the firefighters in positions under retirement systems was lifted in the States of Alabama, Florida, Georgia, Maryland, New York, North Carolina, Oregon, South Carolina, South Dakota, Tennessee, Washington, and the Territory of Hawaii. Under the Federal law, section 218(d)(6) gives the States in certain cases the option of dividing a single retirement system into smaller units. Here, each unit is deemed to be a retirement system. Most important to our membership, a separate referendum is held with respect to each unit or "deemed retirement system." We find in the 11 States mentioned that the States of Florida, Georgia, New York, Tennessee, and the Territory of Hawaii may, under the Federal law, divide a "deemed re-

[1] As of the first week of January 1959, the social security deduction was raised to 2½ percent which increases the above mentioned figures.

tirement system" as they wish on the basis of the desires of the members.

It is our contention that, if under any circumstances there is an indication of the need for extending the old age insurance program, in such instances Congres legislate and provide the option of dividing a single retirement system into smaller units of the public employees and the State and political subdivisions of the State.

In closing, we also wish to stress the fact that under retirement system policy, it would be subject to continual changes and OASI provisions and that, as the retirement systems continue to be adjusted, the advantages in municipal administration will tend to disappear. And, in our opinion, the quality of public service would be lowered as a result.

A Chance in Life—Boys Towns of Italy

EXTENSION OF REMARKS
OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mrs. DWYER. Mr. Speaker, it was my privilege on Saturday evening, May 16, to attend an unusual and inspiring event—the benefit dinner-dance of the Union County Committee for the Boys' Towns of Italy on the occasion of the 15th anniversary year of this magnificent work.

Like many of our colleagues, I had long been familiar in a general way with the purposes of Boys' Towns of Italy—to give life and happiness and hope to children who had nothing—and I had known something about its founder and head Msgr. John Patrick Carroll-Abbig, the Irish priest who, with the encouragement of the late Pope Pius XII, devoted his life to the homeless children of postwar Italy.

It was a revelation, however, to meet this kind and scholarly monsignor who, because he truly loves his children, has attracted the respect and admiration and support of thousands of people throughout the world. And it was deeply satisfying to me to witness the generosity and the devotion to this humanitarian work of so many hundreds of my friends and constituents in Union County, who have proved through the years to be one of the most active and loyal groups of supporters anywhere.

I wish it were possible, Mr. Speaker, to include in the RECORD the words and pictures I found in the committee's program, which describe in impressive fashion the wonderful work being done—as a result of their help—through the Boys' Towns of Italy.

I wish it were possible, too, to recognize here the many people who have worked with Mr. Arthur Venneri, chairman of the Union County committee and general chairman of last week's annual benefit, and with Mr. Louis Dughi, campaign manager for the 1959 campaign, and to list by name all those who have contributed so much in time and effort and love and money to this most worthy of causes.

And, finally, I wish it were possible to do full justice to the contributions made to that evening by the toastmaster, Dr. A. M. Falcone, and by Her Excellency Princess Gabriella Pacelli among the honored guests.

Instead, Mr. Speaker, for the edification of our colleagues and as a testimonial to the greatness of spirit of he who founded Boys' Towns of Italy and of those who support them, I take special pride in including as a part of my remarks the text of the speech last Saturday evening by the Rt. Rev. Msgr. John Patrick Carroll-Abbing.

I would only remind our colleagues at this time—when world peace is uppermost in all our minds—that true peace is the fruit of love and justice and unselfish sacrifice. This is Monsignor Carroll-Abbing's work, and this is God's work.

The speech follows:

Dear friends of Boys' Towns of Italy, we are gathered together in this 15th anniversary year of Boys' Towns of Italy and while we rejoice over the accomplishments of the past 15 years our thoughts go back instinctively to the Christmas eve 1944, when the idea of Boys' Towns of Italy was born.

It was late evening and as I made my way through the dark streets of war-damaged Naples, I was stepping off the sidewalks to avoid walking on the bodies of the children sleeping there, huddled together for warmth. They were some of the 125,000 children left homeless and fatherless by the war who wandered the land from destroyed city to destroyed city seeking for food and shelter, miserable, emaciated, embittered, and homeless children. I had seen these children before, in the caves where I myself lived in the battle areas when I endeavored to help the helpless civilian population caught between the battle that waged on the one side and the German blockade on the other. I had seen the brothers of these children die in the heroic fight for the liberation of Naples, in the defense of the besieged city of Rome. I had seen them in the concentration camps; I had seen them sitting on the ruins of their homes trying to realize that all the things that were dear to them had been taken away, leaving them alone and unloved in the world.

You look into the eyes of a child and you stand in awe and reverence before the innocence that shines forth mirroring the brightness of their souls; you see the mysteries of childhood's joys and little sorrows, but eyes that reflect the security of the love that surrounds and protects them.

But I looked into the eyes of the children of the war and I saw only bewilderment and hurt, bitterness and suspicion and the fear of being hurt again. A friend of mine, a colonel in the U.S. Army, summed up his own thoughts that Christmas eve when he said: "To think that they might be my kids lying out on a sidewalk if things had happened differently."

It was this thought, this identification of the said little war waifs with their own dear ones at home that probably gave to so many GI's overseas the inspiration to try and help these little ones. My first help came from them and it is a great happiness to me to know that so many of these men who helped me in those arduous and tragic days are still a moving spirit in the Boys' Towns of Italy committees that exist in so many cities of the United States.

It was with the permission of Pope Pius XII that I was released from my duties in the Vatican and was able to dedicate myself to the children of the streets. The first center, the Shoeshine Hotel for the shoeshine boys, was in a cellar near the railroad terminal in Rome. It was a miserable dwelling but for me and the boys it was home, and what laughter and fun we had in the evining before the boys went to bed in their iron doubledecker bunks.

I started the first Boys' Town in 1945 in the one available room of a bombed-out villa. Today that first Boys' Town has more than 30 beautiful buildings, cottages, schools, and workshops.

And today there are 9 Boys' Towns, a Girls' Town and 30 day-care centers for younger children, providing total care for approximately 2,400 youngsters and day care for 5,000 others.

The Boys' Towns are staffed with well-trained teachers, instructors, social workers, and counselors, picked for their special suitability for work with dependent children.

The very important feature, however, of the Boys' Towns is the way in which the youngsters are encouraged to become the most important agents of their own training by allowing them to assume direct responsibilities in every sector of their daily life.

The mayor is elected by secret ballot by his fellow citizens. He and his four commissioners (for finance, public works, sanitation, and education) preside over the popular assembly, the meeting of the citizens that takes place daily. They are responsible to the citizens for the honest and competent carrying out of their duties. For instance, the commissioner of sanitation is responsible for the state of cleanliness of the whole town. He receives an allocation of funds under the town budget and offers for competitive bidding all the contracts for cleaning the buildings, the streets, gardens, etc. The citizens who bid for these jobs and who are paid for them must carry out their cleaning jobs well, otherwise the commissioner of sanitation diminishes their daily pay for their task.

The judge is also elected by the citizens by secret ballot. He administers the legal code and can impose fines, etc. within the framework of the law. Citizens can appeal from him to the court. The court judges more serious offenses. The accused can appeal against the decision of the court to the court of appeal and as a last resort to the popular assembly.

A basic economic law, introduced by the citizens of the first Boys' Town in Italy and reaffirmed in the others, was: Chi non lavora non mangia. "He who does not work, does not eat." The boys are paid in regular Boys' Towns currency for their work at school and in the workshops. They cash their pay-checks at the town bank. They pay the boy waiters in the restaurant for their meals. They pay for their shoes, their lodging, their purchases in the town stores (which are run by boy storekeepers). They buy their cokes and candy in the soda fountain run by a boy citizen.

The confidence shown in them, the trust granted to them, the warmth of the family life that surrounds them, and the daily training in democracy by democratic living, have shown their good results in the thousands of fine young men who are now good citizens in the world outside. Many have come to the United States as specialized craftsmen. Some are already U.S. citizens; one, at least, is now in the U.S. Army; some have married here and have their own homes. All this in 15 years.

The United States has thousands of friends in Italy today, young men who look to America with the warm familiarity of friendship. They do so because men and women over here of every national origin

and background interpreted to them by their kindness and their generosity the spirit of brotherly love, giving them the knowledge that there were people in the world who care for them.

Our daily struggle to expand and maintain the Boys' Towns continues. In the Boys' Towns themselves we do everything possible by our own industry to maintain ourselves. Thousands and thousands of people over there help us, giving us their services, their labor, their gifts in money and kind to maintain the children. And in the United States thousands of other people take a little of their time and of their substance to enable us to erect the new buildings we need so badly to extend our work. It is a daily struggle; the struggle that every working father and mother has to support the family, and our family is a big one, made up of healthy and vigorous boys and girls. At one time I used to dream of a great donation which would solve a great part of our problems. This dream has never come true and today I am glad because the efforts of so many thousands of people like you in Union County have made them members of the great family of our Italian Boys' Towns, enriching us by their friendship and enriching them by the blessings that God surely bestows on a great nation whose sons and daughters have given so much love and so much care to children so many thousand miles away.

As you go home and look up at the stars remember the words of the poet: "Ogni lagrima di bambino che si asciuga è una stella che si accende in cielo" (Every tear that is wiped from the eye of a child is a star that is lit up in the sky). May God grant to us in our lifetime the grace and the happinesss to light up many stars in the sky by wiping the tears from the eyes of many children. God bless you.

Clarence Cannon Day in Missouri Legislature

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mrs. SULLIVAN. Mr. Speaker, last Wednesday, May 13, was Clarence Cannon Day in the Missouri Legislature, honoring the outstanding American who is the dean of our Missouri delegation in the Congress, who is our beloved friend and adviser and leader, and who holds one of the most important roles in national life as chairman of the Committee on Appropriations of this House.

It had been my intention last Wednesday, while ceremonies in Mr. CANNON'S honor were being conducted in Jefferson City, to call the event to the attention of the House, but unfortunately for my purpose the House did not meet that day. I have delayed until now on this for the very good purpose of obtaining and including as part of my remarks a truly outstanding and scholarly speech on the role of the representatives of the people in a democracy made before the Missouri Legislature by our remarkable colleague, one of the world's greatest authorities on parliamentary law.

Showing through this excellent talk, in addition to the erudition and scholarship, is the warmth of personality we who know CLARENCE CANNON and who love him associate with this fine and decent and kind human being.

Mr. Speaker, every Member of this House will take pride, I am sure, in the description Mr. CANNON gave to the Missouri Legislature of the role of legislative bodies under our form of government, and will read his speech with delight.

I am sure that my colleagues here will also take pride, Mr. Speaker, in the introductory remarks made about Mr. CANNON in the Missouri House of Representatives by Speaker Richard H. Ichord on Clarence Cannon Day.

For that reason, I include as part of my remarks, under unanimous consent, the introductory remarks of Speaker Ichord and the address by the Honorable CLARENCE CANNON on Clarence Cannon Day, in the Missouri General-Assembly, Wednesday, May 13, as follows:

INTRODUCTORY REMARKS OF SPEAKER RICHARD H. ICHORD ON CLARENCE CANNON DAY

Mr. CANNON, Governor Blair, Mr. President, members of the senate, ladies and gentlemen of the house, distinguished guests, this joint session of the Missouri General Assembly is our official way of saying on behalf of all the people of Missouri to the dean of the Missouri congressional delegation: Thanks for your dedicated representation of us in the Congress of the United States. Thanks for your many and varied important contributions to the art of self-government.

To our guests who have traveled here from all parts of the State for this occasion we extend a hearty welcome and we cordially invite you to attend the reception in the house lounge immediately following this joint session.

Before presenting our honored guest, may I review briefly a list of his many accomplishments, the cause of this day.

He has been Parliamentarian of the House of Representatives during both Democratic and Republican administrations.

He has served longer in the Congress of the United States than any other man in the history of our State, having broken the record established by Senator Thomas Hart Benton.

He has been chairman of the Committee on Appropriations in the House of Representatives longer than any other man in the history of our Nation.

He has been parliamentarian of all Democratic National Conventions since the year 1920.

He is the author of the "Precedents of the House of Representatives," now the accepted authority, not only in the Congress of the United States, but in State legislatures and other legislative bodies in other countries, notably the Philippine Commonwealth.

He is the author of "Cannon's Procedure in the House of Representatives," also used in the State legislatures and other legislative bodies. In this respect, his unseen hand has been present in every piece of legislation considered by the assembly, for his written word has decided the fate of many legislative measures.

He is the author of "Convention Parliamentary Manual," the only codification of procedure in national political conventions.

He is the author of numerous periodical articles, of the Treatises of Parliamentary Law in the "Encyclopedia Brittanica" and "Encyclopedia Americana."

He has been the authority on parliamentary law for Brittanica since 1927 and Americana since 1931.

He is a Regent of the Smithsonian Institution where he has interested himself in basic scientific research, making large contributions to the scientific advancement of our Nation.

His career has included many and varied endeavors: Professor of history, farmer, businessman, and an active attorney at law.

He is one of the few many-sided men in history who have been able to attain political as well as scholarly renown. Many scholars have been able to achieve a minor success in politics and many in politics have been able to achieve a minor degree of success as scholars, but rare indeed is the man who reaches both pinnacles. This is such a man.

For these achievements, for these contributions to his State, his Nation, and the world he have designated this day as Clarence Cannon Day. May I present to you, the Honorable CLARENCE CANNON, Congressman of the Ninth Congressional District of Missouri.

ADDRESS BY THE HONORABLE CLARENCE CANNON

Mr. Speaker, when Charles the first, of England, stalked angrily into the House of Commons and demanded of the speaker of the house the recission of a resolution to which he objected, the speaker falling on his knees before the King said, "Your Majesty I have no eyes to see, no ears to hear or tongue to speak save as I am directed by this honorable body."

By the same rule that honorable body—which some years later beheaded His Majesty, the King—could be addressed only through its speaker. That rule has come down to us through the centuries.

So, on this formal occasion—during a session of the house—with the speaker in the chair—I am not permitted to address friends who may be present, or his Excellency, the greatest Governor of the greatest State of the Union, or even the house itself, save through its speaker.

Mr. Speaker, I cannot tell you how much Ida and I appreciate your kindness—and the indulgence of the house—for this great and undeserved and unmerited courtesy in permitting me to attend so unusual a session. I accept it as an indication of the attitude of the house toward the Missouri delegation in Congress, in both houses and on both sides of the aisle. The only difference in the service we have rendered is that I have lived just a little longer. And as must always be the experience of those admitted to the floor, I stand with the greatest humility before this body of exceptional and distinguished men—not only because they constitute the most carefully selected and carefully screened body of men within the confines of the State—the most eminent men of their respective communities—not only because they represent officially—important constituencies and the wealth and power of the State—but because here in this chamber assembled they are the visible symbol of the greatest achievement of the American people, our form of Government, a form of Government hitherto untried in human history, a form of Government which has made possible in two short centuries the preeminence of the American people in every field of human endeavor, and the development of a civilization which has been the wonder and admiration of the world.

This assembly is the heart and soul of that system of government. It represents democracy in action. Destroy or nullify its functions and you have left but the shell of free government. Any influence which tends to reduce the confidence or the regard in which it is held by the people militates to that extent against the effectiveness of the Government, if not the preservation of the Government itself.

Mr. Speaker, wherever dictators and usurpers have climbed to autocratic power in any country, their first care has been to strike at the representatives of the people

in the legislative branch of the government. Oliver Cromwell, in proroguing the English Parliament, pointed his sword at the mace lying upon the table of the House of Commons and cried, "Take away this bauble." And when it was carried out there went with it representative government in all England.

Again, Napoleon, stalking into the French Chamber of Deputies at the head of his grenadiers, cried "Follow me. I am destiny. I am the divinity of the day." As his bayonets drove out the representatives of the people, some of them climbing through windows to escape, they drove out civil and religious liberty.

From that day until the end of the Napoleonic dynasty, France, and all Europe controlled by France, was without representative government.

Again, more recently, Hitler, seizing the reins of government in Germany, as the first step toward world domination, burned down the Reichstag Building, so that Germany's House of Representatives, unable to meet, was scattered in confusion, and before it could reassemble, a large number had been proscribed or were in concentration camps, and free government in Germany had been destroyed, and free government was in peril throughout the world.

Here in America, whenever any man or group of men have sought to establish autocratic control, whether political, economic, or industrial, they have struck, either directly or by innuendo, at the influence of the representatives of the American people. Of course, the American people have long ago advanced beyond the stage of armed interference with the legislative branch of the Government by military authorities. That would be impossible in America today. Our state of civilization does not countenance the political prison or the concentration camp. But there are other ways of undermining the standing and influence of the assembly in the regard and confidence of the people, which, whether with or without sinister motives, can be just as effective when carried to their ultimate conclusion.

Both Congress and the State legislatures have been subject to criticism—as they should be—ever since the establishment of the Republic. One of the most priceless prerogatives of every American citizen is the right to criticize his elected public servants, and that right has been widely and fully exercised from the admission of the State into the Union down to the 70th General Assembly now in session. At times that criticism has been more virulent and more undeserved than at others. And that is as it should be. Better that we be unjustly accused on many occasions than that we escape merited stricture on any single occasion.

The right to criticize—freedom of speech—has come down to us simultaneously with, and as a corollary of, parliamentary procedure. Freedom of speech is inevitably accompanied by parliamentary control of the right to speak.

Parliamentary practice had its inception when the tribe—beneath the oaks of England or in the Black Forests of Germany—finally agreed to sit down in a circle and speak one at a time. And that is the primary requisite in parliamentary procedure today.

We trace the beginning of the struggle for individual rights—the rights of the people—the protection of the citizen against the tyranny of the state from earliest times.

The spirit of democracy knows no geographical bounds. At the time the yeomen of the British Isles were maintaining their rights against autocracy the Gauls and Franks in Germany were fighting the same battle. After the Battle of Soissons there were vast quantities of booty—the wealth of the dying Roman Empire. Among the spoils was a beautiful vase which King Clovis asked be allotted to him. But a private soldier from the ranks insolently swung his battle axe and shattered it into a thousand fragments. So strong was the sense of equality and equity among the Germanic people that the King dared not show resentment. But a few weeks later when in the course of his inspection of the troops he discovered a spot and a broken thong on the soldier's shield, he cut him down with his battle axe and looking down at him said, "Thus didst thou to the vase of Soissons."

From these many divergent sources has come our love for democracy and the parliamentary law necessary to preserve it.

When Jefferson was called on as Vice President to preside over the Senate he—in his usual methodical manner—prepared a digest of the rules and practice of the English House of Commons. With his opportunities during his service as Washington's Ambassador to France to contrast the traditional deficiencies of the singularly ineffective rules of the succeeding French Assemblies his Jefferson's Manual probably embodied the most efficient system of parliamentary practice up to that time. And it remains today the basic law of the National House of Representatives.

A well established system of procedure is essential to expedition and efficiency in legislation. And familiarity with the procedure of the House is indispensible to a successful legislative campaign. How often have we seen a minority put its program through against a decisive majority through superior knowledge and application of parliamentary tactics.

But parliamentary law cannot be learned from a textbook. It requires practice and observation. For that reason those constitutencies which retain their representative from year to year exercise the largest influence in the assembly.

It has always been so. President Taft, during his service as Chief Justice recalled that Edmund Burke himself related that it was by slow degrees and constant application that Charles James Fox became the greatest parliamentary debater in the world. Speaker Champ Clark, who knew whereof he spoke, said that a man has to learn to be a representative and the best rule is for a constituency to select a man of fair capacity, industrious, honest, sober and courageous, and keep him as long as he discharges his duties faithfully and well. It is to the interest of the State of Missouri that the constituencies represented here today observe that wise admonition—concurred in by two great Americans who left their impress indelibly on our national institutions. The lengthening service of your distinguished colleague Senator Kinney, and his invaluable contributions through the years to his district, his city, his State and to the Nation constitute a convincing example of the cogency of that long-tested rule.

As representatives you are faced today with the most momentous issues of any Missouri House since the civil war. For the problems of the Nation are the problems of the respective States. The Nation today is confronted with unprecedented complications in defense, inflation, labor standards, economic monopoly and predatory exploitation of the consumer, which mark the struggle today between democracy and totalitarianism in modern business. And in our State especially just at this time the price of agricultural products and farm income are among the critical domestic problems of the day. (I am gratified to see present in the chamber this afternoon a great farm leader, Mr. Heinkel, whom the Missouri delegation in Congress is always glad to follow in matters of agricultural policy.)

In its widest implications the field of legislative responsibility of the Missouri General Assembly is no longer provincial; it is nationwide.

Missouri is one of the great States of the Union. It has a great history and a greater destiny. A great and wise Governor. Progress and prosperity are just ahead. And in the future this house and its speaker and the senate and its lieutenant governor have ahead of them an ever widening field of service and accomplishment and achievement.

Department of Agriculture and Farm Credit Administration Appropriation Bill, 1960

SPEECH
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 7175) making appropriations for the Department of Agriculture and Farm Credit Administration for the fiscal year ending June 30, 1960, and for other purposes.

Mr. HOFFMAN of Michigan. Mr. Chairman, unless I am completely mistaken, the validity of justice of this amendment is admitted both by the chairman of the committee and the ranking minority member.

Mr. WHITTEN. Mr. Chairman, will the gentleman yield?

Mr. HOFFMAN of Michigan. I yield.

Mr. WHITTEN. May I say I have not so agreed and did not agree. But I say that if there is merit to the gentleman's argument then the proper place to present it is before the legislative Committee on Agriculture and not on the floor after the contracts have been entered into.

Mr. HOFFMAN of Michigan. Perhaps, unintentionally, I misstated myself. What I meant, and what I think the RECORD will show, if the gentleman does not revise his remarks, was that the chairman of the committee admitted there was merit in the amendment. I realize that the opposition to an amendment which has merit is to object that the present—that is, when it is offered from the floor—is neither the time nor the proper place to consider or adopt it—just postpone it—the amendment is all right, but let let us not take it up now. That is the usual argument here when it appears that the committee had failed to see the need in committee.

This morning a letter came to me, which may be of interest to those who in the last session and since have continuously criticized and berated Secretary of Agriculture Benson. That letter was read to you just a few minutes ago. You might give it consideration in considering the pending amendment. In those days, we were told time and time again, not only by present Members of the House but by some who are not now here that, if we did not get rid of Secretary Benson, the country would go to the dogs; that Secretary Benson's agricultural program was worse than the

program and the administration of the program which was adopted in 1938 by our Democrat friends.

And permit me to add that time and experience have demonstrated that that program, while it may have gained votes for its originators and sponsors, has as yet neither cured nor contributed to the cure of any of the ills affecting the agriculture industry, although we can all admit that it has been beneficial to a few large corporations which have been farming and collecting subsidies. It has not reduced our surpluses.

It has been my privilege to know something about farming for at least 60 years and, while the farmers suffered hardships, so did others, including an almost fixed percentage of businessmen.

A few years ago, a friend who was township clerk as well as chairman of the Republican township committee in one of the townships of my home county of Allegan, wrote me that, in his township, because of Secretary Benson's administration of the Democrat farm program, that is, the Agricultural Adjustment Act of 1938, and the amendments thereto, the farms in that particular township were being abandoned.

At my suggestion, personal surveys were made by disinterested people familiar with the situation in that township. One was by a member of the State senate and another by a disinterested individual, both acquainted not only with the farms but with the people who lived on the farms in that particular township.

Do you know what that survey pointed out? Sure, that many of my constituents and others living in the district of the gentleman from Michigan [Mr. FORD], were abandoning farming. But there was a joker in the situation. The farmers were not farming. Do you know what they were doing? They went to Holland City and to factories in our own towns in the Fourth Congressional District of Michigan and worked in the factories. They lived at home on the farms but they were letting the kids and the women of their households run the farms with the tractors and other farm machinery which made it possible to have two instead of one family income. That is the way they were moving out. They were enjoying two sources of income. Permit me to say to my colleagues on both sides of me that that explains why there are more Democrat votes than usual up there in the last election. Some people think it is fine to have Uncle Sam give them a cash benefit if others pay the larger part of it. They draw their wages in the factory. They want higher wages while working in the factory, then let the wife and kids run the farm. They have no objection to a gift of cash if it is paid in larger part by the other fellow. They are fine folks, they are the people who pay the taxes, but I do not know of any reason why we should let the farmer turn his soil into conservation payments and then take a job which another man needs and who has no source of income except his labor. But if you want it that way, you can have it.

In my judgment, it is neither right nor fair to permit a landowner to put his farm in the soil conservation program, draw down a subsidy for taking his land out of production, and be given a special benefit or subsidy which must be paid from the taxes collected from all of us. That procedure is a deliberate taking of the money paid to Uncle Sam by everyone, regardless of their wishes, and used for the benefit of those belonging to a special group.

It is especially reprehensible when the benefit payments go in large chunks to corporations or wealthy individuals who own large farms. Yet many brazenly assert that the program is for the aiding of the small farmer. That is nonsense and most of us know it. As many an editorial has pointed out, it is vote buying through the expenditure of tax dollars.

Indonesians Live With Hopes, Fears

EXTENSION OF REMARKS
OF

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 19, 1959

Mr. LOSER. Mr. Speaker, I have already placed in the RECORD several articles written by Mr. Coleman A. Harwell, editor of the Nashville Tennessean, during his world tour.

Under leave to extend my remarks, I am today including the first of three articles on Indonesia. I believe you will find it of interest. It follows:

INDONESIANS LIVE WITH HOPES, FEARS

(By Coleman A. Harwell)

JAKARTA, INDONESIA.—Mochta Lubis, one of the victims of Indonesia's strange struggle for independence, sent out a message of hope last week from the imprisonment of his home.

The tragic situation of Lubis typifies the confusion and contradictions of Indonesia today. His message bespeaks both the hopes and the frustrations you discover on every hand.

This was his message:

"Despite the present situation, I am fully confident in the cause of true democracy for Indonesia."

Lubis is not a military hero. Many of his fellow countrymen dispute that he is indeed a hero at all. Some of them say of this editor who has been held prisoner in his own home for 2 years, without trial, that he was too brash. With this Lubis agrees.

"My continued detention," he said, "is my own fault because I refuse to compromise the principles of the freedom of the press."

His message was delivered in the worn voice of his tiny wife, Holly, whose eyes filled with tears as she spoke.

TOLD OF CONCERN

She had been told that newspapermen all over the free world, from New York to Jerusalem to Ceylon, were concerned with her husband's fate and welfare. She had been asked how things were with her and him and their three little children.

"It is not so bad," she said, "we hope * * *"

She turned her head away as tears welled up. But only for a moment; then she turned back and smiled and said, "I'm sorry."

That was her only display of emotion in our talk, the only evidence of the strain of keeping life on an even keel in a home that is a prison.

She and the children come and go freely. It is especially important that the little ones not to be upset by the abnormal situation; that she and her husband not let their anxiety show to them. And that is difficult in the face of the uncertainty, the lack of hope, not knowing if anything will happen today or tomorrow or the day after.

That is why Lubis' predicament is typical of Indonesia—the uncertainty, the not knowing, the evasion of concrete decisions.

NO COMPROMISE

Lubis was one of the millions who exulted when the heavy yoke of Dutch rule was thrown off in 1950. He welcomed freedom not with just a shout, but with a clattering typewriter that proclaimed his joy and also his unwillingness to compromise on any issue of freedom.

His critics say he went too far. Even some newsmen who proclaim their personal friendship say he was too vitriolic in his criticism of President Sukarno—he should have known Sukarno would get even with him; that's the Indonesian way. In any event, Lubis went right on with his attacks.

When a high official—Abdulgani—accompanying Sukarno to America in 1956, was alleged to have profited on a dollar exchange in San Francisco, Lubis printed the story in his newspaper, Indonesian Ria. Lubis was arrested soon afterward, placed under house arrest. His newspaper, hounded by the government, finally gave up.

There is a question as to whether Lubis' immediate situation was helped or injured earlier this year when he was voted the $5,000 Magsaysay award by Philippine newspapers for the greatest contribution to press freedom in South Asia. Certainly it has not helped in feeding the Lubis household, for the money is still in Manila.

HOPE DASHED

Earlier this year, a professor who had won the Sukarno Government's disfavor, was permitted to go to Manila to collect a similar award. This spurred hope in the Lubis household for a time. But nothing happened.

So Lubis paints colorful scenes of the beautiful tropic land he loves so much, reads everything he can get hold of, talks with Holly, helps his children with their studies—and waits.

But, in contrast with past years, criticism of the Government on any important issue cannot be found. And the vigorous investigative reporting, once prevalent, is now nonexistent.

Pressures on the press—a sort of cat-and-mouse technique typical of public life in Indonesia—had started before last year's rebellion in Sumatra. Since then, the country has been under martial law and the press is under control of the military commander in each area.

ARMY CRACKS WHIP

Control is exerted in a most tantalizing, mercurial fashion. Instead of a press law or advance censorship, the army cracks down afterward in any way it sees fit, whether or not the matter is military.

The latest instance would have been funny if it had not been so serious. It illustrates how things are done in Indonesia.

A Dutch captain, Henricus Schmidt, captured in the revolution and sentenced to life for war crimes, was given a reduced sentence to 5 years, set free because he had already been in prison 5 years, and permitted to leave the country.

The attorney general announced the fact, which was published by all papers. Widespread protests resulted, so the attorney general was removed from office. That official wrote a letter to the conservative, government-critic paper, Pedoman, saying he felt he should not have been discharged because he merely executed the order issued by the supreme court.

Pedoman published the letter on page 1 and also ran an editorial saying the minister of justice, who issued the supreme court order to the attorney general, should be asked to explain his action.

NEWSPAPERS CLOSED

Next day, the army closed Pedoman. Some other papers reported the fact. They were closed. Apparently the army felt uncomfortable, so it closed other papers.

All of this was in character. When Schmidt's release had been protested, a scapegoat had to be found. When someone spoke for the scapegoat, he was put in the same class. Then more and more.

Then something else happened. The Indonesian press association announced that if all papers were not allowed to reopen by the next Monday, none of them would print any future announcements by the army. A very brave threat—maybe.

Guess what happened? The papers reopened Sunday.

But not because of the threat. They were permitted to reopen because President Sukarno was making a major speech on Tuesday. And how would it go over without a press?

Of course, the press association knew this when it made its threat. That, too, was in the Indonesian manner.

Tragedy, comedy, democracy—what? It is all very serious, very important business. Is Mochtor Lubis' confidence in the future of democracy justified?

Incentives, Not Subsidies, Meet Human Needs

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. HIESTAND. Mr. Speaker, Nation's Business for May produces a most interesting editorial, "Incentives, Not Subsidies, Meet Human Needs." I ask unanimous consent to insert it in the Appendix of the RECORD:

The day's most costly question is:

"Don't you believe in meeting human needs?"

Only the wicked can answer no.

This permits those with schemes for spending Government money to smear with a nasty stick anyone who dares to challenge their proposals.

So long as an ounce of emotion outweighs a pound of logic the Government can thus be embarked on all sorts of adventures calculated to meet human needs that the people or their State governments have been unable or unwilling to meet.

Presumably the needs are genuine and urgent. Presumably the plans for meeting them are well-intentioned.

The misfortune of our country—and of other benevolent countries before us—is that economic forces are not swayed by good intentions. The evidence of this is on clear view in dozens of places:

Thirty years ago the Government undertook to meet the human needs of farmers. Today the farmers' needs are only slightly less but the Government's problem is monumental.

Twenty years ago Government attempted to legislate a balance of power between workingmen and employers. Today we have a labor despotism that dares threaten Government officials who fail to carry out its orders.

More recently, in an effort to build up stockpiles while meeting the needs of a war economy, Government artificially stimulated production of strategic metals at home and abroad. Today, with the stockpiles overflowing, we are using, among other things, quotas, tariffs, and subsidies in an effort to stabilize the metals industry.

Government dabbling in other economic fields has been equally disillusioning. The benefits are either less than expected or overbalanced by the resulting complications.

Human needs are not met by complications. They are met by an economic system strong enough and versatile enough to support jobs. Jobs, in turn, produce the goods by which needs are satisfied.

Fortunately, our economy as originally set up had a great deal of built-in equilibrium. It has always managed to straighten itself after every push to the left. It has been able to do this because it offered rewards and opportunity to those who were willing to work. Each new Government effort to meet human needs reduces those rewards and opportunities a little.

Oppressive taxes and controls impede private effort. So Government must shoulder additional responsibility, reducing further the field for individual action.

Subsidies to a group or community require, in fairness, subsidies for those with whom they compete. Eventually the subsidies become a right to which the beneficiaries are encouraged to believe themselves entitled.

When the Rural Electrification Administration was creatd 24 years ago, it was authorized to lend money at 2 percent interest to speed electrification of farms. Now, with farms 95 percent electrified, the President has suggested that the interest rate be raised to equal Government's borrowing cost.

With equal logic, we can continue unemployment benefits to those who were recently unemployed, sickness benefits to the recently ill, depressed-area aid to communities recently depressed, educational benefits to the recently illiterate.

We can, and in truth are, building an increasing group that depends on Government rather than ambition for advancement. In Michigan and Pennsylvania unemployment remains high, though in those and nearby States jobs are available for skilled people. Employment agencies observe: Unemployment benefits are very attractive.

Apparently they are less attractive in West Virginia. A Congressman of that State urges aid for depressed areas so that "100,000 unfortunate West Virginia boys can come home." The 100,000 left their native State to find employment. What he wants to stop is the spirit that kept this country from remaining a narrow band of States along the eastern seaboard.

Even where that spirit still exists today, Government intervention is working to erode it. A young man who recently started his own business reports sadly, "I was determined to get along without Government help—but all my competitors were getting it. Now I'm getting it, too—every bit I can."

It is time to consider if this is the sort of society we want. Shall we force individuals to accept Government help, or shall we encourage them to be self-reliant and ambitious?

How Congress acts on the subsidy measures urged in this session can go a long way toward setting our course.

We can depend on the individual to meet his own human needs by offering incentives, giving him room to grow and prosper.

Or we can so conduct ourselves that Khrushchev's statement "your grandchildren will live under socialism" becomes a prediction, rather than a threat.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Daily Digest

HIGHLIGHTS

Senate passed bills on life insurance tax and on Navajo Indian irrigation project.

House debated Housing bill.

Senate committee by vote of 9 to 8 ordered reported the nomination of Secretary of Commerce Strauss.

Senate

Chamber Action

Routine Proceedings, pages 7514–7540

Bills Introduced: 35 bills and 4 resolutions were introduced, as follows: S. 1969–2003; S.J. Res. 98; S. Con. Res. 36; and S. Res. 121–122. **Pages 7518–7519**

Bills Reported: Reports were made as follows:

S. 1968, to strengthen the wheat marketing quota and price support program—reported March 18 during Senate adjournment under prior authorization (S. Rept. 295);

H.R. 5674, fiscal 1960 authorizations for military construction, with an amendment (S. Rept. 296);

S. 1901, to amend the Agricultural Act so as to stabilize and protect the level of support for tobacco (S. Rept. 297); and

S. 218, 707, and 1291, private bills (S. Repts. 298–300).

Pages 7513, 7518

President's Message—Atomic Energy: President transmitted copy of an amendment to agreement between the Governments of the U.S. and of the United Kingdom for cooperation in the uses of atomic energy for mutual defense purposes, signed at Washington on May 7, 1959—referred to Joint Committee on Atomic Energy.

President also transmitted copy of an agreement between the Governments of the U.S. and of the Republic of France for cooperation in the uses of atomic energy for mutual defense purposes, executed on May 7, 1959—referred to Joint Committee on Atomic Energy.

Page 7590

Taxation—Life Insurance: Senate passed with amendments (motion to reconsider tabled), H.R. 4245, proposed Life Insurance Company Income Tax Act of 1959, after adopting amendments as follows:

All committee amendments en bloc, bill as so amended thereafter considered as original text for purpose of further amendment; Byrd amendment of a technical nature affecting dates of filing tax returns; Curtis amendment of a corrective nature respecting certain reinsurance transactions in 1958; Byrd amendment of a technical nature to strike out language on "1958 reserve for dividends to policyholders"; and Williams (Delaware) amendment relating to two stock companies mutualized prior to 1958.

Senate insisted on its amendments, asked for conference, and appointed as conferees Senators Byrd, Kerr, Frear, Williams (Delaware), and Carlson.

Pages 7514, 7540–7555, 7567–7578

Printing: Consideration of Senate's unfinished business, H. Con. Res. 95, authorizing reprinting of H. Doc. 451, of 84th Congress, entitled "How Our Laws Are Made," was resumed, but temporarily put aside again for consideration of other matters. **Pages 7514, 7578**

World Bank: Senate disagreed to House amendment to S. 1094, to amend the Bretton Woods Agreements Act so as to authorize increased U.S. subscriptions to the International Montetary Fund and the International Bank for Reconstruction and Development, requested conference with House, and appointed as conferees Senators Fulbright, Green, Sparkman, Humphrey, Mansfield, Wiley, Hickenlooper, and Langer.

Page 7589

International Health: Senate considered but temporarily put aside for another matter S.J. Res. 41, International Health and Medical Research Act of 1959.

Pages 7579–7581, 7590–7598

Navajo Indian Irrigation Project: S. 72, auhorizing construction of the Navajo Indian irrigation project and the initial stage of the San Juan-Chama project as participating projects of the Colorado River storage project, was passed with an amendment by Senator Hayden to preserve obligation of the "States of the upper division" in the Colorado River compact to prevent depletion of flow of river at Lee Ferry below an aggregate of 75 million feet for period of 10 consecutive years.

Pages 7603–7607

Appendix

Needed: An Investment Attitude

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 20, 1959

Mr. MAGNUSON. Mr. President, we in the West know the true worth of the investment made to develop our natural resources, the return which this investment has brought, and the need for a continuation of this attitude and program now.

That is why the Senator from Missouri [Mr. SYMINGTON] struck such a responsive chord when he addressed the Jefferson-Jackson Day dinner in Tacoma, Wash., May 2, 1959.

So that my colleagues may know Senator SYMINGTON's appraisal of problems besetting us today, I ask unanimous consent to have his Tacoma address set forth in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF SENATOR STUART SYMINGTON, DEMOCRAT OF MISSOURI, JEFFERSON-JACKSON DINNER, TACOMA, WASH., MAY 2, 1959

Thank you very much for asking me to be with you here in Tacoma.

It is a privilege to visit your busy and beautiful State, and to meet with so many people who have a hand in developing the rich resources of the Pacific Northwest.

Here in the State of Washington you not only have a rich store of wealth in your mountains, fields, rivers and valleys, but are very fortunate in your geographical position.

The location of the Seattle-Tacoma area on the great circle route between two hemispheres makes it a great gateway for the jet age.

With the forward-looking leadership characteristic of this area, there is no limit to what can be achieved in this wonderful country.

By your choice of Governor and Senators, you have insured yourselves the kind of leadership we need, not only in Washington and the Northwest, but in all America.

I want to pay tribute to your outstanding Governor, Albert Rosellini.

In these days of tightened sources of State income it is not easy to build the kind of record Al Rosellini has made; and this is especially true when you inherit a deficit from the previous administration.

But your Governor has had the vision to write a progressive program, the good sense to face the financial realities, and the courage to put the State on a pay-as-you-go basis.

When the Governor of New York put over his tax program, the newspapers started running him for President. They should look as well to the State of Washington.

May I also pay tribute to your senior Senator, WARREN MAGNUSON. He is the able and experienced chairman of a great committee, and one of the most respected elder statesmen of the Senate.

All of us benefit from his experience, wisdom, and advice.

You always know where MAGGY stands. Invariably it is on the side of progress; i.e., the side of the people.

As for your junior Senator, "SCOOP" JACKSON, I don't have to tell you what I think about him.

SCOOP and I have long been partners in the effort to keep this country strong so it can remain free.

There is no more reliable friend and ally; and I predict that SCOOP will have a great future as a leader of America.

It is a long way from the State of Washington to the city of Washington. But I can report, as a somewhat prejudiced observer, that the Republican Party in the Nation's Capitol is just as bad off there as it is here.

Before the last election, an official at the White House wrote a book, "A Republican Looks at His Party."

Now he is writing a sequel, "A Republican Looks for His Party."

As they look at the calendar, the Republicans become more and more worried.

Next year, they see, is a presidential election year. If they are going to win again, they know they are going to have to pull a very large rabbit out of the hat.

Let me tell you a story I understand actually happened. As you know, the Republicans have now appointed a nationwide committee to try to formulate the true principles of their party.

This committee held a meeting recently; and one member, a sort of newcomer to Republican politics, said he thought what the party needed, more than anything else, was to stop acting like the party of privilege, and start representing the interests of all the people.

But older and more experienced Republican heads intervened.

One of them said in all seriousness, "You are wrong. We are the party of privilege. This has been our role throughout our history, and we should not change."

There is nothing like honest confession—and this confession of philosophy helps explain the Republican policies of today.

A party of privilege is bound to tradition.

It looks backward.

It is opposed to growth and investment.

It perpetuates waste.

It approaches the most pressing problems of the country with timidity, washing them gently with solutions which are 10 years old.

This preoccupation with tradition results in strange inconsistencies in national policy.

As example, the administration is obsessed by the threat of inflation, even though, according to the consumer price index, the last 12 months witnessed no inflation whatsoever.

Yet efforts to eliminate unemployment are ignored, even though that current problem is so pressing.

In your own State it now constitutes 8 percent of the labor force. In some States as high as 15 percent.

The administration justifies its reductions in the budget by asserting it wants to save our children from the burden of interest payments on the national debt.

But what do these reductions actually cut?

They cut funds for better schools, which in the long run would give our greatest resource—these very children—an opportunity to add thousands of dollars to their incomes.

They cut funds for medical research, which would add many useful years to the lives of all citizens.

Because the Republicans have been so preoccupied with tradition and are afraid of modernization, they have failed in their pledge to keep waste out of Government.

From the 99 chauffeur-driven Cadillacs, to the jungle of committees in the Pentagon, to the six different air forces the taxpayer now supports, to the great and growing mess in the Department of Agriculture, there is now mountainous waste in our Government.

We pay for that waste in taxes.

We pay for it doubly, since all these billions of wasted money could be used for what we really need.

My friends, this preoccupation with looking backward, which lends so much to this duplication and waste, is nevertheless not the most serious flaw of this Republican administration.

The people are on to much of this, as the last election showed.

By far the most serious Republican policy—and it is slowly coming to light—is the way this administration has concealed from the people the steady deterioration of our position in the world.

This latter policy is very serious, because it goes to the heart of our democratic system—the people's right to know the facts, and thereupon to act upon them.

If they are lulled into complacency, how can they make the effort necessary to keep us both prosperous and free.

The people want the truth—and because of these misrepresentations, come next year, will turn these Republicans out.

In 1960, at local, State, and National levels, the people will give the Democratic Party the greatest victory in its history.

May I talk briefly tonight about two areas in which we have been misled: national security and economic growth.

First, as to our defenses:

The administration has been telling us that we had defenses we do not have.

As illustration: For a long time the administration withheld the facts about Russian development of intercontinental ballistic missiles.

The American people were led to believe we were in fine shape, maybe even ahead, in both the development and the production schedule of this weapon.

But last January the Secretary of Defense finally admitted that the Russians will soon have a 3-to-1 lead over us in this field.

What happened when we learned the truth about ICBM's?

The people were immediately informed that our weakness there was compensated by strength in other sectors. One of those listed was our intermediate range ballistic missiles, which, we were told, were operational on foreign bases.

But now we learn that none of these IRBM's are operational—and are told the Russians have many hundreds of medium range ballistic missiles that are operational.

And what was the other major part of our defense balance that justified our voluntarily handing over ICBM superiority to the Communists?

It is the Strategic Air Command, which the administration says comprises over 90 percent of our retaliatory capacity.

Under questioning, however, the administration admits that three-fourths of the present Strategic Air Force is obsolescent: and that its 3-year plan for replacement of these old bombers will replace only a very small percent of those now in operation.

In his television address to the Nation a month ago, the Presiednt showed a chart of 17 missiles he said were "now in use by our Armed Forces."

Only one of these missiles could travel farther than from San Francisco to Los Angeles. That one was not operational then, and isn't now.

This entire process reminds me of the used car salesman who wants his customer to look only at the new paint job, because if he examines the car more closely, he will discover it has no clutch, no brakes, and no motor.

Now, about our economy.

The challenge we face from the Sino-Soviet Empire is fully as much economic as it is military.

The Communists are out to outproduce us, dry up our markets, and show the world that they can offer material welfare equal to, and superior to, that of the United States.

They are still behind us in some areas—but they are gaining fast.

Since 1950, the Russians have gone from 34 percent of American steel production to 71 percent; from 46 percent of our coal production to 113 percent; and from 27 percent of our aluminum production to 39 percent.

But does this administration warn the American people of this Russian progress, or take the steps to meet it?

It does not.

In the last Democratic administration, our economy grew at the rate of about 5 percent per year.

In this administration, economic growth has been slowed to a little over 1 percent a year.

Is this the way to provide for a population which will reach 235 million by 1975?

Is this the way to provide for the growth of the West?

Or is it the way to stunt the growth of the West?

If we had been able to keep up the Democratic growth rate between 1953 and 1958, it would have meant: $2,800 more income for each family; $31 billion more for our farmers; 10 million more man-years of employment; and $39 billion more private investment.

Every segment of our economy, every section of our Nation, would have been more prosperous than it is today.

At least as much as most, you in the Pacific Northwest have tasted the bitter fruits of Republican economic contraction.

You have seen the resources wasted by the policy of no new starts on the Columbia River.

You have felt the credit pinch of tight money.

You have felt the drain of unemployment.

You have seen glowing opportunities for the development of this region snuffed out by the indifference of this administration.

What you need is more investment capital to develop the riches that lie at your feet.

This requires a willingness on the part of our Government to make long-term investments instead of continuing to be obsessed with budget balancing on a year-to-year basis.

It requires an administration which is not afraid of growth.

I believe there must be more willingness on the part of Government to conceive and carry out broad economic plans, instead of responding haphazardly and uneconomically to such crises as power shortages and floods.

As we all know, the difference between civilized man and the savage is planning. The difference between men and animals is that men look ahead.

Long-range planning of resource development therefore, on a multistate basis, would enable the West to know where it was going, and how fast.

So, my fellow Democrats, our work between now and the next election would seem cut out for us.

We must set the record straight.

We must tell the people the truth about the world situation—and also about the lost opportunities caused by the policies of these Republicans.

We must convince them, by our record in Congress and in the country, that the Democrats will improve that record.

If we do so we will win; and the Nation will be stronger for the effort we have made and will make in the years to come.

Vacationers Enjoy Wisconsin State Parks

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 20, 1959

Mr. WILEY. Mr. President, with vacation season just ahead, folks in Wisconsin, and throughout the country, will be seeking scenic, historic, restful, or other places of interest to enjoy their time off from daily routines.

In Wisconsin we have a wide variety of opportunities for visitors or travelers to really enjoy their vacation. These include: good food, friendly hospitality, scenic and historic sites throughout the State, almost a million acres of land set aside for fishing and hunting lands, campsites, and a wide variety of other opportunities for indoor or outdoor vacationing.

Particularly, our State parks offer the visitor a chance to enjoy spots of unique beauty, as well as of scenic, scientific, and historic interest.

Annually, these parks attract more than 5 million visitors—including our home folks, friends from sister States, and visitors from Canada.

For those who are seeking a wide variety of chances to "get away from it all," Wisconsin indeed offers a wonderful opportunity.

A recent edition of the Wisconsin Agriculturist carried an excellent article entitled "Vacationers Enjoy Our State Parks." I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wisconsin Agriculturist, May 16, 1959]

VACATIONERS ENJOY OUR STATE PARKS—SURVEY SHOWS THAT THOUSANDS VISIT STATE'S MANY PARKS AND CAMPSITES

Wisconsin's State parks are the showcases of the State. The 31 areas in the system include some of the unique beauty spots as well as places of outstanding scenic, scientific, and historic interest.

Each year these parks attract more than 5 million visitations from within and outside the State. For more than 50 years both the enjoyment of these parks and the resulting economic benefits to the people of the State have been increasing. But what of the future?

The Wisconsin Conservation Department made a comprehensive study of State park visitors during 1958 in cooperation with the State highway commission, Federal Bureau of Public Roads and the University of Wisconsin. Between June 20 and Labor Day 17,152 drivers of cars were interviewed as they left the several State parks and State forest recreation areas. This number was 2 percent of the vehicles recorded at the State parks during the summer season.

Visitors to our State parks came from 47 States and from Canada. Wisconsin citizens supplied almost two-thirds of these visitors while Illinois, containing the closest major population center in the country, accounted for over half of all out-of-State visitors. Our Illinois neighbors frequented every park in the State with Big Foot Beach, Devil's Lake and Peninsula the most popular areas for them.

COME FROM MIDWEST

Over 23 percent of the nonresident visitors were from Minnesota. The parks along the western edge of the State, particularly Interstate, Pattison, and Merrick, received the majority of Minnesota's use.

Iowa, Michigan, and other neighboring and Midwestern States were also substantial users.

The northern 29 counties, covering about half the area of the State, produced only 20 percent of the use by Wisconsin citizens, while the more heavily populated southern half provided 80 percent of the park useage.

Visitors come to the State parks for a variety of purposes. Since the basic concept of Wisconsin's State park system is to preserve the areas of outstanding statewide scenic and historical significance, it is apparent why one-third of the visitors came primarily for sightseeing.

They came to see the rugged beauty of Devil's Lake nestled in the Baraboo Bluffs; the highest point in Wisconsin at Rib Mountain; bluffs high above the Mississippi at Wyalusing and Perrot and the State's highest waterfall at Pattison.

MANY ARE CAMPERS

Picknicking, another favorite summer activity, was the reported purpose for 19 percent; while camping, the fastest growing recreation in the State parks, was the recreational purpose of exactly one-sixth of the visitors.

About 13 percent of the visitors mentioned swimming as their primary recreational purpose. Other recreational purposes including boating, fishing and hiking were specified by a few visitors.

Visitors spend quite a sum of money within a short distance (20 miles) of the State parks. The average expenditure per car was $16.38. This figure includes the average expenditure of $3.75 per car for lodging, $8.30 for food and drink, $2.51 for car expenses, $1.82 for other purposes such as boat rental, souvenirs, or golf fees. Considering the number of cars entering the parks each season, these figures give an estimate of the economic effect that visitors have on the region surrounding a State park.

Improvements are badly needed in all Wisconsin State parks, yet 55 percent of the visitors gave no opinion when asked what they thought is most in need of improvement.

Those who did respond, including many campers, suggested these park problems: Not enough campsites, too few picnic tables and fireplaces; inadequate toilets; poor or insufficient roads and parking areas; poor maintenance; and too crowded conditions.

University of Connecticut and Georgetown University Scientific Programs

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. DADDARIO. Mr. Speaker, in connection with this week's discussion of appropriations for the National Aeronautics and Space Administration, I should like to call attention to a healthy development in the field of education. This is the move on the part of our academic world to concentrate the spotlight of research on some of the difficult problems that are unfolding in the space sciences.

Two noted universities, one a State university and the other privately endowed, have recently announced studies which underline the reinforced interest in science. One is intended to bring latest information on technology together; the other is to examine the more theroetical aspects of space law.

The University of Connecticut has concluded plans for its second annual institute on missile technology. It is sponsored by the Chief of Research and Development, U.S. Army. The course will run from July 26 through August 7, and will cover all important principles connected with the application of missile technology. It is designed for those seeking fundamental, practical working knowledge in areas related to the development, production, and operation of missiles and components. The course is comprehensive, to provide full coverage of new developments, and is coordinated to facilitate technical understanding and improvement. A staff of military and civilian experts has been gathered from universities and industries engaged in missile research and development. The fields of study will include such current problems as guidance and ballistics, propulsion theory and design, reliability and astral problems.

Here in Washington, Georgetown University has announced a program at its law school to study both nuclear energy law and space law. An institute has been established to conduct intensive, continuing research into national and international legal problems arising out of the peaceful and military uses of nuclear energy and the exploration of outer space. Acknowledging the interrelation of political, economic, and technological factors, the university is calling on faculties of various universities and departments to combine in an interdisciplinary approach to legal problems of the nuclear-space age. The institute will be under the direction of the law faculty and will have the cooperation of an advisory committee of industrialists, scientists, and lawyers actively engaged in such matters.

Thus America's universities, and particularly these forward-looking institutions I have cited, are marshaling their resources to help study the tremendous potential of the space age. The country needs and welcomes the thoughtful, academic consideration and the broadening of the instruction base that these institutes offer.

Padre Island: A National Seashore Plan

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 20, 1959

Mr. YARBOROUGH. Mr. President, for a long time, the 117 miles of beach on Padre Island in Texas has been recognized as one of the last undeveloped seashores in this country.

James Rowe, of the Corpus Christi Caller-Times, has summarized the present situation of the movement to establish a national park on Padre Island in an article for his newspaper.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD Mr. Rowe's article, published in the Corpus Christi Caller-Times for Sunday, May 17, 1959, under the heading, "Padre Island: A National Seashore Plan—The U.S. Park Service Wants To Preserve This Beautiful Expanse of Wasteland for Future Generations, but Bringing It About Will Take Effort From Many People, Here and Elsewhere."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PADRE ISLAND: A NATIONAL SEASHORE PLAN—THE U.S. PARK SERVICE WANTS TO PRESERVE THIS BEAUTIFUL EXPANSE OF WASTELAND FOR FUTURE GENERATIONS, BUT BRINGING IT ABOUT WILL TAKE EFFORT FROM MANY PEOPLE, HERE AND ELSEWHERE

(By James Rowe)

Padre Island has been recognized for more than 20 years as one of the last undeveloped seashores in the United States. Potentially it is one of this Nation's outstanding seashore recreational areas, an unspoiled stretch of beach 117 miles long.

Efforts to establish a national park on Padre Island have been made in the past, but in recent months the first evidence has appeared of a genuine marshaling of public opinion to preserve at least part of the island as a public beach and recreational area. The regular session of the 56th legislature ended without approval of a resolution that would have given consent to the Federal Government to establish a park on the island. Pending in the Senate of the United States is a resolution asking designation of Padre Island as a national park, if State consent is given.

Recently the Advisory Board on National Parks recommended to the National Park Service that Padre Island be designated as a shoreline area. The Park Service is studying this recommendation. As a preliminary step in this direction the U.S. Department of the Interior last week asked Congress to appropriate $15 million to buy up three shoreline areas. One of the areas under consideration is Padre Island, almost all of it privately owned.

SIMILAR TO A NATIONAL PARK

What is a shoreline area, sometimes known as a national seashore? The National Park Service defines it as similar to a national park, but more descriptive of its special qualities and appropriate uses of a seashore. "It is an area capable of sustaining in part, at least, some special public uses, such as the hunting of waterfowl, which would be inappropriate in a national park."

Why is Padre Island being considered as a seashore area? An on-the-spot survey of the island was made 3 months ago by a representative of the National Park Service. The unique appeal of the island is expressed in the following portion of his report on the survey:

"The island is a typical example of a barrier beach, unusual because of its great size which enhances its primitive character. The wide, clean beach, composed of fine sand and broken shell, extends in an unbroken sweep from horizon to horizon. The slope of the shore is uniformly gentle, providing ideal conditions for swimming, surf fishing and other beach recreation.

"A distinctive feature of Padre Island is the windswept, irregular dunes. Lacking extensive vegetation, much of the sand is shaped and reshaped by the wind. When stable, the dunes bordering the beach are often imposing up to 40 feet high. Elsewhere, unstable dunes are smaller, often in the shape of small rippling mounds, or else nonexistent, resulting in flats stretching from sea to sound (Laguna Madre). The general atmosphere of the island is one of undisturbed isolation and seemingly endless expanses of flat, sparsely vegetated beachland.

"Padre Island presents one of the last remaining opportunities for this Nation to preserve such a length of beach in its natural state. In future years America's growing population will have few chances to experience and gain inspiration from a vast sweep of ocean shore unaltered by man. * * * To preserve America's longest island beach will provide not only an outstanding area for biological and geological study, but also a place where future generations of Americans can experience a wild spaciousness that is their heritage."

THE AREA HASN'T BEEN DETERMINED

How much area would the Padre Island National Seashore encompass? No agreement on this subject has been reached. The maximum area recommended is 88 miles long, beginning roughly 15 miles from the north and south tips of the island. The area also would include that portion of Laguna Madre westward to the east line of the Intracoastal Canal.

What would be done to develop the island? The Park Service recommends that the central section of the seashore area be roadless "to preserve the island's primitive character." In other sections a road system behind the barrier dunes would provide access to the beach. Other developments would include camping and picnic areas and information centers at the north and south entrances.

How can the property needed be acquired? There are no hard and fast rules. It can be accomplished by State, Federal, or private purchase or by any combination of these. Even provision can be made for development of the oil and gas potential of the area. This was followed in the establishment of the Everglades National Park in Florida, with up to 10 years given for exploratory drilling. In this connection, Leo J. Diederich, acting chief for the division of recreation resource planning for the Park Service wrote, "Some reasonable alternative (to obtaining fee title outright) looking toward the maximum protection of natural values during the oil exploration and extraction period no doubt will be seriously considered in evaluating further the Padre Island proposal and any enabling legislation which would be required to authorize its establishment as a unit of the national park system."

At this point the National Park Service has not committed itself on Padre Island, other than to note its obvious claims to development as a public recreation area.

THE STEPS TO BE TAKEN

What must be done to ensure development of the Padre Island National Seashore?

First of all, the State legislature must give the Federal Government permission to establish a seashore area on Padre Island. Without this permission the Federal Government will make no further plans for Padre Island. The permission can be given by a simple resolution, such as was proposed during the regular session. With sufficient backing of legislators and the people it might even be possible to persuade Gov. Price Daniel to submit it for consideration during the special session beginning tomorrow, after the vital questions of taxation and spending have been dealt with..

The next important step would be to gain congressional approval of a bill designating Padre Island as a national seashore. Thereafter the National Park Service would make further surveys of the island, define the exact area needed and make recommendations to Congress..

The final step would be land acquisition through gift or purchase. At that stage, agreements on development of oil and gas prospects would be made and time limits set on that exploration.

It is apparent that there can be no overnight establishment of Padre Island as a park or seashore area. Great patience and resolution will be required. But public opinion in Texas seems to be uniting gradually in support of the plan. Many resolutions from garden clubs, Audubon clubs and civic organizations supporting the Padre Island proposal have gone to State legislators and to Congressmen. The theme of this rising tide of public support comes from a recent survey by the National Park Service of Atlantic and gulf coasts: "The seashore is a priceless resource for which there is no substitute. Once subdivided and developed, it is lost forever."

In its overall survey of the Atlantic and gulf coasts, the Park Service had this to say of the Padre Island proposal: "It should be given the highest priority. Padre Island presents an opportunity for beach recreation of a type unmatched by any other area along the Atlantic or gulf coasts. Its great size, remote character, endless sweep of broad beach, grass-topped dunes, and windswept sand formations have great appeal. Its natural resources, historical and biological values should be preserved."

Senator RALPH YARBOROUGH, author of a bill to make Padre Island a national park, said to the Senate: "Mr. President, this great windswept waste, with sea, sand, and scrub timber was the last refuge of the Karankawa Indians, who were cannibals, and who therefore were detested by the Spanish settlers of Mexico and the Anglo-American colonists from the north, as well as the other tribes of Indians. * * * This summer pirates' hangout—this place of treasure—is now one of the finest fishing spots in the world, and will soon fall into private development and be lost forever as a great winter tourist resort for the American people unless prompt action is taken."

It is a curious fact that much of the enthusiasm for creating a national park or seashore area on Padre Island has come from other areas of Texas rather than the coastal bend. We who live here have long taken Padre Island and its companion, Mustang Island, for granted. Residents of the Texas coast are apparently not nearly as fearful as their inland brethren that this vast span of relatively unspoiled beach may yield inevitably to the real estate developer as was the history in Florida. The enthusiasm of coastal residents must be kindled, too, if the dream of a national park on Padre Island is to be realized.

SUBSTANTIAL TOURIST BENEFITS

Beyond the preservation of a wilderness area on the Texas coast, residents of the coastal bend could expect substantial tourist benefits from a national park on Padre Island. The flow of visitors to this area would be increased substantially, if experience in other sections of the country hold true. A tourist study of the Great Smoky Mountains National Park, for instance, indicated that visitors spent approximately $28 million in and near that park in 1956.

Already the section of coast between Tivoli and Brownsville has almost unmatched attractions for nature lovers. There is the Aransas National Wildlife Refuge near Austwell, the last wintering ground for the whooping crane. There is the unusual Laguna Atascosa Wildlife Refuge in Cameron County which harbors one of the greatest concentrations of bird life in the United States during the season of migration. There is the Rob and Bessie Welder Wildlife Refuge near Sinton with its bountiful bird and animal life. A national seashore area on Padre Island would complete a unique concentration of tourist attractions within a 200-mile section of the Texas coast with Corpus Christi as its approximate center.

The danger is great, however, that the flurry of interest over Padre Island will be taken by too many people as a definite promise that the island will become a national recreational area. Only constant, unremitting effort by individuals and groups can bring that proposal to a successful conclusion.

Recently the National Park Service completed its first comprehensive survey of the Atlantic and Gulf beaches in 20 years. Recalling the complacency and inaction which followed the earlier survey the Park Service reported: "For the most part it represented the ghosts of departed opportunities."

Twenty years from now Padre Island will represent the ghost of a departed opportunity if the people and their legislatures do not act now to preserve it as an unspoiled wilderness area for the enjoyment of the living and of future generations.

Tribute by Pendleton East Oregonian to Harry S. Truman on Occasion of His 75th Birthday Anniversary

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, May 20, 1959

Mr. NEUBERGER. Mr. President, a public man can only be considered in perspective. Nobody has said this more frequently than Harry S. Truman himself. Yet, the 75th birthday of this eminent American has afforded many opportunities to assess his career. I have read few editorials more sympathetic or perspicacious in this respect than that which was published in the Pendleton (Oreg.) East Oregonian, of May 8, 1959, entitled "Truman's Diamond Jubilee." In particular, I should like to invite attention to that phase of the editorial which emphasizes the courage and decisiveness of the decision which President Truman took in relation to Korea. That decision may well have been a turning point in safeguarding the free world from aggression.

Mr. J. W. Forrester, the editor of the Pendleton East Oregonian, is a liberal and enlightened citizen who owes partisan affiliation to no particular political party. That is why his editorial tribute to ex-President Harry S. Truman carries special significance. I ask unanimous consent that the editorial entitled, "Truman's Diamond Jubilee," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRUMAN'S DIAMOND JUBILEE

It is thoroughly in character that the diamond jubilee dinner for Harry S. Truman in New York should be a fund-raising affair for the Democratic Party, with a closed-circuit television hookup carrying the program to similar gatherings in key cities throughout the Nation. Whatever stature history bestows upon the former President, among his contemporaries he quite earnestly wants to be known as a politician.

"I don't want to be a statesman," Truman has said on several occasions—most recently on April 20, when his Lamar, Mo., birthplace was being dedicated as a public shrine—"because that's a dead politician, and I am a politician and expect to be one for the rest of my life."

Perhaps no former President has been so closely identified with his party as Harry Truman has been with the Democratic Party. Here is evidenced a certain irony, for the Truman administration was more bipartisan than many, as witnessed, for example, by the high diplomatic assignments given to John Foster Dulles.

Politically, one of Truman's most characteristic traits has been his hell-giving. As he headed west on a special train for a whistlestop campaign in 1948, the President vowed, "I'm going to give 'em hell."

The phrase stuck with him. Even when campaigning for Adlai E. Stevenson in 1952 and 1956 he used the same technique, flailing power and real estate lobbies, Wall Street, and "gluttons of privilege"—favorite targets all. Like a good party soldier, he traveled extensively in both Stevenson campaigns, despite differences with the candidate in 1952 and outright opposition to him prior to the 1956 convention. In 1952 he made 211 speeches, covering 18,000 miles in at least 27 States.

"Give 'em hell, Harricum," was the way his fellow Democrats greeted Truman as he got up to speak before the 1956 convention. The Harricum came from the Latin usage of Oxford University in citing the Missourian for an honorary degree. But despite the affection felt for him, and his very real political power in the party, he was unable to put across his personal candidate, Gov. Averell Harriman of New York.

It's Harry Truman, because what the young man wanted is to be Harry, and the plainness again seems highly characteristic. The former President disclosed, April 30, that his parents originally had name him Harrison S. Truman. "The "S" was to stand for either Shipp or Solomon; the parents couldn't make up their minds and decided to let Harrison make his own choice when he grew older. When the time came, the youth chucked the Harrison for the less awesome Harry.

For all his pepper and plainness, Harry Truman can be eloquent when eloquence is called for. Not long after taking the oath

as President on April 12, 1945, he said: "Last night the whole weight of the moon and stars and all the planets fell on me. Please pray for me."

In a historic message to Congress of July 19, 1950, asking that the country be put in a semiwar footing for the hostilities in Korea, the President declared: "The free world has made it clear, through the United Nations, that lawless aggression will be met with force. That is the significance of Korea, and it is a significance whose importance cannot be overestimated."

It would be presumptuous to declare what history will say in its summation of Harry Truman. We can, however, venture an opinion. It is that Mr. Truman will be rated a far stronger President than he is today.

Address by Representative Collier at Bataan Memorial Dedication

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 20, 1959

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the dedication speech by Representative HAROLD R. COLLIER on May 17, 1959, at the dedication of the Bataan Memorial.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans, there is so little one can say or so little that need be said that could possible reach the deep feelings which prevail on this occasion.

Certainly it would take volumes of words to even approach the emotions, human suffering, deeds of heroism, and love of country which are fully embraced in the history of Company B of the 192d Tank Battalion.

It is, in a sense, a small measure of fulfillment that in solemn gratitude and pride of community and country we dedicate this plaque in honor of a heroic group of soldiers who wrote an indelible chapter in the epic of the Pacific theater in World War II.

We have all learned much of the Maywood Tank Company which was the last of the American forces to cross the bridge from Bataan on the fiery night of January 7, 1942, before it was blown to bits by enemy shells.

The 192d Tank Battalion entered combat early in December of 1941 to engage in the struggle for Clark Field and it continued its fighting for more than a month, moving on to Luzon before its withdrawal into the Bataan Peninsula.

Against great odds it contributed in large measure to the prolonged defense of the peninsula, under the command of Col. Theodore F. Wickford, of Maywood.

It was a member of this company that brought down the first enemy plane to the credit of the armored forces in World War II.

It was here on this site exactly 30 years ago that the 33d Division Tank Company was activated and it was this division that was redesignated as the famous fighting Company B of the 192d Tank Battalion in 1940 when most of the nations of the world were already engaged in conflict.

In November of that year, Company B was ordered to active duty at Fort Knox, Ky., less than 2 months before the sneak attack upon Pearl Harbor which drew the United States into conflict.

The suffering of those who survived the horrible death march of Bataan has been described in the bitter accounts of the early struggle in the Philippines as was the further suffering which came in the Japanese prison camps.

The vicious fighting, the death march, and the maltreatment in the prison camps took their toll and left but few survivors of the original company.

I can't help but recall on this solemn and proposeful occasion, words which Abraham Lincoln uttered at Philadelphia 95 years ago, because no one has ever been able to say in so few words the very thoughts in which we find the true meaning of this ceremony.

It was there he said, "We accepted this war and did not begin it.

"We accepted it for an object and when that object is accomplished, the war will end, and I hope to God that it will never end until that object is accomplished."

So it was with these war heroes of the Maywood Company, when they answered their call to make whatever sacrifice was necessary to remove from mankind the tyrants of that time.

And more significant, in the immortal address at Gettysburg, did Lincoln say those words which could be said in no better phrase or sentiments to fit this very occasion today:

"But in a larger sense," he solemnly declared, "we cannot dedicate, we cannot consecrate, we cannot hallow this ground.

"The brave men, living and dead, who struggled here, have consecrated it far above our poor power to add or detract.

"It is for us, the living, rather, to be dedicated here to the unfinished work they have so nobly carried on."

"It is rather for us to be here dedicated to the great task remaining before us, that from these honored dead we take increased devotion to the cause for which they gave their last full measure of devotion, that we here highly resolve that the dead shall not have died in vain."

And then, we ask, who shall not have died in vain.

In our lifetime it means the hero dead of the great conflicts since the turn of the century.

They died to keep freedom alive.

They gave their all that we might continue to enjoy life, liberty and the pursuit of happiness.

We can make their deaths in vain by ignobly surrending to those things which do not represent the way of life that has been our God-given heritage.

The hero dead of the last great world conflict and those who were spared from the supreme sacrifice were American patriots, strong of body, strong of mind and spirit, and strong in their belief in God.

They did not hesitate to fight for the right as God gave them to see the right.

For if we but stop to appreciate the true values of our heritage we must, by the same token, concede that there can be no guarantee of life or liberty or the pursuit of happiness unless we know what it means to defend it with the same full measure as the men who fought on Bataan.

For those who died that we might be here today with the same traditions, ideals, and freedoms as the day they left these United States for the Pacific battlefields, the job is done.

And well done, it was.

But our work and responsibility to do in our own way what must be done in preserving all of these things remains as a challenge.

For even as we are gathered here today, there are millions of human beings behind the Iron Curtain of communism enslaved as the tyrants of our time would spread its godlessness and suppression of democracy around the world.

May the eternal light which will burn here on this spot after the light of each day has passed, for time immemorial be a reminder to each of us that the light of freedom may flicker and die if we, as Americans, falter in our responsibility to God and country in the years before us.

For those few who gave so much for so many, we must never forget.

Our Judicial System—Democracy's Brightest Light

EXTENSION OF REMARKS
OF
HON. JOHN O. PASTORE
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, May 20, 1959

Mr. PASTORE. Mr. President, I ask unanimous consent to have printed in Appendix of the RECORD the text of a timely address, "Our Judicial System—Democracy's Brightest Light," delivered by Mr. Albert Brick, a Washington attorney, at the annual Law Review banquet on May 9, 1959, at his alma mater, the University of Florida.

I say "timely" advisedly, as this talk is a defense of the U.S. Supreme Court, and a most informative defense of our country's judicial system.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR JUDICIAL SYSTEM—DEMOCRACY'S BRIGHTEST LIGHT

I am pleased and honored to be your guest on the occasion of the annual Law Review banquet, especially because the Gertrude Brick Memorial Award will be made to the freshman who has distinguished himself in the Law Review course during this past semester. If my mother were alive she too would rejoice in this happy occasion because it was through her encouragement that I acquired the determination and desire to become a member of the legal profession.

Standing before you as I am—and you are a captive audience—reminds me of the saying, "Beware of the speaker whose mind is measured by inches, whose words are measured by yards, for he will be dealt with by the foot." Unfortunately, there are today too many of our fine citizens who would like to deal with our judicial system with their feet, so to speak, to kick out literally the system of judicial law and order as we understand it in our country. It is to these people that I would like to address myself so that they can fully understand the calamity and chaos that would befall our fine and democratic form of government if they could but succeed in their efforts.

An American citizen traveling in a foreign land is sometimes asked by a native to define our form of government and, as is natural, he finds himself explaining it in wide and generous platitudes.

This is understandable because this great land of ours for the last hundred years or more has been blessed with prosperity, progress, freedom and happiness. Yet if he is meticulous he will understand that there are several fundamentals inherent in our form of government which set it apart from all others.

We have a Constitution which, while not perfect, has its built-in checks and balances that provide us with the necessary ground rules to prevent a dictator from taking over and stifling our guaranteed and inalienable rights and freedoms. These checks and balances come about by virtue of the separation of powers delegated to the three branches of government—the executive—the legislative—and the judicial. If you attempt to stifle or weaken any one branch you, of necessity, weaken all.

But, in my opinion, the most important and indeed the brightest light of our democracy is our judicial system which, in the last analysis, has the power to review the actions of the other two branches of government. It is therefore incumbent upon our judiciary to be fearless, independent and free of pressures. The fact that you or I may disagree with a decision or the reasoning set forth in an opinion of the Supreme Court of the United States does not mean that the system is faulty.

The truth of the matter is that time and again since the birth of our Nation our courts have stood the test and have proven their worth. From the tumultuous period under Chief Justice Marshall, the Supreme Court has survived though its critics have been many.

It survived the Dred Scott decision and the Civil War and during the early years of the Franklin D. Roosevelt administration the Court remained intact and without change even though that most popular President sought to change the Court and its system—and even he failed in the attempt.

Now in recent years the Supreme Court has again come into focus becaus of an ever increasing amount of criticism—fanned to heat by its decision in the case of *Brown* v. *Board of Education of Topeka* (349 U.S. 294), which declared segregation in public education to be unconstitutional. Even the American Bar Association has criticized the action of the Court in an almost unprecedented move which caused the Chief Justice to resign as a member from that body.

I saw the Chief Justice at several of the bar association functions in London, England, in August of 1957 and on one occasion while conversing with him I told him that I disagreed with most of his decisions although I admired his sincerity and his courage.

Recently some of our Members of the Senate and House of Representatives are attempting to pass legislation which would curb the jurisdictional powers of the Court. It is my firm conviction that this attempt to change the judicial system as we have known it since the inception of our Nation shall fail.

However, all this activity and criticism can and will take its toll on the integrity and independence of our judiciary unless the right thinking members of the bar and the body politic come to the defense of the Court and to the defense of a system which has helped our Nation to prosper and reach a position of prestige in the family of nations.

The continuance of the present judicial system with a courageous, fearless, independent judiciary will depend on our good judgment. The constitutional guarantee of trial by jury is, in my opinion, the very bulwark of our democratic process even though many of the enlightened nations, including England, which was the mother of the jury system, have drastically curtailed trial by jury. We all realize that a jury trial is expensive and costly and that it has some drawbacks. But, to me, it is an essential part of the checks and balances and provides an opportunity for a litigant to be judged by his peers.

In the final analysis there must be a repository of final decision and our Constitution provides that this power reside in the Supreme Court of the United States.

Nevertheless, our fine Constitution is not completely perfect for it had to cover a great deal of ground in an understandable and succint document. Among the amendments to the Constitution is the 10th amendment, which states as follows:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Now his amendment has probably stirred up more debate and discussion than any single portion of our Constitution. On the present issue there are sincere persons who believe that the Supreme Court has encroached upon this amendment by taking away from the States the right to determine whether its public schools are to remain segregated or not. The opponents shout that these persons are only attempting to preserve the status quo. The din is loud and the attempt to curb the power of the Supreme Court Justices is proceeding with speed.

Again I state that whether you agree with the result of the Supreme Court decision in *Brown* v. *Board of Education of Topeka* or not, you must admire the courage and fearless manner in which the Justices, in effect, overruled the case of *Plessy* v. *Ferguson* (163 U.S. 537), which was decided in 1896, which upheld the doctrine of separate but equal facilities. There was not one dissent—the decision of the Court was unanimous. This was a remarkable performance, to say the least, whether you agreed with the Court or not, particularly since this present Court has as many, if not more, dissenting opinions written than have been written by the Supreme Court at any other time in its history.

Recently this Court, in the case of *Bartkus* v. *People of State of Illinois* (79 S. Ct. 676) in dealing with the question of double jeopardy, held that the Federal Government could prosecute for a criminal act even though the defendant had been acquitted by a State court jury for the same crime. This decision is one with which I completely disagree, and I give you a further example of our system of checks and balances when the Attorney General of the United States, a member of the executive branch, promptly announced that he would advise going slowly and not to prosecute unless there were compelling reasons. Hard decisions always make hard law with which we, as citizens, have the right to disagree but not to disobey.

Yet while we disagree we should not destroy or allow the destruction of our judicial system, nor allow conditions to become so intolerable for our Justices so as to destroy courage and independence on their part. It is, however, proper and right to insist that only men of great ability, learning and integrity to appointed to our judiciary so as to insure the proper administration of justice.

Frankly, I have searched through the Supreme Court decisions to determine whether the questions involved in the case of *Plessy* v. *Ferguson* ever came before the Court while those great liberals, whom I always admired and whom I saw in action in my early days in law school in Washing, namely, Justices Holmes, Brandeis, and Cardozo, sat, but posterity was not given the benefit of their deliberations since the questions were never presented to them while they were sitting as members of the Supreme Court.

Now the eternal argument concerning the Supreme Court has mostly centered about its right to overturn stare decisis. The case of *Plessy* v. *Ferguson* has been the law of the land for 59 years and the legislative branch of Government had recognized and even upheld this law before and after this decision by voting money year after year for the segregated school system of the District of Columbia, for which territory it has always legislated.

The question I should like to pose to you is, "Shall the Supreme Court be bound by its prior decisions?" This is not an easy problem but one which requires some examination since certainty of law is a very desirable factor. However, many changes have taken place since our Nation won its independence and our great document, the Constitution, was written. For instance, it must be remembered that in 1800 our population was 6.1 percent urban and 93.9 percent rural, while in 1950 the Bureau of Census revealed that 64 percent of our population was urban and 36 percent rural. The increase in population, the modern inventions, and the vast movement of our citizens to cities were facts that the framers of the Constitution could have hardly visualized, but there were among them many farsighted individuals who foresaw greatness and tremendous progress for our great new Nation. One of the finest minds aiding the framers of the Constitution was a beloved southerner from Virginia who was later a President of the United States. This man, Thomas Jefferson, was also the founder of the Democratic Party, and author of our Declaration of Independence.

It is interesting to understand what his mental processes were when he was aiding in the framing of our Constitution, for he is credited with having said:

"I am not an advocate for frequent changes in laws and constitutions. But laws and institutions must go hand in hand with the progress of the human mind. As that becomes more developed, more enlightened, as new discoveries are made, new truths discovered, and manners and opinions change with the change of circumstances, institutions must advance also to keep pace with the times. We might as well require a man to wear still the coat which fitted him when a boy as civilized society to remain ever under the regimen of their barbarous ancestors."

Does this sound like the words of a man who would insist that the Justices of the Supreme Court be chained to stare decisis? I think not, and I feel strongly that if we are to win the hearts and the minds of men in this cold war with the cunning, ungodly Communists, we must display moral fiber to the world by preserving and defending a courageous, fearless, independent judiciary even though we may from time to time disagree with its decisions. The attempt to curb the powers of the Court should be strenuously opposed and blocked as it is an attempt to brainwash, intimidate, and destroy our present judicial system, which I predict will shine as a bright star when the present storm subsides.

In conclusion, I would again quote Thomas Jefferson, who said: "I have sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man."

Threatened Splitup of Du Pont Co. Interests

EXTENSION OF REMARKS
OF
HON. J. ALLEN FREAR, JR.
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 20, 1959

Mr. FREAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Why a Splitup?" published in the Delaware Coast Press, of Rehoboth,

Del., of recent date, dealing with a threat to the Du Pont interests.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY A SPLITUP?

Almost synonymous with the growth of our country has been the stature of the Du Pont Co. Throughout the years it has grown and prospered with the rest of the country, and it, together with the members of the Du Pont family, have been honored citizens of the country and the State as well.

Their contribution to our country is well known, and their farsighted policies have added much to our way of modern living, besides having been the motivating force in reorganizing our schools after the First World War when they contributed without stint.

We look with pleasure on the latest effort of the court in appointing someone sympathetic to the voice of sound reasoning. It would seem that trying to disrupt such an effective instrument of interpreting the American way of life isn't really as popular as it might have been thought to be. We feel the interests of the E. I. du Pont Co. stockholders are being sold short when the Supreme Court orders a splitup of the company.

Coming at a time when the free world is fighting for its very existence, this hardly seems to us to be the time to try to destroy its finest fruit—success in its field.

By thus disrupting the Du Pont team that made America respected as a disciple of free enterprise we would be playing into the hands of those who destroy our way of life. We hope that when viewed in retrospect, reason based on fairness will prevail.

Down on the Eastern Shore, where a man can think for himself and be respected for his thoughts regardless of what his politics are, we have yet to find anyone who would do this to such a fine old American institution as the Du Pont combine.

It is hard to justify a splitup move which would weaken our economic machine. Surely they have not been accused of browbeating labor. The truth be that it would be hard to recall to mind any such difficulty to our knowledge.

If being big is such a sin, then the same line of thinking would call for us to become federated States, rather than a union. Heaven forbid.

A Woman President

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Wednesday, May 20, 1959

Mr. AIKEN. Mr. President, the Honorable James A. Farley has been considered one of the most astute politicians in this country. He seems to be losing his grip and inviting a lot of trouble for himself. He is reported to have said we will never have a woman for President.

The inevitable happened. The women accepted his challenge and replied to Mr. Farley.

One of the most effective replies was made by the wife of the junior Senator from Oregon, Maurine Neuberger. I ask unanimous consent that the letter of Mrs. Neuberger, which contained a flattering reference to our colleague Senator MARGARET SMITH and which was written to the editor of This Week magazine of May 17, 1959, be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SEE HERE, MR. FARLEY

DEAR EDITOR: So James A. Farley thinks the White House is beyond the reach of 87,858,000 American females.

I profoundly disagree, despite my respect for Mr. Farley's political skill and wisdom. I fear it is characteristic of the average male to be so smug and self-confident that he really believes only a member of his own sex can be trusted to run our country. Have men always performed with such consistent success that nobody of the opposite sex should ever be given a chance?

Jim Farley listed three major reasons why he contends there never will be a "Madam President" within lifetimes of any of us:

1. Know-how: He claimed no woman could amass the varied experience necessary for the presidency.

What about MARGARET CHASE SMITH, of Maine? She has been a telephone operator, circulation manager of a newspaper, executive of a woolen mill, lieutenant colonel in the Woman's Air Force Reserve, secretary to a Congressman, Member of the House, and is now U.S. Senator. Put Mrs. SMITH's experience up against that of any male mentioned for the White House in 1960, and her fitness will compare most favorably.

And what of American women like Eleanor Roosevelt, Mrs. Oswald Lord and Eugenie Anderson? How many male politicians could match their experience overseas in diplomacy or with the U.N.?

2. Nerves: Women are too emotional to cope with the vast burdens of the White House, Mr. Farley contends.

Emotional instability and neurotic tendencies are said by psychologists to lurk at the root of most crime. Although women comprise over half of our population, only 11 percent of the people arrested for major crimes in 1957 were women, according to statistics of the FBI.

Physical well-being and health are other contributing factors to emotional steadiness. American males live an average of 67 years but females live for 73 years. "Weaker sex," as applied to women, is another legend with its roots in masculine self-esteem.

3. Prestige: Mr. Farley emphasized that a woman President could not command respect in world negotiations.

Now, isn't such a remark exactly like a man? Surely members of her own sex, all over the globe, would rejoice that a woman finally had reached the diplomatic summit. Negotiations with a woman in a dominant role could acquire a dignity and universal acceptance never before achieved.

Indeed, even Mr. Khrushchev might think twice before betraying his promises and pledges to a woman.

MAURINE NEUBERGER.

Trees for Tomorrow

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 20, 1959

Mr. WILEY. Mr. President, today I should like to call attention to the program "Trees for Today"—a reforestation project that will contribute much in Wisconsin to providing forest resources for future generations, as well as a source of wood products to stimulate the economy.

The "Trees for Tomorrow" program is the story of 8,100,000 trees, 33,000 people, and 216,000 acres of privately owned forest lands. The project is sponsored by the Wisconsin paper and power industries. The objectives include a program of tree planting, forest management, sound conservation practices, and educating more people for wise, farsighted utilization of our forest resources.

Today, Wisconsin ranks first among the 42 paper-producing States in sales dollars, tonnage produced, investment, and taxes paid; and second in number of employees. About 47 percent—of 16 million acres—of the total land area of Wisconsin is classed as commercial forest land. Two out of every three acres of such forest land are privately owned. This year the people of Wisconsin are expected to plant 40 million additional trees.

Recently, I received the 15th annual report of "Trees for Tomorrow, Inc." The report contained a thought-provoking article on the value of forest and forest products to America, entitled "A Promise for the Future," by President Folke Becker.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A PROMISE FOR THE FUTURE

The economic stability, the social structure, and the security of this Nation are founded on America's productive capacity.

Translated into more personal language this statement simply means permanent jobs at maximum wages, leisure, travel, and an opportunity to enjoy America's outdoors. It means adequate schools with well paid teachers and widespread opportunities for our children to attend college. It also means our ability to produce nuclear weapons, we trust, not for war but to maintain the peace.

Until recent years we held an unchallenged position throughout the world. Today, although not of our own choosing, we are locked in a combined ideological and economic war with Russia, her satellites, and perhaps, in the not too distant future, with China. Economic wars are won with resources.

The industrial fiber of America and our productive capacity are based not on a single industry but on a network of key industries. Some of these industries such as steel are dependent upon nonrenewable natural resources.

The paper and power industries use resources that can be renewed—cellulose from wood, and water from lakes and streams. However, we are so accustomed to the daily use of water and wood that they are taken almost for granted. Paper's importance is overwhelming. We use more than 35 million tons of paper each year for facilitating our free economy, for freedom of the press, for thousands of uses, day by day, in the highest standard of living ever known. Per capita consumption has reached 412 pounds, compared with four pounds in China where paper was invented. No other commodity, except food, would have such a profound effect if it disappeared.

These are a few of the obvious reasons why the paper and power industries in Wisconsin, in addition to their own forestry programs, are building for the future through the long range program of Trees for Tomorrow.

When Trees for Tomorrow was founded in 1944, we visualized a time when there would be a vast new forest for Wisconsin. That forest is beginning to take shape.

This 15th anniversary booklet documents a wide range of resource building activities through which thousands of people, who cherish America, are helping to assure the future prosperity and security of our country.

We trust our friends throughout Wisconsin with whom we have worked so closely during the past 15 years will not consider these pages a report of a job completed but a promise for the future.

New Book by Gladys Workman of Scottsburg, Oreg., Is Highlight of State's Centennial Year

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 20, 1959

Mr. NEUBERGER. Mr. President, my native State of Oregon this year is commemorating 100 years of statehood. In connection with this eventful anniversary, many epic events are taking place.

I think hundreds of residents of the historic Umpqua River Valley must have participated at Scottsburg, Oreg., recently in heralding the publication of "Only When I Laugh," a new book rich in Oregon lore and facts by Gladys Workman of that community. Officials of the Oregon State Centennial Commission scheduled Scottsburg's formal participation in the centennial to coincide with the publication of Mrs. Workman's book by the Prentice-Hall Co.

Mrs. Workman is a remarkable person. She and her husband, Norman, originally migrated to Oregon's lowland valleys for his health, leaving behind a thriving business in Los Angeles. In the Umpqua region Mr. Workman helped to establish daffodils and daffodil bulbs as an important source of earning power, for the lush local climate is appropriate to the growing of these lovely flowers which once were immortalized in an undying poem by William Wordsworth.

Gladys herself developed new and improved techniques in ceramics, and she began to tour Oregon and the Pacific Northwest, helping handicapped people to live more fruitful and enjoyable lives after they had learned to excel in ceramics, too. All of this led to an appearance for Mrs. Workman on the famous Ralph Edwards' "This is Your Life" television program, and other recognition also followed.

Furthermore, Gladys Workman became a close and intimate friend with Mrs. Annie Applegate Kruse of neighboring Yoncalla, known as the home of the eagles, where the pioneering ancestors of Mrs. Kruse blazed the famous Applegate trail long ago. The book by Mrs. Workman duly chronicles the life at Yoncalla of Annie Kruse and others who trace their ancestry back to those gallant frontiersmen, who led the first trains of Conestoga wagons into southern Oregon.

We cannot know where we are going unless we are aware of where we have been. The new book by Gladys Workman of Scottsburg, Oreg., adds to the understanding of Oregon's people today and of their pioneer past.

Mr. President, a very colorful and vivid letter has come to me from Mr. Jack Lawson of Scottsburg, Oreg., in tribute to Gladys Workman and the historic community in which she lives. Mr. Lawson's letter helps to highlight Mrs. Workman's new book, which is so pertinent to the history and traditions of southern Oregon. I ask unanimous consent, Mr. President, that this letter from Jack Lawson be printed with my remarks in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SCOTTSBURG, OREG.,
May 17, 1959.

Hon. RICHARD NEUBERGER,
U.S. Senate, Washington, D.C.

DEAR SENATOR NEUBERGER: It was not by design, especially, but more a happy coincidence this centennial year of the State of Oregon that the book by Gladys Workman, "Only When I Laugh," published by Prentice-Hall, should be released to the American public.

More eloquently than anything else it blends the old days of the pioneers with modern life in a remote spot of Oregon, the village of Scottsburg on the beautiful, fir-lined Umpqua River. Even in Oregon today, relatively few people have heard of Scottsburg. It has no mayor, no fire department, no police department, no hospital—not even a local doctor. But it has Emma Hedden, granddaughter of Cyrus Hedden, Oregon pioneer who established a general merchandise store and the second post office in the Territory of Oregon 111 years ago, before Oregon officially became a State. Today the Hedden store of Scottsburg is the oldest general merchandise store in the State owned by one family.

In her literary gem, Mrs. Workman essentially views the people of Scottsburg and the Umpqua Valley through her own experiences, but succeeds in entwining something of the Umpqua's gallant history, when Scottsburg was the major seaport of Oregon between the Columbia River and San Francisco and the major center of pack trains to the mining regions. There were as many as 500 pack trains in Scottsburg at one time, with a population of more than 2,000 frontiers men and women. Scottsburg as a major seaport was destroyed by a disastrous flood in the early 1860's, which carried hundreds of lives, animals, and buildings out to sea.

Mrs. Workman, her husband and nephew, Norman, didn't arrive on the Umpqua until 1946, but they have been making modern history ever since. In the tradition of "The Egg and I" and other stories of modern pioneers, Mrs. Workman tells of her hilarious experiences, and some most dramatic, and even tragic. She introduces descendants of the early pioneers and the newcomers, as well, in most delightful anecdotes in an absorbing account and with genuine feeling of the vast, raw country of virgin timber that surrounds the Umpqua. The readers meets many Oregon characters he will want to know better in future books. He lives the tragedy of forest fire, flood, river accidents—and the heroic party line. He will meet Ruthie and Dorothy, who find humor and philosophy in the most serious situations.

He will learn how Norman Workman stumbled or bumbled into the daffodil growing business in a small and insecure way and nurtured it into a thriving and prosperous business affecting the economy of the entire Umpqua River Valley.

He will learn how Gladys Workman was forced into the ceramic business, to create an entire new industry in Oregon.

But most important, "Only When I Laugh" is an introduction to a new rich vein of Oregonia which will lead to a wider understanding and appreciation of Oregon and will add appreciatively to its future as an outstanding State of the Union.

As you might imagine, Gladys is most excited today, and most occupied with so many happenings and visitors she sometimes wishes she had never got talked into writing the darned book.

But the people of the Umpqua love it; the people of Oregon—and the entire United States, will, too.

Sincerely,

JACK LAWSON.

Alleged Waste in Expenditures on New Senate Office Building

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 20, 1959

Mr. PROXMIRE. Mr. President, I ask unanimous consent that an editorial from the Milwaukee Journal entitled "Waste, Waste, Waste," be printed in the Appendix of the RECORD.

In a remarkably happy analogy the Milwaukee Journal points out that spending $150,000 for office carpeting to cover the beautiful tiling the new Senate Office Building now enjoys is like buying a statute of Venus and dressing it in a Mother Hubbard.

There being no objection, the editorial was ordered printed in the Appendix of the RECORD, as follows:

WASTE, WASTE, WASTE

The ways of architecture are wonderous. And so are the ways of Senators. And when you mix Sentaors and architects up together in a single enterprise, the result can be more wondrous.

Take the matter of the new Senate Office Building. That's the place where the subway planned from the Capitol ended up unaccountably across the street. The place where the elevators find it difficult to rise. The place where for a time the public address systems in hearing rooms were haunted by pixies.

The new building has beautiful tile rubber floors—$100,000 worth of them. Now tile rubber floors are complete unto themselves. But the Seantors don't like them. So they have voted to spend $150,000 for office carpeting with which to cover them. This is like buying a statue of Venus and dressing it in a Mother Hubbard.

The carpeting poses a new problem. The building has 207 rooms with an average of three doors each. And they are thick, beau-

tifully made doors. But they were hung to go over tile floors snugly. With carpeting on top of the tile, the doors can't swing. So half an inch will have to be sawed off the bottom of each of more than 600 doors. And these are no ordinary doors, mind you, but walnut doors 2¼ inches thick.

Senators DOUGLAS, Democrat of Illinois, and PROXMIRE, Democrat of Wisconsin, suggest nonslip floor wax for the tile floors instead of expensive carpeting. But the Seante will hear none of it. It's going to be carpeting. If the House Un-American Activities Committee looked, it ought to find a great variety of reds in the Upper Chamber. At least there should be a lot of blushing faces.

Pay Rates for Employees at Airport Mail Facilities

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. DULSKI. Mr. Speaker, I am introducing a bill to provide that employees at airport mail facilities who handle high priority airmail should receive the rate of pay which is justified by the complexity of their duties.

Buffalo is proud of its beautiful airport. As a Member of Congress from Buffalo, and as a member of the House Committee on Post Office and Civil Service, I am interested in air traffic at the Buffalo Airport, and also in the quality of postal service that airport is capable of rendering.

The airport mail facility at Buffalo is staffed by a group of devoutly loyal employees of the postal transportation service. Were they to receive double their present rate of pay, their devotion to duty could hardly be increased.

Nevertheless, since having come to Congress, I have learned of the way in which the Postal Classification Act of 1955 was intended to provide equal pay for equal work. By the standards of complexity of duties, by the tension of making sure that mail moves without interruption between the closely connecting air flights, and by the standards of more elaborate as well as more frequently changing scheme requirements, postal employees assigned to airport mail facilities such as that at Buffalo should be granted level-5 pay.

Most distribution clerks in the postal service are assigned to level 4, with a starting salary of $4,035 annually. The starting salary my bill proposes for airport mail facility clerks is $4,275 annually, or just $140 additional per year. This is just 55 cents per working day, or 7 cents per hour.

The Post Office Department has already authorized as high a rate of pay for some people who handle airmail in installations other than airport mail facilities. Under a job description titled "Mail Dispatch•Expediter," which the Post Office Department has numbered 2–198, the Department has authorized one level-5 position when distribution is performed in accordance with authorized airmail schemes.

At airport mail facilities, not only is mail distributed in accordance with such schemes, but it also meets the more demanding test of close-coupled contact with airline personnel to insure that connections are accomplished and that the highest priority class of mail suffers no delay.

Because of considerations such as these, I hope that my bill may be given early attention, and that the existing injustices may be corrected.

House Majority Leader John W. McCormack Speaks in Praise of Israel

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. LANE. Mr. Speaker, Congressman MCCORMACK has a soft spot in his heart for the underdog, whether it be one of his constituents in need, a public issue that requires a strong pleader, or a small nation that is determined to survive and prosper.

The experience of his Irish ancestors and the hardships they endured for their faith and their independence, helped to mold the character and the leadership qualities of JOHN MCCORMACK. No one has to ask him to speak up for any minority group. The fact that they need, and are deserving of support, is all that matters. He will battle for them—all the way.

Since he came to Congress almost 40 years ago, he has been a loyal and admired friend of the Jewish people. Time and again in those days he stood on the floor of this House to advocate the establishment of a national homeland for the Jewish people in Palestine.

After a long and arduous struggle, that dream has become a reality.

Who therefore has a better right to be the main speaker at exercises honoring the 11th anniversary of the State of Israel?

His address on this occasion was sincere, straightforward, and eloquent.

Under leave to extend my remarks, I insert in the RECORD the following editorial comment, titled "Champion of Liberty and Freedom," from the May 17, 1959, issue of the Lynn Telegram-News, published in Lynn, Mass.:

CHAMPION OF LIBERTY AND FREEDOM

House Congressional Majority Leader JOHN W. MCCORMACK delivered an inspiring address in Washington on the 11th anniversary of the State of Israel.

Congressman MCCORMACK, who enjoys universal respect for his unswerving honesty and loyalty, said: "The West needs Israel. There is in the whole Middle East no other real ally of the United States than Israel."

Serving in Congress since 1920, a period of nearly 40 years, the distinguished Congressman from Massachusetts, is well qualified to make the aforementioned statement.

He has followed the status of the State of Israel in the past 11 years and has repeatedly noted in his able manner the progress of this small democratic country and its splendid fight for peace.

The House leader commented in his address "that it was a credit both to the intelligence of the Israeli people and Israel's advanced state of development that Russia has seen fit to exclude Israel from its economic aid programs aimed at winning influence in the Mideast."

Congressman MCCORMACK has always fought for all freedom-loving people. He has been waging a continuous battle for the small nations who are seeking a way to unshackle themselves from the chains of their oppressors.

Liberty-loving free people have always had a champion in Congressman MCCORMACK.

Congressman MCCORMACK is a man of high principle, distinguished for his courage, ability, prudence and intelligence.

The minority groups of the world will always gain heart and courage from Congressman MCCORMACK, a true champion of freedom and liberty.

Economic Growth; Employment and Inflation

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to call attention to an editorial from the New York Times of May 18 by Edward H. Collins, entitled "Congressional Study—Views on Report's Implications That May Come Back To Haunt Authors":

CONGRESSIONAL STUDY—VIEWS ON REPORT'S IMPLICATIONS THAT MAY COME BACK TO HAUNT AUTHORS

(By Edward H. Collins)

The report of the Joint Congressional Committee on the Economic Report was submitted on March 9 by Senator PAUL DOUGLAS, of Illinois, chairman of the committee, on behalf of the majority members of that body. It was part of a 70-page document that included, as well, a minority report and the supplementary or additional views of several members of the committee.

As early as the second paragraph the report began to move rapidly toward what many observers were already convinced would be its central conclusion. That, in the words of the report, was a policy that would place "principal emphasis on prompt and full recovery from the 1957–58 recession" and would give "first priority to the attainment of maximum employment and production."

Before setting down its own choice of objectives, however, the report laid the foundation for it with a preface that was plainly designed as a tranquilizer for those thousands of Americans who, contemplating the spectacular flight of investment into stock market equities, the continuing drain on the country's gold stocks, and the historic dimensions of the 1959 peacetime budget, made no secret of the fact that they were decidedly cool toward the idea of administering further artificial stimulants to the economy.

TWENTY-FOUR-HOUR POLICY

The theme of this almost ritualistic preface was in its way, reminiscent of an observation attributed to the then Secretary of the Treasury, Henry Morgenthau, in the early thirties, when the dollar was in process of gradual devaluation. American international financial policy, Mr. Morgenthau was quoted as saying, was "on a 24-hour basis."

In its second paragraph the report of the joint committee pointed out that changing economic circumstances call for shifts of emphasis to be given the various economic objectives recognized in the Employment Act of 1946, as well as the objective of anticipating the danger of inflation.

A few paragraphs later it came back to this point a second time, dealing with it a little more emphatically.

"Economic prospects," it declared, "are subject to abrupt changes. Those responsible for public economic policies must remain alert, therefore, to the possibility of a resurgence of inflationary pressures, and must be prepared to deal promptly with any such developments." Thus, even before setting forth its own choice of policy emphasis, the authors of the report had made it abundantly clear that any proposals it might make would be subject not only to modification, but complete reversal, in case of any substantial change in the state of the economy.

That this gratuitous emphasis on the reversibility of economic policy was a shrewd political move at the time the report was being prepared is hardly open ot question. For the key figure underlying the policy adopted in that report was the January figure on unemployment, which stood at 4,724,000, or 6 percent of the civilian labor force. The prefactory observations of the innocent piece of byplay must have seemed by its authors at the time the bluest of blue-chip investments. One may perhaps be excused for wondering, however, whether today, 3 months later, the authors of this ingenious stratagem may not be asking themselves whether they might not have paid too high a price for it.

For in the weeks that have elapsed since then there have been some changes made, some of them of great importance. The most important single one of these is the fact that the unemployment figure of 4,724,000 has forfeited most of the significance that made it the center of the committee's policy proposals for 1959. The corresponding figure for April was 3,627,000. The recession peak of unemployment, touched in June, 1958, was 5,437,000.

By no means all of this, of course, was attributable to the recession. If we take the 2,900,000 total, which was the average for the three boom years, 1955–57, as a reasonable measure of full employment, then the recession-induced unemployment figure, even at its crest, was only 2,530,000. The April figures show that this has now been reduced by 1,810,000 or about 71 percent, which would put it at 727,000.

But this is by no means the entire story. In most of the discussion of the lag in employment in recent months, little attention has been paid to the element of seasonal influences, perhaps on the theory that the latter were either highly technical or unimportant, or both. Nothing could be less true. The fact is that, if one examines the weights attached to the figures on unemployment expectancy, one will find that, taking 100 for the average month, they range from as high as 117 in January to as low as 77.8 in October, an extreme swing of almost 40 percent.

What does this mean in terms of present reemployment prospects? It means this. We have put behind us in the first 4 months of the year a period in which unemployment figured to average 8.5 percent above the year's average and we are moving into a period of 8 months between now and the year-end when the indicated seasonal rate is 5.4 percent below average.

But even that is an unrealistically conservative figure, since it includes the month of June, which shows a sharp jump each year, but for a reason not pertinent to the present discussion. Both employment and unemployment are influenced in that month by the addition to the labor market of many thousands of young people seeking temporary summer jobs. If we omit June from our calculations we find that the situation for the remainder of the year points to a rate of unemployment 8 percent below the average for the year and 16.5 percent below the level normally indicated for the 4 months we have just put behind us.

Against this background it would be strange, indeed, if that sound investment of a few short months ago—the decision by the joint committee to emphasize with such fanfare the basic importance of reversibility in directing the Nation's economic policies—hadn't begun increasingly to assume the appearance of a promissory note tossed off in a moment of reckless abandon and that might be presented for payment almost any day.

Need for Increased Enforcement Personnel in the Internal Revenue Service

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 20, 1959

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, excerpts from a letter I have received from the National Association of Internal Revenue Employees, which numbers 22,000 present and past employees of the Internal Revenue Service, the text of a resolution passed by the association, and a letter by Mr. Jerry Kluttz which appeared in the October 1958 issue of the association's bulletin, all dealing with the urgent need for increased funds to provide for a substantial increase in the number of enforcement personnel in the Service.

There being no objection, the letters and other matters were ordered to be printed in the RECORD, as follows:

REVENUE LETTER

(By Jerry Kluttz)

IRS hopes to escape the economy ax that's being swung on Federal agencies.

"We've already been through the economy mill," a high official commented, "and it's inconceivable to me that we'll be forced to take still another cut. We're down to muscle and bone now," he added, "the fat we had has disappeared."

The facts, he continued, show that IRS has taken a 10 percent cut in its staff since 1953, and that more than 5,000 jobs have been abolished since that time.

He also said that a Treasury order last year forced IRS to further reduce its staff, and that IRS's failure to get its full budget approved by the Congress will force it to abolish several hundred Revenue agent jobs as they are vacated.

It's no secret that several high-rank Treasury and IRS officials are convinced that IRS could collect millions more in Federal taxes if it had more agents and other types of employees to work on enforcement of the tax laws. The additional revenue would offset the cost of the employees as much as 20 to 1.

Despite the excellent case IRS has for an exemption from the economy order, many officials here say the pressure will be on IRS to save every possible dollar. If that happens, employee benefits such as higher grades, salaries, and promotions may have to be delayed.

The President has called on all Federal agencies to follow a policy of "Spartan economy" in their operations. He has ordered minimum cuts of 2 percent in their staffs to help offset the cost of the recent 10 percent pay raises. Most of the cuts, he feels, can be accomplished by abolishing jobs as they are vacated.

But the President's directive has a couple of loopholes through which agencies can win exemptions if they can show the cuts and economies would damage their vital programs.

IRS hopes to take advantage of them to escape most of the cuts but realists here believe that the agency will win only a partial exemption from the President's order and that it will be forced to show some economies.

RESOLUTION 5—REQUEST FOR REALISTIC APPROPRIATIONS

Whereas economy in the operations of the Government is a meritorious objective; an objective which should be the primary concern of each and every Federal employee, and in furtherance of such economy it may appear that a decrease in expenditures will effect savings resulting in a more economical operation; and

Whereas the Internal Revenue Service is scheduled to get $325.5 million for its operations for the fiscal year commencing July 1, 1958, which sum is the amount requested for the Internal Revenue Service by the Treasury Department, and such sum is identical in amount with that of the Internal Revenue Service budget for the present fiscal year and does not reflect any increase required by higher operating costs; and

Whereas it is contemplated that the major portion of the savings required to be accomplished to stay within the budgetary limitations will be met through an effective reduction in the number of employees, either through attrition or some other manner, or through limited capital expenditures for business machines, or both; and

Whereas testimony adduced at House Appropriations Committee hearings has consistently stressed that the Internal Revenue Service can obtain additional revenue ranging from $5 to $20 for each additional $1 that is spent, providing that such sums are available to hire additional employees; and

Whereas savings effected through a reduction in the amounts expended for additional employees or business equipment is a false type of economy which does not result in real savings, but merely defers the impact of the reduced revenue potential and is, in fact, a retrenchment; and

Whereas reports on the House Appropriations Committee hearings disclose that a greater appropriation for Internal Revenue Service activities would probably have been granted, if requested, as the explanation was made that the Internal Revenue Service was being given every cent that the Treasury Department had requested for it: Be, it, therefore

Resolved, That the Commissioner of Internal Revenue be urged to request appropriations which are realistic and which recognize that the explanation of budgetary limitations as a reason for inability to provide essential equipment, travel funds, personnel, or promotions is difficult to comprehend

when such budgetary ceilings are self-imposed; and be it further

Resolved, That it is the wish of this convention in view of the fact that the Commissioner of Internal Revenue does not finally determine or establish the amount of the appropriation to be allocated to administration of the Internal Revenue Service, his designated representative accompany the NAIRE committee for the purpose of appealing to the Secretary of the Treasury for more adequate funds to properly support the chief revenue producing agency of the United States.

NATIONAL ASSOCIATION OF
INTERNAL REVENUE EMPLOYEES,
Washington, D.C., May 12, 1959.

The Honorable JOSEPH S. CLARK,
Senate Office Building, Washington, D.C.

DEAR SENATOR CLARK: This is in answer to your letter of April 28 in which you asked for the views of the association about the need for additional Internal Revenue Service personnel in connection with the reduction in the budget for the Internal Revenue Service.

I am having delivered to your office a supply of 30 copies of our association's publication, named The Bulletin, October 1958 issue, wherein is contained on page 6 Resolution No. 5, Request for Realistic Appropriations. This resolution was applicable to the budget for the fiscal year commencing July 1, 1958, and it was resolved that the Commissioner of Internal Revenue be urged to request appropriations which are realistic. It was further resolved that an appeal be made to the Secretary of the Treasury for adequate funds to properly support the chief revenue-producing agency of the United States. As an employee group, we are thankful for the leadership of Commissioner Dana Latham, who has given every indication of his desire to provide an adequate budget for the continuation of the Blue Ribbon Service program. We are as proud of him as we are of the Service and as an employee organization will endeavor to support his program in every possible manner.

It is noted in the release from your office dated April 10 that you have statistical figures issued Commissioner Latham as to the ratio of tax collection to costs of collecting revenue. The experience of our membership tends to bear out the figures as given you by Commissioner Latham. To give you an idea of the attitude of our members on this subject, I can only give you their general quotations, which are as follows:

"We are losing revenue because we are unable to make proper type audits and we are unable to audit a sufficient number of the returns where experience dictates additional enforcement is needed due to insufficient numbers of examiners. We have certain 'must' work which must be performed regardless of the number of available examiners. This includes such things as claims for refund and offers in compromise of liabilities which receive priority in our work assignments. We must audit all types and classes of returns to secure coverage. This coverage is needed to insure voluntary compliance in all tax areas. Due to the spreading thin of our agents in the priority work and to cover all types and classes, we are unable to audit a sufficient number of returns where experience shows that revenue potential is high.

"I believe that not enough has been said about voluntary compliance. In all news releases concerning our campaign for additional funds it has been emphasized that additional enforcement personnel would secure X additional dollars of deficiencies per dollar expended. All of us who are in the know are sure that lack of proper enforcement is an open invitation to otherwise voluntary compliance taxpayers to hedge on the tax liabilities reported on the returns filed. Without doubt additional enforcement would result in greater voluntary compliance.

"In my opinion our revenue officers have done an outstanding job in holding uncollected tax warrants to a minimum. However, as you doubtless know, there are millions of dollars of uncollected taxes in which there is no doubt as to the liability. There is a limit to the number of delinquent accounts which can be properly handled by any one revenue officer. There is no doubt that additional revenue agents and special agents would create further delinquent accounts and additional revenue officers must be hired to keep uncollected warrants to a minimum.

"There is no doubt in my mind but what office audit personnel could be doubled without reducing the average yearly productivity of approximately $60,000 each. Also, Internal Revenue agent personnel could be increased materially before reaching diminishing returns. The same would apply to revenue officers as considerable additional time should be devoted to canvassing. Enforcement of tax laws should be equitable and the application should reach as near 100 percent as possible.

"Our tax system is based on voluntary compliance. Voluntary compliance may be based on several things, including patriotism; however, there is no doubt that the main force behind voluntary compliance is the fear of getting caught. Every day awareness of enforcement is the best possible tool. This has been proven by highway patrols in enforcement of speed laws by radar signs, presence of highway patrolmen, etc."

Those of us who have been in enforcement work in the Internal Revenue Service have no doubts in our minds that the statutory laws pertaining to Federal income tax and the enforcement thereof by the Internal Revenue Service is one of the strongest bulwarks against the spread of crime in this country. It is only through increased enforcement that the effects of the criminal element can be diminished. In view of the concerted drive by all Federal agencies in this respect, it appears that this would be the most opportune time to increase the activities of the Internal Revenue Service by adequate budget measures, and I sincerely hope that you can impress upon your colleagues the desirability of providing the necessary means with which to effect this program through the Internal Revenue Service.

Sincerely yours,

GEORGE BURSACH,
Secretary-Treasurer.

Education Necessary To Make Soldiers Effective

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 20, 1959

Mr. YARBOROUGH. Mr. President, studies of the Armed Forces have shown that soldiers who are poorly educated are quite often ineffective.

I feel this is but another indication of the need for continuing aid to all phases of education in order to help the citizens of tomorrow prepare for and realize a better world.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Sherman (Tex.) Democrat for Thursday, May 14, 1959, under the heading "Ineffective Soldiers." That concise editorial in a paper noted for leadership in Texas, illustrates that a better educational effort is needed in this country for military defense as well as for production and peaceful prosperity.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Sherman Democrat, May 14, 1959]

INEFFECTIVE SOLDIERS

There were 2,500,000 men rejected or prematurely discharged by the Army in World War II. An 8-year study initiated by President Eisenhower when he was president of Columbia University reports among major findings that emotional disturbance was more frequent among the poorly educated.

Far more broke down because of Army life than because of the stress of combat. When faced with the challenge, most performed well. Those that couldn't were the poorly educated, those with handicaps in their backgrounds, or who were overwhelmed by the military situation. The least educated were four times less effective than high school and college graduates. Especially in the new Army, education will be the backbone of the Nation's defense.

Plight of Egg Producers in Oregon and the Pacific Northwest

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 20, 1959

Mr. NEUBERGER. Mr. President, many of us who represent farm areas are concerned over the desperate plight of egg producers. Their prices are often far too low to meet the cost of production.

The Oregon Daily Journal of Portland, in its issue of May 12, 1959, published an excellent editorial summarizing the problem of egg raisers under the title of "Plight of the Egg Producer."

I especially agree with the portion of the editorial which suggests some banding together of egg growers to control production, so that prices will not drop otu of sight due to vast supplies which cannot be profitably sold. This is similar to the self-help legislation which I have been helping to cosponsor at the request of our Oregon turkey growers, who also have faced a somewhat comparable situation.

I ask unanimous consent, Mr. President, to have printed in the Appendix of the Record the editorial from the Journal of May 12 on the abysmal economic conditions now being suffered by many egg producers in Oregon and elsewhere in the Nation. This editorial should help to dispel the notion that all farmer are prosperous and all farmers get Government bounties. Producers of the so-called basics may receive Federal price-support checks but egg producers do not.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PLIGHT OF THE EGG PRODUCER

Cheap eggs may be a joy to the consumer, but they are giving egg producers their toughest sledding since depression days. Eggs in Oregon and generally throughout the Nation are selling at the lowest level since the 1930's. Combine this with the fact that poultry feeds, due to Government price supports, are relatively in the stratosphere, and it is easy to understand the desperate straits of many poultrymen.

Eggs just now are in a seasonal flush of production, and when this is over prices may recover some, but low prices in the egg industry are more than a seasonal problem. Basically, it's a matter of year-around overproduction, due in part to a change from the old-fashioned chicken house, as a part of a diversified farming operation, to egg factories with streamlined methods and a kind of automation.

This is more true of some other States than Oregon, which still has quite a number of producers who combine egg production with general farming. In California, for instance, eggs are mass produced in "factories" with as many as 200,000 chickens. This trend is found also in Texas and in other States of the Southwest and South. Just the other day plans were announced for the world's biggest "henhouse" near Johnstown, Pa., where 1 million layers are to be kept under one 15.4-acre roof, with a minimum production expected of 14,000 cases of eggs weekly.

Factory-type operations are coming to Oregon, too, though on a lesser scale. A Journal story has described one in the Portland area where one man manages 14,000 hens through automatic watering, feeding, and lighting.

It's the old story of larger, more efficient operations putting the little fellow out of business, but at present prices, even the most efficient operators, who have large investments, are hard hit. And Harry Rohe, general manager of the Oregon Egg Producers Association, tells us that the man who relies on a diversified farming operation may weather the storm better than the specialist.

It's an easy thing to tell about the plight of the poultry producer. It's a harder thing to say what should be done about it. Some poultrymen have gone to Washington to seek Government action, including egg buying.

Rohe says producers in this area are less inclined to pin faith on this expedient, although it should be pointed out that the U.S. Department of Agriculture is buying some eggs, both for the school lunch program and to help supply needy persons and welfare institutions.

He believes the long-range answer is in a nationwide organization of producers which will act voluntarily to keep production from getting out of hand. A small surplus, even 5 percent, will have a disastrous effect on the egg market. If the producers themselves seek cooperatively to keep surpluses under control they will have a better chance of a fair price for their product, says Rohe.

As a temporary expedient, Oregon producers favor a Government purchase program for light-type laying hens to take thousands of birds out of production and thus reduce the egg surplus.

Like so many other phases of the farm problem, this one defies easy solution. Past experience indicates Government intervention does not provide a really satisfactory answer. The poultryman's problems would be less, in fact, without Government support of the feeds they must use. Efforts by the egg producers to find their own answers through stronger and more widespread organization appear the most commendable and to have the best chance to be effective.

Nasser, Dangerous Gambler

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 4, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial which appeared in the Daily Evening Item of Lynn, Mass., on May 15, 1959, written by Joseph Lajed Israeli, newsman but now temporarily on the staff of that outstanding newspaper.

President Eisenhower expressed himself this week with utmost caution about the U.S. attitude toward the United Arab Republic. This caution seems to be more than justified.

The Middle East is one of the hottest spots in the cold war and, with all its oil, the Suez Canal, the airfields in Dahran and its strategic position on the map, the stake is great.

The key to any development in the Middle East lies in Nasser's hand and this is the key to an understanding of Nasser:

The President of the United Arab Republic is neither a Communist nor an anti-Communist. In fact he has no political ideology at all. But he has a dream: he is dreaming of a great Arab Empire. And the Caesar of the Arab Empire—this is most important—is going to be Gamal Abdel Nasser himself.

If you know this, you understand the gist of Nasser's policy. Nasser wants to destroy Israel for two reasons: First, the Jewish State doesn't fit into the frame of a future Arab Empire. Secondly, Egypt and Syria, the two countries which make up the United Arab Republic, are divided by Transjordan which could be easily conquered by Nasser, if he were not afraid of the Israeli Army which could—and probably would—interfere.

Nasser has had one rival in the leadership of the Arabs, Nuri-a-Said, Prime Minister of Iraq. He was a western statesman. So Nasser became pro-Communist, bought Russian arms and brought the Red influence to the Middle East.

The revolutionaries of Baghdad killed Nuri-a-Said and Kassem became Prime Minister of Iraq. Nasser hailed him as the liberator of the suppressed masses. Kassem became very popular among the Arabs. Too popular. A new rival in Arab leadership. Who is then supporting Kassem? The Iraqi Communists. Nasser became immediately anti-Communist.

Tomorrow, if the Martians will help anybody who might become a rival to Nasser in his frenzy to become the Caesar of the Arab Empire, Nasser would turn for help to the inhabitants of Venus.

Abdel Nasser is a gambler—a dangerous one. He is playing up, in turn, the West against the East, trying unscrupulously to fulfill his maniacal visions.

The Russian Tactics

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 20, 1959

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column entitled "The Russian Tactics," written by Joseph Alsop, and published in today's issue of the Washington Post and Times Herald.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE RUSSIAN TACTICS

(By Joseph Alsop)

GENEVA.—With the Soviet and Western plans at last on the table, the Geneva conference has entered what may be called the minuet stage. The strange conventions of such rallies require the participants to perform a sort of formal dance, miming negotiation, before they really come to grips and seek results.

This seems a good moment, therefore, to take a sharp look at the peculiar Russian tactics which have produced this meeting and are being used here. Soviet diplomatic methods badly need to be better understood, precisely because they are so foreign to Western methods.

Never forget that one of the main Russian techniques of negotiation is to create an artificial state of tension, in order to be able to seem to give way later on, when they are really only diminishing the tension they themselves have created.

The first rule, laid down long ago by one of the wisest observers of the Soviet Union, has been faithfully followed in the present case. The status of Berlin had remained unchanged since 1949, when Khrushchev last November suddenly announced that this situation, already endured for close to a decade, was absolutely unendurable and intolerable. As the Khrushchev announcement was larded with the most naked military menaces, a state of extreme tension immediately resulted.

Remembering these menaces, a great many Westerners, including even some skilled Western diplomats, are inclined to regard the smiles that Andrei Gromyko is now painfully distributing as solid and substantial concessions. The smiles will not secure the maximum Soviet objective, Western abandonment of free Berlin. But even though Berlin's freedom is not to be sacrificed, the Soviets will get certain changes in Germany which will importantly benefit their East German puppets. And they will also get a summit meeting.

It is a very nice trick indeed, to get so much for so little, by the simple device of bellowing menaces and then putting on a false grin. It will also be a nice trick of the Soviets to smooth the road to the summit by making the concessions needed for an accord in principle on control of nuclear tests. They have always been more eager for such an accord than any of the Western nations. Yet if they move toward an accord, most Westerners will happily conclude that the Kremlin is at last in the mood for serious negotiations.

Great patience, the habit of bazaar bargaining, and totalitarian control of their

countries, are all required by national leaders desiring to use these methods of getting something for nothing. The czars of the past used these methods just as much as the present masters of the Kremlin. But another Soviet method that has been used in the Berlin crisis is decidedly more modern.

Even 2 years ago, when Nikita Khrushchev accurately warned this reporter that "even our glum Comrade Gromyko could be taught to smile on occasion," he also said something else of much greater import. He forecast that the other Western allies would cease to be comfortable about the American bases on their territories, when they began to realize that those bases made them natural targets for Soviet H-bombs.

That realization has been industriously promoted by Khrushchev, ever since the Berlin crisis began. The naked military menaces of the earlier period have now been succeeded by thoughtful little lectures crammed with useful facts and figures. On the eve of this conference, West German Socialist editors visiting Moscow were told by Khrushchev, for instance, that only eigh H-bombs would utterly destroy West Germany. There was a reprise of the same theme in Khrushchev's Kiev speech, and more reprises are to be expected later on.

It should be clearly understood, moreover, that this Soviet H-bomb rattling is already having some of the desired effects on the Western Alliance. The British, for instance, are already frankly uncomfortable because they regard the British Isles as natural targets. This discomfort has enormously influenced British policy from the beginning of the Berlin crisis. No one can predict how far such influences may carry later on, if the American Government continues to neglect the world balance of military power.

There, in truth, is the central fact of the Berlin crisis. This fact is already too easy to ignore. It will no doubt be blandly forgotten if we turn the Berlin corner without being frightened out of our wits. But it is still a fact that there would have been no Berlin crisis, if the Eisenhower administration had made the needed efforts to maintain the Western nuclear lead. And it is also a fact that worse crises have to be expected later on, if the military balance is allowed to deteriorate further.

The plain truth is that their form of society gives the Soviets certain important negotiating advantages, such as the freedom to use military menaces almost at will. If the Western Nations must also come to the negotiating table without real confidence in their own strength, then the Western cause will be doomed in the end.

Slogan and Slowdown

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, May 20, 1959

Mr. MAGNUSON. Mr. President, in mid-April the Senator from Minnesota [Mr. HUMPHREY] addressed a Jefferson-Jackson Day banquet in the tricity area of Pasco, Kennewick, and Richland, Wash.

Favorable reaction is still reaching my office from the searching and penetrating analysis given regional, national, and international issues in his address.

I request unanimous consent that Senator HUMPHREY's address of April 20 be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ENERGY FOR ABUNDANCE—REMARKS OF SENATOR HUBERT H. HUMPHREY, DEMOCRATIC DINNER MEETING, TRICITY AREA, WASHINGTON, APRIL 20

Here in this tricity area you not only stand at the confluence of two great rivers, the Snake and the Columbia, but also at the crossroads of two great historical achievements in man's quest for energy.

Here you receive the benefits of electric energy created by falling water from the multipurpose Grand Coulee Dam on the great Columbia River.

And here you are helping to bring about the most phenomenal of the long line of achievements in the power field—the development of electricity created by atomic power.

One of our greatest needs in America today is energy and more energy—energy to fulfill the infinite needs of man and his environment—energy for abundance.

Why do we need so much power?

We need an ever-increasing supply of power just to maintain our present standard of living. We need it to keep pace with a rapid increase in population—a population which will reach some 260 millions by 1930.

We need an ever-increasing supply of power to support our Defense Establishment.

We need power to remove poverty here at home and increase economic opportunity for all.

We need power to extend a helpful hand to less fortunate neighbors abroad.

We need power to serve as a living example of what free men can do with science and industry.

Whether ultimately we take the road of fission via hydrogen or fusion via nuclear fuels; whether we get our usable electricity by utilizing heat and turbines for electricity; or whether we achieve direct conversion of heat into electricity without the expense and waste inherent in the use of steam, we still must achieve an abundance of energy which should, in time, make all men free from the grueling toil of our ancestors, the malnutrition and famine of our contemporaries.

Power is our first line of defense in the cold war.

When I look at the amazing growth in Soviet generating capacity, my biggest concern is that we keep ahead in the kilowatt race—far ahead.

Between 1945—the last year of World War II—and 1958 the total generating capacity in the United States more than doubled. Our total output of electricity almost tripled. This is good, but not good enough.

The generating capacity of the U.S.S.R. jumped from 10.7 million kilowatts in 1945 to 48.3 million in 1957—more than a fourfold increase. Output there rose from 43.3 billion kilowatt-hours to 210 billion—almost fivefold. According to Allen Dulles of the CIA, their output by 1965 will rise to 460 billion kilowatt-hours—more than double in about 8 years—more than 10 times as much as 20 years earlier. In the cold war and the threatened competition in the economic field it is slight comfort to be assured that in 1965 our capacity will still be more than twice that of Russia—when we have quadrupled our capacity while they have multiplied theirs by 10.

I do not take the doctrinaire position that all the electrical energy we need should be public power, or private power. The problem is not that our sources of energy be in private or public hands, but that there be enough of it at economical rates.

I do not want to be misunderstood. In the drive for abundant supplies of low-cost energy there is—there must be—a place for Federal development, for the Federal yardstick in both hydro and atomic power. There is a place for State and local public power systems where the people want them. There is and should be a big place for private enterprise, regulated as a monopoly and stimulated by public competition.

I am not the imaginary "whole hog" strawman at which Mr. Eisenhower shoots somewhat more than imaginary darts in the form of scare words. But I have no doubts whatsoever as to the benefits which would be lost should private monopoly in the power industry be freed from competition by public and cooperative electric systems.

I have no reservations whatsoever about the continued desirability of construction of public generation and transmission facilities and the marketing of Federal power under the preference clause. I say to my friends in the private utility industry: In an economy of abundance, particularly here in the Northwest with your tremendous power potential, if Federal development went forward as rapidly as it should, there would be an abundance of low-cost power for all—from the smallest little cooperative to the largest private power company.

In this country, since 1953, we have been living under the influence of an administration hypnotized by its own sloganmakers. You are all familiar with the expensive slogans of recent years: "Get the Government out of the power business." "Unleash private enterprise to develop the Nation's rivers at no expense to the taxpayers." "Partnership." "Abolish the Federal monopoly on atomic energy and let American private enterprise do the job." "Reduce expenditures." "Reduce taxes." "Enlarge loopholes for the great corporations through accelerated depreciation." "Balance the budget at whatever cost."

Here in the Northwest you have seen the fruits of this policy of slogan and slowdown.

In spite of everything we could do, the Idaho Power Co. has acquired the great Hells Canyon site at an immense cost to the Northwest in terms of flood control, low-cost power, phosphate development, industrial growth, and all of the benefits which would have flowed from that great project.

You have witnessed years of inaction in the authorization of vitally needed projects.

You have witnessed the appointment to the International Boundary Commission of men like Doug McKay—men who speak the same language as the interests that have jeopardized the longstanding international cooperation between the United States and Canada on the full development of the Columbia.

You have been acutely aware of the way in which Federal budget recommendations for power and river development have dropped almost from sight.

The Pacific Northwest has 40 percent of the potential hydropower in the United States and only about a quarter of this has been developed. There is nothing more essential to the well-being of this Nation—yes, and to its security—than that we get on with the task of pushing this development to completion.

You, we, the entire Nation have already lost the equivalent of one Bonneville Dam at Hells Canyon. This is a luxury we can ill afford—even though the Congress was able to force the administration and the Idaho Power Co. to disgorge the $365 million subsidy which the administration had

granted to that company after it had pledged it would develope the middle Snake without a cent of the taxpayers' money.

It is time that we got about the business of harnessing the hydropower of the Northwest, increasing the irrigated lands to meet the needs of our growing population, controlling the destructive floods which threaten our lands, industry, commerce, and people.

If the psychology and slogans of the Eisenhower administration had been official policy in the old days, the Lewis and Clark Expedition would have been grounded in St. Louis for lack of funds; the Oregon Trail would have been closed to balance the budget; and the settling of the Northwest would have been postponed indefinitely as a threat to a stable dollar.

In 1954 the administration launched an all-out drive to give away the richest discovery in the history of man. That was the atomic energy program for which the Congress up to that time had voted something like $13 billion.

In Congress, because of the great leadership of your own Senators WARREN MAGNUSON and HENRY JACKSON, we were able to water down the giveaway. We were able to assert a preference right for nonprofit systems; we were able to write in an amendment permitting the Atomic Energy Commission to force the cross-licensing of patents.

But under our form of government, with its division of powers, the Congress—even when the Democrats have a majority—cannot govern the country. And the results of the great battle over the atomic energy program have not been heartening.

Year after year the Democrats in Congress have fought to get the money and executive support necessary to carry out a crash program on atomic energy. We have been met with a numbers game on what was being accomplished, or planned, or daydreamed, or hoped for, ad infinitum. So that today we are lagging behind England and the Soviet Union in the development of atomic energy.

Last year under the leadership of your Senator JACKSON and Senator MORSE of Oregon, we authorized a dual purpose reactor for Hanford, to produce both plutonium and electricity—700,000 kilowatts of electricity—two Bonnevilles. But the pressures against this reactor never cease. All we have so far is an installation under construction which can be made dual purpose, but the fight for the power part of the installation is still ahead of us.

There is still another battle we must somehow win. Senator JACKSON and those of us who support him have insisted that power from the Hanford reactor be fed into the Bonneville power grid where it can be utilized to its maximum to supply all of the people with low-cost power. But the Republican administration cannot see this proposal. Their vision stops at private utility stock market quotations.

The Republican administration is blind to the benefits of a giant power grid, which can tie together the generating facilities of an entire region.

The productive power of a modern industrial society is closely related to the cost per kilowatt-hour of electricity. And the economical production and transmission of electricity is inextricably tied to a "giant power" grid, envisioned a generation ago by Gov. Gifford Pinchot. In the Northwest the Bonneville power grid has given you the closest thing in the Nation, with the possible exception of the TVA area, to giant power. But we must build a power grid for the whole Nation which will enable us to tie giant atomic reactors to hydro and steam facilities so that the entire Nation may have the benefits of an abundance of low-cost power, supplied by public and private sources alike.

Taken as a whole, our power system is too much like our highway system 40 years ago. Some of you can remember the days when our highway system was largely a county and city affair. Even the paved roads—and there weren't many of them—looked like something kids in the first grade had drawn for fun. They were a few feet wide; they climbed any hill a team and wagon could climb; they zig-zagged around each farm or other obstruction, real or political. Adequate for a team and wagon, they were a challenge to even the model T and a positive threat to the occasional foolhardy spirit who wanted to push a White Steamer down them at 20 miles per hour.

We just could not have gotten very far into the 20th century with that kind of a highway system. So we did something about it.

But today the Nation's power grid is planned about as scientifically and with just about as much regard for the Nation's requirements as the counties planned highways 40 years ago. Part of the trouble—then and now—was inability of the local units to finance anything better. Part of the trouble—then and now—was an inability to conceive of anything that couldn't be seen from the window of a courthouse.

Our technicians can build a real power grid, and we can afford that kind of a power grid. We ought to have it. And we ought to have it soon.

Five hundred thousand kilovolt transmission lines which are only in the talking stage here are already in operation in Russia. The Russians are planning million-kilovolt lines with direct current transmission over which they can transport power 1,000 miles with only limited loss of energy. These lines will enable them to link giant hydro to giant thermal generators with the latter (if coal fired) built near coal mines. The economies of "hauling coal by wire" will be of great significance in achieving low-cost power.

In this great land peopled by "strangers from a thousand shores," we have moved mankind far in three centuries, blessed by immense natural resources and the greatest individual freedom of any industrial people in the history of the world.

Have we grown weary? Or old? Or afraid?

Are we prepared to lay down our burdens and give up our hopes and fall prey to our fears and distrust of each other?

I say no, and I believe the overwhelming majority of our people say "no." Let us go forward, contending as we may over our honest differences and over our various vested interests, but let us have an end to fears and the slogans of stagnation and sterility.

The highest wisdom, it has been said, is to dare. I believe this and I believe you do, too.

Nuclear Test Ban Pitfalls

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. HOSMER. Mr. Speaker, I take this means to call attention to my remarks in this RECORD following the day's legislative business under title "Nuclear Test Ban Pitfalls." They summarize an important memorandum on that subject by Hon. Thomas E. Murray, former Atomic Energy Commissioner, and present consultant to the Joint Committee on Atomic Energy, and are followed by the complete text of Mr. Murray's memorandum. I also call attention to the following related materials to be found in the RECORD:

"The Case Against the Nuclear Test Ban," an editorial from Air Force magazine, Wednesday, April 29, 1959, at pages A3631–A3632.

"Communist Diplomatic Perfidy," my compilation of Soviet treaty violations and reasons therefor, Thursday, May 14, 1959, at pages 7373–7376.

Fight Rice With Rice

EXTENSION OF REMARKS
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. THOMPSON of Louisiana. Mr. Speaker, because of my great interest in the rice industry and rice as a food for Americans, I would like to refer the membership of the House to the factual story of some of the benefits that can be derived from rice—other than that of helping the rice farming industry—and the phenomenal results as stated by my good friend and columnist of note, Bill Keefe, in the Times-Picayune of April 14, 1959:

FIGHT RICE WITH RICE

Louisiana State University's football squad, with its sights set on a second straight national intercollegiate championship, will rely on a Cannon and Dietzel fuel for initial power this fall. The Cannon, in this case, is all-American Halfback Billy Cannon; the Dietzel fuel is a feeding theory introduced to Coach Paul Dietzel's training table by Trainer Marty Broussard.

When commissioned by Dietzel to find a high-energy food to fit into the Fighting Tigers' diets, Broussard's search confined him to his home State, and to a familiar figure at LSU football games—Dr. J. Norman Efferson, dean of the university's college of agriculture. After a series of huddles with Dr. Efferson, Broussard unveiled his energy-packed formula at the training table: rice in its various forms. The fact that the Tigers meet the Rice Owls in the first game of the season, which will be nationally televised, puts an emphasis on rice.

The steps Broussard took to set the Tigers' training table with energizing food were analytical, but simple. Dr. Efferson had proved that a pound of rice contains 1,644 calories of energy. The dean's research figures also showed that a single calorie of energy will move 1 pound about 3,000 feet. Broussard transferred these statistics into football terms. He reasoned that a calorie of energy would move the average football player, weighing 200 pounds, some 15 feet. (That's 200 into 3,000.)

A pound of rice, according to Broussard's theory, would provide enough energy to move a typical player 24,600 feet, or 8,229 yards. This is more than ample for the average football game, in fact, for nearly the entire season.

"I can't say that we went undefeated last year because we ate rice," says Broussard, who is president of the Southeastern Conference Trainers Association. "But studies here have convinced me that rice is a quickly assimilated energy food, high in carbohydrates, vitamins, and minerals. It's that easily digestible energy factor that interests

me," Broussard points out, "because now we can send a boy out on the field with something in his stomach that won't slow him down."

Dr. Efferson, a research pioneer in the rice industry, said, "If we didn't think that rice had high energy and was a quickly digested food, we wouldn't recommend it to our athletic department."

Coach Dietzel, who earned coach of the year honors last season, enthusiastically endorses Broussard's formula. "They've convinced me that rice is an important energy food. That's why you'll find it on our training table."

Oklahoma Salutes Two Great Texans

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. EDMONDSON. Mr. Speaker, it is a great pleasure to place in the RECORD a resolution recently adopted by the State Senate of Oklahoma, commending our distinguished and beloved speaker, the Honorable SAM RAYBURN, and his distinguished fellow-Texan who is the able majority leader of the Senate, the Honorable LYNDON JOHNSON.

Both Speaker RAYBURN and Senator JOHNSON have through the years won a firm and enduring place in the hearts of all Oklahomans.

Their friendly assistance in matters of keen interest to Oklahoma has been a great help to all of us in the Oklahoma congressional delegation. They have been good neighbors in the finest sense of the term, and their friendship is treasured by every Oklahoman in this body.

Beyond this, however, both of these great Texans have won the admiration and respect of their colleagues by their continuing demonstration of statesmanship of the highest order in their roles as congressional leaders. America is a stronger and a finer place in which to live because of the solid rocks which Speaker RAYBURN and Senator JOHNSON have added to its foundations, during their distinguished terms of service in the Congress.

I am pleased to note the recognition of these two great Americans in the State Senate of Oklahoma, and am further pleased to call this resolution to the attention of the House:

ENROLLED SENATE RESOLUTION 44

Resolution commending the Honorable LYNDON BAINES JOHNSON, majority floor leader, U.S. Senate, and the Honorable SAM RAYBURN, Speaker, House of Representatives of the United States; directing that this resolution be spread upon the pages of the permanent, Journal of the Senate of the 27th Legislature of the State Oklahoma; and directing that duly authenticated copies of this resolution be transmitted to the Honorable LYNDON BAINES JOHNSON, to the Honorable SAM RAYBURN, and to each honorable Member of the Oklahoma delegation in the Congress of the United States.

Whereas the Honorable LYNDON BAINES JOHNSON, majority floor leader, U.S. Senate, and the Honorable SAM RAYBURN, Speaker, House of Representatives of the United States, personify the finest qualities of American statesmanship and political leadership; and

Whereas these statesmen have, over a period of many decades, ably served their State and Nation in positions of high responsibility; and

Whereas during these many years of public life and constructive accomplishments for the people of this Nation these gentlemen have compiled a record of public service unparalled in the annals of modern U.S. history; and

Whereas these statesmen from our neighboring State of Texas combine the rugged and exemplary qualities of the pioneering spirit of America with the 20th century concept of constructive progress in the art and science of government; and

Whereas, the knowledge gained from many years of political life and service to their fellow men is an invaluable asset to the Government and people of the United States and a high goal worthy of attainment by those who serve everywhere in high public office; and

Whereas the outstanding record of statesmanship and public service written in the Nation's Capitol and in the State of Texas by our esteemed and highly respected neighbors to the south will live forever in the hearts and minds of those who adhere to the principles of integrity, service, and progress in government; and

Whereas these gentlemen have endeared themselves, not only to the great Democratic Party, of which they are outstanding leaders, but also to all the people of this Nation; and

Whereas, it is the consensus of this body that these statesmen are ever vigorous and progressive in their devotion, sacrifices and services in the public interest and in their foresight for the future role of this country; and

Whereas, the Honorable LYNDON BAINES JOHNSON and the Honorable SAM RAYBURN have set a high and enviable standard in the political life of this Nation which stands as a worthy goal for those aspiring to positions of governmental leadership: Now, therefore, be it

Resolved by the Senate of the 27th Legislature of the State of Oklahoma, That this body hereby officially commends the Honorable LYNDON BAINES JOHNSON and the Honorable SAM RAYBURN for their exemplary record of public service and conscientious devotion to the public interest, extending over a period of many decades, and for their progressive planning and foresight in guiding the future destinies of this great country.

That this resolution be spread upon the permanent journals of the Senate of the 27th Legislature of the State of Oklahoma as an indelible record of the appreciation and esteem of this body for the Honorable LYNDON BAINES JOHNSON and the Honorable SAM RAYBURN: Be it further

Resolved, That duly authenticated copies of this resolution be transmitted to the Honorable LYNDON BAINES JOHNSON, to the Honorable SAM RAYBURN and to each honorable Member of the Oklahoma delegation in the Congress of the United States of America.

Adopted by the senate the 12th day of May 1959.

———, *Acting President of the Senate.*

CERTIFICATION

I, Leo Winters, secretary of the senate of the State of Oklahoma, do hereby certify that the above and foregoing is a true and correct copy of Enrolled Senate Resolution No. 44 as the same was adopted by the Senate of the 27th Legislature of the State of Oklahoma, the original hereof being on file in the office of the secretary of state of the State of Oklahoma.

Witness my hand and the seal of my office at the State capitol this 12th day of May 1959.

LEO WINTER,
Secretary of the Senate.

The Other Side of the Transportation Coin

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. McCORMACK. Mr. Speaker, one of the best-qualified persons in the United States to discuss our transportation system, overall or otherwise is Hon. Anthony F. Arpaia, a member of the Interstate Commerce Commission.

On May 14, 1959, at the 28th annual banquet of the Rhode Island Truck Owners Association, held at Providence, R.I., Commissioner Arpaia made a frank, objective, and challenging address, which I include in my remarks:

THE OTHER SIDE OF THE TRANSPORTATION COIN

I could, I suppose, discharge my function here by a talk which would be pleasing and comforting to your ears. It would start by praising the important contributions which you, as regulated carriers, have made to the development and stability of our country; the great job you are doing in meeting the needs of commerce, etc.; how our standard of living, productive capacity, and trade depend on the effectiveness of public transportation.

In fact, it is easy to make grandiloquent comments concerning the importance of public transportation. It is virtually impossible to overestimate the value of transportation as a whole to production and distribution, the overall development of our economy, and the specialization which it permits, whether of natural resources or human skills.

But, as a famous British writer once said, "There's no weapon that slays its victims so surely as praise." And sometimes, when one reflects upon the haphazard complex of our transport media as it is composed today, there is just cause to wonder whether the orthodox concept of public transportation is still valid. The fate of public carriage has certainly been the subject of a lot of worry, study, and talk by experts and nonexports, but its future is still shrouded in confusion and conflict rather than in progress and stability.

Under the circumstances, then, I guess it is better to pause and reflect, to refrain from indulging in pious platitudes, and to stop feeding ourselves a diet of easily digestible pap. It may be smarter to get a little cynical and hypercritical—to analyze this welter of transport operations and try to find out where we stand and where we're going before it is too late.

WHAT HAS HAPPENED TO PUBLIC TRANSPORTATION?

For many years, when railroads were virtually the only source of carriage, they had a clear track. There was no basic standard or measure of the efficiency or true cost of their service. Reasonableness of rates was measured, not by meaningful standards of performance and economy, but by what the traffic would bear. To the extent cost was considered, it included fancy financing resulting in overcapitalization, high fixed

charges, duplication, and anything else attributable to railroad operations. Shippers, in general, had no alternative but to accept service as it was and pay the price asked. The Commission was on hand to protect shippers against unreasonably high and discriminatory rates, etc., but the base on which those rates was fixed was never in question.

When motor carrier service came into being, these operators, not having any conceptual basis for pricing, generally adopted the railroad rate structure for their own. This worked out very nicely for them (and the railroads, too) because it afforded them the opportunity to compete at the railroads' higher rates on high valued and attractive traffic without immediately breaking down the general level of prevailing rates for railroads. The shipper got no real relief from inefficiency and lack of economy.

Then came private carriage. For the first time in modern history of transportation, many shippers had a practical alternative of taking public transportation or leaving it. A shipper's cost of providing his own service could be realistically compared with the rates charged by public carriers. He could also size up offered standards of service with those he himself could produce and control.

The extent to which public carriers are unable to meet the present standards of cost and service of private carriage is the real root of the present plight of public transportation. The question follows: Why aren't they able to do so? Before I try to answer this question, let's analyze.

WHAT TRAFFIC IS LEFT FOR PUBLIC TRANSPORTATION

There are still some commodities which are not readily susceptible to private or exempt transportation, and there are also some shippers, usually small shippers, who are not in a position to use private transportation. Also, there are some occasions when even those who use private transportation for a substantial portion of their traffic must resort to public transportation. Then, of course, volume shippers through the power to bargain are able to get commodity rates established which match what they want to pay. There are some commodities attractive to carriers because they move in large quantity. These illustrate the type of traffic left for public carriers and for which they make their pitch by slashing rates.

The present outlook

The total traffic of regulated carriers is still substantial, yet the percentage of the Nation's transportation service performed by them is constantly falling. Whether its erosion will continue and duplicate the history of passenger traffic depends on whether public transport is able to meet this revolution in the pricing and movement of goods with a successful counter revolution. To the extent that public carriers continue to do business at the same old stand in the same old way, they obviously cannot do so and prosper. Meanwhile, motor common carriers are hamstrung by hodge-podge of certificate restrictions both as to commodity and territory which limit their efficiency; railroads seem moribund under a staggering load of fixed charges, waste, duplication, passenger deficits, and local taxes; and coastal water carriers complain that they are being driven out of business.

The handicaps of public transport

In my opinion, some of the handicaps of public transportation are of the carriers own making and some are due to regulatory law and procedures.

The private and exempt carriers have many advantages. They have no terminal costs, no obligation to carry less truckloads and no restrictions on routes or territory. They can take the most direct, convenient and economical route and serve any point at will.

The certificated motor carrier, on the other hand, must comply with many restrictions which limit economy, flexibility and maximum utilization of equipment. These limitations apply to commodities or to routes and points, or both. Few motor carriers, indeed, have broad general commodity authority to all points they serve and ideal territorial limits.

Railroads were built, in part, by promoters, and not by hard-headed businessmen. In such cases they did not meet transportation demands in existence or reasonably foreseeable. Some of them have never been able entirely to overcome the handicap of lack of economic justification. With the development of the truck, such handicaps have become magnified. Where short hauls, numerous interchanges, duplicate administrative and solicitation expense, multiple terminals, high fixed debt and reduced volume are involved, railroads are not geared to meet the competition of one who carries his own goods.

Then there is the handicap of complacent, unprogressive management. In spite of other handicaps, real or imagined, there is too much lack of initiative in regulated transport. Whatever else either the law or the Commission can be blamed for, they do not select management and cannot control management policy and direction, which is sometimes blundering, incompetent or worse. The fact that, under the same law and regulation and under the same economic conditions, some carriers succeed and others fail demonstrates this. Failures have become successes with changes in management and vice versa.

Of course, the overall factor of general economic conditions affects public transport differently than ordinary business. We are bound to have recessions or economic squalls. Most businesses can easily survive such setbacks. Carriers, on the other hand, have a fixed plant, and operate on a low margin of profit. They sell service and nothing more. They cannot build inventories in anticipation of a pickup later or live on inventory. When volume drops, revenue drops, period.

What are carriers doing to overcome their handicaps?

Even now, most carriers don't seem to recognize their real deficiencies. They seem to be under two illusions: (1) that there is a fixed amount of transportation to be performed, and (2) that if the price is rigged sufficiently high, everything will be "jake." Unfortunately, as I pointed out before, the transportation plant is no longer completely in the hands of certificated carriers. It is in the control of shippers—they can add to it at will.

Or, as an alternative, carriers resort to the other extreme and slash rates regardless of profit on the wishful theory that somewhere, somehow, other traffic can be made to carry the load. With lack of vision they reduce rates to their out-of-pocket costs, not appreciating that their costs are of less than academic interest to shippers who can use private carriage. What they have to meet is the shipper's cost of performing the service. Since their present technique of reducing rates has not been effective, they should use more effort to cut out some of the layers of waste at the bottom of the cost pile. This alternative has not been pursued.

There has been no real endeavor to bring down costs where it counts by a fundamental change in the techniques of getting the goods from origin to destination quicker, cheaper, and better than any shipper can do it for himself. Carriers certainly cannot do it by trying to improve their own lot by putting as many roadblocks as possible in the path of a competitor. Nor, can it be done by rigid adherence to the present wasteful methods of operation. Two courses seem inescapable: to eliminate waste and unnecessary costs within each form and to provide services in combination, not only to produce additional savings, but to improve service.

To what extent has regulation been a handicap?

Now that I have said my piece, at least in part, about the lack of realistic understanding and action by the public transport industry, it is also fair to ask: Does regulation contribute to the difficulties which surround public transportation?

That a service as vital to our welfare as transportation requires some measure of control goes without saying, but we should be open minded about its scope and extent in the light of the revolution which has taken place. We should also make sure that regulation does not become a narcotic or a bromide which lulls not only the public, but the carriers themselves, into a false sense of security and protection. In this day and age of risk for the free world and its institutions, there is no room for smugness. In the light of the ever-increasing growth of unregulated transportation, we cannot persist under the illusion that public transportation will be able to fill its expected role merely because the Government has a hand in it.

Is any part of regulation anachronistic?

Now, the pat answer to that is: "The Interstate Commerce Act has been amended many times. It was amended only last year. It's as fresh as this morning's paper." True, since 1887, there have been many amendments to the act. Before 1920, changes were urged by shippers; since that time they have been generally urged by carriers.

In spite of amendments to the act, no substantial and fundamental alteration has been made in the basic approach of transportation regulation. This, in spite of tremendously significant developments in our economy, technology, in methods of production, distribution, and shipper and public habits and needs since the 1930's.

Practically every revision of the act and the adoption of a transportation policy has been to broaden the coverage of regulation rather than to narrow it. Peculiarly, this has been out of a desire by regulated carriers to help themselves by imposing stricter controls on everybody else. The justification was, of course, that this would strengthen public transportation and in this sense serve as a public purpose.

I personally think that transportation regulation covers too broad a field and that the approach should be changed. There are certain carrier activities which could be removed from regulation without damage to the public. There are others which instead of requiring prior approval each step of the way could be made subject to complaint or investigation when and if the public interest warrants. In other words, the sphere of regulation should be reduced and the emphasis should be shifted to where it serves a worthwhile purpose.

As an aside, I deem it necessary to make some observations regarding an apparent indifference on the part of the public respecting the present scope of transportation regulation. Last year extensive hearings were held by the Senate Subcommittee on Surface Transportation. The air was charged with emergency and the sole objective at the time was to save the railroads. In this atmosphere, in addition to many carrier witnesses, there was also some public testimony. Three things impressed me:

(a) Almost without exception all witnesses who represented shippers were in favor of less regulation. The National Industrial Traffic League, the United States Chamber of Commerce, eastern food processors and dis-

tributors, peanut producers, poultry packers, farmers and farm groups, private carriers, etc., were all in favor of either broadened exemptions or loose regulation. It is noteworthy, however, that individual small businesses did not otherwise appear or have their day in court.

(b) The editorial comment in magazines and newspapers was predominantly in favor of relaxed regulation. Even assuming that these editorials were inspired or planted, as is sometimes claimed, there was no pronounced public rejection of them by shippers either by way of letters to the editors or, as far as I know, letters to the Congress.

(c) The Secretary of Agriculture and other witnesses testified that unregulated transportation was more efficient and cheaper than regulated transportation. A recent study by the Department of Agriculture reasserts this view.

While hasty conclusions should not be drawn from the type of record and the limited scope of the hearings before the subcommittee, the indifferent reaction of the public to regulation as it now stands should cause some eyebrow raising.

1. Does it indicate that regulation has lost its original significance?

2. Is there some coverage of regulation which is being forced upon the public unnecessarily?

3. Does regulation provide a refuge or shelter for inefficient and incompetent carriers?

4. Does regulation encourage rather than prevent economic waste and inefficiency in transportation as a whole?

5. Or, to put it in a more general way, assuming that transportation had never been regulated; would there be any demand for regulation under present conditions; and, if so, to what extent? This last question is provocative. It is important to pose it if only to shock carriers and shippers into a realization of what may be the present temper of the general public.

There are major considerations which shippers and the public should carefully weigh should the issue of emasculation of regulation be placed squarely before them. I shall mention only a few:

1. History which shows that carriers can weaken themselves through cutthroat practices and rate cutting. When railroads were competing only with each other they did exactly this.

2. The fact that 48 States might exercise jurisdiction in areas in which there would be no Federal regulation would create an impossible burden on interstate commerce.

3. The fact that shippers located in outlying points, particularly less-truckload shippers, would be prejudiced because carriers would naturally prefer to give the service first to those who are more easily accessible and furnish full truckloads. Such shippers might be compelled to pay a premium for service since there would be no common carrier obligation to serve all points and all shippers equally.

4. Needed connecting lines could be ruined by discriminatory practices of railroads seeking to preserve their own long hauls without regard to the most direct and economical routes.

But there are, it seems to me, some areas in which regulation could be relaxed. Many times while pondering the growing volume of matters where the only parties are carriers vying with one another to obtain some petty advantage or interpose some obstruction or impediment in the path of competitors, I ask myself: What real purpose does all this serve except to benefit one carrier at the expense of another? There is a hopeless volume of proceedings, many of dubious importance to transportation as a whole, which comes before the Commission. We have tried to keep up with the incoming flow but we seem to be swimming against the tide.

However insignificant the impact may be on transportation, each matter receives the same due process and formal consideration. Important and far-reaching proceedings are in the meantime awaiting their turn. This treatment is unavoidable because of the volume and variety of work the Commission must administer under the many sections of the Interstate Commerce Act and the procedural requirements of the Administrative Procedure Act.

There are today some activities of carriers which are of no perceptible impact on the public but which are nevertheless covered by regulatory law. Their elimination would result in savings in time, expense and energy to everybody by reducing many present, fruitless requirements which the Commission must follow. The area of coverage should be confined to conditions which are current. The sheer volume of proceedings serves to deprive the public of decisions within a reasonable time on vital matters of broad scope. And delay is just as galling to Commissioners, I can assure you, as it is to the parties.

The present provisions of section 5 relating to pooling, common control, acquisitions, consolidations, etc., offer a good illustration of what I mean. It is plain hardship to subject motor carriers, whose total investment amounts to as little as $50,000, $60,000, $70,000 or $100,000, to prolonged and expensive proceedings which involve the time of our investigative staff, our examiners, as well as our processing staff, merely because common control of two carriers must receive prior approval. Yet the carriers involved are relatively small and the impact on the soundness of transportation is virtually nonexistent.

I have seen dockets in these types of cases over a foot high and 4 years old where there has been a hearing, rehearing, petitions, reconsideration, reopening, and every other device in the book used by competitors to delay a decision on the application. Should the Commission spend so much of its time trying to determine whether common control of two such carriers should be approved, when their total gross annual volume may be less than a few million dollars? The same applies to issuances of securities, mergers, consolidations, and pooling.

Do carriers abuse regulatory procedures?

The time has come for carriers to reappraise their attitude toward the purpose and function of regulation. It is not to protect them against each other at the expense of the public and national welfare. Carriers seem to expect that the task of regulation is complete when it adjusts private disputes between them regardless of what their actions do, or fail to do, to help serve the public aims of regulation.

Let me illustrate. Under setcion 204(b), the Commission is empowered to establish just and reasonable classifications of groups of carriers as the special nature of the services performed by such carriers shall require. In October of 1952, the Commission made a valiant effort to correct the repetition of the uncertainties and ambiguities which arose from the inept descriptions contained in certain grandfather certificates which had been processed without any basic standards or guides.

The investigation known as Ex Parte No. MC–45, Descriptions in Motor Carrier Certificates, was instituted in October 1949, and over 100 lawyers representing interested parties participated. Its purpose was praiseworthy—namely, to achieve logical and broader groupings of commodities in certificates.

Because of the selfish and petty attitude of protestants who relentlessly oppose every grant and seek to impose as many restrictions, exclusions, and limitations as possible on every applicant for operating authority, we are right back where we were before, if not worse. I submit that their objective is not to promote efficiency in transportation in the public interest. It is to make a competitor as inefficient as possible.

The Commission is caught in a vise. How can this sorry scheme of operating authorities (as Mr. Blanning, former Director of the Bureau of Motor Carriers characterized it) be corrected and the staggering volume of proceedings which result as a consequence be diminished?

If motor carriers would only realize that their efforts to freeze a pattern of uneconomic operations on their competitors, without regard to the interest of the public, may aggravate the situation to the point that shippers may press Congress to take action to correct this uneconomic pattern. They should be told that Congress can, with one fell swoop if it desires, wipe out every commodity limitation and every route and point restriction in every certificate; or, it can, in fact, abolish regulation altogether. It could, if it so desired, provide that any certificated carrier which transports one or more of a certain class of commodities can transport them all to any and all points, intermediate, off route, etc., in the territory which it is authorized to serve. And this can happen.

Shippers' reaction to the lack of constructive attitude of carriers

Regardless of how the carriers feel about it, shippers are getting sick and tired of trying to find out which carrier can transport what particular commodity to which points. Recently, a shipper, who has turned to private carriage, told me that the immediate occasion for doing so was that his shipping dock could accommodate only four trucks at one time and that he had no room to enlarge it and no desire to make the investment to do so. He said, "There is a virtual circus at my plant every day. Some mornings as many as 20 trucks line up in the street and in the yard trying to make deliveries. One carries one thing, another, something else. No wonder the rates are high and service is poor. The motors are running and the drivers are waiting while we are waiting for deliveries. Why, in heaven's name, can't one or two carriers be authorized to transport all the commodities which I need?" If motor carriers insist on being shortsighted and petty, the day will come when the public will get so disgusted at this economic waste that there will be demand for the repeal of motor carrier regulation.

The proper role of regulation

Regulation, in my opinion, should be a ballast to keep the transportation scheme from foundering in the heavy sea of destructive forces, but it is not intended to be used as a weapon to obstruct or kill off competitors. Nor can regulation be used as an instrument to deny the public of the manifold advantages of an efficient, low-cost service.

Decisions of management, unless harmful to the public, should be beyond the reach of Government interference. This is what makes carrier enterprise private instead of regimented, and it is the way to make private enterprise enterprising. This can't be done by holding public carriers on a short chain without real justification.

The Subcommittee on Surface Transportation in its report on S. 3778 hit the nail on the head when it stated:

The subcommittee, from its observation of the Commission, is not satisfied that the Commission is devoting its efforts to the most fruitful areas of regulation. The Commission should earnestly examine the Interstate Commerce Act, and related acts, and come forward with legislative recommendations which will reduce its sphere of action to matters which fundamentally af-

fect transportation. There are some activities now required of the Commission which are of no great consequence but which take time and effort. This attention could be devoted to matters of greater significance. These matters of importance are now delayed because of preoccupation with relatively minor problems.

The Commission should be in the best position to recommend how the sphere of regulation can be reduced. If it doesn't do so, then somebody else will.

Two separate governmental investigations of transportation have been recently authorized: one by the Senate (Res. 29) and another by the Secretary of Commerce. The investigations when undertaken should not be conducted in an atmosphere of crisis and emergency. They should reflect the true public and shipper interest. But if the representations in such inquiries are predominantly those of special interests and pressure groups—the situation may become even more chaotic and deterioration will go on apace.

The carriers in the meantime can do much to improve themselves by collectively developing means of improving service and reducing costs. There is no future safety either for the carriers or the public in vindictive partisanship, selfish interest and cynical disdain for the public interest.

Further, regulated carriers should not expect the Government to rescue them from the consequences of inefficiency and lack of initiative. In order to meet their real competition, private carriage, they must drastically overhaul their methods of operation. Singly, experience shows it cannot be done. Similarly, to the limited extent it has been tried, experience shows that through joint operations between all forms of transportation it can be done. Yet, only a few are trying and they are blocked at every turn by the diehards.

These diehards just don't believe there is oxygen in the air because they can't see it. If they continue in this attitude, they are not only deluding themselves, they are performing a distinct disservice to our treasured heritage of free enterprise and are laying the foundation for the demise of public transportation as a private business.

Foreign Ministers' Meeting

EXTENSION OF REMARKS
OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the following statement from the Gaffney Ledger, Gaffney, S.C. of May 16, 1959.

FOREIGN MINISTERS' MEETING

The Foreign Ministers' meeting in Paris is a test for the democracies. The ministers must remain unified, and must see to it that a foundation of solidarity is established for the prospective summit meeting.

There has been general agreement among the Western democracies on the question of rights in Berlin. However, there has been some wavering on the part of Great Britain, at least, on the question of what alternatives would be employed if the Soviet Union sticks to its threat about the supply of Berlin.

We repeat what we said about the situation several weeks ago. There is absolutely no reason for President Eisenhower to attend a summit meeting concerned largely with the Berlin crisis. That crisis is an artificial crisis, created by the Russian for a purpose.

We suspect that one of the purposes behind the creation of the Berlin crisis was to divert attention from Iraq and Iran, where the main Soviet move today is being made. We are standing behind our rights in Berlin, and to meet on the crisis, in the spirit of "compromise," is merely to admit that we will compromise away some of our rights.

We must be on the offensive in any summit meetings. We must demand that the Russians give freedom to Hungary, stay out of Iraq and Iran, and make concessions looking toward German unity. If the Russians will not give ground on any of these issues, then they will have adopted an obstinate position.

Area Redevelopment Bill

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. MULTER. Mr. Speaker, the House Banking and Currency Committee has reported a necessary and important bill, S. 722, House Report No. 360. In this connection, I commend to the attention of our colleagues the following report on the problem of distressed areas in the State of New York. This report was published by the Area Employment Expansion Committee of New York City:

AREA REDEVELOPMENT FACT SHEET NO. 61, NEW YORK STATE

The Empire State is among those which would benefit from the proposed area redevelopment legislation. While the total number of areas immediately affected constitutes a somewhat smaller proportion of the total of the State than is prevalent in other States where there are more chronically distressed areas, yet the problems are none the less serious in this State.

In January 1959, there were 1 major labor market, Utica-Rome, and 11 smaller areas which would become eligible immediately for benefits under the area redevelopment bill (table I). Their total civilian labor force was over one-half million people, which probably represented some 6 percent of the State's working population (table II). The average rate of unemployment in these areas was 11.9 percent. It would take 29,865 new jobs to eliminate the unemployment in excess of 6 percent in these areas.

In addition, there were 6 major labor markets, 4 smaller labor markets and 3 very small labor markets in which there was a substantial labor surplus. Continued high unemployment in these areas would graduate them into the chronically distressed state. It is probable that some of these areas will reach this condition.

There are 23 counties for which no labor market data are currently available.

DISTRESSED AREAS

A. Major labor market

Utica-Rome: This large labor market in central New York State, including both Oneida and Herkimer Counties, suffered seriously from the postwar contraction of the textile industry. It has struggled desperately to replace some of the textile jobs with new durable goods plants, but these have also been hard hit by unemployment. While these plants have opened up new jobs for the younger people, they have not provided job opportunities for the older population. As a result the rate of unemployment in the labor market in January 1959 was 11.8 percent.

The unemployment rate reached a high of 11.3 percent in January 1955, but had declined in the subsequent years reaching a low in the fall of 1956 (table III). In 1958 this labor market again suffered reverses so that the average unemployment rate for 1958 was 10.4 percent. The community needs considerable assistance to revamp its basic economic structure.

B. Smaller labor markets

Eleven smaller labor markets have had a high rate of unemployment for long enough periods to become eligible for benefits under the area redevelopment bill.

The following are the periods during which these smaller labor market areas have been certified as having had substantial labor surpluses:

Smaller Labor Market and Periods of Substantial Labor Surplus

Amsterdam: June 1954 through September 1956; March 1958 to date.

Auburn: January 1955 through July 1955; April 1958 to date.

Batavia: March 1958 to date.

Elmira: April 1958 to date.

Glens Falls-Hudson Falls: June 1958 to date.

Gloversville: November 1952 through September 1955; April 1958 to date.

Kingston: September 1958 to date.

Newburgh-Middletown-Beacon, July 1958 to date.

Oneida: June 1958 to date.

Plattsburgh: March 1959 to date.

Watertown: April 1958 to date.

Amsterdam: This textile community has suffered repeated setbacks from the closing of large textile mills. The shift of mills from this area to other States and the contraction of operations are the basic causes for its difficulties. The community has made desperate efforts to attract new plants. It has sponsored local industrial advances though individual improvements have been made.

The labor market includes Montgomery County. It has had annual average rates of unemployment of 9.4 percent in 1955; 9.8 percent in 1956; 8.9 percent in 1957, and 14.1 percent in 1958. In January 1959, the unemployment rate was 13.5 percent.

Auburn: Including as this labor market does Cayuga Caunty, it has been a center of industrial activity except that it has suffered from plant closings and the contraction of some of its basic industries. Among the most significant closings was that the International Harvester Co. Recently an electrical machinery company moved out of the area. Difficulties are being faced by other textile plants in the area. The annual average rate of unemployment in 1955 was 9.1 percent; in 1956, 7.1 percent; in 1957, 8.4 percent, and in 1958, 14.3 percent. Relief from continued high unemployment is not in sight.

Batavia: This labor market includes Genesee County. Its annual average rate of unemployment in 1957 was 8.8 percent, and in 1958 9.4 percent. While it was only recently certified as having substantial labor surpluses, it faces serious problems. Layoffs have occurred in its machinery and primary metal industries and many of its local residents must depend upon jobs in nearby areas for continued employment since the area does not itself support the population.

Elmira: This labor market includes Chemung County. Unemployment began to assume serious proportions in December 1957 and has continued at high levels through

1958 and in 1959. In February 1959 the rate was 11.1 percent. The community has suffered from widespread layoffs in machinery and the electrical equipment plants.

Glens Falls-Hudson Falls: This labor market includes both the counties of Warren and Washington. Unemployment was most marked in 1958 with reductions in the electrical equipment, paper, and textile industries. In 1958 the average rate of unemployment was 9.7 percent.

Gloversville: This is one of the truly chronically distressed labor markets. It encompasses Fulton County. It suffers from the decline of the dress, glove, and the woolen knit glove industry. These have been adversely affected by imports. This area has been suffering from continuing high unemployment for a number of years. In 1955 the average rate of unemployment was 13 percent; in 1956, 9.3 percent; in 1957, 14.1 percent, and in 1958, 19.5 percent. In 1959, the rate was 17.9 percent in February. This is an area needing immediate and continuing attention.

Kingston: This labor market of Ulster County has suffered from the closing of a large machinery manufacturing plant, as well as losses in the aircraft, paper, and chemical industries. Only the seasonal pickups in the summer resort trade help offset these setbacks. The average rate of unemployment in 1958 was 8.1 percent, and in January 1959, 10.4 percent.

Newburgh-Middletown-Beacon: This labor market includes Orange and Putnam Counties as well as the city of Beacon and the town of Fishkill in Dutchess County. There have been widespread layoffs in the apparel, textiles, leather goods, metals and machinery industries. Many residents working in outside areas have also been adversely affected. The average rate of unemployment in 1958, was 9.7 percent. Much hope has been placed in the economic effects of the New York Thruway but these have not yet lived up to expectations.

Oneida: The Madison County labor market has also recently been added to the list of the distressed areas. There have been heavy cutbacks in the silverware industry. This is a community which needs long-term improvements. Residents have been working in outside areas and commuting and the cutbacks in these outside areas have adversely affected local people. The unemployment rate has been particularly high in 1958, with an annual average rate of 13.1 percent. Long-term redevelopment is essential.

Plattsburgh: This labor market includes Clinton County and has suffered from the long-term drop in construction and losses in mining industries. The average rate of unemployment in 1958 was 12.9 percent and unemployment continued at a high rate of 15 percent in February 1959.

Watertown: The Watertown labor market includes Jefferson County. The difficulties of this community are attributable to the decline in employment in the machinery and paper industries. The high unemployment rates were first noticeable in March 1957, and continued through all of 1958. The average rate of unemployment for 1958 was 11.6 percent.

AREAS OF SUBSTANTIAL LABOR SURPLUS

In addition to the preceding distressed areas there are a number of labor markets with substantial labor surpluses. This condition has not been of sufficient duration to qualify them for the benefits of the act (table IV). These areas will become eligible as of the following dates:

Labor market area and earliest date of future eligibility

Corning-Hornell: June 1959.
Olean-Salamanca: June 1959.
Albany-Schenectady-Troy: July 1959.
Buffalo: July 1959.
New York: July 1959.
Syracuse: July 1959.
Jamestown-Dunkirk: July 1959.
Orleans: September 1959.
Binghamton: October 1959.
Catskill: December 1959.
Waterford-Mechanicsville-Stillwater: January 1960.
Wellsville: January 1960.
Rochester: July 1960.

TABLE I.—*New York State—Areas of "substantial labor surplus," April 1959, by status of current eligibility and earliest date of future eligibility under the Kilburn, House Banking Committee recommendation, and Senate-adopted S. 722 bills*

The Fine Art of Nepotism

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Evening Herald, Rock Hill, S.C., of May 16, 1959.

THE FINE ART OF NEPOTISM

Nepotism is the practice of bestowing special favors upon one's relatives, by reason of relationship rather than merit.

The word nepotism has become one of rather general use in the past few months because of some dubious practices in Washington. It seems several of our national legislators are in the habit of employing sons, daughters, wives, nephews, nieces, uncles, aunts, etc., at salaries which these people obviously don't merit.

But our U.S. nepotists are apparently a bunch of pikers and amateurs at the practice of nepotism.

The king of them all would be Generalissimo Rafael L. Trujillo of the Dominican Republic.

Today, he celebrates his 29th year of iron-fisted rule over the Dominican Republic.

Trujillo has done a remarkably expert job of keeping the country, so to speak, in the family. Brother Hector is president of the

Republic. Rafael, Jr. (who attracted U.S. attention through his courtship of Actress Zsa Zsa Gabor) is a general and chairman of the joints chiefs of staff. A nephew, Jose, is Secretary of Defense. Another nephew, Luis, is Secretary of War and Aviation. A second son, Rhadames, was a major at 13. It could be that Rhadames is a trifle backward since Rafael, Jr., was a general at 9.

Even the in-laws get into the act. Former Son-in-Law Porfirio Rubirosa (who also had a fling with Zsa Zsa) has served as a diplomat, between marriages and flirtations.

Trujillo's situation may seem humorous to Americans. But a sobering fact is that our country is pouring millions of dollars into Trujillo's Dominican Republic. Our tax money is helping Trujillo tighten his already viselike grip on the Dominican Republic people.

Thanks From the Lapins

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. MACHROWICZ. Mr. Speaker, today ends a glorious 3-month stay in the United States of 30 Polish women, victims of Nazi atrocities in the form of inhuman forced medical experimentations upon them at a time when most of them were young teenagers. Tomorrow these ladies return to Poland.

This entire project was privately financed and directed by the Ravensbrueck Lapin committee, headed by Norman Cousins, editor of the Saturday Review, with the full cooperation of the State Department and the Pan American Airways which has furnished transportation for these ladies to this country and for their return to Poland.

The ladies were given medical care and attention in the United States and were received into the homes of private American families. It was purely a humanitarian project and it has also contributed greatly to the reputation of our Nation for its humanity and desire to promote peace and justice throughout the world.

Yesterday, a number of Members of both Houses of Congress met with the ladies and the Ravensbrueck committee to do honors to the committee and to bade farewell to the ladies. I am sure that everyone who had the privilege of personal contact with these victims of Nazi atrocities must have been tremendously impressed with the courage, spirit and sense of gratitude so obvious in everything they said or did. It would be difficult indeed to guess from their expression the full deepness of their suffering an dtragedy. And there was no feeling of bitterness, merely deep disappointment that to this day the German Government has failed to act to recompense them even in part for the terrible injustice inflicted upon them. To me and, I am sure, to all of us, they were an inspiration for greater efforts on behalf of justice and peace for all the world.

As an expression of the feelings of these ladies, I present a statement from one of them. May God grant that the fine action of the Ravensbrueck committee may inspire us to further and even more effective acts proving to the world that the people of the United States are the most humanitarian and peace-loving Nation in the world.

I REGAINED MY FAITH IN PEOPLE

(Stefania Lotocka thanks everyone in the name of the lapins)

Like a fairy tale 3 months have passed since the moment of landing in New York. Already the full-hearted guardianship of Norman Cousins and his bewitching daughter, accompanying us during our trip all the way from Warsaw, gave us a taste of what was awaiting us on American soil. After landing in New York, we were again in the care of wonderful people such as Caroline Ferriday, Mrs. Benneson, E. Anderson, and Dr. Hitzig. For 4 days during our stay they devoted all their valuable time to us. In New York I learned that four of us were invited to Detroit.

In complete consecration lovely, smiling Judy Reynolds arrived for us. With Judy we also became friends communicating with her in a mixture of languages—English, French, and Polish.

The 23d of December we flew to Detroit. The welcome at the airport I will never forget. I was touched, sick, and very tired. At a certain moment I met the eyes of Dr. Dorsey and under the influence of his expression, a feeling of security came over me unknown since my return from Camp Ravensbrueck. That evening I met several ladies from the committee, again people with overflowing hearts: Mrs. Harvey Barcus, Mrs. L. Gussow, Mrs. E. Gaska, and several others who took us under their protective wings. The holidays passed with mixed emotional moods. Immediately after the holidays each one was placed under the solicitous care of doctors and each one according to her needs started her cure. I learned that all the doctors donated their medical care gratis, devoting very much of their valuable time. Dr. Dorsey, chairman of the committee, surrounded us with truly fatherly concern. All the doctors like Dr. Krystal, Dr. T. A. Petty, Dr. C. A. Domzalski, Dr. W. Kozlowski, Dr. E. Tanay, Dr. T. Zurkowski, and Dr. Sadowski to bring relief to our pains and ailments.

Dr. S. J. Roman, after a thorough examination, donated to each of us glasses. Dr. A. F. Pozdol, Dr. Drabkowski, Dr. J. L. Toton, Dr. Jerome Krause, Dr. A. C. Sawicki, and Dr. S. Laczynski—dentists who on our razed teeth built themselves magnificent monuments. All of society and the entire Polonia gave proof of their concern in our fate.

Thanks to the devotion of Prof. E. Ortega with the Berlitz method we are able to communicate in the English tongue.

From the persons with whom we are living and from those we contact, we are continually receiving so many proofs of their sincere friendliness that to the end of my life I am supplied with food for the soul. I regained faith in people.

I know and understand that more than once we were the cause of much trouble to you, dear friends. Each one of us taken individually is a problem. I am also certain that if you think of our difficult experiences, from the bottom of your big hearts you will forgive all.

From my childhood I remember that every fable had its end. Now I know, this fable does not have an end. But to be able to understand and evaluate this one must go through hell and fulfill life. So this miraculous, never-ending fable I will take with me to Poland.

STEFANIA LOTOCKA.

The Conservation Reserve Authorized by the Soil Bank Act

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. DINGELL. Mr. Speaker, the conservation reserve authorized by the Soil Bank Act is a Federal program, which was supported by members of both parties. The program has been in operation for 3 years and during that time, it has established a remarkable record of accomplishment.

The conservation record is particularly impressive. During the time the program has been in operation, a total of 23 million acres has been placed in the reserve. In 1957, a total of 6 million acres was placed under contract. In 1958, a total of 4 million acres was placed under contract. In 1959, a total of 13 million acres was placed under contract and an additional 7 million acres was offered by the Nation's farmers but could not be placed in the reserve because the Department of Agriculture did not have a sufficient authorization to enter into contracts on this land.

On the first 10 million acres placed in the reserve during 1957 and 1958, establishment of protective cover has largely been completed. On this land, nearly 9 million acres are now covered with flourishing stands of grass which protects the soil from wind and water erosion, conserves the plant nutrients for further generations of Americans, and also contributes to the wildlife populations on this and adjacent lands. A truly remarkable accomplishment in this regard is the fact that in excess of 3 million acres of this grass has been established in the southern Great Plains, usually known as the dust bowl, where wind erosion has been a problem for over 30 years.

Another million acres have been planted to trees—a major contribution to forestry, wise land use, and conservation of soil and water on these lands.

On the 13 million acres placed in the reserve in 1959, final figures are not as yet available. On the basis of a sample projected to the entire acreage, it is estimated that on this land, 3 million acres are already established with a satisfactory cover, 8,500,000 acres are to be planted to grass, 700,000 acres are to be planted to trees, 150,000 acres are to be developed as wildlife cover, and the balance to be established in temporary cover, water conservation measures, etc.

The impact of the program on conservation has equaled or exceeded the highest expectations of the various conservation groups who supported the original legislation.

Among the many favorable aspects of the conservation reserve, one of the most noteworthy is the wildlife phase. It is particularly noteworthy because the benefits of the program to wildlife extends to such a widespread segment of the general public. Both urban and rural peo-

ple enjoy hunting and fishing. In fact, one of every five Americans over 12 years of age fished and/or hunted during recent years. This army of sportsmen supported the original legislation and has been enthusiastic over the increase in wildlife which has already taken place.

Sportsmen in such States as Ohio, Georgia, South Dakota, Oklahoma, Washington, and Michigan have reported greatly improved hunting on lands in and near conservation reserve acres. Game and fish department figures show almost a 100 percent increase in pheasant population during the past 2 years in North Dakota, South Dakota, Nebraska, Minnesota, and Iowa. Wildlife population increases have been reported in every State where substantial acreages have been placed in the conservation reserve.

Conservationists recognize and approve the wildlife improvements resulting from the program and credit the increase to the 10 million acres placed in the reserve through 1958. Similar benefits are anticipated from the 13 million acres added in 1959. They also expect comparable benefits if the program were carried forward to the ultimate goal of 60 million acres originally contemplated for placing in the conservation reserve.

These conservation interests and sportsmen are unable to understand why a program, so successful and of such widespread benefit, should now be crippled by two actions of the Appropriations Committee.

The limitation on the 1960 authorization to $325 million dollars will almost halt placing additional land in the program. The 2.3 million acres that can be added within this limit will hold the program to 25 million acres—far from the 60 million acre goal.

Even worse is the action of the committee in setting a $3,000 maximum contract limitation. This will in effect make it almost impossible to add any land to the reserve next year.

The conservation reserve program has demonstrated its ability to encourage farmers voluntarily to reduce production. It has made possible a substantial land use adjustment, which contributes to soil, water, forest and wildlife conservation. It deserves continued bipartisan support.

Resolution of Council No. 731, Knights of Columbus, Waukegan, Ill.

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am happy to offer a resolution of Waukegan, Ill., Council No. 731, Knights of Columbus, concerning the joint resolution declaring Good Friday a legal holiday:

RESOLUTION OF WAUKEGAN, ILL., COUNCIL NO. 731, KNIGHTS OF COLUMBUS, APPROVING JOINT RESOLUTION OF CONGRESS DECLARING GOOD FRIDAY A LEGAL HOLIDAY

Whereas there is now pending in the U.S. Congress House Joint Resolution 338, a joint resolution declaring Good Friday in each year to be a legal holiday, introduced in the House of Representatives, April 14, 1959; and

Whereas the pendency of this resolution before Congress has been brought to the attention of Waukegan, Ill., Council No. 731, Knights of Columbus: Now, therefore, be it

Resolved by Waukegan, Ill., Council No. 731, Knights of Columbus, That:

SECTION 1. The joint resolution declaring Good Friday in each year to be a legal holiday being House Joint Resolution 338, 86th Congress, 1st session, introduced in the House of Representatives, April 14, 1959, be and the same is hereby approved by Waukegan, Ill., Council No. 731, Knights of Columbus.

SEC. 2. The passage of this joint resolution by both Houses of Congress is respectfully requested by Waukegan, Ill., Council No. 731, Knights of Columbus.

SEC. 3. A certified copy of this resolution be sent by the recording secretary of this council to Senator DOUGLAS, Senator DIRKSEN, Representative CHURCH, and Representative CELLER, in Washington, D.C.

Not a Remedy

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Rockford (Ill.) Morning Star of May 19, 1959, entitled "Not a Remedy":

NOT A REMEDY

Congressional Democratic leaders would relieve the headache the vast Federal highway program is giving Congress by transferring funds from the General Treasury to the highway trust fund. Such a switch would deepen any Federal deficit, but the Democratic spenders have not shown much concern over deficits. They don't want to curtail the program and neither do they want to raise taxes to keep it going full scale.

When Congress in 1956 authorized the 41,000-mile National System of Interstate Highways, it created a special trust fund outside the regular Federal budget to finance the construction program, with revenue from highway-user taxes, such as those on gasoline and tires, going into the fund. Due partly to increased construction costs and partly to an increase in authorized mileage, the cost of the program is now estimated to be nearly $12 billion more than the revenues from the earmarked funds.

An amendment introduced by Senator BYRD, of Virginia, and made a part of the 1956 law provided that the Federal Government could not spend any more money than it had in the trust fund. As an antirecession measure, Congress this year suspended the Byrd amendment for fiscal 1959 and 1960, but not for later years. The amendment would apply in fiscal 1961.

The Federal Bureau of Public Roads contends it cannot, under the Byrd amendment, make any allocations to the States for fiscal 1961 this summer because the highway trust fund is so short of money. The fiscal 1961 Federal money ordinarily would be apportioned this July because there is a gap of a year between the time the Federal money is promised and the States are ready to spend it. The Democratic spenders would meet this problem by dipping into the General Treasury.

President Eisenhower, who recognizes that the straightforward way to carry out spending programs is to provide new taxes, has proposed an increase of 1½ cents a gallon in the present 3-cent Federal tax on gasoline and diesel fuels. The increase would raise an extra $723 million the first year and $900 million in each following year for the highway trust fund. At present rates, the highway trust fund would put out an estimated $241 million more during the next fiscal year than it took in.

The public was assured when the plan was adopted in 1956 that the program would operate on a pay-as-you-go basis through the highway trust fund. It should be kept on that basis. If the gasoline tax is not to be raised, the program should be cut back to where building would be limited to available funds provided under the existing law.

The "Payoff" Press

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. KARTH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial which appeared in the May 16, 1959, edition of the AFL–CIO News:

THE "PAYOFF" PRESS

It's a lot easier to mount an editorial crusade against crooks and racketeers or to pen righteous editorials about "labor racketeers" than to call the police.

That's the dominant lesson that emerges from the shameful testimony given the McClellan committee on payoffs by several New York newspapers to easily identifiable hoodlums disguising their extortion racket in trade union trappings.

The highly respected New York Times, the sometimes raucous New York Daily Mirror, and the American Weekly, a widely distributed Sunday supplement, all admitted paying off racketeers to insure delivery of sections of their papers during a Teamsters strike.

Somewhat chastened by public exposure, they solemnly promised the McClellan committee that they wouldn't do it again. And amazingly, Senator MCCLELLAN didn't bother to raise the vital point that a newspaper dedicated to public service and clean labor-management relations didn't call in the district attorney or courageously refuse to pay tribute.

Instead the Arkansas Senator called for placing all transportation unions under the antitrust laws, an ill-conceived, drastic, and wholly unrealistic step that would penalize millions of members of clean unions without ever getting to the root of the problem.

The New York newspaper case exposes the double standard that governs too many American business operations—clamor for restrictive and punitive labor legislation, but pay off any hoodlum that comes along posing as a labor official.

Corruption and extortion in labor-management relations will be eliminated when employers refuse to do business with crooks.

Tied in with the AFL–CIO's campaign against the racketeers, this will wipe out the

practices that are sowing the seeds of destruction of decency and honesty in labor-management relations.

Maritime Day, 1959

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. BECKER. Mr. Speaker, on Friday of this week, May 22, we will observe Maritime Day. It seems fitting that in saluting the occasion we pause to consider what this means.

The security and well-being of every citizen depends on a strong merchant marine—traditionally operated as a private enterprise with the aid and cooperation of the Federal Government.

Both in peace and war, a strong merchant marine is essential to the strength of our country. A strong merchant fleet is necessary for the prosperity and stability of America's peacetime commerce and it becomes America's fourth arm of defense in times of national emergency.

During war years, American merchant ships were equipped with antiaircraft and heavier guns and merchant crews shared the gun stations with U.S. Navy gun crews.

In M-day or mobilization day plans, if the need should ever arise, the Navy would be responsible for the utilization and routing of merchant vessels. These ships would become naval auxiliaries for the transport of troops, munitions, fuel, and supplies.

In the security plan of the Nation, the ships of the American merchant marine are of prime importance and trained and efficient personnel for these ships is a natural concern of the Government.

It has been said that a ship is only as good as the men that sail her; therefore, if America is to have good ships, she must have good men aboard these ships.

Congress recognized this some years ago and the Merchant Marine Act of 1936 was signed into law. This called for Federal training of merchant officers and the act has often been referred to as the Magna Charta of the merchant marine. Standards were raised and, consequently, the U.S. Merchant Marine Academy at Kings Point was dedicated in 1942.

THE CAMPUS OF THE SEVEN SEAS

The U.S. Merchant Marine Academy at Kings Point is located on the north shore of Long Island, near the confluence of Long Island Sound and the East River, in sight of the towering skyline of Manhattan.

Built and equipped at a cost of $8 million, Kings Point occupies approximately a 65-acre site on Long Island Sound, a campus of the seven seas.

I have watched Kings Point grow from its very first day, when I attended the opening ceremonies as Nassau County commander of the American Legion, later during my 8 years in the Assembly of New York State as chairman of the military law committee and during my years in Congress; several times, I have served on the congressional Board of Visitors to Kings Point and on each occasion of a visit to the Academy I have been impressed by this "Annapolis of the Merchant Marine," its officers, and the cadets.

Every citizen should visit Kings Point and see this fine institution. Pause in the library and see the records made by cadets during World War 2 and read the tales of heroism.

The Academy's fine gymnasium, O'Hara Hall, is named after Ed O'Hara, a cadet from California. During a battle with a German raider, O'Hara, seeing the Navy gunners downed by enemy fire, took over the gun and dispatched the enemy to the bottom of the sea, but O'Hara was mortally wounded in the courageous action.

President Eisenhower on February 20, 1956, signed the bill that gave Kings Point permanent status thereby placing it alongside West Point, Annapolis, the Coast Guard, and Air Force Academies as one of Uncle Sam's five Federal Academies for officer training.

It was a happy day for all hands, my fellow colleagues STEVE DEROUNIAN, STUYV WAINWRIGHT, and I had worked long and hard to insure the final passage of the bill for permanency. John Scherger, chief clerk of the supreme court in Mineola and a very good friend, was president of the Association of Parents and Friends of Kings Point. The association had aided considerably in the battle for recognition.

TOP ADMIRAL, TOP STAFF

The Academy, under the capable direction of Rear Adm. Gordon McLintock, has advanced far in the field of higher education. The faculty is often called on for aid and cooperation in highly technical matters. Presently, several Academy officers are asigned to the building of the *Savannah*, America's first atom-powered ship. Truly a remarkable testimonial to the knoweldge and competence of the Academy staff.

SPARKLING SPORTS STAFF

Kings Point has also advanced in the world of college sports. Under Comdr. James W. Liebertz the Academy presents an intercollegiate sports program unequalled by any school its size.

Commander Liebertz was aide to Capt. Gene Tunney, who was in charge of the Navy's physical fitness program during World War II. The Kings Point athletic director is one of the Nations' most popular men in college athletics and his coaching staff includes two former great athletes from schools here in the Nation's Capitol—Clem Stralka, of Georgetown, and later a great line star with the Washington Redskins, and Tim Stapleton, a three-letter man at George Washington. Harry Wright, All-American from Notre Dame, took over last year as head football coach and the football fortunes started to rise to new heights. St. Comdr. Tom Carmody supervises the physical training program that has every cadet participating in physical development.

I might add that in addition to the educational and physical development of the cadet, there are the Academy chaplains, representing the three faiths, to aid the Kings Pointers' spiritual development.

The cadets spend 3 11-month years in residence at the Academy, plus a year of study and work aboard American vessels at sea. Upon successful completion of the course, which almost equals 5 years of regular college study, the degree of bachelor of science is awarded. Kings Pointers also complete courses qualifying them for U.S. Naval Reserve commissions.

The U.S. Merchant Marine Academy in these short, yet action-packed years of existence has served the country well. We hope that Kings Point will continue to provide the young men who will be America's merchant marine officers and ambassadors of good will for many more peaceful maritime days.

Imports of Canadian Bread in the Detroit Market

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. KNOX. Mr. Speaker, a recent Associated Press news item datelined Lansing, Mich., described a serious problem that has developed in the city of Detroit because of the free importation of Canadian bread. This dispatch quotes two State senators, Harold M. Ryan and Raymond C. Dzendzel, who have urged the Michigan Legislature to appeal to Congress to "rectify the inequity of free bread imports" from Windsor, Canada.

The two senators pointed out that while bread imported from Canada is duty free the Canadian Government levies a tariff on traffic in the other direction. Senator Ryan cited the fact that Canadian bakers work for 85 cents an hour less than the current scale in Detroit and that flour costs $1.25 less per hundredweight in Canada. These basic inequities have naturally created unfair competition for the Detroit bakers. The flood of imported bread has reached the staggering figure of 400,000 loaves every month and it has forced Detroit's bakeries to slash prices drastically in a futile attempt to remain competitive.

While this problem would be serious enough in any American city, it is particularly ominous in Detroit. As you all know, the State of Michigan is one of the leading centers of unemployment in this country with Detroit itself contributing vast numbers to the rolls of the relief-eligible. The unfair competition experienced by the baking industry in Detroit comes on top of an already bad situation in the automobile industry where, despite a favorable rate of auto sales so

far this year, many skilled workers are without jobs.

It was not too long ago that one of our most highly esteemed colleagues, the late Honorable Daniel A. Reed, spoke out against the severe domestic problems that were being created by unregulated auto imports. On February 2, 1959, referring to a speech made by Mr. Ernest R. Breech of the Ford Motor Co., Mr. Reed said:

The next time the free-trade advocates from Detroit express concern over unemployment in that area, they might well give some thought to the fact that the difference between the jobs displaced by imported autos and the jobs created by auto exports showed a net deficit of 28,900 jobs. That conservative estimate is no insubstantial number of unemployed American citizens, the vast majority of them in Michigan.

Our late colleague went on to compute the monetary loss to America caused by this unemployment to be in excess of $200 million for the 12-month period preceding his remarks. Just think of that—$200 million in wages lost because of imported automobiles—and then tell me that our so-called free trade is actually free.

The same lack of reciprocity that is crippling the baking industry in Detroit has been injurying our auto industry for years. In 1957, 2 years ago, the United States imported 95,510 automobiles from the United Kingdom and 100,083 automobiles from West Germany. And how many cars do you suppose we sold in those two countries in the same year? Britain allowed only 265 America autos to be imported and a scant 576 cars of our manufacture managed to hurdle the trade barriers of West Germany. And this is the phenomenon that some of us refer to as reciprocal trade.

Returning to the cross-border competition in the importation of bread by hometown of Sault Ste. Marie, Mich., felt the seriousness of situation when Our Own Bakery was forced to cease operation and put 60 men out of work. This bakery was confronted with competing with Canadian bread imported from Sault Ste. Marie, Canada.

The 11th Congressional District of Michigan has also suffered because of the importation of hardwood plywood. For many years certain areas of my district have been dependent upon the plywood industry for the employment of its citizens. Up until the year 1951 the domestic industry was not too greatly effected by the imports of plywood; as the imports in 1951 consisted of 67 million square feet, and the domestic consumption at that time was 827 million square feet. But when we look at the statistics of imports we find that 4 years later in 1955 the imports had grown to 628 million square feet. The domestic consumption had increased about 100 percent to 1.5 billion square feet. The ratio of the imports was 10 times greater in the year 1955 over the year 1951. The foreign producers gain has been at the expense of the domestic industry with a consequent loss of jobs for our citizens. The towns of Escanaba, Gladstone, Newberry, and Munising, Mich., have drastically felt the impact of such imports, with some plants forced to close their doors, not temporarily, but permanently.

And remember that the problems presented by foreign imports faces all of us; it is not only the bakers, the unemployed woodworkers, the unemployed automobile workers, or the Treasury Department that must bear the expense of our free trade foreign policy. This policy steals money from the pockets of every single U.S. citizen, from every business concern, and from every American industry.

Something must be down before this wasteful, irresponsible doctrine has stolen our country right out from under us.

U.S. Price Fixing (Fair Trade) Bill Contrary to Public Interest

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Waterloo (Iowa) Courier on March 26, 1959, entitled "U.S. Price-Fixing (Fair Trade) Bill Contrary to Public Interest."

That editorial sets out the inherent vices of H.R. 1253, the fair trade measure now pending before the House of Representatives.

Such legislation is not in the public interest and should not be enacted:

U.S. PRICE-FIXING (FAIR TRADE) BILL CONTRARY TO PUBLIC INTEREST

The laws and merchandising practices which parade under the title of "fair trade" are actually mere price-fixing methods designed to stifle competition.

True cutthroat competition is not necessarily in the interest of consumers. If a big, well-capitalized company sells consistently below cost until local competitors are driven out of business, it may later charge excessive prices if it obtains a monopolistic situation. But most such practices are subject to prosecution under the antitrust laws.

The so-called fair trade laws require all merchants to sell products at a price fixed by the manufacturer. Iowa has such a statute, although attempts by national manufacturers to follow price-fixing practices have broken down rapidly in recent years. Iowa has an even worse situation in regard to cigarettes, requiring a fixed mark-up by State law.

What is the net effect of fair trade price fixing where the effort is successful? Robert A. Bicks, first assistant in the Justice Department Antitrust Division, told a congressional committee this week that compliance with such laws increased retail prices by 17 percent, according to a department survey. He reported that nationwide price fixing would cost consumers billions of dollars a year.

However, 16 State courts have now invalidated their fair trade laws; and advocates of price fixing are seeking enactment of a Federal law which would require every retailer to sell the product of a manufacturer at the price set by the manufacturer. As Bicks noted, this would be the least desirable time to adopt a law which could only create higher prices, inflation, and more economic uncertainty.

This is not to deny that there are problems involving competition between reputable, established merchants, and fly-by-night operators. The consumer, if interested only in price when purchasing appliances and other merchandise, will ultimately be cheated if he ignores the availability of servicing and the value of the merchant's good name.

But the solution to such problems does not lie in the elimination of price competition by law. Moreover, the clamor by certain merchant groups for price-fixing practices is bad public relations. The consumers tend to become disillusioned with business advocacy of the free enterprise system when he sees these groups advocating a system which is neither free nor enterprising.

The Labor-Management Performance Act of 1959

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. KEARNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

THE LABOR-MANAGEMENT PERFORMANCE ACT OF 1959

Congressman CARROLL D. KEARNS, ranking Republican on the House Labor Committee, introduced a new labor reform measure in the House today. "Weeks of hearings in the House, together with the public reaction against the Kennedy bill as passed by the Senate, demonstrate the need for a new approach to labor reform," said Congressman KEARNS at a press conference this morning. "I think we've been on the wrong track thus far. We need a new look.

"The heart of the labor reform problem is the breakdown in performance under existing laws. Whether the failure is in the law or its enforcement is an open question. The result is that the fundamental rights of the working men and women of this country definitely are not being protected.

"The breakdown is most serious when it fails to provide lack of protection against internal union abuses and to oust the criminal elements from the union movement. Union members can sometimes obtain relief from internal union problems through use of the courts but it is a long and expensive process. Few rank and file union members can afford the time or the money. In the criminal area the congressional hearings have clearly exposed an appalling failure of enforcement.

"Nevertheless, the Senate act relies on court enforcement of its watered down bill of rights and on criminal penalties for most of the rest of its provisions. Such legislation is no more than a repetition of the same old theme song: 'Let the house of labor take care of itself.'

"My new bill offers a fresh approach. It is based on the recognition that, if the corrupt element is to be eliminated from the labor movement, the major part of the responsibility rests on the membership of any union to do its own housecleaning. Personally, I think they will do it if they are given the necessary tools and real protection while the

job is being done. This bill does exactly that.

"The bill contains a simple by comprehensive bill of rights which will go a long way toward insuring that control of the union will be in the hands of the members rather than the officials. Independently audited financial reports are required but the bill recognizes that regardless of where the reports are filed, only union members will be sufficiently well-informed to question them. Thus it provides that the reports must be given to union members only. By far the great majority of union leaders and employers honest Americans; therefore, no reports are required of labor officials or employers. Such reports are aimed only at wrongdoers and it is ridiculous to think a criminal is going to write us a report of his crime.

"Enforcement procedure is of paramount importance. The bill contains a simple, well-tested method—the unfair labor practice procedure of the National Labor Relations Board. All the member need do is file a charge of violation of the bill of rights or the reporting provisions, and the NLRB takes over the investigation and prosecution of his case. He is protected from retaliation while the case is processed. The confidence which rank and file workmen have in the Board is amply demonstrated by the fact that last quarter they filed 62 percent of the Board's unfair labor practice cases. The bill also includes important changes in Board structure to speed up its case handling."

Congressman KEARNS stated further, "Any labor reform measure must include restrictions on organizational picketing and secondary boycotts. Emotions run high on these issues, but both unions and employers are inclined to forget the impact of such activities on the working men and women who suffer as a result. Their right to be free of such coercion must be preserved if the freedom of association guaranteed by the Wagner Act is to mean anything.

"My new bill prevents picketing after a union loses an NLRB election and, at the same time, markedly speeds up NLRB procedure for holding such elections. It also stops picketing where the labor organization involved cannot establish that 30 percent of the employes want the union to represent them.

"In the secondary boycott area, there are presently restrictions on inducement of secondary employees. They are retained and a ban on threats, restraint and coercion of any person added. Hot cargo contracts are also outlawed.

"Believe me, the time has come to assure a greater voice to the union member in calling strikes. It is obvious that union officials must compete with each other to get the maximum wage increase for their members. Too often the members lose money as a result, either from lost wages or inflation caused by the increase. Consequently, the bill provides for a secret ballot strike vote to be taken within 7 days prior to commencement of any strike.

"There are many other provisions in the bill, which it is impossible to explain in detail in this release. However, they likewise definitely provide practical methods of protecting the rights of individual workmen.

"The Performance Act of 1959 is the least restrictive on the activities of legitimate unions of any bill presently before the House. It provides far fewer opportunities for harrassment of honest unions. At the same time, in my opinion, it provides the union member with the only practical, realistic method of enforcing his rights that can be found in any of the bills introduced.

"As a Member of Congress for 13 years, serving on the distinguished House Labor Committee, I believe that this bill offers the greatest opportunity for harmonious labor-management relations, and protection to the public, of any approach yet conceived."

Indonesia

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 19, 1959

Mr. LOSER. Mr. Speaker, Mr. Coleman A. Harwell, editor of the Nashville Tennessean, and Mr. Kenneth Olson, dean emeritus of Northwestern University, have just returned from a 30,000-mile round-the-world trip. These distinguished gentlemen held journalism seminars, under the State Department's exchange program, in Greece, Israel, Afghanistan, Ceylon, and Indonesia.

It has been my privilege to place in the RECORD the articles written by Mr. Harwell for his paper during this world tour. Today, under leave to extend my remarks, I am including the last two articles on Indonesia. They follow:

THE U.S. TAXPAYER HAD A HEART ATTACK

(By Coleman A. Harwell)

JAKARTA, INDONESIA.—The lady was outraged by the treatment given her cruise ship in the harbor here.

Officers stalked all over the ship, she said. She said they demanded cigarettes, liquor, and food, they were insolent and arrogant.

One American man aboard shouted, "These are the people getting my tax dollars."

He became so outraged, she went on, that he actually had a heart attack. And she didn't blame him.

One significant detail needs to be added to this account. The cruise ship was Dutch.

It was as if a party of Germans had gone to Paris for a holiday just after the World War II occupation there. They would not have been warmly received.

It would have helped the outraged American taxpayer and it might have helped his country, too, if he had tried to see the situation here, not from the view of a luxury cruise member, but from that of the citizen of the country visited. We thought of him a number of times during our stay here.

SOME THINGS OBVIOUS

He might not have found it easy to see things as Indonesians see them. We found some well-trained, diligent Americans here who are finding it difficult to get the viewpoint.

The boundless enthusiasm of the people over their independence is apparent. That they do not know precisely how to use it and that their zeal carries them off in many directions is also apparent, and understandable.

The country is full of contrasts and contradictions. But some things are obvious to everyone interested.

When the Dutch were thrown out (finally in 1949), they left one of the worst rates of literacy in the world, estimated as low as 3 percent. They left no trained nationals (you don't use the word "native" anywhere today) to man public services or businesses.

They left few hospitals, few doctors, few schools, few teachers, little industry. They left poverty. They left hatred.

Indonesia won its independence technically in 1945 after defeat of the Japanese, who had taken over from the Dutch in 1942. There followed a period of great confusion after which the British came to represent the Allies and accept Japanese surrender. The Indonesians, with Sukarno as the hero-leader, proclaimed their independence and sought to take over. The Dutch, listed among the Allies, claimed control. There were sporadic clashes all over the country.

TREATY DRAWN

In time, a commission drew up a treaty, granting independence to Indonesia, leaving only a portion of West New Guinea in Dutch hands, and that subject to negotiation within a year.

Thus Sukarno and his followers had won their 20-year fight—almost. Now remained the problem of making victory real.

Sukarno was suspect by the West on the ground that he had collaborated with the Japanese. His reply was that he had seen this, not as service to the Japanese, but as a means of achieving independence from the Dutch.

In time he nodded in the direction of Russia and the West at the same time. He proclaimed a policy of neutrality. He made speeches. He did little.

But some of the things he did do made some of his fellow countrymen very unhappy.

They raised an issue similar in some respects to one that has disturbed the U.S. States rights.

DEMANDED MORE

The vast and rich, though thinly populated islands of Sumatra, Celebes, Borneo and the lesser Sundras charged that smaller, poorer, more densely populated Java was draining the national treasury. They demanded a greater share of returns from their rubber, oil, pepper, coffee, copra and tobacco. Their demands got nowhere.

So leaders in these areas began a system of sabotaging the central government. They shipped their products outside, collected, built up a revolutionary fund.

At this point, seeing serious consequences ahead, Sokarno decided to rely on his strongest rallying point, hatred of the Dutch. Citing the fact that the Dutch had not carried out the agreement to negotiate on West New Guinea, he proclaimed seizure of all their properties in Indonesia, valued at nearly $2 billion.

Thus again, Sukarno was the hero.

ANOTHER CHALLENGE

But another challenge lay in the future. By spring of 1958, the rebel leaders proclaimed they were ready to strike again.

They said they had strong forces, especially in big Sumatra, and would resist the central government "to the last."

What happened to the alleged "strong forces" is a mystery like many another in Indonesia. A lot of people, including many Americans, were fooled—in fact, many Indonesians still believe the rebellion had American encouragement. They cite the air attacks on government forces which could have come only from Formosa and other areas of our allies. They cited the capture of American Allan L. Pope, who was shot down in an antiquated plane he flew for the rebels for $10,000 per month.

Incidentally, Pope is still a captive in Indonesia. Our officials see him whenever they wish, say he has recovered from his injuries except for a limp, and is well-cared for. They keep agreement with the Indonesian Government.

Regardless of why the rebellion failed, the important points are these:

1. When forces of the central government which was apparently tottering were gathered together by vigorous, young Gen. Abdul Haris Nasution, and went after the rebels in Sumatra, they found no major resistance. The rebellion withdrew to small pockets in the wilds, where it still exists today, how strongly, is anybody's guess. Strong enough, it is obvious, either to justify the Sukarno government continuing its martial rule or to provide an excuse for doing so.

2. Sukarno, like him or not, has ridden out another crisis. He could now continue his

palship with Red China's Chou En-lai and court Russian aid while visiting the United States, and making comments that sound anti-Communist.

3. It became apparent that two other men were of major importance, General Nasution, whose power is great in the military rule and who is more clearly tagged an anti-Red, and Prime Minister Djuanda, a nonparty engineer, widely respected.

These are the facts faced by America in this vast land of 85 million people, which stretches east to west as wide as the United States, covering a major action of the protective island rim that encircles Red territory, and contains a great amount of the world's natural wealth.

FACTS TO FACE

These are facts on which the United States based its decision early this year to ship a quantity of small arms to Indonesia. The shipment, announced by Ambassador Howard Jones, has been guessed as worth $20 million. There followed more recently U.S. announcement of the sales of some outdated warplanes to Indonesia.

Americans favoring the moves feel we must show the Sukarno-Nasution-Djuanda government that we'll give it support in a crisis. Otherwise, they believe, Indonesia will inevitably turn toward Red China and Russia.

How, they say, can we gain Indonesia's friendship if we sit by and let the Communist nations supply its military needs? How, they say, can we expect the Indonesians to rely on us and the West when we continue to let our European ally, Holland, cling to a portion of this country? Don't we know how the Dutch are hated here? Are we going to follow their lead or are we going to act in the manner of Abraham Lincoln and Franklin D. Roosevelt and the other Americans often quoted by the Indonesians themselves as leaders of liberty.

And what sense does it make for us to build roads and help Indonesia eradicate illiteracy if we aren't willing to show confidence in their government?

Thus, out of much confusion, our American policy seems to be emerging in Indonesia.

INDONESIA HUNGERS FOR EDUCATION

(By Coleman A. Harwell)

JAKARTA, INDONESIA.—In 1950, the year the Republic of Indonesia was established, two of its citizens served on public university faculties.

Out of 70 million people that is a low percentage.

This indicates the state of education at that time for all the people of Indonesia.

It has been estimated that the rate of literacy here under Dutch rule was among the worst in the world, perhaps as low as 3 percent.

When the United States considered aid to Indonesia, one of the things agreed upon by International Cooperation Administration (ICA) officials was that education should have a top priority.

Today it is ICA's best estimate that one-half of the children of the whole country go to school. All of these are expected to go through the third grade and become literate. There are 200 Indonesians serving on public university faculties, a great increase over 1950, and 25,000 university students.

You've heard people described as being hungry for education. There seems to be little doubt that this is true of the Indonesians, certainly of those in accessible areas.

Towns and villages have made their own brick and built 9,000 schools for themselves in the past 2 years. Every school in Indonesia, it is said, holds at least two sessions per day.

PEABODY GRADUATE

Of special interest to Nashville and its neighbors is the fact that the educational assistance program here is directed by Dr. Will P. Saunders, a graduate of Peabody College. Dr. Saunders came from Abbeville, Ala., was graduated from State Teachers College, Troy, taught in Alabama and was a school supervisor in North Carolina. To this solid experience, he added M.A. and Ph. D. degrees at Peabody, the latter in 1953, soon after which he came here.

A hearty, dedicated type, Dr. Saunders doesn't skip the bad when discussing the job here.

He cites, for instance, our early mistake in teaching unneeded technical skills—the operation of lathes, for instance, in a country that uses none. ICA is now making a study, with Ford Foundation aid, to determine what skills are useful.

He cites these things:

More than 2,000 Indonesians have studied in America since 1950; others will follow next year.

The University of California contracted in 1953 with the University of Indonesia to develop a medical school. He says with pride that this project is now "phased out." That means completed. He says the medical school is an "excellent one."

The University of Kentucky contracted to develop an engineering school at the University of Bandung. Under Dr. Cliff Keizer progress is being made. The school has 19 professors.

Kentucky is also helping develop an agricultural and veterinary school at Bogor; UCLA is developing an engineering school at Jogjakarta; John Hopkins is aiding an international relations school.

The Ford Foundation is cooperating with ICA and sponsors these projects: A badly needed economics school aided by University of California; another aided by Wisconsin; teacher training schools aided by State University of New York and United Brethren at Protestant University in Sumatra.

Eminent educators working with Dr. Saunders include: Dr. Raymond B. Allen, president, UCLA; Dr. Philip Thayer, dean, Johns Hopkins; Dr. Henry Dyer, vice president, education testing service, Princeton; Dr. Abdul Sassani, U.S. Office of Education; Dr. Mike Krenitzski, Texas A. & M.

The chief adviser on higher education is Dr. Helen Dwight Reid, former college dean and U.S. education official.

Cost of the program: $3 million per year from ICA; $1 million from the Ford Foundation.

The value: Who can estimate the impact of broad literacy and a substantial rate of scholarship in technical fields among 80 million people in one of the world's richest countries?

Suppose this has the impact of American educators? Suppose, on the other hand, that it does not? Suppose, instead, the $5 million accepted recently from Russia for a technical school at Amban, were left unchallenged?

ANOTHER TENNESSEAN

Overseeing the whole ICA program here, including education, is another man with Tennessee ties. James Baird, of Baird, Miss., a former planter, a Temple University law graduate, with wide administrative experience, looks forward to his biennial home leave this summer and a visit to Monteagle. He and Mrs. Baird hope their children will join them there.

Right now, Baird is engrossed in these things:

Plans for a 250-mile road into rich, remote areas of Sumatra, for which ICA will furnish the technical guidance and supervision;

Installation of 50 or 60 diesel generators which will use some of the vast oil resources here to furnish electricity to small cities in remote areas;

Continuation of the malaria-control project jointly with World Health Organization of the U.N., which it is hoped can stamp out the disease in 10 years;

Negotiation of a new surplus commodities contract under which Indonesia procures cotton, rice, tobacco, powdered milk and textiles from America;

Plans for construction of 30 merchant marine ships, possibly by Japanese shipyards, financed largely by Japanese reparations, and concurrent training of officers by the Merchant Marine Academy at Sands Point, R. I.;

A projected training program from film industry leaders, technicians, etc., in Hollywood, to compete with the influence of Red China.

Baird's aim is to help Indonesians develop their own resources, both human and natural. He believes they have an abundance of both. In them he sees the hope of a nation politically and economically independent.

How We Stand From Tia Juana to Tierra Del Fuego

EXTENSION OF REMARKS

OF

HON. STEVEN V. CARTER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. CARTER. Mr. Speaker, under leave to extend my remarks. I would like to include in the RECORD a newspaper editorial by William S. White, which appeared in the Washington Evening Star on May 18. This editorial concerns itself with the serious situation that confronts America in dealing with her neighbors to the south. Some of my colleagues may find it surprising that a Congressman from Iowa should be concerned about anything other than the price of corn. However, in watching the change in the character of the world map, the change in the world's political alinements and, I think, looking at the future realistically, it suddenly becomes painfully obvious that the time may not be too far away when we will be thrown in total reliance on the Western Hemisphere as our bastian of defense. Would not it indeed be a sad note in history if we were to preempt the possibility of our hemispheric solidarity through failure to properly deal and communicate with our friends to the south.

Mr. Speaker, there are many more millions of people living south of the Rio Grande than live to the north of it, and the indications are that population growth south of the Rio Grande will be at a much greater rate in the future than the north of the Rio Grande. From some reason, I find that many people are still surprised by this particular statistic. It is true, Mr. Speaker, that machines and production are important; but if any of us have previously doubted the fact, I think we are convinced now that people still are and probably always will be the most important thing on the face of this earth.

I am not in complete agreement with Mr. White's proposal for collective military actions that are included in the following editorial. However, I do think it might be a worthwhile stopgap measure to be considered by the American Government. The only true way to arrive at a thorough understanding and a fully cooperative community of nations with Latin America is for us to share unselfishly our wealth and our experience with the people that inhabit that area. Let me emphasize that this must not and cannot be done with any kind of indulgent or protective attitude. It must be done in a spirit of deepest sincerity, as a cooperative venture between proud nations with great faith in the future of our lands and our people. If there are those among us who constantly apply the "what's in it for me" criteron to any program for the advancement of mankind, then I would simply point to the enlightened self-interest aspect inherent in a program to reverse the present trend in Latin America. Mr. White's editorial follows:

EROSION IN LATIN AMERICA—COLLECTIVE MILITARY ACTION SEEN AS SALVATION OF U.S. INFLUENCE

(By William S. White)

Our principal ally, Britain, is negotiating in the Foreign Ministers Conference at Geneva under the cruel pressure of steadily increasing dangers to vital British interests in the Middle East.

It is not merely the Berlin crisis which Britain must face, along with the rest of the West. Beyond the Mediterranean, Iraq—which both the United States and the British have so long sought to keep in the pro-West camp—has now seemingly gone all the way into international communism. Moscow has turned the Middle Eastern screw at a brutally apt moment.

Responsible informants in Washington therefore assume, as they must, that British policy at Geneva over Germany is bound to be softened by British concern as to what the Russians might further do in the Middle East.

A chief Western negotiator at Geneva is thus being distracted and weakened by unavoidable fears as to what might happen a long way from Berlin. The long story of declining British power in what used to be a great sphere of British influence, the valley of the Nile is developing a sad new chapter.

Not at this present Big Four Conference will America be similarly bedeviled and enfeebled by perils elsewhere to American interests. But there is a rising possibility that one day, in some other Big Four meeting over Europe, we, too, will have to fight with one hand while the other hand gropes for solutions of other problems far away.

For U.S. influence in the vast 21-nation area of Pan America is crumbling away, all but unnoticed in our preoccupation with the Old World. This vast pan-American expanse, as the Middle East expanse used to be to the British, is our traditional sphere of influence. And it is the source of much of our real economic strength, though few realize it and most of these few forget it.

Neither the Eisenhower administration nor Congress is paying great heed to this slow erosion in the Western Hemisphere. But a few quiet men are pressing constantly for facing up to the realities in Latin America before it is too late for us, as it is already too late for the British in the Middle East.

One of these men is Senator GEORGE SMATHERS, of Florida, whose awareness of Latin America is sharpened by his political location. SMATHERS for years has been telling the administration and Congress that things are not good for us south of the border. He knows, because he goes down periodically to make fresh checks and because he has thoroughly reliable private sources of intelligence.

Communism is an increasing force. Anti-Americanism (U.S. style) is growing, in part because of our own faults. But most of all, economic problems aside, the danger in Latin America comes from the absence of real military power properly restrained.

SMATHERS has highly reliable information, for example, that the recent invasion of Panama from Cuba would have succeeded had it involved as many as 250, repeat 250, well armed men. This may seem a comic opera thing; but it is far from that.

A revolutionary overturn in Panama would intolerably threaten us if, as almost certainly would be the case, it endangered the Panama Canal. In such an event we should be compelled to intervene with troops—and then the cry of Yankee imperialism would resound from the Rio Grande to the bottom tip of South America.

What is the answer? It is to supply what is now absent—a real and collective military power in Latin America which the Latin Americans themselves would respect, and not suspect. SMATHERS and others, therefore, are working for the establishment of an all-American international police force, made up of volunteers from all the 21 pan-American nations.

Such a force might one day avoid in the New World the chaos now gripping the ancient Middle East. And it might avert the clear possibility of an ultimate loss of practical U.S. influence right here in the Western Hemisphere.

Memorial to Late Bruce Blackman, Wilkes-Barre Newspaperman

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader Evening News of May 11, 1959:

BRUCE BLACKMAN MEMORIAL

It was a warming gesture to have the new Forty Fort High School unit of the National Honor Society designated the Bruce G. Blackman Chapter in tribute to the memory of the late sports editor of the Times-Leader Evening News, a member of the board of education in the West Side district almost a quarter century.

Bruce Blackman was generously endowed with the ideals of service, leadership, and character on which membership in the society is based. He himself easily would have qualified for election. Those of us who were his associates in the fourth estate during the past 40 years knew him as a man of integrity and devotion to duty. He was as dedicated to education and to youth as he was to journalism, which is saying a great deal.

The five charter members of the Bruce G. Blackman Chapter of the National Honor Society and others who will be added to the rolls in the years to come now will be doubly honored by their inclusion in this select company bearing his name. In perpetuating his memory in this fashion, the organization will provide its members with a daily source of inspiration and an example they well might emulate through life.

Very few individuals are heroes to those who know them best, as familiarity detracts from the aura of greatness. Bruce Blackman is one of the exceptions to the rule, and with good reason.

Protection for U.S. Silk Industry

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of May 11, 1959:

THREAT TO LOCAL ECONOMY—PROTECTION FOR U.S. SILK INDUSTRY

This community has a big stake in the hearing before the U.S. Tariff Commission in Washington on May 19 when the appeal of the American Silk Council for relief from trade concessions on silk fabric imports will be heard.

At the present time, the entire industry concentrated in the East, with this area one of the principal centers, has been reeling under the effects of ruinous foreign competition, chiefly from Japan.

With workers in the American industry receiving approximately $1.90 an hour and Japanese workers receiving only 11 cents an hour, it is impossible for American plants to compete for markets in this country.

In the past 4 years, Japan has taken 60 percent of the American market in this field. In 1955, Japan sent some 14 million square yards of silk fabric imports to the United States and U.S. mills produced 51 million square yards. During the past year, the situation practically has been reversed with Japan sending here 55 million yards and domestic plants turning out 31 million yards.

While no figures are available on employment, it is not difficult to arrive at conclusions that are anything but reassuring. Plants have been closed and operations have been curtailed. Whereas the industry once employed 12,000 in this region, now there are between 5,000 and 6,000 on the payrolls. And this number unquestionably will be reduced if the situation is not corrected.

What the American Silk Council seek is protection either in the form of higher tariff or quota limitations, so it will be able to compete. That seems like a reasonable request in the light of developments.

The Eisenhower administration has been friendly to Japan which is having economic difficulties of its own, to be sure. Washington's concern is the threat of communism in that Far East land which is the anchor of our defense line. With a teeming population, the Japanese Empire must trade or collapse. Its plight has been worsened by the elimination of Red China and other countries on the mainland which once constituted Japan's chief market. Washington is trying to build up trade between the United States and Japan as an offset, thus making it possible for Japan to survive.

While Washington's policy can be understood in this regard, the disastrous effects on the American textile industry cannot be ignored. It is a stiff price to pay for lending a helping hand to an ally. The Government

in Washington admittedly is on the horns of a dilemma.

The American Silk Council, realizing the international complications involved, is not asking the administration to cut off Japanese imports entirely, but to impose reasonable curbs that will insure the preservation of the U.S. industry.

The American industry now buys raw materials from Japan for processing here and has indicated a willingness to increase these imports to maintain the dollar position in Japan. It is the fabric yardage that is upsetting the cart in this country.

Ironically, the American silk industry is not allowed to buy yarns from Red China, but Red China sends raw material to Italy where it is processed and then shipped to the United States without restriction, adding to the headaches of the U.S. plant owners and their employees.

Another handicap for the American industry is that when foreign fabric is found defective or inferior, purchasers have no recourse, whereas if a batch from U.S. mills is not satisfactory it is returned promptly.

Furthermore, American machinery is being sent to Japan, improving facilities over there at the expense of the U.S. industry and workers.

As a distressed area, with thousands still idle, this community can ill afford to have this threat to its existence continue. In fact, with a little cooperation from Washington, thousands of idle workers, experts in this field, might be reemployed locally, thus relieving pressure on households and relief agencies.

Under the law, the decision is in the hands of the President, acting on the recommendation of the Tariff Commission. Congress cannot step into the picture until later and then it requires a two-thirds vote to overrule the executive branch of the Government.

While there is no desire to upset the delicate international balances under circumstances like these, a realistic approach is in order. American workers and communities should not be penalized unfairly.

On Labor Legislation

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 11, 1959

Mr. WHARTON. Mr. Speaker, I have just received an interesting and timely letter from one of my constituents concerning a forthright statement on pending labor legislation. In my opinion, this represents a plain and factual reaction of the man on the street, and I shall favor any recorded vote which will tend to answer his inquiry.

GHENT, N.Y.

DEAR SIR: I understand that the Senate has passed the Kennedy labor bill, but that the House will knock it down.

It is pitiful how some of our Congressmen sell the American people into bondage to racketeers and thugs. I sometimes wonder how many of these men are in debt to the unions.

After World War I Russia had a democracy for 1 day then the Bolsheviks took over.

What chance does the small man have if the Government backs up hoodlums and racketeers.

Yours truly,

C. R. HINDLE.

World Trade Battle and American Jobs

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. DENT. Mr. Speaker, shortly after my election to Congress in January 1958, I made a study of the reciprocal trades, foreign aid, and mutual assistance to our friendly allies in relationship to American employment.

I have maintained all along the way that the present Reciprocal Trades Act is detrimental to the American economy.

I believed then, and I believe now, that Congress should do something drastic to change this destructive force that has caused the bulk of the present industrial unemployment. It has just now become apparent to some of the slowly awakening public press that this is true.

The following article appearing in the Pittsburgh Press is indicative of this awakening and presages an internal disturbance in this country in the near future that will have the most serious effect upon the entire gamut of our national livelihood—political, commercial, labor relations and, above all, the economy of our Nation from a revenue.

As we shift from producer to consumer, do we shift our tax base from production to sales?

Someone, soon, had better start looking inward instead of outward for the answers to our problems.

The article follows:

WORLD TRADE BATTLE—JOBS AT STAKE AS AMERICA'S EXPORTS DIP—FIERCE COMPETITION FACED IN WESTERN EUROPE, JAPAN

(By Charles Lucey)

WASHINGTON, May 18.—The United States today is bucking into the toughest battle for world markets it has faced since the days of the clipper ships.

It is a battle involving jobs and payrolls on the docks of New York and San Francisco, in the steel mills of Pittsburgh and Cleveland and Birmingham, the machine shops of Cincinnati and Indianapolis—in a word, all the United States of America.

Probably close to 4 million workers hold jobs based on this country's foreign trade. Any serious shift there could have strong bearing on good times or bad in America.

Already storm signals are rising for the United States in this fierce new competition developing in overseas trade.

American exports dipped by billions last year as imports climbed higher. That trend is continuing in these first months of 1959.

First-quarter exports were $3.8 billion, roughly $230 million less than in 1958's first quarter. Imports were about 3.6 billion, or 450 millioh more than a year ago.

Our export surplus for this period a year ago was nearly a billion. This time, only 271 million.

NOT CRITICIZED YET

Now there's a drain-away of U.S. gold reserves to foreign countries. Commonly this goes hand-in-hand with export-import troubles. Nobody regards this as critical yet. But the trend is worrisome because, long-range, it could involve the stability of the American dollar.

High producing costs here at home are losing business for numerous lines of U.S. industry. It's not general or across-the-board, but there is wide agreement that the danger grows.

Always, heretofore, American technology has been the offset to lower costs overseas. But the gap narrows now between our technology and that of industrial Western Europe and restless, resurgent Japan. They're good, too.

CHALLENGE TO UNITED STATES

Today for the first time in the modern industrial era, the United States faces the challenge of competition from a producing area of something near equal strength—the new, economically united Western Europe.

A formidable six-country area of 165 million people welded together in what is called the European common market—this is the prospect. It may hold great new trade possibilities for the United States but there are hazards, too.

Readying to meet new worldwide challenges, big American corporate business is surging overseas to build new plants or tie up with foreign concerns.

TARIFF PREFERENCES

This holds especially for Western Europe, where those inside the six-country area gain tariff preferences unobtainable if they operate from the United States or elsewhere.

In many cases, this means U.S. concerns will be bidding for new markets they were not reaching before. But when it also means their new foreign manufacture displaces old business in exports from these shores, it will cost America jobs.

Then, looming over and beyond all of this is the rising power of the Soviet bloc economic offensive. Already the Communists match the West, thrust for thrust, in some vital world areas.

This ominous threat is sure to grow as Russia, Red China and the Soviet European satellites expand their industrial might.

These are the main facets of the new economic challenge the United States faces around the world.

This challenge, insofar as it relates to friendly allied nations, is in large part United States created.

It was plainly to this ocuntry's interest after the war to build its western associates economically strong. They could not be politically significant allies otherwise. Today they have some of the most modern plants and equipment in the world—in some cases whole industries shining new from head to toe.

That part is good—but it means the United States, in a world shifted from a seller's to a buyer's market, has to root-hog-or-die in competing in overseas markets.

Many trade experts hold it is not new at all land no more than a return to former normal patterns. New or not, it confronts this country with real competition for the first time since the gunds died on World War II.

U.S. trade prospered in postwar years because we were sending billions overseas in loans and grants and these returned, in a kind of indirect subsidy, to pay for American goods shipped abroad. That's long since on the wane.

Certain international lending institutions are finding now that, when loans are made to underdeveloped countries, these countries often seek to spend this money not in the United States but in oversea countries where they believe they can get better prices.

Probably not all of the decline of U.S. exports in 1958 as compared with 1957 constituted a fair comparison because the Suez crisis of 1956 had shoved oversea trade, especially in oil, unusually high.

But it is a continuing trend right to this day, and so increasingly the deterioration of

our competitive position becomes a major disturbance.

Not only does the United States face the danger of pricing itself out of foreign markets—in many cases, the experts hold, it has designed itself out of them.

Autos, for the best example. The world has shown it is not impressed with Detroit's chrome and plush. It doesn't want America's big, dazzling, 16-cubic-feet electric refrigerators; it wants simple small ones.

Neither is the new, more intense competition for the United States limited to world markets—the figures emphasize the rising tide of our own imports and greater ability of foreign manufacturers to get their goods placed on American shelves.

From the high-tariff protectionists, because of this, comes a new cry for higher duties on everything from abroad. Yet there must be give-and-take in world trade and many businessmen denounce protectionism as defeatism—an economic isolationism that is no more possible in 1959 than political isolationism.

For these, they see the answer not in timidity but in boldness. They see the rising challenge, but believe the United States can meet it by a new technological breakthrough and by checking inflation at home to hold down costs. It is a tough test, perhaps the toughest in modern times.

In closing, let me state once again, that cheaper production in America, which some say will be the answer to foreign competition, will create the gravest situation yet found by our State Department.

If we take back our own domestic markets and make inroads into our former foreign markets, the economic crisis in the countries we have helped to industrialize will tear down every argument advanced by the State Department for helping these countries in the first place.

That is, Mr. Speaker, the real danger of continuing the present blind, and sometimes stupid, setup which believes we can raise the standards of others in a competitive world without lowering our own.

Loyalty Day Essay

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. KOWALSKI. Mr. Speaker, recently I had the great honor of participating in the Connecticut Loyalty Day Parade held at Stratford, Conn., under the sponsorship of the Veterans of Foreign Wars. It was a memorable occasion.

In connection with the parade and the Loyalty Day observance, the Bridgeport Lodge of the Loyal Order of Moose held an essay contest.

The winning essay was submitted by Joan E. Cholko, 12 years old, a student in the seventh grade at David Wooster Junior High School. She lives at 427 Bruce Avenue, Stratford.

Her essay is worth the study of all of us. I call it to the attention of the House:

WHY WE HAVE A LOYALTY DAY PARADE IN AMERICA

We have a Loyalty Day parade in America to demonstrate, outwardly, to the other nations of the world, the loyalty or devoted allegiance which we have for our beloved United States of America, a Nation of peace and great freedoms.

The parade also demonstrates the military strength of our Nation, which is always ready to defend the principles of democracy. These principles have to be defended if there is to be peace throughout the world.

JOAN E. CHOLKO.

Statement of Don Romulo O'Farrill Before the Public Works Committee of the House

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. FALLON. Mr. Speaker, at my invitation the Honorable Romulo O'Farrill, president of the Congresos Pan-Americanos De Carreteras, and other Pan-American highway experts, attended today's highway hearing of the Public Works Committee to meet and become acquainted with the members of the committee.

The Inter-American Highway has been of keen personal interest to me since I introduced legislation in April 1955, authorizing funds for the completion of its construction. I believe this joint venture in completing this great highway will result in the increased interchange of cultures and commerce. It cannot fail to benefit our own country as well and will surely create better bonds of mutual understanding among the American nations.

I have the privilege of inserting in the RECORD Mr. Romulo's statement made before our committee today.

Listed below are the names of the Pan-American highway experts who attended the meeting with Mr. Romulo:

ADDRESS TO THE U.S. CONGRESS, HOUSE PUBLIC WORKS COMMITTEE, BY DON ROMULO O'FARRILL, PRESIDENT OF THE PERMANENT EXECUTIVE COMMITTEE OF THE PAN AMERICAN HIGHWAY CONGRESSES AND PRESIDENT OF THE MEXICAN HIGHWAY ASSOCIATION, MAY 20, 1959

Honorable members and friends of the Committee of Public Works, House of Representatives, it is an honor for the Permanent Executive Committee of the Pan American Highway Congressess, on this occasion of its fourth annual meeting, to call upon this distinguished committee which has played such a large part in the evolution of the Pan American Highway System from a theory to actual fact.

You and we have spent many active years in support of this vital hemispheric link. As men and machines have forged ahead to connect our several countries and in fact our continents through a major international highway system, so have all of our peoples become more closely allied through the economic and cultural exchange which are automatic byproducts of such a network.

Our critics have sometimes become impatient with our work and have complained that progress has been slow. To this we would say that only Don Quixote himself could turn windmills into giants and, by contrast, our problems have run the gamut of climate, terrain, and continuing construction in the face of rapidly increasing costs. As you so well know because of you intimate connection with the highway, our problems have been very real ones but, as you also know, they have not been found insurmountable.

I cannot let this moment pass without a special word of praise for the magnificent support given our cause over the past many years by the Bureau of Public Roads. The contribution of this Bureau is not susceptible to normal standards of measurement for its guidance and help, ever sympathetic to the particular needs and requirements of the individual nations and both the Inter-American and Pan American Systems as a whole, have loomed large in the minds and hearts of all of us. Under the guidance of the Federal Highway Administrator, Bertram D. Tallamy, our working relationships and close cooperation have reached a level of unparalleled productivity. All of us today pay an especial tribute to this friend of the Latin Americans.

The Pan American Highway from Laredo on the United States-Mexican border down to Rio alone links the capitals of 17 continental countries and covers 18,769 miles. Of this distance 7,700 miles are paved; 8,541 are in good condition for all year travel; 1,690 miles require improvement to insure passable all year traffic; and only 836 miles remain to be constructed.

Out of this 836 miles to be built some 435 miles are in the section of the Darien of Panama and the contiguous zone in Colombia. Fortunately, all members of the Organization of American States have proclaimed the financial problem of a route through the Darien to be one of an Inter-American nature and one which requires joint Inter-American action for its solution. This thesis was established by the Pan American Highway Congresses and reaffirmed at the meeting of the Representatives of the Presidents.

We in Latin America estimate that 70 percent of the total production of our nations is transported over highways and especially those highways which are identified with the Pan American Highway System. According to the compilation of the International Road Federation, there are 3,511,000 motor vehicles in Latin America. Of these almost 2 million are private cars and 1½ million are buses and trucks. In the 20 Latin American Republics, total production has been increasing between 2 and 10 percent per year. Thus, an average of a 5 percent per year production increase in the countries of the Latin American community make that community one of the most rapidly developing economic areas of the world. Yet the full impact of the economic and social benefits of this prodigious system cannot be fully realized until North and Central America are linked by land passage with the South American system.

The committee which I represent today is deeply appreciative of the important contribution of the United States to the building of our Inter-American Highway system. The U.S. contribution covering two-thirds of the cost of the Inter-American Highway construction in the five Central American countries and Panama to the Canal Zone has been more than a giant step to insure realization of the highway. Not only has this action provided a strategic defense for that vital zone of the continent but has also helped to increase and facilitate the movement of ideas, produce, and travelers. The salutary and far-reaching effects of in-

creased Inter-American travel alone are known to all of us.

Many steps lie ahead which require our additional thought and financial assistance. The matter of financing the Darien gap in Panama and Colombia is one of the most important problems before the Executive Committee of the Pan American Highway Congresses as we meet now in Washington. We undertake our deliberations in the firm belief that the House of Representatives Public Works Committee shares our conviction that a formula must be found which will permit the financing of the last important land link between the Americas; also that the committee shares with us our conviction that a Pan American Highway system fully operative, and adequately maintained, is one of the finest gifts that men of our generation can give to the world.

We of Latin America are proud to number the members of this committee and its staff among our personal friends and among the foremost friends of our individual countries. The names of the Honorable GEORGE FALLON, the late Harry McGregor, and other present and past committee members have an especial significance. They have gone far to give new meaning to the phrase "Inter-American friendship" and for all of this we are fully appreciative.

PERMANENT EXECUTIVE COMMITTEE OF THE PAN AMERICAN HIGHWAY CONGRESSES, FOURTH PERIOD OF SESSIONS, MAY 18–22, 1959, PAN AMERICAN UNION, WASHINGTON, D.C.

LIST OF PARTICIPANTS

Argentina.

Brazil: Delegate, Sr. Alberto Amarante, President, National Highway Council; alternate, Sr. Marcilio Motta, National Highway Department.

Colombia: Delegate, the Honorable Virgilio Barco Vargas, Minister of Public Works; alternate, Mr. Alfredo D. Bateman, National Highway Director.

Chile.

United States: Delegate, Bertram Tallamy, Federal Highway Administrator; alternate, Gerald W. Russell, Officer in charge, Transportation and Communications, Inter-American Regional Economic Affairs, Department of State. Advisers, Paul F. Royster, Frank Turner, Robert F. Ide.

Mexico: Delegate, Mr. Romulo O'Farrill, President, Mexican Highway Association; alternate, Mr. Jose J. March, Director General, Mexican Highway Association.

Panama: Delegate, The Honorable Roberto Lopez Fabrega, Minister of Public Works; alternates, Sr. Tomas Guardia Jr., Executive Technical Director Darien Sub-Committee; Sr. Tomas Guardia Sr., Chief Inter-American Highway.

Peru: Delegate, the Honorable Eduardo Dibos Dammert, Minister of Development and Public Works; alternates, Carlos Donayre, Minister-Counselor, Peruvian Embassy; Carlos Gibson, Commercial Counselor, Peruvian Embassy; Raul Paraud, Subdirector of Highways.

Venezuela: Delegate, Eng. Alonso Perez Luciani; alternate, Eng. Francisco Aspurua.

Organization of American States: Francisco J. Hernandez, Permanent Secretary to the Pan American Highway Congresses; Hugo J. Seifart, Technical Adviser to the Permanent Secretariat.

Special Observers: International Bank for Reconstruction and Development, Mr. C. Lacayo-Faillos; International Road Federation, Robert O. Swain, Executive Director; Wm. C. La Baugh, Director of Engineering; Inter-American Statistical Institute, Efraim Murcia Camacho; United Nations, Louis Delanney; United Nations Economic Commission for Latin America, Daniel Bitrán.

Bucking the Tide

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. DINGELL. Mr. Speaker pursuant to permission granted I insert in the CONGRESSIONAL RECORD an article from the Washington Post and Times Herald of May 20 entitled "Bucking the Tide":

BUCKING THE TIDE

Since 1953, 17 States have thrown out their so-called fair trade laws as unconstitutional, and many major manufacturers of once fair-traded items have in consequence abandoned this retail price-fixing scheme altogether. Consumers throughout the country have benefited from the broadening of competition which has resulted. But the small independent druggist and other not-so-small retailers for whom "fair trade" has been a handy commercial crutch have viewed the trend with great alarm.

So alarmed have they become, in fact, that these businessmen who only seven years ago were in Washington demanding the McGuire Act to sanctify their state fair trade laws—waving high the banner of "States' rights"—have done a complete about fact. They now appeal for a Federal "fair trade" act to take over from the crumbling State laws the job of enforcing minimum retail price agreements. And, amazingly enough, they have persuaded a lopsided majority of the House Commerce Committee—headed by that stalwart States' Righter, Representative OREN HARRIS—to report favorably on their bill.

That such legislation would be against the interests of the American consumer is clear enough. Estimates of the probable cost of a Federal price-fixing law like that which the House committee favors run from $1 billion to $10 billion a year. What is perhaps less clear, but without much doubt equally true, is that a Federal fair trade law would not benefit the retailer in the long run, either. Assuredly it would invite extension of the minimum wage laws to millions of employees not now covered, for if the Federal Government has any business in the retail pricing field, clearly it ought no longer to be foreclosed from the retail wage and hour field. The amendment by which the House committee hopes to head off such action would probably not stand a legal test—and in any case it is certain to open a general "States' rights" debate over "fair trade."

Beyond this consideration, however, merchants who want "fair trade" price-fixing ought to consider whether they really want to live in a rigid market of that kind and whether the consumer reaction to the abolition of much retail competition would not be likely to harm business subsantially. If the retailer is to be placed at the mercy of his brand-name manufacturers, would he not lose the opportunity for pricing and sales initiatives so essential to business promotion and growth? Would he not be in effect become a mere subsidiary of the manufacturers, unable to adapt his merchandising program to local conditions and opportunities?

There can be no doubt that the consumer wants the full benefit of the free enterprise system in retailing. We suspect that the thoughtful retailer knows that his true interests lie in the same direction.

Expert Analysis of Pending Wheat Legislation

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. BROCK. Mr. Speaker, the problem of writing a new wheat legislative program has been occupying the attention of the House and Senate Committees on Agriculture for some time.

It is a very controversial issue and the respective committees have heard testimony from every conceivable source. Much of it is conflicting and is designed to benefit one specific group as opposed by another.

I have given much thought to it, as have the other legislators from the Farm Belt States. We are not completely in agreement as to the best possible solution of the problem. We all wish to protect the income and advance the best interest of the farmer who raises wheat. We also look forward to reducing the enormous wheat surpluses that have been accumulated in our storage bins.

To find some reasonable and fair solution to the wheat problem, I have asked one of the outstanding agricultural experts in the United States to give me the benefit of his views on the problem. He is Carl F. Wilkins, who has served on congressional committees as an agricultural economist and is recognized for his studies and work in this field.

Mr. Speaker, may I, therefore, under the unanimous consent of my colleagues extend my remarks and place Mr. Carl F. Wilkins' analysis and reply in the RECORD. I know that they will render a valuable contribution to all thinking on this controversial issue:

EXPERT ANALYSIS OF PENDING WHEAT LEGISLATION

You asked me to analyze the difference between the Senate bill in regard to wheat and the proposal before the House.

First of all I would like to point out that the economic record clearly proves that we cannot have a solvent economy without an average of parity for our farm production and the production of other raw materials.

In addition I would like to point out that parity of income must have an additional factor units of production to multiply by the price.

The Senate bill as I understand it provides a 65 percent of parity price for those who do not cut back their production and a support price of 80 percent of parity for those who cut back 20 percent of their production.

First of all I wish to point out that both proposals evade the basic need of an average of 100 percent of parity for farm products to create the reciprocal market in rural America for the goods which we must produce to meet our payrolls and capital costs.

The wheatgrower with 65 percent of parity and full production will have an income based on 100 percent production and 65 percent of the needed price or 65 percent of parity income.

The group who produce 80 percent at an 80 percent price support will have an income based on 80 percent production and 80 per-

cent price or 64 percent of parity income. The 65 percent of parity price support will establish the market price and the wheat with an 80 percent price support will land in the hands of the Government. The bill undermines the capital investment on wheat now in storage thus automatically forcing a loss.

On the other hand the bill before the House provides for a 90 percent price support with a reduction of 30 percent in production. Under this proposal the grower will be paid 90 percent for 70 percent of normal production and will receive 63 percent of parity income.

Both bills will therefore have about the same result and end up in establishing an income of 65 percent from wheat production. I cannot understand how Congress, after voting for legislation which provides parity for labor and permits adjustment of wages to increases in the cost of living on one hand, can defend legislation which still further reduces the income of rural America through lower farm prices.

In one respect the House bill is very important. It returns to the 90 percent price support. In my opinion, without a minimum of a 90 percent price support for farm production, it is impossible to ever reach the goal of parity or price balance between the income of rural areas and industrial areas.

For example in 1957 the per capita income of 34 States with a population of 79 million was approximately $720 less than the per capita income in 14 States with a population of 91 million. The 34 States depend upon their primary income from farm production and other raw materials while the 14 States depend primarily for their income upon manufactures, payrolls and finance.

Passage of either bill will help to force down the income of the 34 States while on the other hand increases in hourly wages and debt expansion will increase the income of the 14 States.

The record of your own State, Nebraska, proves that the present program for agriculture has deprived your State of $460 million of income per year over the past 7 years. The program set forth in wheat legislation will force a further loss upon your State and other rural areas.

In all fairness if wheat growers are to cut back their production they should at least be paid 100 percent of parity for the wheat they do produce. If 65 percent of parity is sound legislation for agriculture, an industry with 14 percent of all capital investment in the United States, then all other groups should be cut 35 percent below present income levels.

No group has ever been exploited to the extent that our farm operators have been exploited during the past 8 years.

In 1946–50, with a national income averaging $211 billion, the farm operators were paid $14.2 billion. In 1957–58, with a national income of $362 billion per year, the farm operators were paid $12 billion, or $2 billion less per year.

This underpayment to agriculture and in turn to rural America is undermining our economic structure, setting the stage for economic collapse. The two bills if passed will add to the dislocation. I cannot understand how Congress and the American people can justify the attitude toward agriculture. A level of 65 percent of parity or economic equality for rural America is completely contrary to the principles of our system and against the laws of mathematics which govern our income and exchange of goods and services.

Poison in Your Water—No. 79

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the St. Louis Post-Dispatch of March 5, 1958, entitled "City Polluting River, United States Says; Must Correct Garbage Plant":

CITY POLLUTING RIVER, UNITED STATES SAYS; MUST CORRECT GARBAGE PLANT—ST. LOUIS OFFICIALS STUDYING HOW TO FINANCE IMPROVED WAYS OF DISPOSAL—LEGAL ACTION POSSIBLE

What steps to take to meet a new financial problem handed the city yesterday were under study today. Participants in a conference called by the U.S. Public Health Service, which has legal authority to compel compliance with its orders, directed the city to study speedily ways to improve its methods of garbage disposal. The aim is to reduce pollution of the Mississippi River.

The Public Health Service and other agencies represented at the conference at Soldiers' Memorial—the Missouri Division of Health, the Illinois Sanitary Water Board, and the Bi-State Development Agency—found that the city of St. Louis was a principal contributor to pollution of the Mississippi because of its practice of putting untreated garbage into the river. The city grinds the garbage it collects but does not treat it.

SURVEY REQUIRED BY JULY 1

As a result of this finding the conferees instructed the city to have an enginering report prepared on methods for improving garbage disposal. The survey must be completed by July 1.

The city was instructed to submit the report to the State health division. Should it be found that no method other than the present one is feasible, the city was directed to present strong reasons to justify continuing the present practice.

Facilities for converting garbage into fertilizer or treating it in some other manner would cost more than $1 million, Frank Kriz, president of the board of public service, said.

Murray Stein, chairman of the conference and chief of interstate enforcement for the Public Health Service's water supply and water pollution control program, expressed surprise when he learned that the city put ground, but untreated, garbage into the river. He described the practice as "very unsatisfactory."

OTHER METHODS RULED OUT

Kriz said that before garbage grinding facilities were expanded in 1955, the city considered other methods of handling the 150 tons of garbage collected daily from householders. All were either impractical or too costly, he said.

He said the idea of building a plant to convert the garbage to fertilizer was rejected because there was no assurance there would be a market for the product after a fertilizer plant was built.

"No other city is marketing fertilizer at a profit or at anything close to justifying the cost of a fertilizer plant," he remarked.

A facility for cooking the garbage, then selling it to hog feeders, was also rejected because of a lack of any assurance of a market for the feed, he said. There is no suitable space in the city for a sanitary landfill, Kriz pointed out.

DEFENDS GRINDING

He defended the grinding method, saying that the garbage is ground so thoroughly that no chunks are flushed into the river. Representatives of Illinois and Missouri conservation agencies, as well as officials of the Public Health Service, reported at yesterday's conference that large pieces of garbage have been floating down the river as far as 150 miles south of here.

There was no direct evidence that the refuse came from the city's grinding plant, but conferees found no other municipality in the area that puts untreated garbage into the Mississippi.

Kriz said that when the grinding plant was expanded, it was the city's plan to connect the facility to a sewage treatment plant to be built by the Metropolitan St. Louis Sewer District.

Health officials expressed dissatisfaction with this plan, however, pointing out that the sewer district's schedule of projects to abate stream pollution here does not call for the construction of sewage treatment facilities before 1963 and as late as 1967.

LEGAL ACTION POSSIBLE

A Public Health Service official said that if the city fails to have the engineering report made, a public hearing would be called by the U.S. Surgeon General. Should he find that the conferees' order was proper, he then can order the report. Failure to comply with this order would result in legal action, the official said.

Kriz told a reporter he would confer tomorrow with Mayor Raymond R. Tucker, to determine whether to proceed with hiring an engineering firm and to see if funds for the job are available.

The conferees accepted the sewer district's 9-year timetable of projects to abate stream pollution.

Antitrust Laws Needed for Labor Unions

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. HIESTAND. Mr. Speaker, the following article was published by the National Small Businessmen's Association in their Small Business Bulletin of May 1959. This is a penetrating analysis of one of the major problems confronting the American people today and a great public service. With local autonomy gone and bargaining demands now formulated at the national level, labor monopoly power in the hands of professional managers wields a force with almost unlimited power over the national economy.

Current newspaper headlines illustrate the threat to use that force and the need for bringing labor unions under the jurisdiction of our antitrust laws. I urge my colleagues to study this article and other aspects of the problem and to join with me in support of labor antimonopoly legislation:

Labor Monopoly Threatens Our Free Economy System

(By John Kilcullen, special counsel to the National Small Businessmen's Association)

The problem of monopoly, which Congress sought to dispose of by enacting the Sherman Act 70 years ago, has reappeared in a form quite as threatening as that in which it appeared during the late stages of the 19th century.

Then it was the monopoly of the large corporations and the industrial trusts. Now it is labor monopoly. The effect is the same—monopoly prices. And the victim is the same—the consumer.

LABOR EVEN MORE THREATENING

In many respects, labor monopoly is far more threatening than the business combinations of the last century. It is more extensive and more powerful. And, because labor is the most important element in costs, its effect upon consumer prices is greater.

Where industrial monopolies regulated the prices of only a few commodities, labor monopoly has its impact upon the price of all commodities. Where the business monopolies were limited to certain industries or areas, labor monopoly wields a unified nationwide force with almost unlimited power over all industries.

Most important of all, labor monopoly is gradually undermining the value of money, a process which, unless curbed, can eventually destroy not only economic welfare but national security as well.

Unfortunately, the labor monopoly subject and what can or should be done about it has been clouded by emotional and irrelevant arguments. As a result, clear understanding of the subject has been lacking. Spokesmen for organized labor insist that the term "monopoly" can be used only in relation to business and commercial functions—that it has no valid applicability to unions or any of their activities.

LABOR CLAIMS IMMUNITY

By reason of this, they argue, it is unrealistic to consider any union activities or practices within the context of the antitrust laws. Let us proceed to examine whether this is true or not.

Monopoly power may be defined as the ability to set prices and outputs of particular commodities and services at levels which are significantly different from those that would be established by the interaction of the forces of supply and demand in a free market.

MONOPOLIST SEEKS SHELTER

In normal circumstances, monopoly power cannot be exercised unless the monopolist is in some way insulated or sheltered from competitive pressures and the checks and balances provided by natural economic forces.

In the case of business firms which manufacture or sell a product, such insulation is difficult to achieve. If they attempt to set or maintain the price of a particular commodity at an artificially high level the consumer will seek, and probably find, a suitable substitute.

Thus would-be monopolists find themselves in control of a product which has no market. To avoid this they must attempt to prevent the entry of rival products or rival businesses into the competitive market. But here they are stymied by the antitrust laws. Any efforts in this direction are prohibited and subject to severe penalties.

Labor unions, on the other hand, are effectively insulated from competitive pressures because those who require a supply of labor cannot find, except in rare instances, a suitable substitute. They have no alternative than to pay the price demanded by the union which supplies or controls the necessary labor.

Further, by virtue of their immunity from the antitrust laws, unions can protect their control over labor supply and labor prices by preventing the introduction of new and cheaper methods or products whose prices are forced up by increased union labor costs.

TEAMSTERS THREATEN TROUBLE

A case in point is the action taken by the Teamsters Union to prevent piggyback transportation of truck trailers by rail. This method was developed in cooperation between trucklines and railroads to provide lower freight costs where longhaul shipments are involved.

The Teamsters viewed this cheaper method of transportation as a threat to their control of labor supply in the motor freight industry. Accordingly, they notified trucking firms that any firm making use of piggyback arrangements would face labor trouble with the Teamsters.

When a few trucking firms ignored this threat, the union directed its members to refrain from loading the trailers onto the railroad flatcars and engaged in picketing to prevent others from loading the trailers. Efforts to obtain legal relief from this high-handed interference with interstate commerce were rendered futile when the Supreme Court held that the Teamsters' boycott could not be enjoined.

If any business firm or firms in the transportation industry were to attempt to impose any such restraints upon the piggyback arrangements they would unquestionably be prosecuted under the antitrust laws.

OTHER EXAMPLES CITED

Many examples of similar union practices can be found in the building construction industry. There, unions have been successful in pushing wages of the bricklayers, plumbers, plasterers, and other crafts to a higher point than almost any other group of industrial workers.

To protect these high wage levels the unions have used various devices to keep competitive products and methods of construction off the market. The Carpenters Union has, for example, outlawed the use of various types of prefabricated door and window sash, wall sections, and modular units. These would greatly increase efficiency and cut costs in building construction.

The Plumbers Union has barred the use of plastic pipe, a new and improved product, which would more than cut in half the amount of plumbing labor involved in home construction and reduce costs of construction appreciably.

In some areas the unions closely regulate the entry of firms into a certain line of business, decide what projects a particular firm may be permitted to bid on, and set a minimum amount for any given bid.

In the printing industry the unions have prevented the use of automatic equipment which would permit cheaper and more efficient printing of books, magazines, and newspapers.

All of these restrictions have, of course, the objective of preventing competition with the unions' established control over the available labor supply. Needless to say, the cost to the consumer is enormous.

Organized labor's apologists willingly admit that unions utilize these various devices to prevent or neutralize competitive factors. But they argue that: (1) Workers are justified in taking these collective measures to obtain the highest possible wages and preserve their opportunities for employment; and (2) labor is not a commodity. Consequently the control of labor supply is not to be equated with the control of the supply or price of a commercial product or service.

The first part of this argument begs the question as to whether any segment of society is justified in taking self-help measures at the expense of all other segments. The producers of a commodity could, by the same token, argue that they have a right to make an adequate profit from their efforts. And, where necessary, they should be permitted to protect their product from price-cutting competition.

In a practical sense the businessman's argument is just as logical and morally justified as that of the union. But in each case, the result is the same—curtailment of competition and higher prices to the public.

IS LABOR A COMMODITY?

The argument that the labor of a human being is not a commodity or article of commerce originally found expression in section 6 of the Clayton Act amendments to the Sherman Act adopted by Congress in 1914. The implication was that any attempt to apply the antitrust laws to unions would amount to putting union members in the same category as so many sacks of flour or pairs of shoes or loaves of bread. To even suggest such a notion, the reasoning goes, demonstrates a disregard of human values.

Actually this argument is more emotional than real. Admittedly, human labor should not be regarded as a commodity or article of commerce. But there is no rational relationship between this premise and the proposition that unions, as organizations, should or should not be subject to the antitrust laws. It is ridiculous to suggest that putting antitrust restraints upon the union would place its members in the category of commodities to be bought and sold in the marketplace.

In actual fact, it would be more accurate to say that just the opposite result would occur—that many of the present practices whereby unions exploit the workers and sell their services to those who can be induced or forced to buy them would be outlawed.

It is a right of workers, individually and collectively, to proffer or withhold their labor as they see fit. But in the vast majority of situations where union economic power is employed to bring about restraints of trade or to force unrealistic or uneconomic costs on production of commodities, the choice of the individual worker to proffer or withhold his labor is not involved. In most such situations the individual union members have little, if any, voice in determining the price to be charged for their labor, or in the determination as to whether their employer is to be permitted or restrained from handling a particular type of product or doing business with another employer.

UNIONS SELL LABOR

These decisions are, for the most part, the decisions of those who manage the union affairs. Consequently, these decisions and the actions which flow from them must be treated as actions of the union as an entity apart from the human beings whose labor is being proffered or withheld.

In this context it becomes apparent that the labor of human beings has become a commodity or article of commerce, because the union itself is engaged in the business of trading and selling this commodity. And when the union engages in monopoly practices and restraints of trade it is not necessarily acting for, or in the interests of, those whose labor is being bought and sold.

The idea of a labor union as an association spontaneously formed by individual employees to equalize their bargaining power and protect themselves from exploitation by a powerful employer is as obsolete as the horsecar.

LOCAL AUTONOMY LOST

This concept was true in years past when unions were local in character. That is, they were composed of workers in a particular area, or plant, or trade who had common interests and objectives.

In that setting the workers had a direct and immediate interest in their union, and the union had many of the aspects of a

genuine fraternal self-help organization. The local union formulated its own collective bargaining demands, carried on the bargaining and, when agreement could not be reached, made the decision on whether or not to engage in a strike.

Although the local union was affiliated with a national or international union, this affiliation was a loose one. On policy matters the local union was autonomous and independent.

During the prodigious union growth of the past 25 or 30 years, local union autonomy has long since been thrown overboard. The center of gravity shifted to the headquarters of the national or international union.

There, the major decisions are made and carried out by a group of professional managers. They have taken over the functions of formulating bargaining demands—even conducting negotiations for the local unions.

In many industries the national union negotiates a pattern contract with a major company. The terms of this contract then become the obligatory terms for all local unions and employers throughout the industry. Decisions to strike are likewise made by the national managers with local members having no choice but to comply.

This transfer of the decision making functions from the local members to the national officers has caused, quite naturally, a marked drop in interest of rank and file members in union affairs.

For the most part the union member no longer feels a close identification with the union. Studies of union loyalty attitudes have shown a high percentage of members having little, if any, interest in the union other than its periodic efforts to get higher wages, and a generally prevalent feeling of skepticism and lack of trust toward the union officers and their motives. This lack of rank and file interest is demonstrated most strikingly by low attendance at union meetings.

COMPULSORY MEMBERSHIP VITAL

In the face of this sharp decline in interest among rank and file members, gradual disintegration of many unions would have been inevitable if the union professionals had not had the foresight to demand and obtain compulsory membership provisions in their collective bargaining contracts with industry.

Under these so-called union security clauses the workers are obligated to become, and remain, dues-paying union members as a condition of retaining their jobs. Union managers argue, and have been able to convince the public, that such clauses are necessary to eliminate freeriding by workers who share the benefit of union collective bargaining activities without paying the cost. But their actual purpose has been to prevent large-scale defections by workers who no longer have any sympathy for, or interest in, the union. This also explains why the professional unionists have thrown almost their total power and resources into the fight against the right-to-work laws.

In the process of change from local union autonomy to the centralized power of the national unions, other changes have taken place in regard to union objectives.

The bread-and-butter union objectives of Samuel Gompers have quite clearly been displaced by a broad program of changes in the social and economic system.

The new union managers, almost to a man, maintain no strong sympathy for the competitive enterprise system. They strongly prefer a planned economy. Abundant evidence of this is available from the legislative proposals supported by the AFL–CIO. These include demands for heavier taxes on sources of investment capital, heavy Government spending in the fields of public power and public housing, Federal aid to education, rigid Federal farm subsidies and controls, Federal regulation of natural gas prices and many other programs which would expand the areas of governmental regulation and planning. The ultimate goal is complete Government control over industrial programs, production, and prices.

The accomplishment of that ultimate goal has been slowed down to some extent because the American people are still too strongly committed to the competitive enterprise system. The most effective means of overcoming this public resistance and to hasten progress toward the planned economy is to break down the competitive enterprise system and destroy public confidence in it. The most effective tools for accomplishing this are the anticompetitive practices and uneconomic wage costs imposed upon industry by labor unions.

SOLUTION OFFERED

It is futile and unreasonable to expect that labor unions will ever voluntarily, in the public interest, forego their demands for higher and higher wages. Nor when these demands are thwarted by competing forces, will they forego the temptation to strike down the competition. Only when legal restraints are imposed and enforced by the Government will there be any adequate protection of the public interest.

Effective legislation in this field would have to do three things:

1. Prevent centralized control of collective bargaining policies by national or internation unions, and return these functions to the local union level.

2. Prohibit strikes and other forms of coercive action carried out as part of a prearranged plan or combination between two or more unions to impose concerted wage demands and other contract conditions upon industries affecting interstate commerce and trade.

3. Prohibit union imposed restrictions upon the use of products and improved methods of work performance, limitations on production, price fixing, and similar arrangements arrived at through agreement—either voluntary or coerced—with individual employers or groups of employers.

Simultaneously, it should be made clear that where an individual union engages in any action in the form of strikes, picketing, or boycotts as a means of obtaining or enforcing a demand for wages or other conditions of employment—and such action is not a part of any concerted plan, combination, or arrangement with any other union—it would not come within the scope of any antitrust or antimonopoly restrictions even where it may result in an interruption of interstate trade or commerce.

Under such legislation the ability of local unions to use their traditional economic weapons in support of legitimate union objectives would be fully preserved and protected. But the big power combinations of unions would be broken up, just as the big corporation trusts of the 1890's were broken up by the Sherman Act.

It should be apparent to those who have a grasp of the economic force now building up within our country and throughout the world, that enactment of such legislation is our only hope of staving off ruinous inflation and the drabness of the welfare state economy that inevitably lies in store for the next generation.

International Institute of Gary, Ind.

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. MADDEN. Mr. Speaker, the International Institute of Gary, Ind., is celebrating its 40th anniversary this week. During that period of time, thousands of immigrants have come from across the ocean to the Calumet region of Indiana and this organization has contributed greatly toward making it easier for these new citizens to launch their career as Americans in a proper manner. Its community service and good work during this period of time is immeasurable. Under the direction of Miss Elizabeth N. Wilson during the last 14 years, the work of this organization has greatly expanded until today its service reaches to thousands of citizens in homes of the Calumet area.

The following editorial by H. B. Snyder, editor of the Gary Post-Tribune, pays a deserving tribute to the International Institute of Gary, Ind.:

THE INSTITUTE'S BIRTHDAY

Gary seems to have had more than its share of anniversaries since the city's own golden jubilee 2 years ago, but they do give us a chance to look back with satisfaction and pride. This week the International Institute celebrates the 40th anniversary of its founding and there are reasons for the whole city to share in the celebration.

We are a city of varied backgrounds amalgamated into one people. An important part of that amalgamation has been handled by the International Institute since it came into being as a department of the YWCA back in 1919. Its work has been varied and one can see in that variety an important part of the history of the Nation and of Gary.

Born in the era of mass immigration that followed World War I, the Institute's primary function in its first years—one that continues today—was the integration of the first highly restrictive immigration through group activities, solution of legal problems and classes in English. Passage of the first highly restrictive immigration act in 1921 brought new problems, including the reuniting of families separated by the quota act.

The 1930's brought changes. With the depression many families sought repatriation to their homelands. Among those who stayed, many needed relief of one kind or another and this brought new emphasis on naturalization. These years also brought two changes in the Institute's own character. In 1934 it was severed from the YWCA and became a separate agency. In 1937 it became a charter member of the Community Chest.

The World War II years brought a different set of problems. There was an increasing pressure for naturalization on the part of various industries engaged in warwork. Both the military and industry pressed security investigations of aliens, though in cool retrospect the record of American patriotism of immigrants can be matched by few, if any, groups.

Postwar years have developed yet another set of pressures on the Institute. Again there was the business of reuniting separated families. Dependents of many veterans who won citizenship through wartime service were clamoring for entry. And from Europe came the rush of displaced persons, first fleeing from the released Nazi oppression and later from new oppression of Soviet communism. The oppressed, whether escaping from the remnants of the Hitler terror or after such later events as the abortive Hungarian revolution, all brought problems of adjustment with them as they came to new homes in Gary.

What the future holds is uncertain. Many will go on seeking a way out from behind Europe's Iron Curtain. There is a concerted move under way now in the United Nations seeking some help for refugees both from Red China and from the

troubled Middle East. Whatever happens in the field of immigration is almost certain to affect Gary. The city is fortunate to have the International Institute and Miss Elizabeth Wilson, its director since 1945, on hand to help solve the complex legal and personal problems any newcomers will bring with them.

Community Action Program in Meriden, Conn.

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. KOWALSKI. Mr. Speaker, the city of Meriden, Conn., which I am happy to call my home, has recently inaugurated a community action program, designed to secure additional contracts for industry in the Meriden area.

This program, which I regard as most important, has been set up through the cooperation of the Department of the Navy and the Department of Defense. It has as its goals the creation of 2,500 new jobs and an increase of $25 million in annual sales volume. These are not easy goals to achieve, but the spirit and aggressiveness of the Meriden Industry Action Committee convince me that they will be reached.

I cannot speak too highly of the cooperation shown in this endeavor by the Navy Department. Since the day that I requested the establishment of this program in Meriden, the Navy has given every possible assistance. I gladly pay public tribute to Vice Adm. E. W. Clexton, Chief of the Office of Naval Materiel; Rear Adm. R. L. Swart, Vice Chief; and Mr. Kenneth Borgen, Industrial Assistance Coordinator.

Mr. Borgen spent several days in Meriden arranging for the start of this program. Later he spent an entire week there, guiding and advising the local committee in drawing up and initiating its program. He has worked tirelessly and most effectively for the program and I cannot speak too highly of his tremendous contribution to this community effort.

The Navy is willing to assist any local community in establishing a program such as Meriden's, though unfortunately this is not too well-known. I am hopeful that other Connecticut cities and towns will institute similar programs, and I call the attention of my colleagues from other States to the Navy's great interest in helping local communities to help themselves.

The Industry Action Committee of Meriden has made a preliminary report which I feel is highly significant.

Portions of the report follow:

COMMUNITY ACTION PROGRAM TO STIMULATE ECONOMIC GROWTH AND EMPLOYMENT

This community action program is designed to increase the level of economic activity and employment in Meriden, Connecticut, by a $25 million increase in annual sales and the creation of 2,500 new jobs. This is for the initial purpose of relieving the unemployment situation in Meriden with a longer range purpose of increasing sales and jobs yearly, to provide for population growth and to stimulate an expanding economy. A survey of 24 plants in Meriden on April 28, 1959 disclosed that they had a potential employment of 2,427 new jobs if they had the business.

The basic principle underlying this program is that of concerted, cooperative community, State, and Federal action focused on a common economic problem utilizing the basic framework of standard business practice and our free democratic enterprise system. The advantage of a community action program is that it marshals the human and business resources available and focuses community effort on a common objective. Required is an effective community organization and procedural mechanisms to carry out the program.

For business firms and Government activities outside of the area, the program provides a central point of community information and enables ready location of unique and highly qualified suppliers, as well as industrial site locations.

This program was developed by the cooperation of Meriden businessmen, congressional officials, and a representative of the Navy Department in discussion sessions at Meriden, Conn., over the period of April 27–May 1, 1959. It is requested that all recipients of this publication lend their assistance in achieving our objectives.

Committee members: Mr. Theodore Frost, chairman and president of Connecticut Telephone & Electric Corp. of Meriden; Mr. Sanford Shorr, vice chairman and manager of Chamber of Commerce of Meriden; Mr. W. J. Wilcox, secretary of the Manufacturers' Association of Meriden and Wallingford; Mr. W. L. Lyons, president, the Lyons Tool & Die Co., Meriden; Mr. Albert Hulme, public relations director, Cuno Engineering Corp., Meriden; Mr. Frank Tracy, plant manager, International Silver Co., Meriden; Mr. Morton Greenblatt, vice president, Elmore Silver Co., Meriden; Mr. Albert Rene, public relations director, the Miller Co., Meriden; Mr. Daniel Rich, general manager, Rich Plastics, Meriden; Mr. Fred Dossin, factory manager, the Charles Parker Co., Meriden.

Committee advisers: Mr. Kenneth P. Borgen, Industrial Assistance Coordinator, Office of Naval Material, Executive Office of the Secretary of the Navy, Washington, D.C.; Comdr. A. J. Yuzakewich, Inspector of Naval Material, Bridgeport; staff, Mr. Jack Goldman and Mr. John Gibson; Mr. David S. Miller, commissioner of police, Meriden.

The Industry Action Committee of Meriden, Conn., will pursue the following actions to stimulate the flow of business into the area.

1. Directory of firms: Prepare and distribute a supplement of the "Directory of Business Firms of the Northeastern United States in Substantial Labor Surplus Areas Who Seek Defense Department and Other Government Prime Contracts and Subcontracts," of June 16, 1958. This directory will go to all Government procuring activities and their prime contractors for use in selecting sources of supply. The inspector of naval material, Bridgeport, will provide a letter of transmittal and supply a distribution list.

2. Directory of local Federal purchasing activities: Arrange for the preparation and distribution of a purchasing directory of all Federal activities who made local purchases along the lines of a publication of the Los Angeles Chamber of Commerce entitled "ANAFMA, Sales Manager's Guide to Southwestern Bases," issued March 1959 (undated). The directory to cover those local Federal purchasing activities of the northeastern part of the United States and to include such information as a listing of major items of purchase by dollar volume, procedures for dealing with the activity, and the name and location of the purchasing officer.

3. Market analysis: Arrange for a study of the Federal procurement market for the fiscal years 1959–60 including such departments and agencies as the Department of Defense, Atomic Energy Commission, National Aeronautics and Space Administration, General Services Administration, Department of the Interior, and the Department of Agriculture. Tabulate major procurement items by dollar volume and procurement agency. Match these procurement requirements with the supply capability of Meriden firms and ascertain the potential Federal business capable of being performed in Meriden. Make this information available to Meriden firms. The U.S. Bureau of the Budget is a source of such information. Arrange for plant tours of Meriden firms by selected agencies.

(a) Make a similar study and distribution of the procurement market offered at the State level in the Northeastern States by State purchasing activities.

(b) Make a similar study and distribution of subcontract opportunities available from selected Government prime contractors in both defense and commercial business of these firms. Arrange for selected prime contractor representatives to tour Meriden plants.

(c) Analyze overseas markets with the Boston office of the U.S. Department of Commerce in a similar manner.

4. Community monograph: Arrange for the updating of the 1956 Meriden monograph of the Connecticut Development Commission with a suitable cover and transmit to selected addresses such as some of those receiving the supplement to the "Directory of Firms."

5. Plant facility lists: Establish a standard format for practical, usable individual plant brochures and encourage each appropriate businessman to develop and use this sales tool.

6. Business promotion: Arrange with salesmen of Meriden firms to publicize the capability of other suppliers in Meriden while making their regular calls. The "Directory of Firms" supplement and plant facility lists can be used for this sales effort. Any promising business leads thus developed should be relayed to the appropriate firm.

7. Intracity subcontracting: Explore the precise nature of the subcontract and supply complex of Meriden in terms of products and their dollar volume which is performed for Meriden firms by outside sources. Discuss the findings of this survey with appropriate firms and encourage maximum interchange of work in the Meriden area where it is economically feasible.

(a) Determine in the course of the study whether new businesses might be established in Meriden to supply goods or services not presently available. If this proves to be the case, encourage the expansion of existing suppliers in these product lines or the establishment of a new business.

(b) Insure that all Meriden firms are fully informed on the production or supply capability of each other through plant tours or other devices.

8. Intercity subcontracting: Arrange with appropriate organizations and individual large firms in adjacent cities such as Hartford, Bridgeport, and Boston to maximize the interchange of subcontract and supply work with Meriden businessmen. Use techniques similar to those of intracity subcontracting.

(a) Expand this economic integration as appropriate to other cities where the greatest opportunities lie.

(b) Enlist the help of field agencies and the Federal Government in locating sources of subcontract work such as the Inspector of Naval Material in Bridgeport.

9. Government procurement information: Arrange for an appropriate Meriden office to maintain a central, current file on publications on Government procurements. The file should contain such items as "Selling to Navy Prime Contractors," "How to Sell to Agencies Within the Department of Defense," "General Procurement, Information on Guided Missile Programs, Rockets and Target Drones," "The U.S. Missile and Aircraft Market" (Los Angeles Chamber of Commerce), "Daily Synopsis of U.S. Government Proposed Procurement, Sale and Contract Awards," and "Inventions Wanted by the Armed Forces." These are only a few of the many helpful publications available.

(a) Enlist the help of local Federal field offices in keeping Meriden businessmen fully informed on Government business practices and business opportunities.

(b) Sponsor educational seminars periodically on such subjects as research and development, inspection procedures, contracting procedures, quality control and other subjects. Such seminars should include representative prime contractors.

(c) Encourage and exhibit of business opportunities for the New England States in 1960 similar to the Hartford exhibit of procured items of July 1958. The exhibit of business opportunities is a display of hardware; soft goods and supply, service or research and development capability needed by private industry, State and local governments, the Federal Government and its prime contractors. The exhibits are manned by qualified purchasing agents or procurement personnel. The Department of Defense assists sponsoring groups to stage such an event on a regional basis with four held per year.

(d) Advise businessmen on how to sell to Government agencies via information sheets such as "Selling to the Navy" in appendix II.

10. IBM directory service: Encourage the establishment of an IBM system at the State level to list the supply capability of businessmen for use by both Government and private industry in locating sources of supply. Such a system is used in the State of Oklahoma and is outlined in appendix III.

11. Commercial product trend analysis: Investigate the commercial opportunities available to Meriden firms in terms of growth potential by analyzing the industrial trend series of the U.S. Department of Commerce. Match these trends with Meriden capability and advise businessmen of new opportunities.

12. Legislation: Analyze State and Federal proposed legislation affecting economic development and support those bills with greatest promise of assistance.

13. Production pool: Explore with community businessmen the desirability of pooling their resources to undertake larger contracts. Twelve firms already contacted are very much in favor of the idea.

14. Business development: Encourage the establishment of new small business enterprises from within the community as their need becomes known. Assist promising young men and women to become established.

15. Committee effort: The committee will continue in operation for a period of a year. It will act as a steering committee and render positive leadership in carrying out this program. In this connection, it will integrate its efforts with existing organizations such as the manufacturers' association, chamber of commerce, and the urban redevelopment committee. In necessary cases, the committee will itself take necessary action on the program where other reources are not appropriate or immediately effective. The committee will develop a publicity and promotion campaign. It will keep appropriate people informed on progress and results of their work.

Adlai E. Stevenson Speaks—Urges Passage of Housing Bill

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. BRADEMAS. Mr. Speaker, today Members of the House of Representatives continue debate on an issue of deep concern to millions of Americans—housing.

I am sure that as my colleagues consider voting on the housing bill they will find interesting and helpful an eloquent address by the Honorable Adlai E. Stevenson delivered on May 5 in Newark, N.J., to the American Council To Improve Our Neighborhoods.

I should like to draw particular attention to the following statement in Governor Stevenson's speech in which he indicates his support of S. 57:

In my judgment, the housing bill which the Senate has already passed and the similar bill the House is now considering represent a constructive enlistment of the private and the public forces which are essential to getting on with this job.

Governor Stevenson's address follows:

ADDRESS BY ADLAI E. STEVENSON AT AMERICAN COUNCIL TO IMPROVE OUR NEIGHBORHOODS DINNER, TUESDAY, MAY 5, 1959, NEWARK, N.J.

My remarks proceed from an impressive title—"The American City: A Cause for Statesmanship." I despair, frankly, that any words of mine can satisfy the promise of this title (which is not mine), or that my grasp can equal its reach.

As for the American city, I am not expert in its problems. I confess to not even living in it, but rather as far from it as the logistics of commuting permit. I know this makes me, in the literature of the subject, a "fugitive from civic responsibility," form of parasitical growth taking income and culture from the city, and in return only adding to the morning and evening traffic jams.

As for statesmanship, again I pretend no expertise. If certain political adventures of mine—in my youth—may have seemed to involve pretenses of statesmanship, I recognize that issue as having been publicly settled.

Yet surely the first charge upon statesmanship as it applies today to the American city is clear enough. It is the charge upon statesmen responsible for all of the cities of the world. It is that these cities be permitted to survive—that they not become, in a chain of blinding flashes, only smoking, gaping holes in the ground. The point does not bear laboring. Neither may it be forgotten—lest it become the ultimate irony that man's foregathering in the city was to simplify his self-destruction.

The real city planners, the architects of our tomorrows, are not we who meet tonight here in Newark, but those who are even now gathering in Geneva. May they feel the strength of our hopes, the power of our prayers.

But survival isn't the only problem we have in common with the rest of the world. Urban renewal and a shortage of housing are universal. I was told everywhere from central Asia to Leningrad that housing is the No. 1 problem of the Soviet Union. And I have seen the great boom towns in the exploding population areas from Damascus to Manila, and the new central cities that have arisen from the ashes of London, Warsaw, Berlin. Everywhere on earth the city planners and officials are struggling with the same problems of the decay and death of old centers and the birth and growth of new ones.

In distant places, I have, like you, often thought that in spite of our standard of living, in spite of amenities that exceed the grasp, even the imagination, of most people, we in America have still fallen far short of even arresting the spread of blight and decay in our cities. Like you, I have often wondered how we can hope to solve the problems of maintaining our alliances, of meeting the Communist economic offensive, of extending a helping hand to the peoples now searching for national identity and independence, of standing firm against aggression anywhere, if we can't mobilize our domestic resources to meet the needs of day-to-day work and living.

We are not concerned just with the new low-income and minority ghettos in some cities, nor just real-estate values in the downtown central business districts, nor the bedeviled commuter, nor the costly, growing traffic congestion, nor the general offensiveness of the urban sprawl. The deficiencies in our schools and communal services, like parks, playgrounds, hospitals, and the ugly outcroppings of juvenile violence, are all pleading for attention and are all part of the broader task on which we are embarked—the revitalization and reinvigoration of the city as a way of life.

It is not even a renaissance we seek; rather it is the construction of an entirely new mode of living—poles apart from the Victorian city of old. What we are concerned with is the exciting, exhilarating adventure of constructing economic, financial, social, and political tools to build—not a city—but a metropolis.

But, to return to "statesmanship" in this context, I would define it simply as the marking and the doing of the central thing that needs to be done—finding the right key—and turning it.

If there is a key to the answers to the problems which today beset our cities, I am sure I haven't got it. I don't think there is one key. But I think of Pope's line about a key to a drawer wherein lie other keys.

Because, I suppose, a good many of the years of my life have been devoted to the problems of government, the drawer I look to is the one marked "government"—government with a small "g."

This term does not mean, for me, the agencies of public government as distinguished from those of what we call business or private enterprise. I wish the Nation could realize, as you in action do, how closely the functions of a corporation are related to governmental functions when—for example—a great insurance company takes over the clearing of a slum and its replacement with the facilities for decent, 20th century living.

The problems of the American city will be met when, and not until, we recognize that they are already and inexorably committed to the joint trusteeship of private enterprise and public responsibility; that they demand a shoulder-to-shoulder, two-fisted attack; that their solution depends entirely upon an alliance of private and public agencies—with each respecting its own limitations and the capacities of the other, and with each acting in support of the other.

It is equally essential to recognize that the public agencies involved operate at three levels—Federal, State, and local—and that there is a similar problem of distributing responsibilities among these three, with each being equiped to do its appointed part.

America has the resources, the wealth, the raw materials, the intelligence, the technical know-how, the pressing need, and the driving desire to solve all the problems which have

so far prevented the remaking of the cities. Statesmanship's question here is not what to do but who is to do it—and how to make an alliance among the agencies involved, as you have evidently done with such spectacular success here in Newark.

There is no point in emphasizing at an action conference the stake private enterprise—including every businessman in every city in America—has in the preservation and the strengthening of the urban structure. You, more than any other group, have pointed out that what is good for the American city is good for every businessman who operates there.

Part of these returns are direct—in profit on the building projects themselves. But more and more the business community is coming to realize that urban renewal also means more customers coming in the doors, that an equity investment in a slum clearance development project represents philanthropy—at a profit. We are beginning to recognize that not only charity, but investment as well, can best begin at home, in homes.

I suspect that in the long run the clearing of slums will come less as the result of public concern about the people there being poor people than as a product of the business community's concern about their being poor customers. This isn't cynical. It simply recognizes the fact that it is hard to sustain public concern—except when a school burns down or a rat bites a child—in a problem which neighbors can solve by moving away from it. But businesses can't easily do that.

So business, especially big business, has a great opportunity here to make a contribution—and to make a profit.

But there are some parts of this job that just cannot be done at a profit, and therefore will not be done privately. The necessary distribution of responsibilities for city saving will not come about as long as influential groups insist that any governmental financial aid, except to guarantee mortgages, is socialist sin—which you are either against in all of its manifestations or for, all the way.

I came across, the other day, a speech I made at a Housing Day Conference in Chicago 10 years ago. This line jumped out at me: "The public housing debate is over." That was shortly after, of course, the enactment under the sponsorship of Senators Taft, Wagner, and Ellender, of the Housing Act of 1949—providing for the building of 135,000 public housing units a year for 6 years, or 810,000 in all.

But now, 10 years later, only half of those 810,000 units have been built, and some of those who denounced Senator Taft as an old Republican have brought in a housing bill providing for no public housing at all.

Nobody likes public housing. It is a mark of failure, and the Nation will welcome and accept the views of those critics of public housing who will develop alternatives which are constructive and realistic. But mere insistence that private enterprise can do the job without public housing is no answer—unless this insistence that private enterprise can do the job without public housing is no answer—unless this insistence is backed up with action. We are entitled to say here, with a new meaning, "either put up—or shut up."

There is reason for larger satisfaction about the increasing supply of middle-income housing. I saw a few days ago in New Haven the heartening spectacle of a beautiful new city rising from the ashes of ugliness and neglect. We have in Chicago now, as you have in a number of your cities, substantial developments which confirm the willingness and ability of private capital and enterprise to carry the job of reconstruction forward if public funds are available for the preliminary clearing of the old slum areas.

I am most encouraged, incidentally, by the reports of success in leasing these new accommodations on open-occupancy basis, for any realistic appraisal of the housing problem must take account of the serious danger that subsidized housing will become racially segregated housing and will thereby aggravate a problem as serious as the housing problem itself.

Last week a friend of mine who has done a great deal in the effort to rebuild Chicago showed me how the private equity investment of $4,725,000 per year for 10 years will produce the capital required to completely rebuild an entire square mile of slums with fine, modern living accommodations which can be rented to low middle-income families at a fair profit. Surely this means that our goals are within our reach. I was sobered when he added that this proposition assumes a public subsidy to acquire this land and to write it down to use value, and that these costs will run to $8 million per year. But this is the kind of cooperative venture, the kind of public-private alliance, which alone can do this job. It appeared, for a while, that there was solid recognition of the degree of aid that would have to come from Federal sources to support local urban renewal, in both its private and its public aspects. Of late, there has been considerable doubt cast on both the extent of such aid and its character or continuance. The plain fact is that those who oppose Federal aid for urban renewal are actually against urban renewal. For they know full well that many of the possibilities of local revenue have been preempted by Federal and State taxing bodies, that the largest urban centers are operating under archaic revenue authority with little hope of relief from State legislatures dominated by nonurban lawmakers. The vast sums urban renewal requires are just not available, presently, or in any foreseeable time, exclusively from private funds or from the local resources of the overwhelming majority of urban centers.

In my judgment, the housing bill which the Senate has already passed, and the similar bill the House is now considering, represent a constructive enlistment of the private and the public forces which are essential to getting on with this job. These bills recognize the continued need for some public housing, particularly now when the relocation problem has become even more acute as a result of the expansion of the highway and other construction programs.

These bills reflect the lessons of administrative experience which we have had to learn the hard way. It is clear now that the administrators of the Federal program destroy the effectiveness of local authorities and discourage willing private investors when they keep changing the rules of the game, throwing out projects which were carefully devised to conform to the old rules but which don't meet the new ones. Too many of us here are familiar with the crippling effect in our own cities of arbitrary notices from Washington that all projects are to be scaled down by an arbitrary percentage. Too often the scaled down project just doesn't make sense. Half a building is not better than none, and it is often the falsest economy to pick at a slum instead of rending a bulldozer all the way through it.

It is noteworthy, too, that these pending bills reflect the significance of the conservation principle that a dollar put into preventing urban decay is $10 saved in subsequent rebuilding.

Such legislation deserves support solely in terms of the human values that are involved. The juvenile delinquency a slum breeds infects a whole city. The tax bill for it—for police regulation, for fire protection, for relief payments—goes to every taxpayer.

You and I vote at each election with complacent confidence that democratic capitalism means security and the supplying of life's purposes. But our votes count no more than the votes from slum victims which are not based on that faith.

I reread not long ago the story of the 21 American soldiers who chose not to return from the Korean Communist prison camp but to stay with those who had captured their minds as well as their bodies. Fifteen of those "21 Who Stayed" came from slums—some in the cities, some in the country. I could only think of Bret Harte's poetic dictum that nobody will carry a musket for a boarding house.

But, we are being told, we can't afford these things.

I would, if it were necessary, say to this that there are emergencies in which you call the doctor without asking the cost, and that cancer in our cities is such a case. When somebody starts talking about the evil of passing a burden of public debt on to the next generation it makes me want to ask if it is better to pass on a burden of slums, of ignorance, of national weakness. There is a time in war to say "Damn the torpedoes, full speed ahead," and there is a time in peace for equal daring.

But to support a program of full scale renewal and rebuilding of the cities is not to be soft-hearted (which seems to me no sin in a democracy); it is also to be hard-headed. I am not a budget buster. But I do believe in America's greatness, and that this greatness can be traced to bold leaders and bold enterprises and the basic notion that money invested properly and adequately will multiply wealth. What is true in our past economic history is true of our future. There are millions to be invested in the rebuilding of our cities. The Federal and local government funds appropriately invested will generate manifold greater private investment and resulting new levels of economic activity. And every dollar of public funds that goes into slum clearance and urban renewal will be returned to the public coffers in increased revenues.

I hope we are ready to stop, in the face of these great needs which are also great opportunities, the demagogic, political debate which assumes that Government and private enterprise are inherently antagonistic. I hope we are now ready to accept, instead, the demanding necessity for a confident alliance of public and private enterprise in meeting the problems of the city.

I concede that we will have to spend more and proceed at a much more rapid rate if we are to more than nibble at the problem that confronts us.

Yet money is not enough. Indeed the wrong amount of money at the wrong time and in the wrong place may hinder rather than help our efforts to construct the city of the future. We Americans have a penchant for believing that sufficient inputs of energy and dollars can solve any problem. We rush in where angels fear to tread and frequently we profit, but sometimes we learn why the angels, in their greater wisdom, have not joined us and preferred to stay aloft. Urban reconstruction is a case in point.

Despite the laudable efforts we had been making to deal with various aspects of the problem in the generation since the New Deal began, does the sum of these parts add up to a meaningful whole? Instead of developing a comprehensive program, are we in danger of creating a patchwork, a conglomeration of temporary and short-sighted solutions to pieces of a problem which cannot be handled piecemeal? Even in that haven of generalities—a preamble to a Federal law—we look in vain for a comprehensive statement of what we are after.

What do we want our downtown centers to become? What, in the long run, are the

proper uses of the land in the "gray belt"? What kind of transportation system will best meet our needs? How do we want to use the remaining open spaces around our cities—for parks, for wildlife reservations, for industries, or for the next wave of developments?

We shall have to look to ACTION and to groups like this for responsible, sustained help in finding the answers. But it will have to be left to the citizens of each urban community, acting through their own governments, to settle their own issues. And here we run into another problem of government—the problem of too much government. At the local level the jumble of bureaus, municipalities, counties, commissions, authorities, corporations, and officialdom generally has neither a sense of union nor a sense of direction. In most instances even the skeleton of a limp confederation is lacking.

At the very root of this problem is also the fact that although we have become a dominantly urban and suburban society, our political thinking and structure is still predominately country-minded.

One hundred million Americans live today in 168 metropolitan areas. This is over 60 percent of our total population. Yet, while we maintain a huge Department of Agriculture in Washington, no one there speaks for the cities as such. And in most legislatures the vote of a small town or rural citizen is worth substantially more than his city cousin's.

I know, from my years as Governor of a divided State, how difficult this problem is. There are two sides to it. And yet there is bound to be a change. Local governments must be given the fiscal authority which the discharge of their responsibilities demands. There must be enlargement, in one way or another, of the revenue sources available to them. Gotham won't secede from New York, nor Chicago from Illinois, but this is a serious problem and it is going to take ingenuity—and a willingness to seek out entirely new ways—to meet it.

These urban problems have today become metropolitan problems, problems that cross all lines between city and suburbs and between incorporated and unincorporated areas, problems that have no city limits.

The plain fact is that the resources on which our urban life depend—land, water, and breathable air—are getting scarcer. The decisions about their use, like the decisions about transportation, are hard decisions. Any assumption that the city planners or high-level commissions will devise the answers seems to me to go only half way. For the answers, however wise, won't mean anything unless they are adopted—through the political decisionmaking process—by those affected by these decisions.

I know the difficulties which will be in the way of developing new machinery of decision. The sovereignties and vested interests of established local units and officialdom will be as hard to break down as they are at the national and international levels. The various suburbs which surround our major cities are already developing special ethnic and economic personalities, and this will make it harder and harder for the citizens of one area to be persuaded to submit their interests to a common vote which includes the citizens of another.

But I know, too, of the bold, effective way this problem has been met by Toronto. We are all watching eagerly the imaginative inquiry being conducted at Detroit. Other cities have taken the first essential steps toward metropolitan planning and are now looking to the possibilities of one form or another of limited metropolitan government.

If building new instruments seems to some of you hopeless, then I must say that I think the other choice is to accept for our cities the fate of eternal worrying at the edges of our urban concerns, of everlasting plucking at everbroadening scabs of blight and decay, and more authority will remain at the higher State and Federal levels.

A balkanized metropolis can probably cope, in daily desperation, with the problems of urban survival. It can make our day-to-day difficulties tolerable. But it can never conceive the great plans, set the great policies, make the great decisions, which are essential if the cities are to be built and rebuilt according to the blueprints of our hopes.

I have tried to suggest that the problems of the American city demand the exercise of what is perhaps the most difficult art of democratic government: the effective mobilization of all of the forces which make up the free body politic and the free body economic—not just to make the right decisions, but also to carry them out.

I find great significance in the fact that it is a citizens' group such as ACTION that sponsors this meeting. For whatever may be the answers to the city's problems they must be worked out by the common consent of those affected by them.

There are people in the world today who say that tough public problems are best solved behind closed doors, by dictators, or central committees. But in our land we dare not even reach for a goal of human improvement in disregard of human needs, human values, human judgments. The central tenet of statesmanship in a democracy is that unless the people understand it and participate in it, no long-term program can endure.

So, as we put ourselves to the rebuilding of our cities, to the problems of their growth, we will look for leadership, a high quality of skill, in the managing of this task. But we will not buy the shibboleth that autocratic action is essential to achieve the desired result. We will not leave the subject to an anointed few.

The municipality of tomorrow must be renewed in the image of people's hopes and ambitions for a better life. The values to be recreated must have a sound political and economic pedestal, but they must flow from human needs.

Thus will we build and rebuild our cities, and in so doing renew and rekindle our faith in ourselves and in the limitless creativeness of free men.

Education Is Everybody's Business

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following article by Frank W. Abrams, former chairman of the board, Standard Oil Co. of New Jersey, and chairman of the executive committee of Council for Financial Aid to Education, Inc.:

EDUCATION IS EVERYBODY'S BUSINESS

The Founding Fathers of our country talked much about equality. However, it seems to me that the essence of the American dream is not so much equality of people as it is the equality of opportunity. Men are not equal. They are not all alike. They are not of the same stature, the same physical strength, the same talents of mind or spirit. Nevertheless, they are all children of God, they possess inalienable rights, and so far as possible they should have the same chance of progress. And we are coming to see that it is education that provides this chance. If we are to achieve the American dream of equality of opportunity it will be by providing equal facility for a first-rate education.

Again, if we are interested in the physical well-being of our people, or the development of informed and responsible citizens, or the social, cultural, and scientific advance of the Nation, the answer will be found in the quality and character of American education. The schools and colleges supply the scientists and managers of American industry. They produce both the leaders of Government and the informed citizens, and they determine the level of culture and intelligence.

And still again, our entry into both the atomic and space ages within two decades has signalled a reappraisal of what we mean by national strength. In the past we have measured the strength of nations almost entirely by size of population, gross national product, natural resources, the size of military esablishments, and the control of colonial empires. Now with a jolt we realize that perhaps the best measure of a nation's strength is the quality of her intellectual resources. And in this higher education plays the decisive role.

The challenge to all of us today as we consider the future of education in this country is a challenge to character. It will not be met solely by our ability as a people—nor by our resources as a nation—nor through our generosity, but as the result of our devotion to ideals and principles. And the test of this devotion is the price we are willing to pay in the form of sacrifices.

As I have asked myself what seems to be the most important thing for Americans to be saying to each other at this time, I have come to this conclusion. The test we now face is a test of character, and the proof of our devotion to freedom, to education, and to everything else we hold dear, is our willingness to sacrifice for them.

There are some other things of which I think we should remind ourselves. I am going to put first the fact that—America will always be "unfinished business."

I grant you that there is no place in the world where so many people have so much.

Our standard of living as a Nation is unbelievably high. Half the time when our representatives abroad are talking to people in underdeveloped areas of the world—and even in some developed areas—they have to understate our condition in order to be believed.

We live in a country where the "rich"—measured by the standards of hundreds of millions of people in other parts of the world—are more numerous than the poor.

We also live in a country where life expectancy has gone up 40-odd percent since the turn of the century—thanks to medical education.

We live in a country where the individual has achieved an amazing freedom from tyranny—the tyranny of Government, the church, or economic groups.

In this country today we have unparalleled cultural satisfactions—easy and inexpensive access to the finest music, the greatest art, the best theater. All roads lead to America and to the vast waiting audiences of the American people.

We have every reason for pride in our achievements.

But is anybody prepared to say we have come to the end of our road? Has America achieved the ideals of its founders—or all we now see that it is possible to achieve?

Of course not.

If we can agree that America is not finished business, then I think we must say to ourselves—"A better America will be a product of better education."

The progress of the United States has been the progress of education in this country from the beginning.

As we have raised the general level of education—expanding the number of people who could go to school—increasing the number who could go beyond literacy into higher and higher education—we have raised the ability of millions of individuals to discover and develop their potentialities, to lead richer lives, and to handle their own affair successfully. On the material side education has increased our capacity as individuals to produce, and thus to earn. Through education men have increased their ability to cooperate with one another in great undertakings and to use the discoveries of the free, inquiring mind for the development of hundreds of thousands of goods and services which make life richer and safer. We have accomplished more because we have learned more. And this has given us a strong base on which to build as a nation.

The contribution of education is perfectly obvious in the economic field. No American businessman today can be unaware of the importance of the American system of education to his operations. The American system of production harnessed to serve not a privileged few but 175 million people could not exist today if 97½ percent of our adult population had not achieved literacy, if more than 75 percent had not completed a grade school education, if nearly 40 percent had not completed the work of a secondary school, and if 6 percent had not already been graduated from a college, a university, or a graduate school.

Mr. Alfred P. Sloan, Jr., undoubtedly one of th greatest organizers we in this country have ever known, would be the first to tell you that the General Motors Corp. could not be organized in a nation which did not make available to it so vast a number of educated men and women as the United States. It could not find the necessary leadership at every level or the necessary workers, and certainly it could not find enough customers. And I am sure that Mr. Irving S. Olds of United States Steel would agree with this for his company.

When I got my first job as a young graduate engineer, working in an oil refinery—and a very primitive refinery it was by our present standards—college men were so rare that they had to tread cautiously and remember that they were an underprivileged minority. As recently as 40 years ago the foremen and skilled workers in such plants had a substantial contempt for us college boys, and they also were very glad indeed to see that we did not miss our chance of graduating from the college of hard knocks.

As a businessman I cannot visualize the corporate enterprise of tomorrow—with its vastly increased use of technology—without assuming a substantial growth of our educational system not only in breadth but in depth.

I would like to put forward a third proposition. It is this—in the end the best educated nation will achieve world leadership.

I think we are justifiably concerned at the gains which a hard-driving Soviet Russia has been making in the field of education. And I think what troubles us most is the evidence that the Russian people seem more than willing to pay the price of sacrifice. I think we have a right to be disturbed at our own easy-going educational ways, because much more is involved here than leadership in the production of scientists in any race to achieve military supremacy. Even if we or the Russians could achieve that—and I don't think either of us can—we would still need to face the fact that a better world can never be brought into existence by force. A better world must first be constructed in men's minds.

In the end it must be achieved by a vast increase in the availability of education to the peoples of the world. And by that I mean the kind of liberating education which we know in this country and which has made so great a contribution to our own security and well-being. Again and again public opinion studies in this country have shown that as you increase the level of education, you increase the ability of people to understand and to give temperate and tolerant answers to critical questions.

Under these circumstances nothing is more important than that our own educational system achieve greatness—which means not only that it will remain free and independent but that it offer young Americans the hard challenges of intellectual leadership. We cannot bring out the best in the generations which will meet the issues of the future by soft and second-rate challenges now.

I have one final proposition—only as each of us individually contributes to the support of education will we get the kind of educational system we need.

I want to say something at this point about the teaching profession of this country.

Back in September 1947, I made a speech before the Advertising Council in New York on "The Stake of Business in American Education." I was asked to help in the work of getting public attention on the problems of education, and I finally gave in to the pressures of good friends and the obvious importance of the cause.

I certainly didn't know very much about my subject, but it began to look to me as if business was a kind of absentee stockholder in education and ought to pay some attention to its investment. That was about what I said at the luncheon.

Afterward I went back to my office satisfied that I had done my good deed for the day. The three or four hundred people at the luncheon had applauded in all the right places, and I received the normal letters one might expect after an effort of this sort.

What I was not prepared for was what came after the educational press had reported my comments. Postcards, letters, telephone calls, telegrams began pouring in from educators who took my speech much more seriously than I did. And then I discovered—or rediscovered—some of the great army of teachers and administrators in this country who are deeply devoted to education. They weren't asking anything for themselves. It was education that mattered to them—and the young people who were being educated. They wanted to do a job—and they thought what I had said was helpful to their cause.

Since then I have become increasingly aware of how much these fine people in teaching have been sacrificing for the rest of us. There isn't a college graduate in this country whose education was not paid for in part by somebody else—through college endowments and otherwise. We all got a free ride of one sort or another. But we don't often think that our teachers were also making a financial contribution to the education of each and every one of us through their compensation rate.

When I finished my chore for the Advertising Council, I thought I was through with that assignment. I never made a greater miscalculation than that one. As I became better informed on the problems of education, I saw—and the company from which I graduated a few years ago also saw—that there was a job to be done by business and industry for American education.

We have a magnificent public educational system. There are no better schools or colleges or universities than many of those which are tax supported.

We have no finer teachers than those who are in such tax supported institutions.

They deserve our help and affectionate regard. But only as we participate individually do we truly commit ourselves—and a better America will not be created for us by any government under any party. We will produce it ourselves by our own efforts. And I think we will all be better served if we make maximum good use of our right to pay a substantial part of the bill through voluntary giving rather than depending entirely on the compulsion of taxes.

Can we do it? Let's look at some factors which indicate the capacity of support from private sources.

What we need at the moment—in terms of money—is an increasing investment of something like $500 million a year in our public and private institutions of higher education.

This is a respectable sum, but it is only about one-ninth of 1 percent of our gross national product even in the recent year of recession. Let me put this sum in perspective in some other ways.

There are more than 800,000 business enterprises, large and small, which filed tax returns with the Bureau of Internal Revenue last year. If these companies averaged only $600 per year to higher education, it would mean about $500 million.

It is estimated that corporations in the United States spend $5 to $6 billion annually in research and development work. Actually, of course, this type of activity is a particular beneficiary of our educational system since it requires highly educated technical personnel. If corporations were to invest in colleges and universities a sum equal to 10 percent of their research and development budgets, they would get more than a half billion dollars.

The last reported annual net income before taxes of American business and industry amounted to over $47 billion. Just over 1 percent of this amount contributed to the support of higher education would provide the $500 million needed. Since a corporate taxpayer may spend up to 5 percent of its net income for philanthropic purposes under the Internal Revenue Act of 1936, such a contribution would be only a little more than one-fifth of the allowable percentage.

The expenditure for advertising by American companies totals approximately $10 billion per year, and there is no corporate expenditure which owes a greater debt to the existence of a vast educated market than advertising. Far be it from me to suggest that any part of this great sum should be diverted per se to education. But I do think some of our advertising could be designed to stimulate private support of education.

Of course, by far the largest expenditure of virtually every business and industrial enterprise is to its annual outlay for payroll. This figure is roughly $250 billion today. Since education determines, more than any other influence, the capacity of these more than 65 million employed people to produce, it would not seem unreasonable for an enterprise to contribute an amount equal to two-tenths of 1 percent of its payroll to improving and expanding its source of personnel supply in this country.

Please bear in mind that no single yardstick of ability to pay that has been enumerated above is suggested as the source of funds. These are purely measures of private ability to support a national need that is of basic importance to the future of business itself.

The final and chief beneficiary of the educational system is the individual. His life is greatly enriched by education—but it is evident that he also has a direct financial gain.

We have already seen a very wide acceptance of the duty of the college graduate to support his college or university. Very few of the nine million college graduates in this

country today paid the full cost of their education.

The extent to which this obligation is being recognized today is indicated by the fact that American colleges and universities are receiving approximately $130 million a year from their graduates—a very respectable sum. Nevertheless, on the basis of nine million graduates, this is an average of only a little more than a dollar a month. It would not be too difficult for these nine million beneficiaries of education to contribute several times this total, and become a substantial partner of business in the educational enterprise.

If you believe that America is still unfinished business and that a better America will be a product of education—and if you agree that we must develop the world's best educational system so that American ideas of freedom, justice, and equality will influence the shape of the world in which our children and grandchildren will live—I think you must share the feeling many of us have that we are involved in the most important job that the American people have to do as they seek world leadership for peace in the years ahead.

Let us dedicate ourselves to this purpose. And let us learn to make whatever sacrifices are necessary to accomplish this end, for education is everybody's business.

Law: Many Things to Many People

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. BROCK. Mr. Speaker, the date of May 1 is observed by those in the legal profession and our courts as Law Day. To those so engaged the meaning and concept of the law is clear and they are generally very zealous in their observance of the ethics of their profession and the tenets of the bar associations. However, to those unschooled in the law, it ofttimes has an entirely different meaning—at times an awesome regard for something beyond their ordinary comprehension, never recognizing the protective cloak it throws over their daily lives.

Morris D. Cook, an eminent member of the bar for some 30 years, and president of the Dodge County (Nebr.) Bar Association, recently wrote an enlightening description of the intent, purpose, and protective accomplishments of the law, as we know it and respect it. The Fremont Guide and Tribune, a leading journal in the State of Nebraska, thought so much of Mr. Cook's masterful treatment of the subject that it was carried as the lead editorial in their April 30 issue.

In order that all will have the benefit of this very unusual dissertation, may I request at this time the necessary permission to extend and place in the daily RECORD the editorial published by the Fremont Guide and Tribune:

LAW: MANY THINGS TO MANY PEOPLE
(By Morris D. Cook, president, Dodge County Bar Association)

President Eisenhower by proclamation has designated May 1 as Law Day and the American Bar Association has urged its observance.

The word "law" means many different things to many people. To some it is the policeman on the corner or the patrolman on the highway. To others it is the judge on the bench and the lawyers in the courtroom. Many think of it as the dramatic battle of wits between the district attorney and the lawyer for the defense on television, or the hair raising exploits of the private detective.

The Capitol Building, the courthouse, the prison, and the voting booth, all appear in the kaleidoscope of impressions we receive of the law.

All these, and many more, are the outward expressions of the law, but, in a broader sense, they are not the real law.

A great many of us probably have never been in a courtroom. Yet, in many respects, next to our place of worship and our homes, it is probably one of the almost sacred places.

It is what happens in the courtroom that determines how we enjoy the sanctity of our homes, the safety of our loved ones, and our means of livelihood. The courtroom literally affects our lives from the cradle to the grave and beyond, for even after death, our estate is managed and distributed in the courtroom.

In a sense, the courtroom is the depository of everything we own, our freedom and our lives. It is here that they are protected or taken away.

It is axiomatic that we rarely fully appreciate the things we have until we lose them. The safeguards of our Constitution, such as the rights to trial by jury, freedom of speech and religion, representation by counsel, presumption of innocence, public trial, and many others, are only words until we need them. Then they become like old friends in time of trouble.

Not all our laws are good; neither are all judges or law enforcement officers for they are only human beings subject to all human frailties. However, most of our laws are good, particularly those dealing with fundamental rights. For instance, our rules of evidence are designed to ascertain the facts and, contrary to popular opinion, they do just that.

Space does not permit a discussion of these rules but they are the results of many, many years of experience and thinking by the founders of our present system of legal procedure.

For example, the prohibition against hearsay evidence prevents our trials from becoming mere gossip forums with all the unreliability attached to gossip.

Our Constitution and other basic laws guarding our fundamental rights are not merely printed words but are like living, breathing things. They have withstood the impact of wars, national calamities, and all the vicissitudes of mankind. In times of public stress when passions run high, they protect the minority from the excesses of the majority. Although the majority may rule, it is not always right. One only need to remember that at one time the majority thought the world was flat.

It may be trite to say that the very foundation of our Nation is founded on law. Nevertheless, it is well to keep this thought in mind during these troubled times in our world affairs for all our military might cannot save our way of life if we lose these fundamental laws.

It would take volumes to even hit the high spots to describe what a wonderful system of laws we have in these United States. So far, with all its imperfections, it is the best that has ever been devised by the heart and mind of man.

Therefore, it seems quite proper that at least once a year we pause a moment in our busy lives and, in a manner of speaking, "count our blessings."

MORRIS D. COOK,
President, Dodge County Bar Association.

DAV Services in West Virginia

EXTENSION OF REMARKS
OF
HON. HARLEY O. STAGGERS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. STAGGERS. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of West Virginia citizens has recently been brought to my attention. Again, these splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly and indirectly.

Among the several congressional chartered veteran organizations, which have State departments and local chapters in West Virginia, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war.

DAV SETUP

Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have very substantially benefited every compensated disabled veteran. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger; its national director of claims, Cicero F. Hogan; and its national director of employment relations, John W. Burris—all located at its national service headquarters, 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become th elargest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV National Headquarters, located in Cincinnati, Ohio, has maintained the largest staff of any veterans' organization, of full-time trained national service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and in its central Office in Washington, D.C.

They there have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

SERVICE FACILITIES IN WEST VIRGINIA

The DAV maintains a full-time national service officer in West Virginia, Mr. Henry E. Smith, located in the VA regional office, 832 Fifth Avenue, in Huntington. The department commander is Mr. James R. Greer, Box 535,

Rupert, and the department adjutant is Mr. Clifford E. Mason, of the same address.

There are four VA hospitals in West Virginia, in each of which the DAV has a voluntary services representative, as follows: Mr. James B. Taylor, Jr., at Beckley, with 200 beds for general medical patients; Mr. Edward C. Wereley, at Clarksburg, with 184 beds for general medical patients; Mrs. Esther M. Darling, at Huntington, with 180 beds, general medical; and Mr. Earl T. Rosensteel, at Martinsburg, with 1,400 beds at the VA center.

During the last fiscal year, the VA paid out $63,813,000 for its veteran program in West Virginia, including $17,738,910 disability compensation to its 20,083 service disabled veterans. These Federal expenditures in West Virginia furnish substantial purchasing power in all communities. Only about 8 percent, 1,558, are members of the 35 DAV chapters in West Virginia.

SERVICE ACCOMPLISHMENT BY DAV

This 8 percent is strange, in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officer in behalf of West Virginia veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted (estimate)	42,816
Claims folders reviewed	35,680
Appearances before rating boards	13,276
Compensation increases obtained	1,815
Service connections obtained	786
Nonservice pensions	740
Death benefits obtained	59
Total monetary benefits obtained	$1,000,470.39

These figures do not include the accomplishments of other national service officers on duty in the Central Office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32, and in the central office, they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for West Virginia veterans their dependents and their survivors.

SERVICES BEYOND STATISTICS

These figures fail properly to paint the picture of the extent and value of the individual advice, counsel and assistance extended to all of the claimants who have contacted DAV national service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guaranty loans for homes, farms and businesses, and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment—to utilize their remaining abilities—civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disability becomes extremely difficult—too many times impossible.

A VA claims and rating board can obviously not grant favorable action merely based on the opinions, impressions, or conclusions of persons who submit notarized affidavits. Specific detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed, because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

LOSSES BY REVIEWS

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year. About 1 percent of such discontinuances and reductions have probably occurred as to disabled veterans in West Virginia with a consequent loss of about $280,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in West Virginia to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

COSTS OF DAV SERVICES

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

METHODS OF PROVIDING SERVICES

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag (miniature automobile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1 million owners of sets of lost keys have received them back from the DAV's Idento-Tag department, 2,992 of whom, during the last 8 years, were West Virginia residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

MEMORIAL HONOR ROLL

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000, exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of

all service claimants, DAV members and other social minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first perpetual rehabilitation fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100, equivalent to about $4 per DAV member.

As a DAV life member, I am pleased to enroll as one of the benefactors on the memorial honor roll of the DAV Service Foundation, with the realization that only the interest earnings therefrom will be available for appropriation to the DAV for its use in continuing to maintain its national service officer setup in my State of West Virginia.

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in West Virginia by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue, NW., Washington 4, D.C. Every such serviced claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100—$50 to those born before January 1, 1902, or World War I veterans—payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations and various religious, fraternal and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veterans' organizations: The United Spanish War Veterans, the American Legion, the Veterans of Foreign Wars, Amvets, Military Order of the Purple Heart, and the Disabled American Veterans. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice, the DAV. I am proud to be a member of the DAV, as well as a member of the American Legion, the Veterans of Foreign Wars, and Amvets.

The Danger of Nasserism

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following article by the distinguished Senator from New Jersey, the Honorable HARRISON A. WILLIAMS, as it appeared in the April 1959 issue of B'nai Zion Voice:

THE DANGER OF NASSERISM

(By Senator HARRISON A. WILLIAMS)

The grave situation in the Middle East constitutes a most serious challenge to the free world today.

As I read the latest dispatches from the Middle East, I am especially mindful of many early warnings against Nasserism and its true character. Instead of facing the unpleasant facts, we helped to build up the Egyptian military adventurer. We fed his imperialistic ambitions in the naive belief that he would, in gratitude, identify himself with the West.

It should have been apparent to anyone who could read Nasser's own words as set down in his book, "The Philosophy of the Revolution," the "Mein Kampf" of pan-Arabism—that Nasser was motivated by violent hatred of the West and by dreams of empire at the very outset of his political career. But our State Department preferred to view the matter otherwise, and we all but begged to be blackmailed.

The inevitable results were the weakening of our prestige and influence throughout the whole area, the perpetuation of the Arab-Israel conflict as Nasser's best instrument for promoting the tensions on which his dictatorship feeds, and the entry of Soviet power on the Middle East scene through Nasser.

Nasser's forces are working overtime to convince the American people that Nasserism and Arab Nationalism are synonymous and that we have no choice but to swallow our dislike of Nasser and come to terms with him. This devious argument, which some misrepresent as hard-headed realism, would be more persuasive if one did not know the history of the power struggle within the Arab world and the essential weakness of strong men like Nasser, whose sole strength has been his ability to play off East against West. He has no indigenous strength. Even with the military aid and political support of the Kremlin, he was ignominiously defeated by little Israel, and he is being increasingly resisted and challenged by Arab countries like Lebanon, Jordan, and Iraq.

Add to this the opposition of Turkey and Iran, the growing resentment against Nasserist aims in Libya and Sudan, and the forthright action of President Bourgiba of Tunisia in breaking off relations with Nasser. The picture is not one of an invincible man of destiny marching from conquest to conquest, but of a political mirage going the way of all such fantasies of the desert.

The task before the West is clear. Our previous policy of massive appeasement of Nasser must be permanently replaced by a policy of massive containment.

Let no one intimidate us into believing that by pursuing such a policy we will be standing in opposition to Arab nationalism. America has provided the greatest impetus to Arab nationalism. It was at our initiative and under our leadership that the old imperialism were withdrawn from the Middle East. We fostered the political independence of all the Arab States and have lavished assistance of all kinds on these countries.

We are today prepared to continue our help to the under-developed Arab countries and ill-used Arab peoples. But we should not be prepared to equate Nasserism, with the ligitimate national aspirations of the Arab peoples, which we support.

I have already urged that we set ourselves the goal of establishing a stable economy in the Middle East, on a regional basis. That is the first thing we must do if we are to get peace.

In urging that a program of economic assistance in the Middle East should be pursued, however, I wish to make it clear that I do not believe that such assistance, if applied through the United Nations, should be given to nations which fail to observe the United Nations Charter, which explicitly prohibits economic boycott and belligerency of the kind now being waged by the Arab States against Israel.

At the same time, I believe that countries like Israel, which are clearly and unmistakably linked with the United States, in the worldwide struggle for democracy and against Communism, should receive expanded aid directly from the United States on the basis of bilateral agreements.

Where Israel is concerned, even those who had blindly opposed its establishment must now admit that it stands as the major bastion of Western strength in the Middle East.

The moral and material support we have rendered to Israel—and such support has been largely bipartisan in character—must be viewed not only as a matter of aiding justice, but also as an extraordinarily vital expression of enlightened self-interest.

For if—Heaven forbid—Israel should ever fall, the Middle East would be finally opened up to the domination first of Nasserism, and next to the domination of Communist imperialism centered in Moscow. Then the hopes of the free world in that part of the world would vanish—and with them our hopes for Africa, and large parts of Asia, and perhaps even of Europe.

Neither the people of Israel themselves, with their magnificent though small defenses, nor the public opinion of the whole Western world, would ever permit this.

In the light of the bonds by which history and fate have linked the destines of the peoples of Israel and the United States, is it not time to give full and unqualified public expression to this relationship?

Our Government has shown friendship and support for Israel in many ways—but it has not yet publicly proclaimed our determination to maintain Israel's political independence and territorial integrity, come what may. It makes absolutely no sense to argue that a declaration by our Government to this effect would tend to stir up resentment and latent hostility against America within the Arab world. Our past reserve on this subject has certainly not served to check the barrage of anti-American propaganda emanating from Cairo.

Indeed, the inhibition we have imposed upon ourselves in order to appease Arab extremists has had the very opposite effect; it has encouraged them to believe that we are not unequivocally committed to Israel's defense and that by hammering away at America for being friendly to Israel, they may induce us to withdraw our support from Israel altogether. I believe, therefore, that a categoric warning that an attack against Israel would be dealt with as a threat to the security of the free world is the best way of tranquilizing the astmosphere surrounding the Arab-Israel conflict.

This policy, forcefully stated and resolutely pursued and implemented by American leadership in the United Nations, would be the prelude to peace and mutual cooperation among the peoples of the area for the benefit of future generations and for the good of mankind.

George Washington Day Dinner, American Good Government Society

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. REECE of Tennessee. Mr. Speaker, each year the American Good Gov-

ernment Society calls to memory the enduring contributions of George Washington to good government in this country by holding a public George Washington Day dinner here in the Nation's Capital. On these occasions the society's annual George Washington Awards are presented to two people for their outstanding contributions to good government in our own times.

Among the previous recipients of the George Washington Awards are the late Robert A. Taft, Harry Flood Byrd, Herbert Hoover, Allan Shivers, Howard W. Smith, Robert E. Wood, the late Walter F. George, George M. Humphrey, Karl E. Mundt, William M. Colmer, Richard B. Russell, and William F. Knowland. This year the recipients of the George Washington Awards of the American Good Government Society were JOHN L. MCCLELLAN and Lewis L. Strauss.

The awards were presented at the 1959 George Washington Day dinner attended by more than 700 ladies and gentlemen on Thursday, April 30, the 170th anniversary of the inauguration of the first President of the United States.

On behalf of the trustees of the American Good Government Society, U.S. Senator HARRY FLOOD BYRD, of Virginia, made the presentation to Secretary Strauss and Representative CHARLES A. HALLECK, the minority leader of the House of Representatives, made the presentation to Senator MCCLELLAN.

I offer for the RECORD Representative HALLECK's remarks on making the presentation to Senator MCCLELLAN, the citation from the George Washington Award and Senator MCCLELLAN's response:

Mr. Chairman, all of you folks, I am happy and proud to be a part of this wonderful evening. I would like to say first of all that I note with approval that the purpose of the Good Government Society is to promote the education of the American public in the principles of the Constitution and of free competitive enterprise. Now certainly this is a worthy objective, and I would like to observe, in passing, that good government is government according to these principles.

Tonight it is my singular privilege to present the Society's George Washington Award to a man who has made a unique contribution to the preservation of these principles, the Honorable Senator, JOHN L. MCCLELLAN of Arkansas. If you will pardon a personal note, I have not only worked with him as a colleague in the Congress but I've been hunting and fishing a few times with JOHN, and I mean it when I say that he's a great guy any place you find him. [Applause.]

I think you will all agree that the primary purpose of government under our Constitution is the protection of personal liberty. The Constitution has given Congress the legislative power to provide this protection against both our enemies—those from without and those within our own society who would encroach upon our liberty.

The power to investigate is an essential component of the legislative process if the Congress is to perform its function intelligently and effectively. It is a power, however, which must be used with the utmost fairness and restraint.

As chairman of a select committee, Senator MCCLELLAN has labored long and well to bring to the attention of Congress and the American public the abuses that are today threatening the personal liberty of many hard-working Americans. JOHN MCCLELLAN has won the gratitude and respect of all right-thinking Americans for the fearless and fair manner in which he has carried on his investigations. [Applause.]

In these days when Congress is fair game for everybody, no Member of Congress has done more to enhance public esteem of Congress as a champion of the human rights guaranteed by the Constitution than has Senator MCCLELLAN. [Applause.] And no man has done more to improve the understanding of the investigative functions of the Congress of the United States.

JOHN MCCLELLAN has shown a deep devotion to the Constitution and the free-enterprise system, and so all of us who love him and respect him and admire him, applaud him for the great job he has done.

JOHN, [applause] this says: "Resolution and Tribute and Honor."

"JOHN L. MCCLELLAN, lawyer, statesman, and patriot, has devoted a quarter-century to the service of the people of Arkansas and of the United States—as prosecuting attorney, as Representative in Congress, and, the last 17 years, in the U.S. Senate. At 17, having passed the examinations, he was admitted to the Arkansas Bar by special act of legislature.

"Among his notable achievements have been the adoption by Congress of many recommendations of the Hoover Commissions—on both of which he served with distinction; the enactment of community property income tax law; and the exposure of corruption and tyranny in labor unions, which deny the constitutional rights of union members. For 20 years he has been an advocate of flood prevention, and the development of the Nation's water resources.

"Courage and integrity, wisdom and suasive power have indelibly marked Senator MCCLELLAN's work for efficient government and for liberty—the sum total of human rights. He is Arkansas' most illustrious son.

"For the board of trustees, American Good Government Society, Burks Summers, president, and J. Harvie Williams, secretary, April 30, 1959."

JOHN, good for you. [Applause.]

SENATOR M'CLELLAN'S RESPONSE

Thank you, CHARLIE. I only regret that you couldn't have started that speech in the Senate, where I could have yielded all the time you want. You have been very generous with your flattery, and I, like all human beings and particularly Irishmen, like it when it is favorable. I wish you might have continued.

Mr. Toastmaster, President Summers, Admiral Strauss, distinguished guests, my colleagues, members of the society, my friends, ladies, and gentlemen, it is not merely difficult—it is just about impossible—for me to express the extent and depth of my appreciation for the high honor which you have so graciously conferred upon me here this evening. To say that I am happily surprised is a gross understatement.

Indeed, I can hardly reconcile this happening with reality, for it had never even remotely occurred to me that I had ever done anything to be worthy of the George Washington Award of your splendid organization or to be deserving of the enviable recognition which you have accorded me tonight. To be so honored by your distinguished society overwhelms me, and I take great pride in it and have a greater appreciation for it when I contemplate what this society stands for, the kind of government that it supports and approves, as has been so ably referred to here and been so ably described in the wonderful address we have just heard by my distinguished colleague, Senator GOLDWATER. [Applause.] This is indeed a marvelous tribute, and it is one that I shall always cherish and treasure.

I accept this notable award with profound gratitude and humility, but I cannot—and I do not—accept it in my own right and for myself alone. But I accept it for and on behalf of my family—for Mrs. McClellan, my loving wife and devoted companion, and for my precious and wonderful children. [Applause.] For, if I have ever done anything to deserve this, if my labors and my feeble efforts have in any way, even in the smallest measure, contributed to good government, the national security, and the public welfare, I readily and proudly acknowledge that the larger share of the credit is due them. Their faith and their abiding trust have constantly inspired and sustained me. Without their confidence and encouragement many, many times I might well have faltered and failed.

Then, too, I should like to accept this award in the name of my native State, the great State of Arkansas, and her people, whom I have the honor to represent in the U.S. Senate. [Applause.] Except for their suffrage, their support, and the trust that they have reposed in me, I could never have had the high privilege of serving or the opportunity to serve in the National Congress; and to them I am eternally indebted and thankful.

And may I say to you fellows, Governor, and all of our friends in Arkansas, I am happy indeed that you have come here tonight. You indeed honor me greatly. [Applause.]

When I meditate upon the affairs of state and reflect upon what constitutes good government, there comes to my mind a story that illustrates to me a great truth and one that maybe we should all relearn, observe, and remember. It is said that on one occasion a minister of a tiny country church asked a celebrated actor, who happened to be present in his audience, to render for the congregation the 23d psalm. The great actor readily agreed. He rose and in a most eloquent manner dramatized the beautiful passages of the 23d psalm. His efforts were an overwhelming example of forensic oratory. But when he sat down, the minister turned to a humble parishioner, a man of simple words, and asked him if he too would recite the same psalm. The poor parishioner stood up, fully conscious of his plain clothes, his face weather-beaten, and his lack of training in the art of public speaking. But he began reciting, "The Lord is my shepherd * * *" and, as he continued, the congregation listened with consecrated attention. When he ended, there were tears in the eyes of the church members. They had been stirred and moved to a state of reverence and devout worship.

After the services, the minister asked the great actor why it was that the parishoners were more impressed by the words of the simple workingman than they had been by his. The great actor hesitated a moment, and then he said, "Well, I knew the psalm, he knew the psalm, but he also knows the author."

So we hold that governments are instituted among men to secure and maintain certain basic and unalienable human rights. Among those fundamentals that we foster, cherish, and seek to preserve are equality, liberty, and justice for all, under the authority of law that is derived from the consent of the governed, and not by dictatorial powers arrogated by men unto themselves. [Applause.]

If we are to have good government, these words, "equality, liberty, and justice," must have their meaning and be a part of our being. They must live in our hearts as well as in our minds. In short, we must "know the author," for I believe the indestructible principles embodied in these words, "equality, liberty, and justice," have upon them the divine seal, and that "good government" as our highest political aims has the approbation of His divine will.

I have heard my friend speak here this evening. His remarks and his address reminded us of the conditions that prevail in the world today and conditions that unhappily prevail here in our own country. They point out to us the gravity of dangers that may threaten us and the crises that may be impending. Since this is the 170th anniversary of the occupancy of the Presidency of the United States, I think it might be well for us, therefore, to reconsecrate and rededicate ourselves and our lives, our fortunes and our sacred honor, to the preservation of the land that we love. That is what I shall try to do. Thank you. [Applause.]

What Is an American?

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. CANFIELD. Mr. Speaker, Freedoms Foundation this week presented awards for two editorials that discuss what it means to be an American.

The first editorial I am inserting in the CONGRESSIONAL RECORD was published in the Tatler, newspaper of Central High School, Paterson, N.J. The second appeared in the Statesman, journal of the New Jersey Department American Legion's Boys State, and was written by Morris Shimshak, 400 East 38th Street, Paterson:

[From the Tatler]

WHAT IS AN AMERICAN?

An American is granted the promise of a bright future. He has the right to belong to the organizations of his own choice, and the right to contribute his share toward democratic government in using his voting privilege. He has time for leisure and relaxation from his work. An American doesn't toil from dawn to dusk. He has the right to educate his children in the finest public schools in the world. An American is aware of unlimited opportunities that are within his reach. Today's American is a well-informed person. He is free to do whatever he chooses. His home is his castle, and he is proud to provide his family with luxuries as well as necessities.

Each and every American has the right to worship as he chooses and where he chooses. An American probably has some of his savings invested in Government bonds, believing in the strength of his Government. He lives in complete freedom from fear, knowing that the defenses of America protect his home and his family. He stretches out his hand to help the oppressed.

[From the Statesman]

DEMOCRACY DEPENDS ON ME

This slogan was suggested and developed by the National Boys' State Committees of 1947 and 1950. It was more fully expounded and interpreted as "The security of my rights, privileges, and responsibilities as an American citizen depends on me."

The slogan embodies the principles and objectives of all Boys' States throughout the Nation to "develop civic leadership, develop an interest in the study of our Government, arouse a desire to maintain our form of government, and to provide a laboratory for a functional study of citizenship."

The additional point that we at New Jersey Boys' State are attempting to make, especially through our Statesman paper, is the one that this slogan be adopted, not for a week, a month, or a year, but for a lifetime. No truer ideal must be a reality to make our American way of life a fait accompli. The democratic ideals of our forefathers will only be reached when a greater number of Americans—the wealthy, the educated, the gifted, as well as the poor, the illiterate, and the weak—learn to share the burdens and responsibilities of government. The American government—local, county, State, and Federal—will never be better than the sum total of the contributions of each of us as individuals.

You, the men of Boys' State, are and will be the men of the Nation. Upon your shoulders will be placed the heavy responsibilities of tomorrow. May you have the strength and the courage, the willingness to serve without counting the cost, the spirit of giving without expecting a return that will insure the future of this great land.

Leadership requires an unselfish spirit of service and concern for the rights and privileges of others. It requires patience. It requires tolerance. It requires long hours of study. It will require working, not by the clock or calendar but by getting a job done. It means courage to set the pace rather than following; to work while others shirk; to accept failure with grace and understanding. It means you need the qualities of industry, thrift, and self-reliance. You need to know your responsibilities and be willing to accept them.

"In the past your school and we at Boys' State have certified to your leadership. All we ask now is that when you begin to have doubts about your ability to improve our order of government and the conditions of the world you find the answer in the slogan, "Democracy Depends on Me."

The Oil Centennial

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 30, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Warren, Pa., Times-Mirror of Wednesday, May 13, 1959:

THE OIL CENTENNIAL

If a man is sometimes a cussed animal, he can, also, at times, be an appreciative one. Part proof of this is borne out by his predilection to commemorate any event of special significance to him, with birthdays and anniversaries high up at the top of the list.

This is a good year for people who appreciate commemoration; 1859 was a vintage year for important occurrences, Oregon statehood, the Colorado gold rush, and the birth of the oil industry are examples, so that makes 1959 a big year for centennial celebrations. One of the most significant of these celebrations is scheduled for August 27 at Titusville. There, just 100 years ago, "Colonel" Edwin L. Drake completed drilling the world's first successful commercial oil well and the oil industry was born.

Drake could have no idea of the tremendous scope of scientific and economic advances his accomplishments would make available to the world in the century to come. For oil, used centuries ago by the Seneca Indians as a medicinal ointment, suddenly opened new worlds of comfort and convenience to man. Starting in 1859 as kerosene—an illuminant superior to the whale oil and coal oil in use at the time, oil eventually made possible the development of the internal combustion engine—and with that the birth of the automotive—and later the air—age. In the 20th century, uses for oil have expanded rapidly and oil has spawned new industries right and left. Today oil is found in thousands of products ranging from asphalt highways to fine fabrics; from heavy duty lubricating oil to plastic kitchen utensils; from household heat to satellite fuel.

We can no more guess what wonders will come from this miraculous natural resource in the next 100 years than Colonel Drake could predict the last 100 years. But we can be sure they will be great and that the lot of mankind on August 27, 2059, should be easier, more convenient and comfortable than ever before dreamed of.

As we said before, man does have the spark within him that enables him to appreciate significant occasions. And it's fitting that commemorative ceremonies have been scheduled at Titusville this year. Oil put Titusville on the maps of history. But Titusville, and its determined Colonel Drake, put mankind on the road to unparalleled achievement.

Michigan's Tourist Industry

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. LESINSKI. Mr. Speaker, this week we Michiganites are celebrating Michigan Week, a time during which we review our State's rich history, progress, and potential for the future. May 19 is set aside especially to emphasize the natural friendliness of Michigan people and the part hospitality plays in the State's great tourist industry. We invite all to read the following article by Culver Bailey, staff writer for the Michigan Education Journal, describing the beauties of our State and hope it will induce you to spend your next vacation in Michigan:

MICHIGAN'S TOURIST INDUSTRY

(By Culver Bailey)

During all four seasons Michigan offers tourists unparalleled opportunities for fun and relaxation.

Tourism is firmly rooted as an industry in Michigan, an industry providing employment and income for a large segment of the State's population. In spring, summer, autumn, or winter there are tourist attractions in this State to attract literally millions of Americans.

Ranking with manufacturing and agriculture as one of the State's top three revenue producers, the tourist industry comprises a statewide combination of relatively small enterprises devoted to servicing the wants and needs of the Michigan vacationer. The State's tourist industry is big business in dollar volume yet small business in nature.

Benefits of tourism are not restricted exclusively to those directly involved in operating vacation facilities. Tourist dollars fil-

ter into every business channel of our highly complex economy—retail, wholesale, professional and governmental.

Michigan's annual vacation travel revenue exceeds $650 million by conservative estimate. At least $39 million of this total reaches the Michigan State treasury in the form of sales tax collections, gas, liquor, and cigarette taxes, and hunting and fishing license fees.

Some 9,750,000 tourists vacation in Michigan annually. Approximately one-half of this total are Michigan residents. A survey of the Nation's travel market conducted by the Curtis Publishing Co. revealed that Michigan ranks as fourth most popular vacation State in the Nation with a 5.7 percent share of the domestic travel business. Ahead of Michigan are New York (10.9 percent), California (8.4 percent), and Florida (7 percent).

Beckoning tourists to Michigan is a montage of natural beauty — lakes, stream, beaches, forests, mountainous hills, and picturesque scenery.

MICHIGAN AT ITS FRESHEST

This month Michigan is at its freshest, for it is springtime. More than 17 million acres of forests are decked in their spring garb. Crisp, green leaves usurp winter's greyness, cherry blossoms burst forth, and delicate flowers add brilliant hues to nature's design.

Tourist interests in spring are marked by festivals and special events which herald the new season. The maple syrup festival at Vermontville (April 18); the blossom festival at the twin cities, St. Joseph and Benton Harbor (May 3–9); the tulip festival at Holland (May 14–16); the blessing of the blossoms at Traverse City this month, are but a few.

The out-of-doors vacationer looks forward to spring fishing season. With the exception of black bass (bass season opens June 20), all of the State's game fish become legal to catch on April 25. The popular bluegills, sunfish, walleyes, perch, and northern pike currently are being sought in Michigan's lakes.

Summertime in Michigan means the height of tourism. With the longest shoreline in the nation (3,121 miles) and 11,037 inland lakes, Michigan truly merits its "water wonderland" label. Water for every summer whim is in plentiful supply—water for swimming, boating, fishing, water skiing, or scenery. Four of the five Great Lakes touch Michigan's shores. Shoreline scenery lures many tourists—sand dunes along Lake Michigan or Lake Superior's Pictured Rocks, for example.

"Michigan's islands — more than 500 of them—are especially attractive in the summer," wrote Robert J. Furlong, executive secretary of the Michigan Tourist Council, for the magazine inside Michigan. "Some are large, some small, but each with an individual charm. One of these is famous Isle Royale in Lake Superior, the country's only island national park. Another is unique and historical Mackinac Island. Still another is Beaver Island, made famous in the middle of the last century as a Morman stronghold."

MANY SUMMER ATTRACTIONS

Additional manmade and natural attractions on the docket for Michigan sightseers include the Lake Huron shore scenic drive, the Straits of Mackinac Bridge, the Soo locks, the Porcupine Mountains, and the Hartwick Pines. There are many others, including the new Enrico Fermi atomic plant near Monroe; the sparkling sandy beaches at Holland, Grand Haven, Muskegon, and Saugatuck on the west coast; the St. Clair Metropolitan Beach at Mount Clemens, largest in the Midwest—a crescent of white sand 300 feet wide and a mile long; Thunder Bay, near Alpena; and Huron Beach at Hammond Bay, north of Rogers City.

Summer is the best time to visit Michigan's historical sites. Indians, French, British, Spanish, and colonials all played important roles in developing this part of the Nation. Old landmarks still stand in testimony of their contributions.

Diversity of attractions is a major reason for this State's high ranking as a tourist State. For example, after visiting Detroit's Greenfield Village and automobile plants, the tourist can travel north to deep sea fish at Munising, or mountain climb in the upper peninsula's copper country. Fishing for trout in one of upper Michigan's many cool, swift-running streams is a happy respite for tourists.

"A summer vacation snag in previous years has been accommodation shortages," said Robert McIntosh, of Michigan State University's tourist-resort service. "The Mackinaw City-Sault Ste. Marie accommodation shortage after 4 p.m. is an example. However, this summer the situation will be lessened considerably."

Awaiting vacationers throughout the State this summer will be 2,500 motels, 3,500 resorts (cottage-type), and 100 resort hotels. McIntosh said the heaviest concentration of motel and hotel accommodations will be found in the Roscommon and Chippewa Counties.

Highlighting Michigan's fall tourist season are color tours and hunting. During autumn the forests are aglow with huge splashes of brilliant colors. Deep reds, bronzes, yellows, oranges, and greens turn Michigan's landscape into an artist's palette.

Vacationists in Michigan at this time of year will find well-marked color tours to guide them through the forest areas. These tours begin on or about September 15 in the Upper Peninsula, and during the first week in October in the northern counties of the Lower Peninsula.

Almost every kind of game from rabbits to moose awaits the Michigan hunter in scores of public parks and hunting areas during the autumn season. October 1 will herald the opening of the hunting season in the Upper Peninsula and the northern Lower Peninsula for upland birds, ducks, geese, and for the increasingly popular archery season for deer. Pheasant season in the Lower Ueninsula is set for October 20–November 10 this year. Putting the final touches on autumn tourism, hunters with firearms will stalk Michigan's deer starting November 15.

WINTER TEMPO PICKS UP

Winter, once the neglected stepchild in the State's tourist industry, is fast filling an important niche in Michigan's year-around tourist activities. The Michigan Tourist Council estimates that one-half million sportsmen participated in the State's winter sports this year. Some 150,000 skiers, an increase of 20 percent over last year's total, spent $14 million here this winter.

Michigan is well suited for winter sports, for much of the State has greater snowfall than any point between the Rocky Mountains and New England. This unique aspect of its climate is largely due to the influence of the surrounding Great Lakes.

Michigan's winter vacationland is invaded by thousands of skiers, skaters, tobogganers, ice fishermen, and rabbit and bobcat hunters. Representing an investment of more than $9 million, some 69 winter sports areas now dot the State.

Weekends find such resort areas as Gaylord and Cadillac packed with out-of-door enthusiasts. Ski areas adding snow-making machines this year included Dryden, 18 miles north of Rochester; Mount Christie, north of Oxford; and Holiday Hills, east of Traverse City. Snow-making equipment is used when there is an unseasonably small amount of snowfall.

Spring, summer, fall, winter—each season has something to offer in Michigan's all-year vacationland. Answer this vast State's invitation, for some diversion will be discovered to your liking.

And while you are in Michigan, I hope you will visit the 16th District, the home of the Ford Motor Co.'s Rotunda, its exhibit building, which is currently honoring our 49th State, Alaska, with one of its largest displays.

ALASKA EXHIBIT BIGGEST EVER AT FORD ROTUNDA

The 49th State, Alaska, is featured in the largest single display ever presented in the Rotunda, Ford Motor Co.'s exhibits building in Dearborn which opened Sunday.

The Alaska scene occupies the center court of the Rotunda and is the major exhibit of the 1959 summer show, "New Adventures on the American Road." Other displays, geared to the interest of travelers, will be added within the next few weeks prior to the height of the summer tourist season.

In what is believed to be the biggest representation of Alaska ever exhibited in the United States, the backdrop for the Rotunda scene is 125 feet wide. On it, a mountain rises to a height of 50 feet. In the foreground, a waterfall, 20 feet high, utilizes 45,000 gallons of water per hour.

Animated figures in the setting are a Kodiak bear, nine feet high; a fisherman; trout which jump in the waterfall; a walrus, and a seal that cavorts in the water.

Living trees and wildflowers, indigenous to Alaska, an 18-foot totem pole and Ford station wagons carrying outdoor living equipment round out the scene. The National Geographic Society assisted the Rotunda staff in selecting authentic trees and flowers for the exhibit.

The scene was constructed by the Silvestri Art Manufacturing Co. in Chicago. Four trailers, 40 feet long, and another open at the top to accommodate 20-foot-high trees were needed to bring the scene to Dearborn. Silvestri officials describe the mount backdrop as one of the largest ever painted in their shops.

The Rotunda is one of the Nation's top six tourist attractions. Every year nearly 2 million persons from throughout the United States, its possessions and more than 80 foreign countries visit the Ford Motor Co. showplace. Tours of the nearby Rouge plant originate at the Rotunda.

Current Rotunda visiting hours are 8:30 a.m. to 9 p.m., Monday through Friday, and 1 p.m. to 9 p.m., on Sundays. Starting June 1 the Rotunda also will be open 1 p.m. to 9 p.m. on Saturdays and holidays.

Is Public Money Nobody's Money?

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. ALGER. Mr. Speaker, the old fallacy of getting something for nothing from the Federal Government is a problem which returns to haunt us many times during the congressional session.

"Is Public Money Nobody's Money?" is the title of an editorial from the Perryton (Tex.) Ochiltree County Herald, and comments graphically on Federal Government spending:

IS PUBLIC MONEY NOBODY'S MONEY?

There seems to have arisen in the past two decades the attitude on the part of bureau-

crats and Congressmen that the public money is nobody's money, merely to be spent with a free hand.

All of us who have a bite taken out of our income to support this sort of spending are bitter about it, but it is frustrating not to be able to do anything about it.

In the news this week were a few instances of what is being done with your money.

In Michigan, a doctor was paid $41,000 for 2¼ months' work taxing X-rays for the Army induction station. When challenged, he admitted that the same work could have been performed for $5,000 were it being done with private money. Government money is different.

The Air Force Academy at Colorado Springs is another case in point. Already the Air Force has maneuvered around and spent twice as many million dollars on the Academy as Congress ever authorized, and is still spending. Where they are getting the tax money appears to be a mystery, except that other Air Force appropriations are being manipulated to provide the cash. It all comes out of your pocket.

The Senate is building a subway to connect the Senate Office Building with the Senate Chambers. This has cost several million dollars, making it beyond a doubt the most expensive subway on the face of the globe, and it was discovered that the money ran out before the subway got to its destination. All they have so far is a tunnel, which will be extended with your money, of course.

Somehow, some way, we are going to have to insist on money conservation. How to do it is anybody's guess.

The Modern Crusade of the Innocents

EXTENSION OF REMARKS
OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. PELLY. Mr. Speaker, in the near future, Congress by its action in either accepting or rejecting legislation to provide Federal grants to the States for education may well establish a policy which will be far-reaching. In fact, historians of the future will probably refer back to this session of Congress and our decision on Federal aid to education as having an important influence on generations to come in America and what is in store for this Nation.

Recently, two Members of the other body with conflicting views, discussed the subject, "Is Federal Aid to Education Necessary?" on the "American Forum of the Air." I have a transcript of this debate.

The Senator who was opposed to the Murray-Metcalf bill said it would lead to the Federal Government controlling the schools and in turn it would lead to the Federal Government prescribing the curriculum of our schools.

This Senator said: "When it does that, you've a dictatorship. That is the way Hitler and Mussolini arose in their countries."

The other Senator did not agree. Then he added, and these are his actual words:

"But even if it were true, I would suggest the possibility that it would be the lesser of the evils of not giving our children a decent education."

Mr. Speaker, I found this statement shocking, but even more disturbing to me is the way certain educators themselves ignore history. For example, all my friends in education agree with me and oppose Federal strings and control. Yet they are blind to history and will not not see that it is impossible to remove control from the financing of schools. Japan is a good example of this power of the purse and central thought controy. There before the war, organizations like chambers of commerce and of course all municipal functions of government were dependent for funds to exist from the central government, and why educators, of all people, would naively believe it would be different in America is beyond me.

The latest evidence of a misguided educator came to me in the form of letters forwarded by a teacher.

Hereafter is one of these letters which is typical of them all. After it, is my reply and the accompanying comment to the teacher. I think all three letters form a composite picture which recalls the Children's Crusade in Old World Europe. I wonder if unwittingly this 20th century Pied Piper could not be leading her innocent boy and girl students into oblivion and modern slavery. For myself, I do not consider such a risk the lesser of two evils and in all conscience I shall continue to actively oppose Federal control of our educational system.

These are the letters to which I refer:

The Honorable THOMAS M. PELLY,
Senate Office Building,
Washington, D.C.

DEAR MR. PELLY: Lately I have heard so many good things about you because you are such an outstanding man. So I am telling you from the bottom of my heart to please vote for schools, because we need your help for the Murray-Metcalf bill.

Now would you like to hear something about myself. I have two hobbies, horses and dogs. I have a dog called Susie.

My father works at Peter Thomas Co. My mother doesn't work.

———— ————.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., May 18, 1959.

DEAR THIRD GRADE STUDENTS: Your letters have reached me. When I was your age and in the third grade I went to Summit School. The same building still stands. It is at Union Street and Summit Avenue. Since I am a grandfather, you can tell it is getting to be an old building indeed.

Seattle, just like other places in the United States, needs new school buildings particularly I think to replace portables which get quite stuffy in winter.

The necessary money to construct such new schools and get good teachers of course must come from the citizens who live in Seattle, regardless of whether the city, the county, the State of Washington, or the Federal Government taxes these people to pay for them.

The Constitution of the United States does not call for the National Government to finance education and building of such schools. The Constitution of the State of Washington, on the other hand, accepts responsibility and guarantees an education to you and each other child in Seattle.

The reason our forefathers left education to the individual States was for fear of a dictatorship and a President of a king such as George III of England gaining control of our schools and telling each teacher what to teach. Thus Federal control could come about if special requirements were attached to accepting Federal money.

Before Pearl Harbor the people of Japan were under "thought control" made possible by financing of Japanese schools by the central Government of Japan.

I have urged the Congress of the United States to recognize the needs of our schools and pass a law so as to have the Secretary of the Treasury send back a part of the income tax paid by each State to that State to be used for schools in the way each State decides it wants to use the money.

Your teacher told you and each member of your class to write me to vote for a different kind of a law. She has told you to tell me to support the Murray-Metcalf bill which would provide Federal grants to the States for use not only in constructing new schools but also for paying her and other teachers higher salaries.

I am sure she deserves better pay and I am sure your parents and the school board members elected to manage the Seattle schools want to increase it. As a matter of fact, if all property was valued and taxed properly and fairly in our State the problem would be simplified.

Many well-intentioned people are now urging Federal Aid to Education as a solution. But other equally well-intentioned people believe if the Federal Government once starts in granting money for teachers' salaries, its role will be expanded and new Government-selected books and other school needs will be added to these Federally-financed items. That will in time pave the way, some of us believe, to central control and the way opened for regimentation of all school children into one pattern of thought. History could repeat itself. We could have a Hitler in America under such a system.

I want you to know that your school and the education of every child in America is very important to me.

As the Representative in Congress of the northern part of Seattle and King County, which has had and will continue to have a huge increase in school population, I intend to do all I can to meet this problem without endangering principles that are basic to our way of life, such as the freedom from any form of "thought control," the right to think and make our own decisions free from any influence, kindly or otherwise.

I have two granddaughters attending McGilvra Grammar School. One is in kindergarten and one in the first grade. In a couple of years they will be in the third grade just like you are and I hope they too will be able to express themselves as eloquently as you have in your letters to me. It goes without saying that I want only the best in life for them, just as I do for you, and I know this can be accomplished without jeopardizing our intellectual freedom.

Thank you for writing to me as you have.

Sincerely,

THOMAS M. PELLY,
Representative in Congress.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., May 18, 1959.

DEAR MISS: I am enclosing a single reply to the various letters from your third grade students which you forwarded to me. I am sorry that I cannot talk to your class personally. Instead I hope you will act as my representative in reading the enclosed letter to them.

Children should take an early interest in civics and matters of concern to our country. However, in this instance I believe

that perhaps unwittingly you have acted unwisely in using your third grade students in what amounts to spreading propaganda for legislation in which you have a personal interest and the real implication of which obviously is over their heads. My reaction to their letters would be the same regardless of whether your students were urging support of or opposition to the Murray-Metcalf bill. I am sure you realize that many of the parents of the children attending our public schools are strongly opposed to Federal aid to education. Furthermore, while I do not impugn your motives, to me it is not proper to use children in this way.

Th National Education Association, the Washington State Education Association and on down through the various State and local groups, interested in and dedicated to the improvement and advancement of our educational system, perform an essential service in providing information. I value their help and although I am not always in agreement with the position taken by these various organizations and their representatives, I nevertheless appreciate their objectives and respect their point of view.

That I oppose Federal strings to school dollars is a matter of record. However, I am also conscious of the critical financial need facing our school system. It was in this connection that I initiated H.R. 4079, which would return a percentage of the Federal income tax to the various States to be used in any way those States themselves deem advisable, in the field of education and with no Federal controls of any nature.

Any other type of bill, it is my belief, could result in the Government censoring text books, so to speak, and occupying a seat on each school board in America.

I hope you will accept my letter in the spirit in which it is intended. The right to petition is in the Constitution, but this does not include the right of a teacher-guardian to use children in spreading propaganda.

Kind personal regards.

Sincerely,

THOMAS M. PELLY,
Representative in Congress.

Con Edison; Serving a Growing New York

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Charles E. Eble, president of Consolidated Edison Co. of New York, Inc., before the New York Chamber of Commerce on May 7, 1959:

CON EDISON: SERVING A GROWING NEW YORK

(An addressby Charles E. Eble, president Consolidated Edison Co. of New York, Inc., before the New York Chamber of Commerce, May 7, 1959)

I am delighted with this opportunity to talk about Con Edison to the New York Chamber of Commerce. The chamber and Con Edison have much in common. Both have grown up with the busiest city in the world; both have made major contributions to its growth and development; both are vitally concerned with its future and dedicated to its constant improvement. A number of our executives count it their privilge to serve as members of this chamber and to participate in its activities.

We need not look far to find specific examples of these mutual interests. The city's subways are a case in point. This chamber originated the idea of the city's first subway and the plan for its initial operation. This plan called basically for the city to provide the tunnels and stations, and for private enterprise to provide the equipment, and power supply, and to operate the system. A board composed of chamber members carried this idea through to completion in 1904. The initial pattern of operation was generally followed until 1940 when the city took over the entire subway operation, including the subway powerplants. These plants provide power to operate two of the city's three subway systems. The power to operate the third, the IND, has been supplied by Con Edison since the IND was built in the middle 1930's.

Con Edison has long held that city ownership and operation of the subway powerplants are not in the best interest of the city's taxpayers. Between 1945 and 1956, we made a number of proposals regarding power supply for the subway system but they were not accepted. Finally, in late 1956, on the urging of the city planning commission, the city administration asked if Con Edison would submit a proposal to purchase the subway powerplants. Shortly after, negotiations were begun which led to Con Edison's present offer. In April of 1958, the Preusse committee, appointed by the mayor to study the desirability of selling the plants, strongly recommended their sale. Public hearings were held in February of this year, and in March the board of estimate approved the sale. Con Edison committed itself to buy the plants when we signed a contract with the city and the Transit Authority on April 30. The public auction required to effect the sale is scheduled for May 19.

At the February hearings, the New York chamber vigorously endorsed the sale of these powerplants to Con Edison. I am sure support such as this contributed directly to the city's decision to sell the plants—a decision we are confident will be of lasting benefit to New York.

When Ike Grainger asked me to come here today, he suggested that I talk about Con Edison. Now, I imagine many of you associate Con Edison with its holes in the street, which by latest report totaled 322. Of course, you are not alone in that respect. A number of well-known entertainment personalities have had fun with our street work, but we don't think things are quite as bad as Jack Paar indicated a few weeks ago when he was shown a picture of Grand Canyon. He took one look and said. "Well, this time Con Edison has gone too far."

THE UTILITY INDUSTRY

Con Edison is one of the larger companies in one of the Nation's major industries. Although the utility industry had its beginnings over 135 years ago, it continues to experience dynamic growth. Today it is one of the most significant sustaining forces in our economy. During the recent recession, as in earlier ones, the continuing investments by electric and gas utilities played an important role in carrying the economy through the period of adjustment. Last year, when total expenditures by the Nation's industries for plant and equipment declined to $30.5 billion, down 17 percent from 1957, electric and gas companies spent a record $5.6 billion, or almost one-fifth of the total. Con Edison's construction expenditures in 1958 reached a record $189 million, a significant part of the overall utility industry investment.

And there is no indication that utility industry growth is slackening. Recent forecasts indicate that electric sales in the United States will double in 9 years, quadruple in 18. Gas sales nationwide are expected to increase between 5 and 6 percent annually over the next several years. It is apparent that future utility expansion to meet growing demands will have a continuing favorable impact on the Nation's economy.

CON EDISON: THE COMPANY

New York City is perhaps best known for its skyline and other glamorous aspects, but as you are aware, it is outstandingly the Nation's leading city in finance, commerce, and industry. The business and industrial complex that has grown up, in and around New York, coupled with the millions of people who live and work here, make it the most concentrated market for energy in the world. Con Edison's job is supplying this market for energy with electricity, gas, and steam.

There are a number of ways of looking at Con Edison. As a business enterprise, its operation is made possible by the investments of 180,000 stockholders—people from all walks of life, from all parts of the United States, and from several other parts of the world. Individuals own more than half the stock, and about 35 percent of all stock is owned by people with 100 shares or less. No stockholder of record owns as much as 1.5 percent of the total common stock.

These investments have made possible the development of the extensive facilities required to supply the energy needs of the areas Con Edison serves. We provide electricity to nearly 9 million people in a 600-square mile area that includes essentially all of New York's five boroughs as well as most of Westchester County. Gas is supplied in a 400-square mile area that includes Manhattan, the Bronx, part of Queens, and most of Westchester. Steam service is provided to most of the buildings in midtown and downtown Manhattan.

Our electric facilities at present include nine powerplants with more than 4 million kilowatts of capacity. To generate last year's electrical requirements, these plants used an amount of coal, gas, and oil equivalent in heat content to 8 million tons of coal. To insure our fuel supply against possible interruption, a stockpile of 1.5 million tons of coal—enough to fill 25,000 rail cars—is maintained as well as substantial amounts of oil. Many of our generating units are equipped to burn coal, oil, or gas. This provides flexibility in meeting any possible disruptions in fuel shipments and also gives us the added economic benefit of being able to use the lowest cost fuel at any given time.

Until a few years ago we manufactured all the gas we sold but today, natural gas makes up almost our entire supply. The company still maintains three gas manufacturing plants which are used to supplement natural gas during periods of high demand.

To provide steam service, Con Edison has six steam generating stations, as well as several other steam sources which can be drawn on as the situation requires.

Since energy must be delivered the instant it is needed, there is the additional requirement for extensive distribution facilities to connect our energy sources directly with every customer. Con Edison has 43,000 miles of underground electric mains, 26,000 miles of overhead lines, and 4,000 miles of gas mains. Distribution facilities alone account for more than one-half our present investment.

To operate these facilities and to carry out its business activities, Con Edison has 25,000 employees and 15,000 of them have been with the company 25 years or longer. This high proportion of experienced and loyal people who take pride in the company's reputation is important in maintaining our high standards of service.

CON EDISON AND NEW YORK

A utility is unlike many other businesses in that its growth and development—yes; even its success—hinge in large measure on the local communities it serves. By the very nature of its business, a utility company cannot move to another location or seek another market.

For well over a century, the relationship between Con Edison and New York has been mutually beneficial. The company has had the good fortune to grow up with one of the major cities in the world and many of its important suburbs. On the other hand, we believe these communities have directly benefited from having the continuing high standard of energy service which Con Edison has provided.

But the impact of Con Edison's operations on the economic life of the communities it serves extends beyond that of meeting their ever-growing energy needs. Con Edison is one of New York's largest employers, with an annual payroll of $156 million. Its continuing construction program—$200 million this year—is a major source of business for contractors and suppliers and provides employment for a substantial number of people. Con Edison's maintenance and operating activities also play important economic roles. Last year, we spent $49 million for supplies and outside services other than fuel. Fuel, incidentally, is the biggest item we buy; last year our fuel bill was nearly $92 million.

Con Edison is also one of the area's major taxpayers. Our local taxes last year amounted to $77 million, of which $71½ million went to New York City. We are the city's largest real estate taxpayer, with our real estate taxes last year amounting to 6½ percent of all such taxes received by the city. The benefit the city derives from these taxes becomes even more apparent when it is recognized that Con Edison's investment in distribution facilities—something over a billion dollars—is taxed at the same rate as ordinary real estate; that is, the rate includes provisions for education, welfare, fire protection, police protection, and the like. Yet, the facilities themselves are for the most part underground and require little or no expenditures by the city for such services.

CUSTOMER GOOD WILL

To operate successfully, a utility company must earn and hold the good will and confidence of its customers. Without these, it is doubtful that a company could maintain a financial position that would enable it to attract the new capital necessary for progress; without these, a company could not reasonably expect in the long run to retain its franchises to supply energy.

We at Con Edison consider the good will and confidence of our customers as the company's greatest asset, and we know that to retain these, it is of primary importance for us to do our job in the best possible manner. Our continuing objective is to provide our customers with the form of energy they want, when, where, and in the amounts they want it, at the lowest possible cost consistent with continuing good service.

CONTINUING PROGRESS

In New York, the task of supplying energy is perhaps more difficult, more expensive, and on a larger scale than in most other parts of the country. The nature of the area places exacting requirements on its energy supply; severe dislocations in the life of the city would occur if this supply were interrupted for even a relatively short time. To meet these exacting requirements, Con Edison has developed energy supply systems that are unsurpassed in reliability anywhere in the world.

Our history is filled with examples of technical advancement and industry firsts. We know that using the most advanced equipment and techniques serves to improve the quality of our service and helps to keep the cost of energy down.

Last September, we placed the world's largest turbogenerator in operation at our Astoria plant in Queens. This 335,000-kilowatt unit is the most efficient on our system. Two similar ones are under construction and still another is on order. Savings that will be realized through use of these modern turbogenerators will help offset the rising costs we are experiencing in practically every aspect of our business.

Since 1950 we have switched over from manufactured to natural gas. Natural gas is a better and more economical fuel and the changeover has resulted in continuing benefits for our gas customers. To make this change involved a tremendous conversion job which included some modification of every gas appliance used by our customers. This job took 5 years to complete and cost $36.5 million.

We have introduced electronic accounting machines which have greatly improved the efficiency and reduced the cost of our accounting processes. We have developed new techniques and equipment that enable us to accomplish our street work faster and more economically. We are right now constructing one of the Nation's first large-scale nuclear powerplants. These are but a few examples of Con Edison's continuing quest to provide its customers with the best possible energy service.

However, we feel our responsibilities to our customers extend beyond this. As one of New York's major enterprises, Con Edison has an important role to fulfill as a good neighbor and a good citizen.

Being the city's largest user of fuel, we have long realized the importance of controlling the emission from our power plant stacks. Since the early 1900's, Con Edison has pioneered in the development of smoke control equipment. We have spent over $63 million since 1937 alone to minimize this problem. The air pollution control equipment for each of our newest generating units cost $5 million and is designed to remove 99 percent of the solids from the smoke.

The nature of our business requires frequent—and in many cases daily—contacts with city, State, and Federal Government agencies on a wide variety of matters ranging from health, safety, and inspections to taxes, building permits, and city planning, all of which affect the public interest. We also cooperate closely with various city departments in fire, storm, or other emergencies which affect the city's energy supply or the general welfare, and our operating people are an integral part of the municipal civil defense organization.

DIG WE MUST

As another example of our community-mindedness I'd like to tell you something of our street work program. I am sure you have all seen our signs—"Dig we must for a growing New York." In simplest terms, they tell the reason for our street digging. Cables and pipes laid to serve 5-floor walkups cannot carry the energy needed to supply a 40-story building being built on the site today. And there is no way of predicting precisely where new major loads will spring up. Coupled with New York's rebuilding is the constant demand by existing customers for more energy. As this demand increases, the time comes when existing cables and mains cannot carry the load. I assure you if there were a practical way of meeting the city's growing energy needs without digging, we'd have adopted it long ago.

Faced with the necessity for carrying out underground work in the city's streets, we have continually sought to develop means of doing the job more quickly, more economically, and with the least possible inconvenience to the public. Let me give an example of a recent innovation.

Our construction engineers have designed and developed horizontal earth boring equipment to meet situations where it is necessary to install facilities under busy parkways, railroad tracks, or congested street intersections. This equipment makes it possible to install conduits in any size from 2 inches to 36 inches in diameter without disturbing the street surface except for small pits at the ends of the traverse. In connection with the installation of a 30-inch gas main across Manhattan, we are making extensive use of this equipment. We plan to bore under Fifth Avenue as well as under other sections along the route of the main. The alternative, of course, would be to dig up the street along the entire route. Equipment such as this, as well as other new new techniques we have developed and perfected, serves to reduce the inconveniences accompanying our street work.

ATOMIC POWER

At times our advance planning involves us in reducing major scientific advances to practical engineering concepts that are economically feasible. In this regard, the development of a safe, practical, and economic means of generating electricity with nuclear fuels is perhaps the most intriguing challenge that ever confronted the electric utility industry. In simplest terms, nuclear fuels, such as uranium, are sources of heat. The heat can be used to change water into steam, and the steam, in turn, can be used to drive turbogenerators. The electricity generated, of course, would be no different from that which we have today.

Nuclear fuels have a major advantage over fossil fuels because of their high unit energy content. One pound of uranium, for exaple, has the same energy content as 25 rail cars of coal. The potential savings in transportation costs are apparent. Nuclear fuels also contribute importantly to our total supply of energy sources.

But nuclear fuels have their drawbacks, too. They are radioactive and require special handling; they must undergo extensive processing and, in most cases, fabrication before they can be used; the machines in which they are burned—reactors—are unbelieveably complex. Because of radioactivity, extensive shielding and safety precautions must be incorporated into plant design. At present, we know how to use only a small portion of the potential energy in nuclear fuels. All of this—and more—adds up to the fact that while we know how to generate electricity with nuclear fuels, we do not as yet know how to make it as cheaply as will fossil fuels.

We expect, however, that with further development, nuclear fuels will become economic in many parts of the country. Even so, there should be a word of caution here. Nuclear energy does not promise the millenium insofar as the cost of electricity is concerned. The potential savings through use of nuclear energy is in fuel costs. Out of each dollar of Con Edison electric revenue, only 18 cents goes for fuel. Obviously, nuclear fuel will always cost something, and indications are that nuclear plant capital costs will be more than such costs for conventional plants. Percentagewise, the potential savings is small.

Following passage of the Atomic Energy Act of 1954, Con Edison was the first utility company in the country to announce plans for the development and construction of a nuclear powerplant. We are presently constructing a 275,000-kilowatt nuclear plant at Indian Point, some 35 miles north of New York on the Hudson River, with completion scheduled for early 1961. The project is being financed entirely by Con Edison. No Gov-

ernment financial assistance has been received or requested.

Pioneering in this field is both complex and expensive. Initially, we planned to build a 236,000-kilowatt plant which was estimated then to cost $55 million. The plant we are building has a capacity of a 275,000-kilowatt plant and is estimated to cost $100 million.

As you can see, this is a major increase in cost. Part of the increase was due to additional capacity, part to major design modifications necessitated by results of early research, part to the need for carrying out additional research, part to increases in construction costs that have occurred over the past 4 years and part due to the fact that our early estimates had to be based on meager technical data.

Indian Point will not produce economic power. We have never expected it would. The capital costs of this plant will be something over $360 per kilowatt. Our newest conventional plant costs on the order of $200 per kilowatt. Our best estimate is that Indian Point will produce power at an overall cost of 14 mills per per kilowatt-hour, assuming full load 75 percent of the time. A new conventional generating unit at the same site would produce power at a cost of about 8¾ mills. Our principal objectives in constructing Indian Point are to gain knowledge and experience that will enable us to build economic nuclear units in the future. This knowledge and experience can be gained in no other way. We are confident also that our efforts will contribute to nuclear technology and benefit the entire industry and the customers it serves.

LOOKING AHEAD

When we look at the future of the market Con Edison serves, we see a dynamic and growing area. New York is building and rebuilding at a rapid rate. The city continues to grow upward—buildings are torn down to be replaced by new ones, in most instances many times taller than their predecessors. Last year 14 major office buildings with a net rentable area of 5.7 million square feet were completed. More than twice that number of buildings with three times the floor space were under construction at the end of the year. Another seven were in the planning stage.

Last November, David Rockefeller addressed this chamber on the extensive plans to develop lower Manhattan. This undertaking alone will provide major impetus to New York's growth. Another important and optimistic note in the city's long-term outlook is the continuing growth of its nonmanufacturing industries. These facts are all positive indications of New York's vitality. They also mean that New York will need a lot more energy in the future.

To provide for the city's growing energy needs, Con Edison is now engaged in the largest expansion program in its history. Indicative of the magnitude of our present growth, it took 106 years from the founding of our first predecessor company until we acquired $1 billion in utility plant. Twenty-eight years elapsed before the second billion was acquired. Our present program calls for the expenditure of $1 billion over the next 5 years.

To carry out this billion-dollar program will require extensive financing. It is estimated the company will need to finance, through the sale of securities, some $625 million in addition to the nearly $60 million obtained earlier this year through the sale of convertible debentures. The balance of the billion dollars will come principally from provisions for depreciation and retained earnings.

It is apparent that our company must maintain a healthy financial position if it is to attract this necessary capital. The importance of the public service commission's taking a realistic approach to our financial requirements cannot be overemphasized. The company must be permitted to earn a continuing adequate return on its investment if it is to attract the capital necessary for the expansion and improvements that make continuing good service possible.

To sum up, Con Edison looks to the future of New York with confidence. We know that New York's daily activities and future growth depend on energy—and energy is our business. We are building the energy facilities now that will enable the city's future growth to take place. Our job is to insure that New York will always have enough energy—and ahead of time.

How Much Federal Aid Then?

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. ALGER. Mr. Speaker, the voice of Texas at the grassroots is not always heard in this Congress as we debate more Federal aid for this or that program.

The following editorial from the Ochiltree County Herald—Perryton, Tex.—entitled "How Much Federal Aid Then?" has caught my attention and should be of interest to my colleagues. After all the pioneer spirit of this great country, including the independent thinking of Texans is in the heart of every American, though unfortunately lying dormant and unexpressed too much of the time:

HOW MUCH FEDERAL AID THEN?

Spencer Whippo, member of one of Ochiltree County's pioneer families, has spoken to civic clubs in recent weeks, telling of the early days of this county and surrounding area when there were but a handful of families on the plains.

Lack of running water handicapped the settlement of the plains area—and it was a major undertaking to dig for water. Without water, there was no survival.

The late E. L. Whippo dug a well some 177 feet, by hand, before finding water. The Brillhart family established a home after digging a deep well, by hand.

Life was hard in Ochiltree County in those days, in the late 1800's. The residents were in a depressed area. No one guaranteed them high prices for their products. Their only roads and schools were those they built themselves.

For social security they did their own savings, or starved.

All they had was character. All they did was work. All they wanted was self-respect.

The sum of these three traits became America.

How different it is today. Character among a new generation is being formed by a national climate that demands security above all, that demands more money for less work, that pampers criminals instead of punishing them, that gives away national resources that should be used at home, that wants the Government to take care of people instead of people taking care of themselves.

Long years of early American self respect and hard work built America, but the traits you see today can destroy it in half the time. This may sound corny, but it's true.

News Campaign Gets Top Award

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. CANFIELD. Mr. Speaker, we all remember the grim and somewhat unnerving period of recession last year. While unemployment mounted and production declined, Harry B. Haines, publisher of the Paterson Evening News, delivered a counterblow.

"Believe in America," he told his readers, for the recesssion was a "psychosomatic slump, more mental than physical." For his campaign, Mr. Haines was awarded last week a George Washington Gold Honor Medal from the Freedoms Foundation.

I am inserting in the RECORD a portion of the story in the Paterson Evening News, Paterson, N.J., May 13, 1959, describing the award ceremony:

NEWS CAMPAIGN GETS TOP AWARD

"A nation is never static. It must always be moving up or down, and when it is going down it takes a strong individual to halt the gathering momentum and send it back on the upward track," W. C. (Tom) Sawyer, vice president of Freedoms Foundation, said yesterday in the crowded city hall council chambers where leaders of business, industry, and government, and private citizens from all walks of life, assembled to witness the presentation of the foundation's top Americana award to Harry B. Haines, publisher of the Paterson Evening News.

Over the past 10 years the foundation's program and philosophy have won public acceptance, he said. He noted that in 1958 more than 40,000 nominations for awards were submitted and given serious consideration by the awards jury for the 800 awards to be presented.

Turning to Mr. Haines, who was to receive his third Freedoms Foundation award, Mr. Sawyer called him a leader of men.

"When the Nation was wallowing in the morass of fear and gloom of an economic recession, his newspaper lighted one little candle. From its gleam other candles across the Nation caught the spark and soon the darkness was dispelled and the clear outlines of a strong, courageous America broke through," he said.

He described the Evening News' "believe in America" campaign as the catalyst that unified the people's hopes and faltering courage into a solid determined force that reversed the plunging economy by the sheer force of their own will.

Representative GORDON CANFIELD, who worked with Postmaster General Arthur E. Summerfield to have the "believe in America" message carried around the world via a special U.S. postal cancellation, said he, too, had been "excited by the ringing message."

Canfield recalled "the banners, the buttons, the proud confidence of the people" inspired by "believe in America," a clarion call with which Mr. Haines bombarded his readers.

"If this campaign was not constructive citizenship, then I do not know the meaning of the term," he stated.

Dr. Michael Gioia, superintendent of schools, as an able master of ceremonies, said he felt his role a fitting one, since the administration he heads has the responsibility for training and disseminating knowledge to more than 23,000 young people of this city.

Bringing the felicitations of the Greater Paterson Chamber of Commerce, John Anderson, president, said that leadership was the outstanding feature of Mr. Haines' personality.

Forward Paterson saluted Mr. Haines through its president, Jack Stern, who said that "Believe in America" expressed on a larger scale the goal this movement strives to achieve.

He expressed Forward Paterson's gratitude to Mr. Haines for his cooperation and leadership and to Mayor Edward J. O'Byrne who so often went out on a limb to help the city overcome its own downward trend.

Lt. Col. Robert W. Wilson, commanding officer of Combat Command C, New Jersey National Guard, commended Mr. Haines not only for the recognition given his newspaper for the "Believe in America" campaign, but for his support of the National Guard program with all the force of his editorial columns.

Visibly moved by the demonstration in his honor, Mr. Haines expressed deep appreciation for the honor bestowed on him and the Evening News by Freedoms Foundation for the third time. He received an award in 1953 and again in 1957.

"It is not so much the medal but what it signifies," he said. "It is an award that belongs to the people of Paterson, of America, more than to me. It was they who proved they 'believe in America.' "

Our Farm Surplus

EXTENSION OF REMARKS
OF

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. BROOMFIELD. Mr. Speaker, there are plenty of people making money from our Nation's extravagant farm programs, but these people have little to do with actual farming.

A recent series of articles in the Detroit Free Press points out the waste and the speculation which is taking place with the hard-earned money of our taxpayers, waste which must be stopped.

Following are the two articles by Mr. Ray Cave:

BIG MONEY IN STORAGE OF WHEAT

(By Ray Cave)

The storage of America's $4 billion grain surplus is so lucrative in some types of storage facilities that a warehouse firm recently offered a Midwest farmer a 5-cent-a-bushel payoff not to sell his wheat on the open market but to let the Government take it over.

The storage operator assumed the Government would allow the wheat to sit in his storage facility for months or years while he collected the full storage rate.

There is no indication of whether or not this nickel-not-to-sell practice is widespread.

If it is widespread, it is costing the U.S. taxpayer millions of dollars to store surplus crops which America's farmers had been willing to sell on the open market.

The Government official who learned of this nickel-not-to-sell offer said another private grain-storage operator had told him of making a similar offer.

"There's no law against it," this storage man had pointed out to the Government agent.

He's right. There isn't.

In another Wheat Belt State a private storage concern was reported to have offered to pay a 5-cent-a-bushel trucking fee to get Government grain moved into its storing facilities.

Once there, the company apparently figured, it would still make a profit when the Government paid its usual storage fee of slightly more than 16 cents a bushel, plus handling costs.

These handling costs amount to about 7 cents additional a bushel if the wheat is delivered by truck, or 2 cents if delivered by rail.

As farm surpluses have grown Government storage expenses have soared. It costs the Government more than six times as much to store the farm surplus now as it did 8 years ago.

In 1952 it cost $73 million. This year it will cost $476 million.

Total storage costs for the 7 years are $2,300 million.

The hope for a quick profit is certainly one factor in the national stampede into the farm-surplus storage business.

Last year alone 600 million bushels of new grain-storage space was constructed, bringing the national total to 3,500 million bushels of space available. This is a national increase of 20 percent in 1 year.

By the end of this year an additional 367 million bushels of space is expected to have been constructed.

Under the uniform grain-storage agreement, the Government pays between 16 and 17 cents a bushel to store wheat and corn, whether the surplus commodity is being kept in a multi-million-dollar grain elevator, a steel quonset hut, a converted cotton warehouse or an old oil tank.

Responding to this flat rate, private storage construction is booming across the Nation. For example:

In Iowa there were 208 million bushels of private storage in 1958, compared to an estimated 275 million bushels in 1959, an increase of 32 percent.

In Kansas there were 1,000 million bushels in 1957, 282 million new bushels constructed in 1958, and an estimated 150 million more bushels being put up in 1959. Thus in 2 years grain-storage facilities in Kansas were expanded more than 40 percent.

The amount of money Uncle Sam is pouring into the pockets of private storage concerns is even beginning to worry long-time members of the storage industry.

Alarmed at the type of storage facilities being constructed to hold Government surplus grain by latecomers to the storage business. Price Feuquay, owner of an Oklahoma grain elevator company and chairman of the National Grain Trade Council, predicts:

"They're going to smell the stink of rotting wheat all the way to Washington if the Government doesn't strengthen its storage requirements.

"The losses will be enormous, and the taxpayer will have to foot the bill because some of those new companies won't have enough money behind them to pay for the rotten grain.

"The rate the Government is willing to pay to store grain in cheap facilities is encouraging the construction of such facilities," says Feuquay.

"Secretary Benson is soon going to find that he can't curtail the price-support program, not because of pressure from farmers, but because of pressure from the greatly expanded storage interests."

The pressure, he says, will come from newcomers who have rushed into an apparently profitable business in recent years.

How profitable can storage Government grain surpluses be?

One giant Oklahoma wheat-storage firm made a net profit of $3 million on the Government grain it handled last year.

The Government makes the storer 100 percent responsible for the condition of the grain.

Not only has the storage industry greatly expanded (there are now 12,000 storage firms with contracts to handle surplus commodities) but the Government has urged the farmer to build his own on-the-farm storage.

The Government will lend the farmer 80 percent of the cost of the building and 75 percent of the cost of equipment needed.

If the farm storage is inspected and approved, the Government will then pay the farmer to store its surplus grain at exactly the same rate it pays the private storage industry. Such grain may be kept on the farm several years.

Asked pointblank about the profits which wheat-storage people might be making in his State, in view of recent expansion there, Lewis F. Wolfe, State administrative officer for the Oklahoma office of the Commodity Stabilization Service, said:

"It must be a paying business or they wouldn't be in it."

FIRM GETS MILLIONS FOR IDLE WHEAT

(By Ray Cave)

ENID, OKLA.—A cooperative storage company in this northwest Oklahoma town made a net profit of $3 million last year by storing Government surplus grain.

The company which operates four huge grain elevators, also made a net profit of $1.8 million on grain stored at private expense, giving it a total net profit for the year of nearly $5 million.

With room for 50.3 million bushels of grain in its elevators, the Union Equity Cooperative Exchange can hold more wheat than would be consumed in 18 years in Baltimore.

At that, this giant co-op is holding only a tiny fraction of the Nation's wheat supply.

There are now 2.3 billion bushels of wheat in this country.

Since the United States uses only a billion bushels a year, for both domestic and export markets, 1.3 billion bushels are being stored with no market in sight.

All but 100 million bushels are owned by the Government, which acquired it under the price-support program.

It is in the storing of these vast surpluses that firms like Union Equity prosper.

Union Equity is the largest wheat storage facility on one location in the country.

Yet it needs only 125 full-time employees. The operation is so mechanized that only 16 men are needed to work elevator Y, with its 16.3-million-bushel capacity.

Its newest pair of elevators, built in the early fifties at a cost of roughly 40 cents a bushel, hold 31.6 million bushels.

Controlled through stock held by 92 small grain elevator co-ops, Union Equity returned a 7.8-cent-a-bushel dividend to stockholders for each bushel of wheat that stockholders had sent to Union Equity.

Dividends are paid to the small co-ops, which then give the profits to their individual farmers.

The Government received no dividend for the $74 million worth of grain it stored with Union Equity.

It is a nonmember user.

If the profits of Union Equity are giant-sized, so was the vision of the late Edward N. Puckett, who expanded the business when Government surplus first began growing in the late forties.

A storage designer as well as a businessman, he wanted to try a revolutionary concept of grain-elevator construction. Shaping the bins like honeycombs instead of circles, he cut construction and operating costs.

He designed an ever-moving belt system to shift grain from bin to bin, thus getting air to the grain to prevent spoilage.

He installed heat indicators to catch the first hint of spoilage.

He ordered automatic unloading equipment which can empty a boxcar in 4 minutes. In 6 more minutes the carload of wheat is weighed and placed in any one of the 624 bins in elevator Z—a 900-foot-long, 180-foot-wide monster.

Union Equity is located on three major rail lines, and its wheat can be shipped to the gulf for export, or to Kansas City for domestic use, at about an equal freight rate.

The freight rate advantage makes Enid a major grain storage center.

Union Equity, largest of the four Enid companies, sometimes buys and sells a million dollars worth of wheat a day.

Visitors are welcome at Union Equity.

In the company's new $500 million office building, the Midwestern informality equals the efficiency.

Gerald Frazier, assistant general manager, estimates about 40 percent of Union Equity's operation this year will involve Government wheat, with a net profit from the storage of Government wheat estimated at $2 million.

Some Government wheat has been held by Union Equitys since 1951. But most has been kept between 2 and 3 years—at the standard 16-cent-a-bushel storage rate.

Contrasting again-t the shimmering white of Union Equity's giant elevators are the green bits of property between railroad tracks, parking lots and smaller company buildings.

The farmer who owns this land has nourished it well, and rarely considers the irony of his position. With 50 million bushels of wheat within his sight, he is busy growing more wheat.

Here's How 85,000 Rural Folks Feel About the REA Program

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, Wisconsin Electric Co-op, our statewide association of rural electric and telephone cooperatives, recently adopted a series of resolutions on various REA and cooperative proposals to be considered by Congress. As these resolutions express the thinking of the 85,000 rural electric and telephone co-op members in my State, I would like to include the resolutions in the RECORD under leave to extend my remarks:

WISCONSIN ELECTRIC CO-OP RESOLUTIONS

PEACETIME APPLICATION OF NUCLEAR ENERGY

Whereas the most rapid development of nuclear energy in a manner which will assure widespread availability at lowest possible cost is vital to sustaining our national position in a troubled world; and

Whereas nuclear energy promises applications particularly suited to the needs of rural electric systems; and

Wheras a public policy which would prevent the monopolization of nuclear development by any segment of the power industry, but instead would establish competitive incentive to accelerate development is vital to the Nation's welfare; and

Whereas it is our opinion that Federal sponsorship of large-scale units employing a variety of reactor types should stimulate development of nuclear energy for generating electric power: Now, therefore, be it

Resolved, That we go on record in support of the legislation proposed by U.S. Senator GORE which would authorize construction of large-scale units by the Federal Government which, in our opinion, would result in most expeditious development of promising new source of harnessed energy.

FEDERAL CAPITAL BUDGETING

Whereas the present Federal budget makes no distinction between appropriations to finance current operating or noncapital type expenditures from appropriations made for such programs as REA where expenditures are fully repayable with interest; and

Whereas this failure to distinguish between the two types of appropriations creates public confusion regarding the fully liquidating type appropriation and a failure to understand that such programs are carried on without any ultimate expense to the taxpayer and actually are wealth creating and result in great social and economic benefits to the Nation; and

Whereas legislation has been introduced by U.S. Senator WAYNE MORSE amending the Budget and Accounting Act of 1921 to provide for a budget distinguishing between capital investments and noncapital expenditures: Now, therefore, be it

Resolved, That we go on record endorsing such legislation and urging its enactment in the current session of the Congress.

GENERATION AND TRANSMISSION LOANS

Whereas the availability of an adequate supply of wholesale power is one of the fundamental requirements to good rural retail service and most rural cooperative power systems are dependent upon the willingness of a single supplier to make power available to them in adequate supply at reasonable cost; and

Whereas down through the years the right of electric cooperatives to borrow funds under the REA program for generation purposes has not only proven an excellent bargaining tool, but in most instances, particularly in Wisconsin, has been utilized to the great advantage of electric cooperatives; and

Whereas those cooperatives dependent upon their own generation and transmission systems must be assured an adequate source of capital funds to plan the orderly expansion of facilities to keep pace with load demands; and

Whereas the Administrator of REA, David Hamil, has recently publicly stated REA policy to continue this very effective program and to meet all legitimate G. & T. capital requirements of borrowers: Now, therefore, be it

Resolved, That the REA generating and transmission loan program be continued on a basis that will meet all legitimate loan requirements and that Administrator Hamil be commended for his policy on such loans; be it further

Resolved, That we commend the excellent manner in which generation and transmission borrowers in the WEC service area have utilized these programs for the benefit of our rural member-owners and state our conviction that the tremendous growth of load demands to serve the future needs of rural people will require vast expansion of our generating capacity and will require a continuing REA policy of making available sufficent funds to meet these demands to assure the future vitality of the rural electric program.

COOPERATIVE TAXATION

Whereas the Secretary of the Treasury has recently proposed new standards which would impose punitive tax liabilities on cooperatives; and

Whereas our cooperatives are paying their full share of taxes, with the electric cooperatives of Wisconsin contributing more than a half million dollars in taxes to support Government during the past year; and

Whereas under present tax laws, electric cooperative tax payments in Wisconsin are expected to triple by 1970: Now, therefore, be it

Resolved, That we express our unalterable opposition to the imposition of additional taxes against cooperatives or the establishment of tax standards which would impose a hardship on members in protecting their equity in their cooperatives.

THE RURAL TELEPHONE PROGRAM

Whereas since the REA Act was amended in 1949 to initiate a program to finance the expansion of modern telephone service in our rural areas; and

Whereas while the program has achieved commendable progress in assisting in the development of modern telephone service in the more densely occupied rural areas, but has made less creditable progress in more sparsely populated areas where the assistance of this kind of financing program is more seriously required; and

Whereas the administration of the telephone program has been carried on under a policy which does not recognize the importance of aggressive assistance to groups of rural people who might formulate a potentially feasible telephone cooperative—a method of approach which proved so successful in the electric program; and

Whereas the cooperative phase of the telephone program is more seriously lagging each year until in 1958 the proportion of loan funds to new commercial-type borrowers exceeded funds to new cooperative-type borrowers by 14 to 1; and

Whereas the electric cooperatives feel an abiding obligation to each other and to the Federal Government for the full repayment with interest of all loans under this program and are confident that only under a cooperative-type program can we continue our confidence that the telephone loan program will be able to maintain the type of repayment record of electric cooperatives: Now, therefore, be it

Resolved, That we respectfully petition the Congress and the Administrator of REA that it become the expressed policy of REA to promote the cooperative telephone program on a preferential basis and that sufficient staff be assigned to effectively assist potential members of such associations in the organization and development of modern service; and, be it further

Resolved, That the Department of Agriculture consider the assignment of this organizational effort to the farmer cooperative services if it cannot properly be assigned within REA; and be it further

Resolved, That appropriations necessary to finance extension of modern telephone service through cooperative-type borrowers be earmarked separately from appropriations to commercial-type borrowers and that independent records of the progress of cooperative type borrowers be maintained; and be it further

Resolved, That WEC continue its policy of lending all possible assistance to cooperative-type borrowers and potential cooperative-type borrowers.

REA FINANCING PROGRAM

Whereas the President of the United States has publicly stated that he will recommend legislation increasing the rate of interest charged electric and telephone cooperative borrowers under the REA program, and that he will further recommend legislation delimiting the availability of loan funds to meet necessary capital requirements of borrowers to force them into the private money market; and

Whereas all exacting studies of borrowing costs indicate that the REA loan program is being carried on over the duration of loan terms at no cost to the taxpayers; and

Whereas the present interest rate was established in 1944 at what was admittedly a favorable rate for the purpose of encouraging the rural people of America to bring service to areas of low density on an area coverage basis to alleviate the deplorable neglect by the existing industry which claimed these areas could not possibly yield sufficient revenue to meet the basic cost of service; and

Whereas a study conducted last year indicates that any increase in the cost of borrowing funds for Wisconsin borrowers would result in higher retail rates, a slow-down in application of electric power for productive purposes, delay, if not retard, the acquisition of necessary equity for bargain power in a private money market, and make it unfeasible to continue our common effort to bring electric service to every rural home in Wisconsin: Now, therefore, be it

Resolved, That we urge the Congress to oppose any and all proposals which would thusly stifle our present healthy development, cause service to deteriorate, and increase retail power rates on an already seriously depressed rural economy; and, be it further

Resolved, That upon completion of a survey by the National Rural Electric Cooperative association of capital loan funds needed during the 1960 fiscal year by electric and telephone borrowers that WEC notify members of the Wisconsin congressional delegation of the amount of these funds and, in our name, respectfully request that the Wisconsin delegation support adequate appropriations to meet these requirements.

COMPTROLLER GENERAL OPINION

Whereas in July 1958 the Comptroller General of the United States issued a ruling, admittedly at the request of a commercial power company, which, if upheld would cast a cloud upon the intent of the Congress in passing the REA Act of 1936 and open to question the legality under which Congress has legislated and the executive department has administered the program down through the years; and

Whereas Senator AIKEN, of Vermont, has introduced Senate Resolution 21 reaffirming the intent of the Congress with respect to the REA Administrator's loan-making authority; and

Whereas this ruling by the Comptroller General is so completely contrary to both the legislative and administrative history of the REA Act that Members of Congress, including Representative LESTER JOHNSON of the Ninth District of Wisconsin, have introduced legislation authorizing a thorough investigation of this and other actions of the Comptroller General; and

Whereas we the delegates at the 23d annual meeting of WEC would greatly deplore the use of a responsible and high office in the Government of the United States for the purpose of public harassment for irresponsible and veiled objectives: Now, therefore, be it

Resolved, That we condemn in the strongest possible manner this particular ruling of the Comptroller General, and that we commend Senator AIKEN, Representative JOHNSON, and other Members of the Congress who seek to correct the record and investigate an untoward purposes behind this action; and be it further

Resolved, That we go on record urging approval of the Aiken resolution and that the investigation of the Comptroller General be authorized to proceed without delay.

FOSTERING YARDSTICK IN THE POWER INDUSTRY

Whereas the nonprofit segment of the power industry provides the public with its only effective yardstick as to the performance of the dominant profit-motivated segment; and

Whereas during the past century it has frequently been found, as in the REA program, that power distribution conducted solely as a service to consumers has been successful in bringing an adequate supply of harnessed energy to segments of the public after commercial companies have failed to do so; and

Whereas the opportunity of the public to turn to nonprofit service where existing commercial service has not proven adequate provides the public with an alternative which can be used for bargaining purposes to correct poor service; and

Whereas we feel it a matter of sound public policy that the Congress initiate public development of such natural resources as our great river systems under public programs that will assure full development as an alternative to partial and inadequate single purpose development for the primary benefit of a limited few; and

Whereas we feel that development of the Nation's resources should, wherever feasible, be accomplished on a multipurpose basis with power capacity resulting therefrom assessed realistically for its actual portion of the cost and distributed in a manner which will result in greatest public benefit as ascertained by the Congress; and

Whereas power produced as a portion of multipurpose development of publicly owned natural resources should be, as a matter of historic policy, distributed with preference accorded to those power suppliers who will make it available without exacting a profit as a middleman between the public and the product of its own tax-financed development: Now, therefore, be it

Resolved, That we, the delegates at the 23d annual meeting of Wisconsin Electric Cooperative, go on record urging the Congress to carry on a continuing survey of our natural resources for the purpose of perpetuating them and initiating their development and utilization for the greatest public benefit and that a continuing national investment program be carried on earmarked for the maximum development of such resources; and be it further

Resolved, That the Congress implement all such enabling legislation with provisions which will accord preference to means of distribution which will get the benefits of such development into the hands of the public at lowest possible cost consistent with returning to the Federal Treasury the investment costs over the life of the projects.

TENNESSEE VALLEY AUTHORITY

We, the delegates at this 23d annual meeting of Wisconsin Electric Cooperative, hereby resolve that we support H.R. 3460, H.R. 3461, and H.R. 3462, recommended by the TVA Board of Directors to finance future normal growth of TVA power facilities by bonds backed solely by TVA's revenues.

CONSUMER INTEREST REPRESENTATION

Whereas in our highly organized and complex society, the trend is toward increasingly greater organization of individuals into groups with a common aim of achieving greater bargaining power; and

Whereas in most instances the objective of such organization is to achieve a greater share of return in the common marketplace at the expense of the consumer; and

Whereas today the only broad segment of our society which is not organized as such in its own interest on a broad basis is the consumer; and

Whereas attempts at Government regulation in the interest of the consumer through such regulatory agencies as the Federal Power Commission, the Interstate Commerce Commission, and the Federal Communications Commission is weakened by the organized pressures applied by special interest group; and

Whereas the REA program is one of the very unique and highly successful Government-sponsored programs designed to strengthen the hand of consumers; and

Whereas U.S. Senator ESTES KEFAUVER has introduced legislation in the Congress which would create a consumer department of Government aimed at more effective representation of consumer interests in our national economy: Now, therefore, be it

Resolved, That we the delegates at this 23d annual meeting of Wisconsin Electric Cooperative hereby endorse this legislation and urge its enactment.

The California Visit of Senator Kennedy

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. HAGEN. Mr. Speaker, the distinguished Senator from Massachusetts, the Honorable JOHN F. KENNEDY, recently visited the State of California. In the course of such visit he graciously met with our distinguished Democratic Governor, Pat Brown, and praised his record of accomplishment as a liberal.

The Senator received excellent press coverage during the visit. I invite to your attention the story of an interview by Reporter C. K. McClatchy of the Sacramento Bee in the issue of May 2, 1959. The story reads as follows:

KENNEDY WILL LEAVE BROWN OPEN FIELD IN CALIFORNIA PRIMARY

(By C. K. McClatchy)

SACRAMENTO.—U.S. Senator JOHN F. KENNEDY declared if he becomes an avowed candidate for the presidency he will not enter the California primary because he expects Gov. Edmund G. Brown will go to the convention as the State's favorite son.

The Massachusetts Democrat, on a half-day whirlwind visit to the capital, said he will decide whether he will seek his party's nomination sometime before the March 8 filing date for the New Hampshire primary.

Governor Brown said it is his present intention to file as a favorite son candidate. He added that once he files he will stay in the primary race even though other candidates enter the competition.

PRAISES RECORD

KENNEDY praised the record of Brown during a joint press conference held in the Governor's office.

"Governor Brown's record here," Kennedy said, "is well known across the country. His fight for better labor standards, a FEPC and a balanced budget has strengthened the party nationally and proved it to be liberal."

KENNEDY also commented that Brown, too, has been strengthened politically by his record on his recent trip to Washington where he favorably impressed Democratic leaders.

The Senator brought laughter to the crowded press conference after he described both Vice President RICHARD NIXON and Gov. Nelson Rockefeller as formidable opponents, but declined to make a comparison.

"You may not believe this," KENNEDY said, "but I have given much more thought to the Democratic nomination than the Republican choice."

ENDORSES PRIMARIES

KENNEDY put in a strong endorsement for presidential primaries and said he disagreed with former President Harry S. Truman's comment they are only "eyewash."

"Presidential primaries," KENNEDY said, "broaden the participation of party members in the selection of candidates. I am opposed to the selection by conventions, such as we have in Massachusetts."

KENNEDY said he regrets Mrs. Clare Boothe Luce will not go to Brazil as the American Ambassador. He said he had supported her in the Senate and praised her work as Ambassador to Italy.

Following the press conference the Senator spoke before the State assembly where he said the Nation stands at the edge of a new era which will require leadership the equal of Lincoln's.

KENNEDY was honored at a luncheon sponsored by Democratic legislative leaders in the Senator Hotel and departed for Los Angeles.

SEES NO LABOR FIGHT

LOS ANGELES.—Senator JOHN F. KENNEDY says he does not expect strong labor opposition if he becomes a candidate for the Democratic presidential nomination in 1960.

He made the statement last night in a question and answer session at the Los Angeles Press Club.

The Massachusetts Democrat was asked if he feels labor would vigorously oppose him because of his labor reform bill.

"I don't think labor is going to exercise a veto over any of the possible candidates mentioned," KENNEDY said. "Nor would such a veto stick. I don't think any work I did is going to hurt me."

KENNEDY stuck to his previous statements that it is too early to say whether he definitely will be a candidate for the presidential nomination.

States Should Be Reimbursed for Building Modern Highways

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the text of a statement I submitted to the House Committee on Public Works in connection with its current hearings on legislation to reimburse States for expenditures incurred in the construction of roads which were subsequently incorporated into the Interstate Highway System. Among these measures is also my bill H.R. 6409, which I introduced on April 15, 1959. The text of my statement is as follows:

STATEMENT BY HON. VICTOR L. ANFUSO, OF NEW YORK, TO THE HOUSE COMMITTEE ON PUBLIC WORKS, MAY 19, 1959 ON H.R. 6303 AND H.R. 6409

Mr. Chairman and members of the committee, I appreciate this opportunity to present my views in support of the bill, H.R. 6303, introduced by the distinguished chairman of this committee, my own bill H.R. 6409 which is similar in content, and related bills. The purpose of all these bills is to equitably reimburse the States for toll and free roads which were incorporated into Interstate and Defense Highways of the Nation.

Several years ago Congress had authorized the construction of an interstate system of roads and highways of 41,000 miles extending into all parts of the country, in order to meet present-day highway needs as well as defense needs. This should have been undertaken several years earlier because of the growing needs. Some of our States had the vision and foresight to realize the immensity of our traffic and highway problems and they could not wait until Congress made up its mind. They were confronted with the problems and the only logical solution was to begin construction of roads.

This they did, and they built them well. The upshot was that in numerous instances these roads were later incorporated into the Interstate System and in these past few years they have been carrying a heavy traffic load. Let us not overlook the fact that those States which were the largest contributors to the Interstate System have the heavies traffic demands and largest use.

Statistics show that a total of 10,954 miles built and financed by States have thus been incorporated into the Interstate System, and the cost of construction of these roads is given as more than $6 billion. The bills under consideration would reimburse the States for this expenditure, but less the States' share of the cost and less Federal payments already made. Thus, the total net reimbursable amount for all States would come to $4,295,600,000, which is roughly about 70 percent of the entire outlay. These reimbursements, however, are not to be made at once, but over a 15-year period, beginning with the fiscal year 1962.

As for my own State of New York, it had been allocated a total of 1,227 miles of roads under the 1956 Federal Aid Highway Act. New York, however, was one of those States that had the foresight to start building modern highways several years before the 1956 measure was enacted. New York took the initiative in the construction of such highways as the New York State Thruway and other roads, but it did so in the expectation that some sort of reimbursement would be made at some future date. In this way, New York was a pioneering State, it had spent about a billion dollars on the thruway alone.

Of the 1,227 miles allocated to New York, 658.2 miles of roads are financed through Federal aid and 568.8 miles were financed by New York State at a cost of $1,036,000,000. If the Federal Government had contributed 90 percent of the cost, as it has done for all interstate highway construction under the 1956 act, New York would have been entitled to receive $932,600,000 from the Government. Actually, New York received only $133,500,000, which means that it has a legitimate claim for the reimbursement of $799 million.

It is for this very reason that I introduced my bill. I feel that New York is justly entitled to this refund. In fact, 3 years ago when we debated the 1956 Federal Aid Highway Act on this floor, I stated that at time New York was already entitled to a reimbursement of $650 million and that it should not be penalized because it had the initiative to go ahead with its road program and could not wait until the Federal Government determined its course of action.

Mr. Chairman, the New York State delegation in Congress has nearly always shown consistency in support of legislation which is not only beneficial to our State, but to the Nation as a whole. We have never acted in a provincial manner despite the fact that the people of New York contribute nearly one-fifth of the tax collections of the Government. I, therefore, urge you to approve this bill and to reimburse each State to the share to which it is entitled.

Benson Unyielding, Says Farm Controls Must Go

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. ALGER. Mr. Speaker, with the agricultural appropriation bill before us for consideration, the following article from the Waco Times-Herald of April 8, 1959, I submit for my colleagues' consideration. I am among those who believes there is throughout this country a strong grassroots support of Mr. Benson's flexible policies as opposed to the higher rigid support programs which has gotten us in the present agricultural difficulty. In fact, I believe people of this Nation if given the chance at this time to a referendum would throw out the entire agricultural subsidy program, going far beyond Mr. Benson's moderate approach in solving this troublesome problem:

GAINING SUPPORTERS—BENSON UNYIELDING, SAYS FARM CONTROLS MUST GO

(By Clark Bolt)

You may want to cuss him; you may think he's the biggest enemy the farmer has; you may not ever agree with him. But this fact still remains: Ezra Taft Benson has done more to change the thinking and direction of farm programs than any other man in the Nation during the past 6 years.

And he's gaining more supporters to his side daily.

As Secretary of Agriculture, Benson has the hottest position in Washington—hotter even than the position of the Secretary of State, the office of any President's Cabinet which usually catches all of the opposition's barbs, quips, and verbal diarrhea. During the past 6 years, Benson has been the main target of any and all opposition. He's probably the most controversial Secretary of Agriculture the Nation has ever had.

And though his opponents are many, and though they continue to deride his program, Benson has not backed down one iota from his original stand 6 years ago. That simply is that Government control of agriculture must go if agriculture is to come out of its problems.

Benson made that statement shortly after he took office as Secretary of Agriculture. He repeated it to us at press conferences back in 1953, at the Future Farmers of America convention in Kansas City; he said it again at the national soil conservation district supervisors convention in New Orleans in 1954; he repeated it in 1956 at the national watershed congress in Lincoln, Nebr.; he reemphasized it in San Angelo in 1957, while on a drought inspection tour of west Texas; and he said it again even more forcefully Tuesday in Dallas at the annual meeting of the Texas Cotton Ginners Association.

He has changed his position on some statements during the past six years to be sure. But basically, he has not and does not intend to change his thinking on how agriculture's ills can be cured.

Practically every type of program, remedy, plan, and gimmick has been tried to cure agriculture's ills during the past 40 years through some type of Government action. All have failed. Rigid suport prices have gone by the wayside; flexible support prices

have not kept the farm surpluses from piling up. Soil bank, AAA, two-price plans, compensatory payments, are all a part of recent programs and of now proposed plans to somehow cure agriculture. Here is what Benson says can cure the farm dilemma:

"In the interest of the whole Nation, we need less Government in farming. Quit trying to fix prices unrealistically from which flow the twin evils of production for Government warehouses and Government control of farmers. Emphasize markets, increased efficiency, and competitive selling. Eliminate Government stranglehold on agriculture."

For spreading that philosophy in the past Benson has been laughed at, scorned at, rejected by members of his own party; farmers have thrown eggs at him, he has been declared a political liability and one politician claims Benson is doing all this because he wants to become President of the United States.

Yet Benson continues in his own way to attack those who believe the Government should continue to aid the farmer. If you want to argue with Benson, you'd better have your facts well in hand. He has his facts that way, and unless you can quote him facts, he can tear your arguments into ribbons.

Suport for Benson's programs may be stronger than many folks would even realize. Support is apparently coming from all walks of agriculture—from the small-size farmer to the businessman engaged in doing business with farmers.

Results of a recent nationwide poll by a nationally circulated farm magazine at least point that way. In tht poll, 80 percent of the farmers asked for less Government control. In the South (where many think the trend is for more Government control) the magazine's results show 81 percent in favor of less Government control.

"I don't know what to believe," one innocent bystander at the ginners' association meeting said Tuesday. "I do know this. Something's got to give pretty soon in the farm business. Benson is either 100 percent right—or he's 100 percent wrong. Either way, you've got to admire him for standing up for his beliefs."

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Address by Hon Steve McNichols, Governor of Colorado, Before Western States Democratic Conference

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 21, 1959

Mr. HUMPHREY. Mr. President, during the constructive Western States Democratic Conference held in Denver last weekend an impressive presentation of western problems was made by Gov. Steve McNichols of Colorado—along with a plea for the kind of attention the growing West needs in the Halls of Congress.

I so enjoyed reading Governor McNichols' fine address that I want to share it with my colleagues by asking unanimous consent for it to be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY GOV. STEVE MCNICHOLS, OF COLORADO, BEFORE WESTERN STATES DEMOCRATIC CONFERENCE, DENVER, MAY 15–17, 1959

Distinguished Senators and Congressmen, honorable Governors, Chairman Butler, Vice Chairman Loucheim, national committeemen and women, State Democratic chairmen, distinguished guests, ladies, and gentlemen, we are engaged in a novel and far-reaching enterprise this weekend. We are taking part in a new development that can help bring new growth and maturity to America's two-party system.

Regionalwide meetings have been held before by political parties. But only in the last several years has the purpose of such meetings been to analyze public problems, to study proposals, and to close the conference with recommendations for platform planks on vital topics.

This weekend will witness no oratorical exercises, no snake-dance contests, no stampede of delegates. We are here to win the confidence of all the voters by clearly demonstrating that we are willing to probe, anxious to understand, and ready to work out and accept new solutions to old and new problems. We are here to find answers to today's problems, and to put those answers to work tomorrow.

I, for one, welcome this strengthening of principle and platform in our party system. To maintain decent competition between the two major parties, I hope that the Republicans copy our new way of finding answers. The "me too" party probably will do it automatically—a habit it first began cultivating following the election of Franklin Delano Roosevelt in 1932.

We should applaud a Californian for pioneering this new type of political conference in the West. We should be thankful that we have a national chairman who recognizes the important role of such conferences as this and does all in his power to make them a success. You know I am referring to the two Pauls—Paul Ziffren and Paul Butler.

The subject matter of this conference has wisely been limited to three major topics—natural resources, small business, and transportation. Each of these is of vital importance to the West, and of equal importance to the rest of the Nation. Each is vitally related to the other.

The three topics are highly suitable for another reason. Each has been the victim of serious mishandling, mismanagement, or just plain neglect by the present administration. The administration's approach to each of these topics has clearly demonstrated that Republican leaders are timid when they should be bold, thoughtless when they should be full of ideas, and asleep at the switch when they should be fully cognizant of a new era approaching.

I believe that this is one of those rare times in American history when the general public is far in advance of the present leadership in its understanding of key problems facing the American people. More important, the public is far in advance of the present administration in its willingness to move forward aggressively to solve problems both at home and abroad.

I believe the American people feel that they are trapped in an administrative vacuum that is choking America's internal development and shrinking our stature before the rest of the world. This is a serious charge. Let us briefly document the case as it relates to the three topics of this conference.

There is a growing awareness of resource use across the land. This awareness is greatest here in the West, because more of the resources are in the West. Fifty years ago enlightened conservationists were concerned with the overuse of our resources. Now, many are concerned with nonuse and nondevelopment of our resources.

Our administration seems to be too busy with international problems to devote much time or energy to domestic problems. Proof that an administration can do both quite handily—if it only has the imagination and the courage to invite progress—is very close at hand. We have only to look at the years that Democrats occupied the White House to see the difference. Here is a party whose work and decisions on international policy are now chapter headings in the history books—such historic phrases as United Nations Charter, Marshall plan, Truman doctrine, NATO, point 4, Korea, and Berlin airlift.

Yet, the Democratic Party moved forward on the homefront at the same time it was projecting the image of a strong, forthright, squareshooting America across the world. Reclamation and resource development moved forward under the Democrats. America gained postwar recovery under the Democratic Party. It looked forward with Party. * * *

President Truman's Materials Policy Commission also known as the Paley Commission. This Commission published the five-volume landmark report titled "Resources for Freedom"—a title that still can and should guide America's resource policy. The Paley Commission foresaw the time when America might join the other have-not nations because of its unwise resource use policies, its skyrocketing population, its huge consumption of raw materials.

Another important resource landmark under the Democratic Party was the President's Water Policy Commission, headed by Morris Cooke, which produced the known and respected work titled "A Water Policy for the American People."

The meaning of these studies to the West was obvious then. It is even more obvious now, since the present administration has let valuable years roll by while our resource and water policies have simply drifted along on the current of time. The ancient Shakespearian phrase, "Time is not measured by the clock, but by the intensity of experience," was never more appropriate.

I know I do not have to sell this audience on reclamation. We all know that it has triggered the development of the West we know today. It has made the desert bloom and lighted our farms and our cities. It drives the wheels of our industries, and creates jobs and wealth that help support all of us. It is the best investment in the present and the future that any government has ever made in addition to providing huge tax sources to broaden the tax base and lessen individual tax burdens.

In contrast to this progress under Democratic leadership and sponsorship, the Republicans advocate the backward policy of no new starts.

What the present administration overlooks is that reclamation is an investment in the Nation's future. And, every day that goes by with reclamation at a standstill means revenue lost, opportunity shunned, the future postponed.

It seems that this administration is content to add up the costs of past achievements, ignore the benefits they have brought to the whole Nation, and then warn everyone that such programs cost money. They are looking backward at ledgers when they should be looking forward at blueprints.

These great projects should be carried on our books as self-liquidating assets, as the underpinning of national defense, and as guarantees against future depression.

The virtual elimination of funds for reclamation investigation has relegated new projects to the dead files and thick layers of dust gather year by year on the drafting boards of the Reclamation Bureau.

When he was dedicating Hungry Horse Dam in Montana, Harry Truman told the audience to take a good look at this latest reclamation achievement in concrete and steel. "Because," he said, "if General Eisenhower is elected, it will be the last one you'll see in a long, long time." History again proved Harry Truman to be right.

I am not alone in opposing the administration's "no-new-starts" reclamation policy. Don't make the mistake of thinking only one western Governor is complaining. Just last month, in a meeting at Council Bluffs, Iowa, the Governors of the 10 Missouri River Basin States went on record with a strong resolution condemning the administration's no-new-starts policy. Here are some words from that resolution:

"The no-new-starts policy impairs the economic strength of the entire country by preventing the development of natural resources as an investment in the future welfare and security of the United States as a whole. Full development of the resources of this country is required in the struggle between the free world and the Communist-

dominated areas of the world * * * and delay in construction of planned projects weakens the economic base of this region and that of the entire Nation."

The general public must be reminded frequently that reclamation is far, far different from most Government-supported programs. Since reclamation was started in 1902, the Government has spent a total of $7.8 billion on reclamation in the 17 reclamation States. In today's Federal budgets, this does not sound like very much even for a single year—and this expense is spread over a 57-year period.

But the clincher is that $7.3 billion of this $7.8 billion is paid back to the Federal Treasury. Putting it differently, only $500 million of this total is not paid back to the Federal Government. Just one of the many benefits from reclamation justifies this $500 million expenditure, in my opinion, and that is flood control. This is certainly a Federal problem, since rivers do not respect State lines, and $500 million is a small investment to avoid the catastrophies in human life and property damage caused all of us by uncontrolled water on the rampage.

It should be obvious why we call reclamation an investment in the future. We need only to point to the thousands of industries—private enterprise industries—that power from reclamation projects has made possible.

We should also remember the vast scope of reclamation. The spur to the fantastic industrial and population growth of southern California came from Hoover Dam, hundreds of miles away in Nevada. It can truly be said that in the far western United States the desert can make the seacoast bloom. We strongly support the principle of full basin development of all river basins in the Nation.

I have spent much time here speaking on reclamation for a purpose. It deeply affects the 13 Western States represented here, plus 6 others. In all, reclamation is vital to 60 percent of the land area of the old continental United States—to which we can now happily add the great new States of Alaska and Hawaii.

This neglect of reclamation is a blow to the development of the whole Nation. For those of you who like to look at problems such as this from the standpoint of numbers and political action, let me remind you that the reclamation and Missouri Basin States represent 135 electoral votes. And to this we can now add six or seven more electoral votes for Alaska and Hawaii.

In brief, the long end of the country is getting the short end of the stick from these shortsighted policies.

Almost any phase of America's resources policies of the past 6 years shows the same signs of indifference and determination. On minerals, we are still stumbling along on a quasi-emergency program. More of our mines are closing every week. Our mine labor force is dispersed now into other lines of work. Reconverting to mineral production, in case of national emergency, would be cumbersome and costly.

Our mineral import-export policy is confusing at a time in history when our trade policies should be clearly drawn for the rest of the world.

We need a national fuels policy to go with a sound minerals policy. We need to utilize our abundant coal supplies, to supplement other fuels that have a shorter lifespan and fewer proved reserves. At a time when oil production is spread out thoroughout the world, and our Nation depends heavily on imported oil, our domestic oil industry is languishing because our import program is in serious imbalance. Commercial production from our vast oil shale reserves in Colorado, Utah, and Wyoming should be encouraged and developed as one of our Nation's greatest resources.

Our national mineral policy is similar to our national farm policy in that it is the same patchwork collection of inadequate measures designed in a hurry to meet an emergency. We need long-range programs our Nation can run on, not short-term plans that cause us to hobble, stumble and limp.

During the years 1947 to 1952, Colorado had an average of 153 lead, silver, and zinc mines in operation. Between 1953 and 1958, this number declined to an average of 98. Today, we have only four major mining operations in the whole State of Colorado. And this general situation is true in virtually every State with a mining economy.

We face a national dilemma here. The original cure for domestic mining problems was the high protective tariff. Today this policy places us in an untenable position in international affairs. We can't tell the world to follow our lead in developing resources, and then shut them out completely on marketing those resources.

Another proposed cure is to reduce wage levels in our domestic mining industry so we can compete pricewise with foreign minerals. This is not only misguided, but is totally beyond the pale of American traditions and concepts.

A third approach is to abandon the domestic minerals market to foreign producers, and closing down our own mines. The effect of this on our local, regional and national economy would be disastrous. It would also be foolhardy from the standpoint of national security.

There is a fourth approach which, I believe, is not only practical but realistic. It lies between the protectionist theory and the free trade philosophy. I refer to a quota production program for the domestic mining industry.

Production could proceed under such a system, with a balance struck between both foreign and domestic consumption, and such special measures as stockpiling for defense. This would require great cooperation between the minerals industry and our Federal Government. But it is not a new or radical idea.

The sugar industry has been operating successfully on a quota production basis for many years. And sugar has the same basic problems of export and import.

I believe the West is willing to move ahead on reasonable programs which will put our boom-bust mining industry on a solid foundation. And, America's position in international affairs could be immeasurably enhanced in the process.

The West has certain problems that are peculiar to it because conditions in the West are so vastly different from other parts of the country. Because of our topography, all of our surface heavy freight transportation consists of trucks that must run on long, expensive highways or freight cars that must run on long, expensive railbeds. We lack the lowest common denominator in freight handling—low-cost waterway transportation.

In other parts of the country, water transportation provides an efficient and cheap means of freight movement. It also is a compelling factor in providing lower rates on other modes of transportation. As a result, the other areas enjoy a freight rate advantage that the West cannot match.

For these reasons it is essential to the future of the West that the Federal Government recognize our freight rate problems as unique and give special study and attention to them.

For instance, the West should be given the benefit of our natural advantage of long hauls on a basis of per-ton-mile cost, especially on intraregional transportation. We need to integrate our transportation systems for economy and better service, thus stimulating commerce within our own region and strengthening our transportation ties with other regions.

In short, transportation should be viewed by the Federal Government as vital to all parts of our society and commerce. Transportation rates should not be set according to artificial and archaic rules laid down to benefit or relieve only one segment of industry in any single part of the Nation.

We of the West need and want a fair deal on freight rates, which also is consistent with and in contemplation of the critical problems facing the railroads and truckers themselves. Until we get such a fair deal, we have an automatic ceiling on our industrial and commercial development that holds back economic expansion of the entire United States.

In 1956 Congress passed the Highway Act which affected 41,000 miles of Federal Interstate Highways. This act created the Highway Trust Fund to finance new highway construction, and Congress raised certain highway user taxes and inaugurated new ones to support this trust fund. For instance, the Federal tax on motor fuel was raised from 2 to 3 cents per gallon.

Before this act, Federal money for roads came from the general fund. The Highway Trust Fund marked a distinct change—an improvement—in supporting highways. Congress knew that the highway trust would not be large enough to support construction planned for the years between 1960 and 1968. Congress anticipated that the extra funds needed for construction during this period would have to come from the general fund—all to be paid back later from the revenues from bigger Federal highway use taxes that will flow into the Highway Trust Fund.

In other words, everyone knew that the ambitious and much-needed highway construction campaign authorized in 1956 could not be paid for on a current basis. The peak construction years would demand more funds than those amounts coming into the Highway Fund during those peak years. For this reason the new and increased highway user taxes were to be in effect through 1972—3 years beyond the construction timetable.

Highway Trust Fund receipts during fiscal 1960 are expected to be about $2.3 billion. Construction expenses for the same period will run to $3.1 billion.

Now we are at the crossroads. Under the present, geared-up road construction program the Highway Trust Fund will be exhausted by June of 1960. Either additional money must come from the general fund or we must cut back the construction program to match the meager amounts collected in the trust fund at that date.

The bottleneck in this mammoth construction job is failure of the administration to follow the plans mapped out by the Congress. The administration does not want to provide the needed money from the general fund. Instead, the administration wants to hike highway user taxes even further—despite the fact that Congress did this in 1956 to finance the new construction.

For instance, the present administration is now asking Congress to tack another 1½ cents per gallon increase on Federal motor fuel taxes, which, incidentally, is a poor measure of highway use. To give you an idea of how much more this would cost taxpayers, this increase would mean that Coloradoans would pay an additional $9.5 million per year. For Texas, the increase amounts to $137 million. The crowning injustice is that the Federal Government is now diverting—every year—more than $1.5 billion of revenue from Federal highway user taxes into nonhighway purpose.

We need some imaginative, creative thinking in the planning of these vital programs and a willingness to accept new and dynamic

action concepts in executing them. Ramifications of this stop-and-go approach to highway construction range from greater highway fatalities to a slowing down of commerce and industry at a time when we need to give business, industry, and employment full throttle ahead.

It is no political accident that 35 Governors have agreed to oppose the new highway user taxes that the administration wants to add to the motorists' bill. Failure of the administration to plan and act has badly upset plans at the State level and will be disastrous to private industry and employment in critical areas.

This same lack of planning has placed small business in trouble. Lacking time to go into detail about its problems, let me say only that small business has been the victim of the same indifference and inattention and a monument of bankruptcies stand as evidence of this national tragedy.

Let us remember why we are here. We are here to speak for the West in clear, loud tones. We must remember that this is a dramatic "new West" we are talking about. We are the growing, expanding part of a great Nation. We now can happily boast that resource-rich Alaska and beautiful, productive Hawaii are our sister States in an unwritten economic and political pact.

The West is no longer a poor country cousin. We have markets, as well as resources—we have spirit, as well as know-how—and we have votes, as well as political savvy.

The man who is elected President of the United States in 1960 will be guiding the destinies of 25 million more citizens at the end of his term than were on the census rolls at the beginning. The political party that will be chosen by the citizens of this Nation must have this vision and foresight to assure our citizens ample food and clothing, services, schools, jobs, homes, plus automobiles and the other luxuries that have become necessities of American life.

The Democratic Party must be ready and willing to establish programs and policies designed to develop our resources, encourage mineral development, and expand our sources of raw materials for the benefit of all the people. We must have the optimism that comes from self-confidence, and the courage that comes from faith in America. In short, we must know the needs of the Nation and the ability of the West to fully participate in and meet those needs. We are gathered here this weekend to draw the political blueprints of the West's future, and to forge programs and policies that will insure full participation in a dynamic and peaceful America. We will do our part in fulfilling the destiny of the Democratic Party by bending every human effort to make this Western States' Democratic Conference productive and fruitful.

Thank you.

Tributes to George E. Stringfellow, Imperial Potentate of the Shrine of North America

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 21, 1959

Mr. SCHOEPPEL. Mr. President, on last March 9 a former colleague of ours here in the Senate, Albert W. Hawkes, of New Jersey, gave a reception and dinner in honor of the Imperial Potentate of the Shrine of North America, Sir George E. Stringfellow, at the Sheraton-Carlton Hotel here in Washington.

Senator Hawkes tried to have all the Masons and Shriners in both branches of Congress present, but the pressure of business permitted only 58 Members of the House and approximately 23 Members of the Senate to be present with many of the outstanding officers of the Masonic fraternity and the Shrine throughout the United States. In Senator Hawkes' invitation he recounted that he had become a Mason at 71 years of age and a Shriner at 72, and while in the Senate he was impressed by the fact that George Washington was a devout Mason and gave much credit to his teachings in Masonry for the maintenance of principle on the battlefield and in public office. It was recounted that a majority of all those who signed the Declaration of Independence were Masons, and a majority of those who signed the Constitution of the United States were Masons, and his theory was that inasmuch as our Masonic forefathers had so much to do with the creation of our American form of liberty and opportunity, perhaps we, as the benefactors of their work, might do our share in helping to preserve our Americn constitutional government and way of life.

Briefly, I wish to call attention to the fact that the Shriners Crippled Children's Hospitals draw no lines based on color, race or creed in their splendid work to help those with physical infirmities get the most possible out of life.

Senator Hawkes tells me he has in mind bringing together all of the Masonic and Shrine Members of the Congress and many of those in the executive and judicial branches of our Government once a year in the hope that this group of well intentioned citizens can be of greater benefit in their public services to the Nation and every group of citizens composing it.

Mr. President, I ask unanimous consent that the transcript of the minutes of the dinner in honor of the Imperial Potentate of the Shrine of North America, Sir George E. Stringfellow, of East Orange, N.J., may be printed in the Appendix of the RECORD, although it is estimated by the Public Printer to be over two pages and will cost $283.25 to insert.

There being no objection, the proceedings were ordered to be printed in the RECORD, as follows:

RECEPTION AND DINNER GIVEN MARCH 9, 1959, IN HONOR OF THE IMPERIAL POTENTATE OF THE SHRINE OF NORTH AMERICA, SIR GEORGE E. STRINGFELLOW, AT THE SHERATON-CARLTON HOTEL, WASHINGTON, D.C.

Hon. ALBERT W. HAWKES. Will you all please stand for the invocation by my very dear friend, Dr. Frederick Brown Harris, the Chaplain of the U.S. Senate? I want to say about Dr. Harris that our friendship has been one of the choice things in my life. I consider him one of the most unselfish ambassadors of Christ on earth and one of God's chosen servants. He is also a Mason and has been a working Knight Templar for years. Dr. Harris, will you please offer the invocation?

Dr. FREDERICK BROWN HARRIS. Let us lift our hearts in prayer. Our Father, God, who hath made and preserved us a Nation, our fathers trusted in Thee and were not confounded. In Thee we trust. Thou hast made us to love truth and beauty and goodness. May Thy truth make us free, free from pride and prejudice and from all the ugliness of disposition that does so easily beset us.

Lift us, we pray Thee, above the mud and scum of mere things with the holiness of Thy beauty so that even the common task and the trivial may be trimmed with crimson and gold. Lead us in Thy paths of righteousness for Thy name's sake.

Enrich us, we pray Thee, with those durable satisfactions of life so the multiplying years may not find us bankrupt in those things that matter most, the golden currency of faith and hope and love.

In these desperate and dangerous days, when the precious things we hold nearest in our hearts are threatened by sinister forces without pity or without conscience, help us to give the best that is in us against the wrongs that need resistance and for the right that needs assistance and to the future in the distance and the good that we may do.

We ask it in that Name that is above every name. Amen.

Hon. ALBERT W. HAWKES. Now, gentlemen, will you please remain standing for just a moment while we have the national anthem?

(The assembly joined in singing the national anthem.)

Hon. ALBERT W. HAWKES. Be seated, gentlemen.

(The assembly was seated and dinner was served.)

(Selections by the quartet of Crescent Temple.)

Hon. ALBERT W. HAWKES. Gentlemen, I was supposed to say a few words of welcome, but I thought that everybody acted so much at home that it wasn't necessary. [Applause.] I do want to say this: that I am particularly happy that you very busy men, who have great burdens on your shoulders (and I know something about them) have seen fit to come out tonight to honor our distinguished imperial potentate, Sir George E. Stringfellow, of the Shrine of North America. [Applause.]

Now I know you don't want to hear very much from me, but I must say this: that I hope the fact that we can come here as free men tonight shows, regardless of what party we belong to, or what our ideas regarding some of the chosen representatives of the American Government may be, still we are free agents to come and go as we choose and show to each other brotherly love and consideration. I hope the fact that you can do that will never be out of our minds when you are voting and working to keep good in the saddle as against evil that is trying to control the world. I want you to know that I think we are living in the greatest county that God ever helped man to develop, and I trust that no man in our Congress will ever fail to have the courage to vote to preserve the American system of free men. Thank you very much. [Applause.]

(Selections by the quartet of Crescent Temple.) [Applause.]

Hon. B. CARROLL REECE. We have great men in public life and private life. In public life we have none greater than Albert W. Hawkes, who served so faithfully and devotedly in the U.S. Senate for what made America great; and in private life we have none who has served his country more faithfully and devotedly than our imperial potentate, Sir George E. Stringfellow, and to the Masons and Shriners and their purposes of good will to all mankind.

(The assembly participated in the toast.)

Hon. ALBERT W. HAWKES. Thank you very much, my friend Carroll, for your fine toast.

Senator MUNDT, would you like to make a few remarks now? If you would, I invite you to the microphone. KARL, what you say is worth hearing, and I would like to have you come up here. [Applause.] I wish to offer a toast.

Hon. KARL E. MUNDT. Our genial and beloved host Al, and imperial sir, this is indeed a surprise to me, but I have never yet known a Senator who would decline the opportunity to say a few words. Usually we like to get the food before we talk, because then we are sure of being fed, but it is a pleasure to address such a distinguished group at any time.

I would like to say for those assembled, if I may speak for you all, that this is in many ways one of the most delightful occasions that I have been able to attend for a long time. It is good to be here with Al Hawkes and his good neighbor, who have no axes to grind and who would like to have the same America we all believe in. I think it is nice to come out to a banquet and not be pressured in this direction or that direction, but just be with good fellows who are enjoying good fellowship and who, being members of the shrine, as we are, have this opportunity to pay a tribute to the imperial potentate whom we have all watched through the many years that one has to go through the chairs before he reaches that distinguished position.

I have met George Stringfellow many times as I have traveled around the States trading a cool speech for a cold steak. I met him in Shreveport and all through the South. To me he typifies what the shrine stands for, that wonderful spirit of comradeship, that genuine affection for his fellow man. He carries out that concept for which Shriners stand with great credit to our craft.

So, Al, I want to thank you as one member of this company for your thoughtfulness in inviting us to meet and pay our respects to a man who is doing a great job as the head of a great organization.

I have known George Stringfellow and his wife for a long time, and it has been my privilege to visit with him in his home.

I know he is respected in his hometown, as he is throughout shrinedom, as a man with the courage of his convictions and a man whose convictions can always be found on the right side as far as the concept of preservation of America is concerned.

Thank you for the privilege of saying what I have felt for a long time. I never expect to be surrounded by two better Americans than Al Hawkes and George Stringfellow. [Applause.]

(Selections by the quartet of Crescent Temple). [Applause]

Hon. ALBERT W. HAWKES. I am going to ask my very good friend, Senator BOURKE HICKENLOOPER, of Iowa, if he would like to make a few comments—you can say the limit about our good friend, the Imperial Potentate. [Applause.]

Hon. BOURKE HICKENLOOPER. Noble Al, Imperial Sir, Al came around just a moment ago and asked if I would like to say a few words. I said, "Not necessarily." He said, "Would you?" And I said, "Yes."

This gathering tonight is a meeting of people who are dedicated not only fraternally but politically, regardless of partisan politics, to the preservation of the American system of government, and I think it is remarkable. A great patriot once said, "My country, may she always be right but right or wrong, my country." I think those of us who are gathered here under the banner of the Mystic Shrine may say, "My politics, may they always be right, but right or wrong, may they lead to the preservation of my country." This is the thing we hold most dear.

Tonight I am delighted to be here, and not only be with my dear and Noble friend, Al Hawkes, who is one of the most dedicated Americans I have ever known, but to be with Imperial Sir George E. Stringfellow whose acquaintance and friendship I have enjoyed for a good many years. To all of you, I say that the renewal of this fraternal association, which most of us renew so infrequently, is a stimulus and a pleasure. Al, all I can say is that I, for one, thank you for this opportunity to meet with George Stringfellow, with you, and with the others who have made the Mystic Shrine one of the greatest humanitarian organizations that the country knows. Thank you. [Applause.]

Hon. ALBERT W. HAWKES. BOURKE, we all appreciate very much your kind and thoughtful remarks.

Now my very dear friend, a Democrat—I have some very good friends who are Democrats—Senator JOHN SPARKMAN is going to say a few words from the South, which is in my opinion, one of the finest American sections of the United States that we have left. Thank God we have the South. [Cheers and applause.] I am talking right from the heart now. I think we ought to thank God that we have the Americanism that is in the South of this country. I don't say the South is always right, but I do think the South has as many and as deep convictions of the fine things of the American system of freemen and our constitutional form of government, as we can expect to find anywhere in our country.

Senator SPARKMAN, come up here, will you? [Applause.]

Hon. JOHN J. SPARKMAN. Thank you, Al Hawkes. I am delighted to have this opportunity, but I want to explain one thing before I start. There is one reservation I have about making this speech. He said, "Just a few words." We southerners don't accept a speech on that basis.

I think it is a great occasion to be here tonight. I was delighted when I had a letter from Al Hawkes some time ago telling of his plan to set up this get together honoring our imperial potentate, whom we are glad to have with us tonight. By the way, Al, he is a great southerner from the State of Virginia. Of course, I have no idea of drawing the line tonight. I am just carrying out what you suggested by your remarks. There is no line with Shriners.

I had the pleasure of serving in the Senate with Al Hawkes. He sat on the other side of the aisle, but I never knew a person of greater integrity or finer friendship than this man from New Jersey. By the way, I can tell you a little practical incident that happened after he got out of the Senate. One day I had a telephone call from him while I was down in Huntsville, and he asked me about a little business in my part of the State. The business was in trouble, and somehow it had gotten to him; I don't know how. Well, he pulled it out of the ditch and it is doing all right today.

It is great to be here tonight. By the way, we from Alabama are particularly pleased to have here with us the imperial chief rabban, George Mattison, and the imperial captain of the guard, Orville Rush, so I think we are doing pretty well in this lineup.

I am glad to be here to pay tribute to George Stringfellow and the tremendous job that he has been doing as imperial potentate. We are delighted to be with you. We are glad to have this chance to be with one another without any mention of legislation. You know, the only word I heard about legislation I got when I rounded the table down there, and it was from EVERETT DIRKSEN whispering to me. He didn't want me to take advantage of this microphone on some of the things we have been talking about on the Senate floor. But it is great to be here, and I appreciate the privilege of being with you.

By the way, a toast was drunk to our imperial potentate. That reminded me of an incident when I was in London one time with a small group. We were having a little luncheon in London County. We had this master of ceremonies, a great stately fellow. He had a great time announcing us every time, but he was scared to death that these Americans were going to smoke before the King had been toasted. Well, he managed to keep them from smoking, but just as quick as the King was toasted he made this announcement: "Ladies and gentlemen, the King being drunk, you can smoke." So George Stringfellow "has been drunk."

I would like to propose a toast, if I may, Mr. Chairman. I would like to ask you to lift your glasses and drink with me to the hundreds of thousands of crippled children who are receiving benefits by reason of the existence of our organization and the great leadership of Imperial George Stringfellow.

Thank you, sir. [Applause.]

(The assembly joined in the toast.)

Hon. ALBERT W. HAWKES. John, both the imperial potentate and I think you very much, and we are very happy you are here tonight, very happy. [Applause.]

(Selections by the quartet from Crescent Temple.) [Applause.]

Hon. ALBERT W. HAWKES. I want to thank the quartet from Crescent Temple of Trenton for the rendition of these fine songs, and tell them how much I think they have added to our pleasures.
